W. W. Norton & Company has been independent since its founding in 1923, when William Warder Norton and Mary D. Herter Norton first published lectures delivered at the People's Institute, the adult education division of New York City's Cooper Union. The Nortons soon expanded their program beyond the Institute, publishing books by celebrated academics from America and abroad. By mid-century, the two major pillars of Norton's publishing program—trade books and college texts—were firmly established. In the 1950s, the Norton family transferred control of the company to its employees, and today—with a staff of four hundred and a comparable number of trade, college, and professional titles published each year—W. W. Norton & Company stands as the largest and oldest publishing house owned wholly by its employees.

CONTENTS

List of Maps • xv

Preface • xix

Part One | A NEW WORLD

1 | THE COLLISION OF CULTURES 5

PRE-COLUMBIAN INDIAN CIVILIZATIONS 7 • EUROPEAN VISIONS OF AMERICA 12 • THE EXPANSION OF EUROPE 13 • THE VOYAGES OF COLUMBUS 15 • THE GREAT BIOLOGICAL EXCHANGE 18
• PROFESSIONAL EXPLORERS 22 • THE SPANISH EMPIRE 23 •
THE PROTESTANT REFORMATION 35 • CHALLENGES TO THE SPANISH EMPIRE 38
• FURTHER READING 43

2 | BRITAIN AND ITS COLONIES 45

THE ENGLISH BACKGROUND 46 • SETTLING THE CHESAPEAKE 50
• SETTLING NEW ENGLAND 61 • INDIANS IN NEW ENGLAND 72
• THE ENGLISH CIVIL WAR IN AMERICA 76 • SETTLING THE
CAROLINAS 77 • SETTLING THE MIDDLE COLONIES AND GEORGIA 83
• THRIVING COLONIES 94 • FURTHER READING 96

3 | COLONIAL WAYS OF LIFE 98

THE SHAPE OF EARLY AMERICA 99 • SOCIETY AND ECONOMY IN THE
SOUTHERN COLONIES 107 • SOCIETY AND ECONOMY IN NEW
ENGLAND 118 • SOCIETY AND ECONOMY IN THE MIDDLE COLONIES 131
• COLONIAL CITIES 134 • THE ENLIGHTENMENT 138 • THE GREAT
AWAKENING 141 • FURTHER READING 145

4 | THE IMPERIAL PERSPECTIVE 147

ENGLISH ADMINISTRATION OF THE COLONIES 148 • THE HABIT OF SELF-
GOVERNMENT 153 • TROUBLED NEIGHBORS 157 • THE COLONIAL
WARS 162 • FURTHER READING 173

5 | FROM EMPIRE TO INDEPENDENCE 174

THE HERITAGE OF WAR 175 • BRITISH POLITICS 176 • WESTERN LANDS 177
• GRENVILLE AND THE STAMP ACT 177 • FANNING THE FLAMES 184
• DISCONTENT ON THE FRONTIER 188 • A WORSENING CRISIS 189
• SHIFTING AUTHORITY 195 • INDEPENDENCE 202
• FURTHER READING 206

Part Two | BUILDING A NATION

6 | THE AMERICAN REVOLUTION 213

1776: WASHINGTON'S NARROW ESCAPE 214 • AMERICAN SOCIETY AT
WAR 218 • 1777: SETBACKS FOR THE BRITISH 221 • 1778: BOTH SIDES
REGROUP 225 • THE WAR IN THE SOUTH 229 • NEGOTIATIONS 234
• THE POLITICAL REVOLUTION 235 • THE SOCIAL REVOLUTION 239
• THE EMERGENCE OF AN AMERICAN CULTURE 246 • FURTHER READING 248

7 | SHAPING A FEDERAL UNION 249

THE CONFEDERATION 250 • ADOPTING THE CONSTITUTION 263
• FURTHER READING 277

8 | THE FEDERALIST ERA 279

A NEW NATION 280 • HAMILTON'S VISION 285 • THE REPUBLICAN
ALTERNATIVE 293 • CRISES FOREIGN AND DOMESTIC 295 • SETTLEMENT OF
NEW LAND 303 • TRANSFER OF POWER 307 • THE ADAMS YEARS 308
• FURTHER READING 319

9 | THE EARLY REPUBLIC 320

JEFFERSONIAN SIMPLICITY 322 • JEFFERSON IN OFFICE 324
• DIVISIONS IN THE REPUBLICAN PARTY 333 • WAR IN EUROPE 334
• THE WAR OF 1812 339 • FURTHER READING 351

Part Three | AN EXPANSIVE NATION

10 | NATIONALISM AND SECTIONALISM 357

ECONOMIC NATIONALISM 358 • "GOOD FEELINGS" 362 • CRISES
AND COMPROMISES 367 • JUDICIAL NATIONALISM 371 • NATIONALIST
DIPLOMACY 374 • ONE-PARTY POLITICS 376 • FURTHER READING 384

11 | THE JACKSONIAN IMPULSE 385

SETTING THE STAGE 387 • NULLIFICATION 389 • JACKSON'S INDIAN
POLICY 396 • THE BANK CONTROVERSY 400 • VAN BUREN AND THE NEW
PARTY SYSTEM 406 • ASSESSING THE JACKSON YEARS 412 • FURTHER
READING 414

12 | THE DYNAMICS OF GROWTH 416

AGRICULTURE AND THE NATIONAL ECONOMY 417 • TRANSPORTATION
AND THE NATIONAL ECONOMY 421 • A COMMUNICATIONS REVOLUTION 430
• THE INDUSTRIAL REVOLUTION 432 • THE POPULAR CULTURE 439
• IMMIGRATION 443 • ORGANIZED LABOR 449 • THE RISE OF THE
PROFESSIONS 452 • JACKSONIAN INEQUALITY 455
• FURTHER READING 456

13 | AN AMERICAN RENAISSANCE: RELIGION, ROMANTICISM, AND REFORM 458

RATIONAL RELIGION 459 • THE SECOND GREAT AWAKENING 460
• ROMANTICISM IN AMERICA 466 • THE FLOWERING OF AMERICAN
LITERATURE 470 • EDUCATION 475 • ANTEBELLUM REFORM 479
• FURTHER READING 487

14 | MANIFEST DESTINY 489

THE TYLER YEARS 490 • THE WESTERN FRONTIER 492 • MOVING
WEST 501 • ANNEXING TEXAS 507 • POLK'S PRESIDENCY 511
• THE MEXICAN WAR 515 • FURTHER READING 524

Part Four | A HOUSE DIVIDED

15 | THE OLD SOUTH 531

THE DISTINCTIVENESS OF THE OLD SOUTH 532 • WHITE SOCIETY IN THE
SOUTH 538 • BLACK SOCIETY IN THE SOUTH 543 • THE CULTURE OF THE
SOUTHERN FRONTIER 554 • ANTI-SLAVERY MOVEMENTS 556
• FURTHER READING 563

16 | THE CRISIS OF UNION 565

SLAVERY IN THE TERRITORIES 566 • THE COMPROMISE OF 1850 572
• FOREIGN ADVENTURES 580 • THE KANSAS-NEBRASKA CRISIS 581

- THE DEEPENING SECTIONAL CRISIS 591 • THE CENTER COMES APART 599 • FURTHER READING 606

17 | THE WAR OF THE UNION 607

- THE END OF THE WAITING GAME 608 • THE BALANCE OF FORCE 612
- THE WAR'S EARLY COURSE 614 • EMANCIPATION 629
- REACTIONS TO EMANCIPATION 630 • BLACKS IN THE MILITARY 632
- WOMEN AND THE WAR 634 • GOVERNMENT DURING THE WAR 635
- THE FALTERING CONFEDERACY 640 • THE CONFEDERACY'S DEFEAT 645
- A MODERN WAR 655 • FURTHER READING 657

18 | RECONSTRUCTION: NORTH AND SOUTH 659

- THE WAR'S AFTERMATH 659 • THE BATTLE OVER RECONSTRUCTION 664
- RECONSTRUCTING THE SOUTH 673 • THE RECONSTRUCTED SOUTH 679
- THE GRANT YEARS 686 • FURTHER READING 698

GLOSSARY A1

PREFACE

Just as history is never complete, neither is a historical textbook. We have learned much from the responses of readers and instructors to the first six editions of *America: A Narrative History*. Perhaps the most important and reassuring lesson is that our original intention has proved valid: to provide a compelling narrative history of the American experience, a narrative animated by human characters, informed by analysis and social texture, and guided by the unfolding of events. Readers have also endorsed the book's distinctive size and format. *America* is designed to be read and to carry a moderate price. While the book retains its classic look, *America* sports a new color design for the Seventh Edition. We have added new eye-catching maps and included new art in full color. Despite these changes, we have not raised the price between the Sixth and the Seventh Editions.

As in previous revisions of *America*, we have adopted an overarching theme that informs many of the new sections we introduce throughout the Seventh Edition. In previous editions we have traced such broad-ranging themes as immigration, the frontier and the West, popular culture, and work. In each case we blend our discussions of the selected theme into the narrative, where they reside through succeeding editions.

The Seventh Edition of *America* highlights environmental history, a relatively new field that examines how people have shaped—and been shaped by—the natural world. Geographic features, weather, plants, animals, and diseases are important elements of environmental history. Environmental historians study how environments have changed as a result of natural processes such as volcanic eruptions, earthquakes, hurricanes, wildfires, droughts, floods, and climatic changes. They also study how societies have used and abused their natural environment through economic activities such as hunting, farming, logging and mining, manufacturing, building dams, and

irrigation. Equally interesting is how different societies over time have perceived nature, as reflected in their religion, art, literature, and popular culture, and how they have reshaped nature according to those perceptions through the creation of parks, preserves, and designed landscapes. Finally, another major area of inquiry among environmental historians centers on the development of laws and regulations to govern the use of nature and maintain the quality of the natural environment.

Some of the new additions to the Seventh Edition related to environmental history are listed below.

- Chapter 1 includes discussions of the transmission of deadly infectious diseases from Europe to the New World and the ecological and social impact of the arrival of horses on the Great Plains.
- Chapter 3 examines the ways in which European livestock reshaped the New World environment and complicated relations with Native Americans.
- Chapters 5 and 6 describe the effects of smallpox on the American armies during the Revolution.
- Chapter 12 details the impact of early industrialization on the environment.
- Chapter 17 describes the impact of the Civil War on the southern landscape.
- Chapter 19 includes new material related to the environmental impact of the sharecrop-tenant farm system in the South after the Civil War, industrial mining in the Far West, and the demise of the buffalo on the Great Plains.
- Chapter 21 describes the dramatic rise of large cities after the Civil War and the distinctive aspects of the urban environment.
- Chapter 24 surveys the key role played by sportsmen in the emergence of the conservation movement during the late nineteenth century and details Theodore Roosevelt's efforts to preserve the nation's natural resources.
- Chapter 28 surveys the environmental and human effects of the "dust bowl" during the Great Depression.
- Chapter 37 discusses President George W. Bush's controversial environmental policies and describes the devastation in Mississippi and Louisiana wrought by Hurricane Katrina.

Beyond these explorations of environmental history we have introduced other new material throughout the Seventh Edition. Fresh insights from important new scholarly works have been incorporated, and we feel confident that the book provides students with an excellent introduction to the American experience.

To enhance the pedagogical features of the text, we have added Focus Questions at the beginning of each chapter. Students can use these review tools to remind themselves of the key themes and central issues in the chapters. These questions are also available online as quizzes, the results of which students can e-mail to their instructors. In addition, the maps feature new Enhanced Captions designed to encourage students to think analytically about the relationship between geography and American history.

We have also revised the outstanding ancillary package that supplements the text. *For the Record: A Documentary History of America*, Third Edition, by David E. Shi and Holly A. Mayer (Duquesne University), is a rich resource with over 300 primary source readings from diaries, journals, newspaper articles, speeches, government documents, and novels. The *Study Guide*, by Charles Eagles (University of Mississippi), is another valuable resource. This edition contains chapter outlines, learning objectives, timelines, expanded vocabulary exercises, and many new short-answer and essay questions. *America: A Narrative History Study Space* is an online collection of tools for review and research. It includes chapter summaries, review questions and quizzes, interactive map exercises, timelines, and research modules, many new to this edition. *Norton Media Library* is a CD-ROM slide and text resource that includes images from the text, four-color maps, additional images from the Library of Congress archives, and audio files of significant historical speeches. Finally, the *Instructor's Manual and Test Bank*, by Mark Goldman (Tallahassee Community College) and Steven Davis (Kingwood College) includes a test bank of short-answer and essay questions, as well as detailed chapter outlines, lecture suggestions, and bibliographies.

In preparing the Seventh Edition, we have benefited from the insights and suggestions of many people. Some of these insights have come from student readers of the text and we encourage such feedback. Among the scholars and survey instructors who offered us their comments and suggestions are: James Lindgren (SUNY Plattsburgh), Joe Kudless (Raritan Valley Community College), Anthony Quiroz (Texas A&M University – Corpus Christi), Steve Davis (Kingwood College), Mark Fiege (Colorado State University), David Head (John Tyler Community College), Hutch Johnson (Gordon College), Charles

Eagles (University of Mississippi), Christina White and Eddie Weller at the South campus of San Jacinto College, Blanche Brick, Cathy Lively, Stephen Kirkpatrick, Patrick Johnson, Thomas Stephens, and others at the Bryan Campus of Blinn College, Evelyn Mangie (University of South Florida), Michael McConnell (University of Alabama – Birmingham), Alan Lessoff (Illinois State University), Joseph Cullon (Dartmouth University), Keith Bohannon (University of West Georgia), Tim Heinrichs (Bellevue Community College), Mary Ann Heiss (Kent State University), Edmund Wehrle (Eastern Illinois University), Adam Howard (University of Florida), David Parker (Kennesaw State University), Barrett Esworthy (Jamestown Community College), Samantha Barbas (Chapman University), Jason Newman (Cosumnes River College), Paul Cimbala (Fordham University), Dean Fafoutis (Salisbury University), Thomas Schilz (Miramar Community College), Richard Frucht (Northwest Missouri State University), James Vlasich (Southern Utah University), Michael Egan (Washington State University), Robert Goldberg (University of Utah), Jason Lantzer (Indiana University), and Beth Kreydatus (College of William & Mary). Our special thanks go Tom Percy (Slippery Rock University) for all of his work on the timelines. Once again, we thank our friends at W. W. Norton, especially Steve Forman, Steve Hoge, Karl Bakeman, Neil Hoos, Lory Frenkel, Roy Tedoff, Dan Jost, Rebecca Arata, and Matt Arnold, for their care and attention along the way.

—George B. Tindall

—David E. Shi

Part One

A NEW WORLD

A decorative graphic on the left side of the page, consisting of a stylized staircase or a series of vertical lines of varying heights, creating a sense of depth and movement. It is rendered in a light brown or tan color.

History is filled with ironies. Luck and accident often shape human affairs. Long before Christopher Columbus accidentally discovered the New World in his effort to find a passage to Asia, the tribal peoples he mislabeled Indians had occupied and shaped the lands of the Western Hemisphere. The first people to settle the New World were nomadic hunters and gatherers who had migrated from northeastern Asia during the last glacial advance of the Ice Age, nearly 20,000 years ago. By the end of the fifteenth century, when Columbus began his voyage west, there were millions of Native Americans living in the Western Hemisphere. Over the centuries they had developed diverse and often highly sophisticated societies, some rooted in agriculture, others in trade or imperial conquest.

The Native American cultures were, of course, profoundly affected by the arrival of peoples from Europe and Africa. Indians were exploited, enslaved, displaced, and exterminated. Yet this conventional tale of conquest oversimplifies the complex process by which Indians, Europeans, and Africans interacted. The Indians were more than passive victims; they were also trading partners and rivals of the transatlantic newcomers. They became enemies and allies, neighbors and advisers, converts and spouses. As such they fully participated in the creation of the new society known as America.

The Europeans who risked their lives to settle in the New World were themselves quite varied. Young and old, men and women, they came from Spain, Portugal, France, Great Britain, the Netherlands, Italy, and the various German states. A variety of motives inspired them to undertake the often harrowing transatlantic voyage. Some were adventurers and fortune seekers eager to find gold and spices. Others were fervent Christians determined to create kingdoms of God in the New World. Still others were convicts, debtors, indentured servants, or political or religious exiles. Many were simply seeking a piece of land, higher wages, and greater economic opportunity. A settler in Pennsylvania noted that “poor people (both men and women) of all kinds can here get three times the wages for their labour than they can in England or Wales.”

Yet such enticements were not sufficient to attract enough workers to keep up with the rapidly expanding colonial economies. So the Europeans began to force Indians to work for them. But there were never enough laborers to meet the unceasing demand. Moreover, captive Indians often escaped or were so rebellious that several colonies banned their use. The Massachusetts legislature did so because it claimed that Indians were of such “a malicious, surly and revengeful spirit; rude and insolent in their behavior, and very ungovernable.”

Beginning early in the seventeenth century more and more colonists turned to the African slave trade for their labor needs. In 1619 white traders began transporting captured Africans to the English colonies. This development would transform American society in ways that no one at the time envisioned. Few Europeans during the colonial era saw the contradiction between the New World's promise of individual freedom and the expanding institution of race-based slavery. Nor did they reckon with the problems associated with introducing into the new society people they considered alien and unassimilable.

The intermingling of peoples, cultures, and ecosystems from the continents of Africa, Europe, and North America gave colonial American society its distinctive vitality and variety. In turn, the diversity of the environment and the climate led to the creation of quite different economies and patterns of living in the various regions of North America. As the original settlements grew into prosperous and populous colonies, the transplanted Europeans had to fashion social institutions and political systems to manage growth and control tensions.

At the same time, imperial rivalries among the Spanish, French, English, and Dutch produced numerous intrigues and costly wars. The monarchs of Europe struggled to manage and exploit this fluid and often volatile colonial society. Many of the colonists, they discovered, had brought with them to the New World a feisty independence that led them to resent government interference in their affairs. A British official in North Carolina reported that the residents of the Piedmont region were "without any Law or Order. Impudence is so very high [among them], as to be past bearing." As long as the reins of imperial control were loosely applied, the two parties maintained an uneasy partnership. But as the British authorities tightened their control during the mid-eighteenth century, they met resistance, which became revolt and culminated in revolution.

1

THE COLLISION OF CULTURES

FOCUS QUESTIONS

- What civilizations existed in pre-Columbian America? What were their origins?
- What were the goals of the European voyages of discovery and of the explorers who probed the shorelines of America?
- What were the consequences of the exchanges and clashes that accompanied European contact with the plants, animals, and people of the New World?

The “New World” discovered by Christopher Columbus was in fact home to civilizations thousands of years old. Until recently archaeologists had long assumed that the first humans in the Western Hemisphere were Siberians who some 12,000 to 15,000 years ago had crossed the Bering Strait on a land bridge to Alaska made accessible by receding waters during the last Ice Age. These nomadic hunters and their descendants had then drifted south in pursuit of grazing herds of large mammals: mammoths, musk oxen, bison, and woolly rhinoceroses. Over the next 500 years these people had fanned out in small bands across the entire hemisphere, from the Arctic Circle to the tip of South America. Recent archaeological discoveries in Pennsylvania, Virginia, and Chile, however, suggest that ancient humans may have arrived by sea much earlier (perhaps 18,000 to 40,000 years ago) from various parts of Asia—and some may even have crossed the Atlantic Ocean from southwestern Europe.

When did people first cross the Bering Sea? What evidence have archaeologists and anthropologists found from the lives of the first people in America? Why did they travel to North America?

PRE-COLUMBIAN INDIAN CIVILIZATIONS

The first humans in North America discovered an immense continent with extraordinary climatic and environmental diversity. Coastal plains, broad grasslands, harsh deserts, and soaring mountain ranges generated distinct environments, social structures, and cultural patterns. By the time Columbus happened upon the New World, the native peoples of North America had developed a diverse array of communities in which more than 400 languages were spoken. Yet despite the distances and dialects separating them, the Indian societies created extensive trading networks that helped spread ideas and innovations. Contrary to the romantic myth of early Indian civilizations living in perfect harmony with nature and one another, the native societies exerted great pressure on their environment and engaged in frequent warfare with one another.

EARLY CULTURES After centuries of nomadic life, the ancient Indians settled in more permanent villages. Thousands of years after people first appeared in North America, climatic changes and extensive hunting had killed off the largest mammals. Global warming diminished grasslands and stimulated forest growth, which provided plants and small animals for human consumption. The ancient Indians adapted to the new environments by inventing fiber snares, basketry, and mills for grinding nuts, and they domesticated the dog and the turkey. A new cultural stage arrived with the introduction of farming, fishing, and pottery making. Hunting now focused on faster and more elusive mammals: deer, antelope, elk, moose, and caribou. Already by about 5000 B.C., Indians of the Mexican highlands were consuming plant foods that became the staples of the New World: chiefly maize (corn), beans, and squash but also chili peppers, avocados, and pumpkins.

THE MAYAS, AZTECS, CHIBCHAS, AND INCAS Between about 2000 and 1500 B.C., permanent farming towns appeared in Mexico. The more settled life in turn provided time for the cultivation of religion, crafts, art, science, administration—and warfare. From about A.D. 300 to 900, Middle America (Mesoamerica) developed great city centers complete with gigantic pyramids, temples, and palaces, all supported by the surrounding peasant villages. Moreover, the Mayas developed enough mathematics and astronomy to devise a calendar more accurate than the one the Europeans were using at the time of Columbus.

In about A.D. 900 the complex Mayan culture collapsed. The Mayas had overexploited the rain forest upon whose fragile ecosystem they depended.

As an archaeologist has explained, “Too many farmers grew too many crops on too much of the landscape.” Deforestation led to hillside erosion and a catastrophic loss of farmland. Overpopulation added to the strain on Mayan society. Unrelenting civil wars erupted among the Mayas. Mayan war parties destroyed one another’s cities and took prisoners, who were then sacrificed to the gods in theatrical rituals. Whatever the reasons for the weakening of Mayan society, it succumbed to the Toltecs, a warlike people who conquered most of the region in the tenth century. But around A.D. 1200 the Toltecs mysteriously withdrew.

Mayan Society

A fresco depicting the social divisions of Mayan society. A Mayan lord, at the center, receives offerings.

The Aztecs arrived from the northwest to fill the vacuum, founded the city of Tenochtitlán (twenty-five miles north of what is now Mexico City) in 1325, and gradually expanded their control over central Mexico. When the Spanish invaded in 1519, the Aztec Empire under Montezuma II ruled over perhaps 5 million people—though estimates range as high as 20 million.

Farther south, in what is now Colombia, the Chibchas built a similar empire on a smaller scale. Still farther south the Quechuas (better known as the Incas, from the name for their ruler) controlled an empire that by the fifteenth century stretched 1,000 miles along the Andes Mountains from Ecuador to Chile. It was crisscrossed by an elaborate system of roads and organized under an autocratic government.

INDIAN CULTURES OF NORTH AMERICA The Indians of the present-day United States developed three identifiable civilizations: the Adena-Hopewell culture of the Northeast (800 B.C.–A.D. 600), the Mississippian culture of the Southeast (A.D. 600–1500), and the Pueblo-Hohokam culture of the Southwest (400 B.C.–present). None of these developed as fully as the civilizations of the Mayas, Aztecs, and Incas to the south.

What were the three dominant pre-Columbian civilizations in North America? Where was the Adena-Hopewell culture centered? How was the Mississippian civilization similar to that of the Mayans or Aztecs? What made the Anasazi culture different from the other North American cultures?

The Adena-Hopewell culture, centered in the Ohio River valley, left behind enormous earthworks and burial mounds—some of them elaborately shaped like great snakes, birds, or other animals. Evidence from the mounds suggests a complex social structure and a specialized division of labor. Moreover, the Hopewell Indians developed an elaborate trade network that spanned the continent.

The Mississippian culture, centered in the Mississippi River valley, resembled the Mayan and Aztec societies in its intensive agriculture, substantial towns built around central plazas, temple mounds (vaguely resembling pyramids), and death cults, which involved human torture and sacrifice. The Mississippians developed a specialized labor force, an effective government, and an extensive trading network. They worshipped the sun. The Mississippian

culture peaked in the fourteenth and fifteenth centuries and finally succumbed to diseases transmitted from Europe.

The arid Southwest hosted irrigation-based cultures, elements of which persist today and heirs of which (the Hopis, Zunis, and others) still live in the adobe pueblos erected by their ancestors. The most widespread and best known of the cultures, the Anasazi (“enemy’s ancestors” in the Navajo language), developed in the “four corners,” where the states of Arizona, New Mexico, Colorado, and Utah meet.

The Anasazis lived in baked-mud adobe structures built four or five stories high. In contrast to the Mesoamerican and Mississippian cultures,

Mississippian Artifacts

Mississippian people produced finely made pottery, such as this deer-effigy jar.

Cliff Dwellings

Ruins of Anasazi cliff dwellings in Mesa Verde National Park, Colorado.

Anasazi society lacked a rigid class structure. The religious leaders and warriors labored much as the rest of the people did. In fact, they engaged in warfare only as a means of self-defense (*Hopi* means “Peaceful People”), and there is little evidence of human sacrifice or human trophies. Environmental factors shaped Anasazi culture and eventually caused its demise. Toward the end of the thirteenth century, a lengthy drought and the pressure of new arrivals from the north began to restrict the territory of the Anasazis. Into their peaceful world came the aggressive Navajos and Apaches, followed two centuries later by Spaniards marching up from the south.

EUROPEAN VISIONS OF AMERICA

The European discovery of America was fueled by curiosity. People had long imagined what lay beyond the western horizon. Norse expeditions to the New World during the tenth and eleventh centuries are the earliest

When did the first Norse settlers reach North America? What was the symbolic significance of these lands of the Western Hemisphere? How far south in North America did the Norse explorers travel?

that can be verified, and even they have dissolved into legend. Around A.D. 985 an Icelandic named Erik the Red—the New World’s first real-estate booster—colonized the west coast of a rocky, fogbound island he deceptively called Greenland, and about a year later a trader missed Greenland and sighted land beyond. Knowing of this, Leif Eriksson, son of Erik the Red, sailed out from Greenland about A.D. 1001 and sighted the coasts of Helluland (Baffin Island), Markland (Labrador), and Vinland (Newfoundland), where he settled for the winter. The Norse settlers withdrew from North America in the face of hostile natives, and the Greenland colonies vanished mysteriously in the fifteenth century. Nowhere in Europe had the forces yet developed that would inspire adventurers to subdue the New World.

THE EXPANSION OF EUROPE

During the late fifteenth century, Europeans developed the maritime technology to venture around the world and the imperial ambitions to search for riches, colonies, and pagans to convert. This age of discovery coincided with the rise of an inquiring spirit; the growth of trade, towns, and modern corporations; the decline of feudalism and the formation of national states; the Protestant and Catholic Reformations; and the resurgence of some old sins—greed, conquest, exploitation, oppression, racism, and slavery—that quickly defiled the fancied innocence of the New World.

RENAISSANCE GEOGRAPHY For more than two centuries before Columbus, the mind of Europe quickened with the so-called Renaissance—the rediscovery of ancient texts, the rebirth of secular learning, the spirit of inquiry, all of which spread more rapidly after Johannes Gutenberg’s invention of a printing press with movable type around 1440. Learned Europeans of the fifteenth century held in almost reverential awe the authority of ancient learning. The age of discovery was especially influenced by ancient concepts of geography. As early as the sixth century B.C., the Pythagoreans had taught the sphericity of the earth, and in the third century B.C. the earth’s size was computed very nearly correctly. All this was accepted in Renaissance universities on the word of Aristotle, and the myth that Columbus was trying to prove this theory is one of those falsehoods that will not disappear even in the face of evidence. No informed person at that time thought the earth was flat.

Progress in the art of navigation accompanied the revival of learning. In the fifteenth century, mariners employed new instruments to sight stars and

find the latitude. Steering across the open sea, however, remained a matter of dead reckoning. A ship's captain set his course along a given latitude and calculated it from the angle of the North Star or, with less certainty, the sun, estimating speed by the eye. Longitude remained a matter of guesswork since accurate timepieces were needed to determine it. Ship's clocks remained too inaccurate until the development of more precise chronometers in the eighteenth century.

THE GROWTH OF TRADE, TOWNS, AND NATION-STATES The forces that would invade and reshape the New World found their focus in Europe's rising towns, the centers of a growing trade that slowly broadened the narrow horizons of feudal culture. In its farthest reaches this commerce moved either overland or through the eastern Mediterranean all the way to east Asia, where Europeans acquired medicine, silks, precious stones, dye-woods, perfumes, and rugs. There they also purchased the spices—pepper, nutmeg, clove—so essential to the preserving of food and for enhancing its flavor. The trade gave rise to a merchant class and to the idea of corporations through which stockholders would share risks and profits.

The foreign trade was chancy and costly. Goods commonly passed from hand to hand, from ships to pack trains and back to ships along the way, subject to tax levies by all sorts of princes and potentates. The Muslim world, from Spain across North Africa into central Asia, straddled the important trade routes, adding to the hazards. Muslims tenaciously opposed efforts to "Christianize" their lands. Little wonder, then, that Europeans should dream of an all-water route to the coveted spices of east Asia and the Indies.

Another spur to exploration was the rise of national states, ruled by kings and queens who had the power and the money to sponsor the search for foreign riches. The growth of the merchant class went hand in hand with the growth of centralized political power. Merchants wanted uniform currencies, trade laws, and the elimination of trade barriers. They thus became natural allies of the monarchs who could meet their needs. In turn, merchants and university-trained professionals supplied the monarchs with money, lawyers, and government officials. The Crusades to capture the Holy Land (1095–1270) had also advanced the process of international trade and exploration. They had brought Europe into contact with the Middle East and had decimated the ranks of the feudal lords. And new means of warfare—the use of gunpowder and standing armies—further weakened the independence of the nobility relative to royal power.

By 1492 the map of western Europe showed several united kingdoms: France, where in 1453 Charles VII had emerged from the Hundred Years'

War as head of a unified state; England, where in 1485 Henry VII had emerged victorious after thirty years of civil strife known as the Wars of the Roses; Portugal, where John I had fought off the Castilians to ensure national independence; and Spain, where in 1469 Ferdinand of Aragon and Isabella of Castile had ended an era of chronic civil war when they united two great kingdoms in marriage. The Spanish king and queen were crusading expansionists. On January 1, 1492, after nearly eight centuries of religious warfare between Spanish Christians and Moorish Muslims on the Iberian peninsula, Ferdinand and Isabella declared victory at Granada, the last Muslim stronghold. They gave the defeated Muslims a desperate choice: convert to Christianity or leave Spain. Soon thereafter the Christian monarchs gave Sephardi, Jews from Spain or Portugal, the same awful ultimatum: baptism or exile.

These factors—urbanization, world trade, the rise of centralized national states, and advances in knowledge, technology, and firepower—combined with natural human curiosity, greed, and religious zeal to create an outburst of energy, spurring the discovery and conquest of the New World. Beginning in the late fifteenth century, Europeans set in motion the events that, as one historian has observed, bound together “four continents, three races, and a great diversity of regional parts.”

THE VOYAGES OF COLUMBUS

It was in Portugal, with the guidance of King John’s son Prince Henry the Navigator, that exploration and discovery began in earnest. In 1422 Prince Henry dispatched his first naval expedition to map the African coast. Driven partly by the hope of outflanking the Islamic world and partly by the hope of trade, the Portuguese by 1446 had reached Cape Verde and then the equator and, by 1482, the Congo River. In 1488 Bartholomeu Dias rounded the Cape of Good Hope at Africa’s southern tip.

Christopher Columbus, meanwhile, was learning his trade in the school of Portuguese seamanship. Born in 1451, the son of an Italian weaver, Columbus took to the sea at an early age, making up for his lack of formal education by teaching himself geography, navigation, and Latin. By the 1480s, Columbus, a tall, white-haired, pious man, was an experienced mariner and a skilled navigator. Dazzled by the prospect of Asian riches, he developed an outrageous plan to reach the Indies (India, China, the East Indies, or Japan) by sailing west across the Atlantic. Columbus won the support of Ferdinand and Isabella, the Spanish monarchs. They awarded him a tenth share of any pearls; gold, silver,

Christopher Columbus

A portrait by Sebastiano del Piombo, ca. 1519.

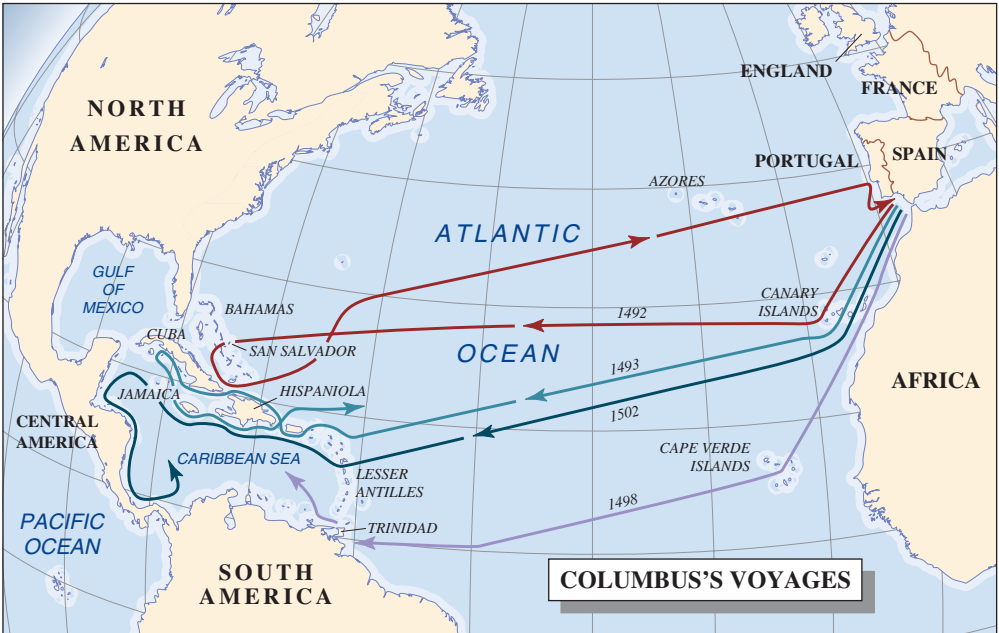

or other precious metals; and valuable spices he found in any new territories. The legend that the queen had to hock the crown jewels is as spurious as the fable that Columbus set out to prove the earth was round.

Columbus chartered one seventy-five-foot ship, the *Santa María*, and the Spanish city of Palos supplied two smaller caravels, the *Pinta* and the *Niña*. From Palos this little squadron, with eighty-seven officers and men, set sail westward for what Columbus thought was Asia. The expedition stopped at the Canary Islands, the westernmost Spanish possessions, off the west coast of Africa. Early on October 12, 1492, a lookout on the *Santa*

María yelled, “*Tierra! Tierra!*” (Land! Land!) It was an island in the Bahamas east of Florida that Columbus named San Salvador (Blessed Savior). Columbus decided they were near the Indies, so he called the island people *los Indios*. He described the “Indians” as naked people, “very well made, of very handsome bodies and very good faces.” He added that “with fifty men they could all be subjugated and compelled to do anything one wishes.” The natives, Columbus wrote, were “to be ruled and set to work, to cultivate the land and to do all else that may be necessary . . . and to adopt our customs.”

Columbus continued to search for a passage to the fabled Indies through the Bahamian Cays, down to Cuba (a place-name that suggested Marco Polo’s Cipangu [associated with modern-day Japan]), and then eastward to the island he named Española (or Hispaniola, now the site of Haiti and the Dominican Republic), where he first found significant amounts of gold jewelry. Columbus learned of, but did not encounter until his second voyage, the fierce Caribs of the Lesser Antilles. The Caribbean Sea was named after them, and because of their alleged bad habits the word *cannibal* was derived from a Spanish version of their name (Caníbal).

On the night before Christmas 1492, the *Santa María* ran aground off Hispaniola. Columbus, still believing he had reached Asia, decided to return home. He left about forty men behind and seized a dozen natives to present as gifts to Spain’s royal couple. When Columbus reached Palos, he received a hero’s welcome. The news of his discovery spread rapidly across Europe

How many voyages did Columbus make to the Americas? What is the origin of the name for the Caribbean Sea? What happened to the colony that Columbus left on Hispaniola in 1493?

thanks to the improved communications brought about by Gutenberg's printing press. In Italy, Pope Alexander VI, himself a Spaniard, was so convinced that God favored the conquest of the New World that he awarded Spain the right to control the entire hemisphere so that its pagan natives could be brought to Christ. Buoyed by such support and by the same burning religious zeal to battle heathens that had forced the Moors into exile or conversion, Ferdinand and Isabella instructed Columbus to prepare for a second voyage. The Spanish monarchs also set about shoring up their legal claim against Portugal's pretensions to the newly discovered lands. Spain and Portugal reached a compromise agreement, called the Treaty of Tordesillas (1494), which drew an imaginary line west of the Cape Verde Islands and stipulated that the area west of it would be a Spanish sphere of exploration and settlement.

Columbus returned across the Atlantic in 1493 with seventeen ships, livestock, and over 1,000 men, as well as royal instructions to "treat the Indians very well." Back in the New World, Admiral Columbus discovered that the

camp he had left behind was in chaos. The unsupervised soldiers had run amok, raping native women, robbing Indian villages, and as Columbus's son later added, "committing a thousand excesses for which they were mortally hated by the Indians." The natives finally struck back and killed ten Spaniards. A furious Columbus immediately attacked the Indian villages. The Spaniards, armed with crossbows, guns, and ferocious dogs, decimated the natives and loaded 550 of them onto ships bound for the slave market in Spain.

Columbus then ventured out across the Caribbean Sea. He found the Lesser Antilles, explored the coast of Cuba, discovered Jamaica, and finally returned to Spain in 1496. On a third voyage, in 1498, Columbus found Trinidad and explored the northern coast of South America. He led a fourth voyage in 1502, during which he sailed along the coast of Central America, still looking in vain for Asia. Having been marooned on Jamaica for more than a year, he finally returned to Spain in 1504. He died two years later.

To the end, Columbus refused to believe that he had discovered anything other than outlying parts of Asia. Full awareness that a great land mass lay between Europe and Asia dawned on Europeans very slowly. By one of history's greatest ironies, this led the New World to be named not for its discoverer but for another Italian explorer, Amerigo Vespucci, who sailed to the New World in 1499. Vespucci landed on the coast of South America and reported that it was so large it must be a new continent. European mapmakers thereafter began to label the New World using a variant of Vespucci's first name: America.

THE GREAT BIOLOGICAL EXCHANGE

The first European contacts with the New World began an unprecedented worldwide biological exchange. It was in fact more than a diffusion of cultures: it was a diffusion of distinctive social and ecological elements that ultimately worked in favor of the Europeans at the expense of the natives. Indians, Europeans, and eventually Africans intersected to create new religious beliefs and languages, adopt new tastes in food, and develop new modes of dress.

If anything, the plants and animals of the two worlds were more different than the people and their ways of life. Europeans had never seen such creatures as the fearsome (if harmless) iguana, the flying squirrel, fish with whiskers like those of a cat, or the rattlesnake, nor had they seen anything quite like several other species: bison, cougars, armadillos, opossums, sloths,

tapirs, anacondas, American eels, toucans, condors, and hummingbirds. Among the few domesticated animals they could recognize the dog and the duck, but turkeys, guinea pigs, llamas, and alpacas were all new. Nor did the Native Americans know of horses, cattle, pigs, sheep, goats, and (maybe) chickens, which soon arrived from Europe in abundance. Yet within a half century whole islands of the Caribbean would be overrun by pigs.

The exchange of plant life between Old and New Worlds worked a revolution in the diets of both hemispheres. Before Columbus's voyage three staples of the modern diet were unknown in Europe: maize (corn), potatoes (sweet and white), and many kinds of beans (snap, kidney, lima, and others). The white potato, although commonly called Irish, actually migrated from South America to Europe and reached North America only with the Scotch-Irish immigrants of the early eighteenth century. Other New World food plants include peanuts, squash, peppers, tomatoes, pumpkins, pineapples, sassafras, papayas, guavas, avocados, cacao (the source of chocolate), and chicle (for chewing gum). Europeans in turn soon introduced rice, wheat, barley, oats, wine grapes, melons, coffee, olives, bananas, "Kentucky" bluegrass, daisies, and dandelions to the New World.

The beauty of the exchange was that the food plants were more complementary than competitive. Corn, it turned out, could flourish almost anywhere—in highland or low, in hot climates or cold, in wet land or dry. It spread quickly throughout the world. Before the end of the 1500s, American maize and sweet potatoes were staple crops in China. The nutritious food crops exported from the Americas thus helped nourish a worldwide population explosion probably greater than any since the invention of agriculture. The dramatic increase in the European populations fueled by the new foods in turn helped provide the surplus of people that colonized the New World.

Europeans, moreover, adopted many Native American devices: canoes, snowshoes, moccasins, hammocks, kayaks, ponchos, dogsleds, and toboggans. The rubber ball and the game of lacrosse have Indian origins. New words entered European languages: *wigwam*, *tepee*, *papoose*, *tomahawk*, *succotash*, *hominy*, *moose*, *skunk*, *raccoon*, *opossum*, *woodchuck*, *chipmunk*,

Unfamiliar Wildlife

hickory, pecan, and hundreds of others. And new terms appeared in translation: warpath, war paint, paleface, medicine man, firewater. The natives also left the map dotted with place-names of Indian origin long after they were gone, from Miami to Yakima, from Penobscot to Yuma. There were still other New World contributions: tobacco and a number of other drugs, including coca (for cocaine), curare (a muscle relaxant), and cinchona bark (for quinine).

By far, however, the most significant aspect of the biological exchange was the transmission of infectious diseases from Europe and Africa to the New World. European colonists and enslaved Africans brought with them deadly pathogens that Native Americans had never experienced: smallpox, typhus, diphtheria, bubonic plague, malaria, yellow fever, and cholera. In dealing with such diseases over the centuries, people in the Old World had developed antibodies that enabled most of them to survive infection. Disease-toughened

adventurers, colonists, and slaves invading the New World thus carried viruses and bacteria that consumed Indians, who lacked the immunologic resistance that forms from experience with the diseases.

The results were catastrophic. Epidemics are one of the most powerful forces shaping history, and disease played a profound role in decimating the indigenous peoples of the Western Hemisphere. Far more Indians died of contagions than from combat. Major diseases such as typhus and smallpox produced pandemics in the New World on a scale never witnessed in history. The social chaos caused by the European invaders contributed to the devastation of native communities. In the face of such terrible and mysterious diseases, panic-stricken and often malnourished Indians fled to neighboring villages, unwittingly spreading the diseases in the process. Unable to explain or cure the contagions, Indian chiefs and religious leaders often lost their stature. Consequently, tribal cohesion and cultural life disintegrated, and

Impact of European Diseases

This 1592 engraving shows a shaman in a Tupinamba village in Brazil (at left) using his rattle to attract benevolent spirits to heal the diseases brought by Europeans.

efforts to resist European assaults collapsed. Over time, Native Americans adapted to the presence of the diseases and better managed their effects. They began to quarantine victims and infected villages to confine the spread of germs, and they developed elaborate rituals to sanctify such practices.

Smallpox was an especially ghastly and highly contagious disease in the New World. Santo Domingo boasted almost 4 million inhabitants in 1496; by 1570 the number of natives had plummeted to 125. In central Mexico alone, some 8 million people, perhaps one third of the entire Indian population, died of smallpox within a decade of the arrival of the Spanish. Smallpox brought horrific suffering. The virus passes through the air on moisture droplets or dust particles that enter the lungs of its victims. After incubating for twelve days, the virus causes headaches, backache, fever, and nausea. Victims then develop sores in the mouth, nose, and throat. Within a few days gruesome skin eruptions cover the body. Death usually results from massive internal bleeding.

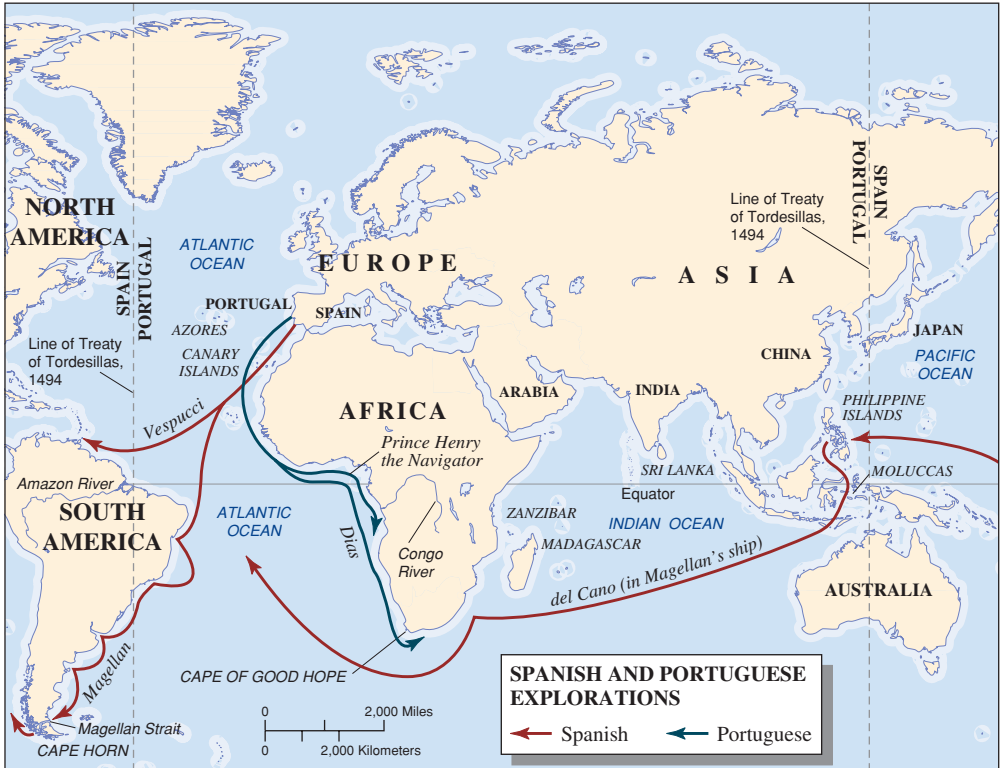

In colonial America, as Indians died by the thousands, disease became the most powerful weapon of the European invaders. A Spanish explorer noted that “half the natives” died from smallpox and “blamed us.” Many Europeans, however, interpreted such epidemics as diseases sent by God to punish Indians who resisted conversion to Christianity.

PROFESSIONAL EXPLORERS

Undeterred by new diseases and encouraged by Columbus’s discoveries, professional explorers, mostly Italians, hired themselves out to look for the elusive western passage to Asia. They probed the shorelines of America during the early sixteenth century in the vain search for an opening and thus increased by leaps and bounds European knowledge of the New World.

The first to sight the North American continent was John Cabot, a Venetian sponsored by Henry VII of England. Cabot sailed across the North Atlantic in 1497. His landfall at what the king called “the new founde lande” gave England the basis for a later claim to all of North America. During the early sixteenth century, however, the English grew so preoccupied with internal divisions and conflicts with France that they failed to capitalize on Cabot’s discoveries. Only fishermen exploited the teeming waters of the Grand Banks. In 1513 the Spaniard Vasco Núñez de Balboa became the first European to sight the Pacific Ocean, having crossed the Isthmus of Panama on foot.

The Spanish were eager to find a nautical passage from the Atlantic to the Pacific. To that end, in 1519 Ferdinand Magellan, a haughty Portuguese

What is the significance of Magellan's 1519 voyage? What was the controversy over the Treaty of Tordesillas? What biological exchanges resulted from these early explorations?

seaman hired by the Spanish, discovered the strait that now bears his name at the southern tip of South America. Magellan kept sailing north and west across the Pacific Ocean, discovering Guam and eventually the Philippines, where he was killed by natives. Surviving crew members made their way back to Spain, arriving in 1522, having been at sea for three years. Their accounts of the global voyage quickened Spanish interest in exploration.

THE SPANISH EMPIRE

During the sixteenth century, Spain created the most powerful empire in the world by conquering and colonizing the Americas. The Caribbean Sea

served as the funnel through which Spanish power entered the New World. After establishing colonies on Hispaniola, including Santo Domingo, which became the capital of the West Indies, the Spanish proceeded eastward to Puerto Rico (1508) and westward to Cuba (1511–1514). Their motives were explicit. Said one soldier, “We came here to serve God and the king, and also to get rich.” Like the French and the British after them, the Spanish who explored and conquered new worlds in the Western Hemisphere were willing to risk everything in pursuit of wealth, power, glory, or divine approval. The first adventurers were often larger-than-life figures. They displayed ambition and courage, ruthlessness and duplicity, resilience and creativity, as well as crusading religiosity and imperial arrogance.

The European colonization of the New World was difficult and deadly. Most of those in the first wave of settlement died of malnutrition or disease. But the natives suffered even more casualties. A Spaniard on Hispaniola reported in 1494 that over 50,000 Indians had died from infectious diseases carried by the Europeans, and more were “falling each day, with every step, like cattle in an infected herd.” Even the most developed Indian societies of the sixteenth century were ill equipped to resist the European cultures invading their world. Disunity everywhere—civil disorder and rebellion plagued the Aztecs, Mayas, and Incas—left the native peoples of the New World vulnerable to division and foreign conquest. The onslaught of men and microbes from Europe perplexed and overwhelmed the Indians. Prejudices and misunderstandings had tragic consequences. Europeans presumed that their civilization was superior to those they discovered in the New World. And such presumed superiority justified in their minds the conquest and enslavement of Indians, the destruction of their way of life, and the seizure of their land and resources.

A CLASH OF CULTURES The violent encounter between Spaniards and Indians in North America involved more than a clash between different peoples. It also involved contrasting forms of technological development. The Indians of Mexico had copper and bronze but no iron. They had domesticated dogs and llamas but no horses. Whereas Indians used dugout canoes for transport, Europeans sailed heavily armed oceangoing vessels. The Spanish ships not only carried human cargo; they also brought steel swords, firearms, explosives, and armor. These advanced military tools struck fear into many Indians. A Spanish priest in Florida observed that gunpowder “frightens the most valiant and courageous Indian and renders him slave to the white man’s command.” Such weaponry helps explain why the Europeans were able to defeat far superior numbers of Indians. Arrows and tomahawks were seldom a match for guns and cannon.

The Europeans enjoyed other cultural advantages. For example, the only domestic four-legged animals in North America were dogs and llamas. The Spaniards, on the other hand, brought with them horses, pigs, and cattle, all of which served as sources of food and leather. Horses provided greater speed in battle and introduced a decided psychological advantage. “The most essential thing in new lands is horses,” reported one Spanish soldier. “They instill the greatest fear in the enemy and make the Indians respect the leaders of the army.” Even more feared among the Indians were the greyhound dogs that the Spaniards used to guard their camps.

CORTÉS’S CONQUEST The first European conquest of a major Indian civilization on the North American mainland began on February 18, 1519, when Hernando Cortés, driven by dreams of gold and glory, set sail from Cuba with nearly 600 soldiers and sailors. Also on board were 200 Cuban natives, sixteen horses, and several cannons. When the invaders landed at Vera Cruz, on the Mexican Gulf coast, they were assaulted by thousands of Indian warriors. After defeating the native force, Cortés invited the warriors to join his advance on the Aztecs. He then burned all but one of the Spanish ships. There would be no turning back.

Cortés in Mexico

Page from the Tlaxcala Lienzo, a historical narrative from the sixteenth century. The scene, in which Cortés is shown seated on a throne, depicts the arrival of the Spaniards in Tlaxcala.

Cortés's expedition was unauthorized. His soldiers, called conquistadores, received no pay; they were military entrepreneurs willing to risk their lives for a share in the expected plunder and slaves. The ruthless Cortés had participated in the Spanish occupation of Cuba and had acquired his own plantations and gold mines. But he yearned for even more wealth and glory. Against the wishes of the Spanish governor in Cuba, who wanted the Aztec Empire for himself, Cortés launched the daring invasion of Mexico. The 200-mile march from Vera Cruz through difficult mountain passes to the magnificent Aztec capital of Tenochtitlán (north of present-day Mexico City) and the subjugation of the Aztecs, who thought themselves "masters of the world," constituted one of the most remarkable feats in history.

Tenochtitlán, with some 200,000 inhabitants, was the largest city in the Americas and was much larger than Seville, the most populous city in Spain. Graced by wide canals and verdant gardens and boasting beautiful stone pyramids and other buildings, the fabled capital seemed impregnable. But Cortés made the most of his assets. His invasion force had landed in a coastal region where the local Indians were still fighting off the spread of Aztec power and were ready to embrace new allies, especially those possessing strange animals (horses) and powerful weapons. By a combination of threats and deceptions, Cortés entered Tenochtitlán peacefully and made the emperor, Montezuma II, his puppet. Cortés explained to Montezuma why the invasion was necessary: "We Spaniards have a disease of the heart that only gold can cure." Montezuma mistook Cortés for a returning god.

After taking all the Aztec gold, the Spanish forced Montezuma to provide Indian laborers to mine more. This state of affairs lasted until the spring of 1520, when disgruntled Aztecs, regarding Montezuma as a traitor, rebelled, stoned him to death, and attacked Cortés's forces. The Spaniards lost about one third of their men as they retreated. Their 20,000 Indian allies remained loyal, however, and Cortés gradually regrouped his men. In 1521, having been reinforced with troops from Cuba and thousands of Indians eager to defeat the Aztecs, he besieged the imperial city for eighty-five days, cutting off its access to water and food and allowing a smallpox epidemic to decimate the inhabitants. An African slave infected with the virus spawned the contagion. As a Spaniard observed, the smallpox "spread over the people as great destruction. Some it covered on all parts—their faces, their heads, their breasts, and so on. There was great havoc. Very many died of it. . . . They could not move; they could not stir." The ravages of smallpox help explain how such a small force of determined Spaniards lusting for gold and silver was able to

vanquish a proud nation of nearly 1 million people. Montezuma's nephew led the final fierce assault by the desperate Aztecs. Some 15,000 died in the battle. After the Aztecs surrendered, a merciless Cortés ordered the leaders hanged and the priests devoured by dogs. He and his officers replaced them as rulers over the Aztec Empire. In two years the brilliant Cortés and his disciplined army had conquered a fabled empire that had taken thirty centuries to develop.

Cortés and his army set the style for plundering conquistadores to follow, who within twenty years had established a sprawling Spanish Empire in the New World. Between 1522 and 1528 various lieutenants of Cortés's conquered the remnants of Indian culture in the Yucatán Peninsula and Guatemala. In 1531 Francisco Pizarro led a band of soldiers down the Pacific coast from Panama toward Peru, where they brutally subdued the Inca Empire. From Peru, conquistadores had extended Spanish authority south through Chile by about 1553 and north, to present-day Colombia, by 1536 to 1538.

SPANISH AMERICA The Spaniards sought to displace the “pagan” civilizations of the Americas with their Catholic-based culture. Believing that God was on their side in this cultural exchange, the Spaniards carried with them a fervent sense of mission that bred both intolerance and zeal. The conquistadores transferred to America a system known as the *encomienda*, whereby favored officers became privileged landowners who controlled Indian villages or groups of villages. As *encomenderos*, they were called upon to protect and care for the villages and support missionary priests. In turn they could require Indians to provide them with goods and labor. Spanish America therefore developed from the start a society of extremes: wealthy conquistadores and *encomenderos* at one end of the spectrum and native peoples held in poverty at the other end.

What was left of them, that is. By the mid-1500s native Indians were nearly extinct in the West Indies, reduced more by European diseases than by Spanish brutality. To take their place, as early as 1503 the colonizers began to transport Africans to work as slaves, the first in a wretched traffic that eventually would carry over 9 million people across the Atlantic. In all of Spain's New World empire, by one informed estimate, the Indian population dropped from about 50 million at the outset to 4 million in the seventeenth century and slowly rose again to 7.5 million by the end of the eighteenth century. Whites, who totaled no more than 100,000 in the mid-sixteenth century, numbered over 3 million by the end of the colonial period.

The Indians, however, did not always lack advocates. In many cases Catholic missionaries offered a sharp contrast to the conquistadores. Setting

an example of self-denial, they ventured into remote areas, usually without weapons or protection, to spread the gospel—and often suffered martyrdom for their efforts. Among them rose defenders of the Indians, the most noted of whom was Bartolomé de Las Casas, a priest in Hispaniola and later a bishop in Mexico, author of *A Brief Relation of the Destruction of the Indies* (1552).

From such violently contrasting forces, Spanish America gradually developed into a settled society. The independent conquistadores were replaced by a second generation of bureaucrats, and the *encomienda* was succeeded by the hacienda (a great farm or ranch) as the claim to land became a more important source of wealth than the Spanish claim to labor. From the outset, in sharp contrast to the later English experience, the Spanish government regulated every detail of colonial administration. After 1524 the Council of the Indies, directly under the crown, issued laws for America, served as the appellate court for civil cases arising in the colonies, and administered the bureaucracy.

The culture of Spanish America would be fundamentally unlike the English-speaking culture that would arise to the north. In fact, a difference already existed among the pre-Columbian Indians with largely nomadic tribes to the north and the more complex civilizations inhabiting Mesoamerica. On the latter world the Spaniards imposed an overlay of their own peculiar ways, but without uprooting the deeply planted cultures they found. Catholicism, which for centuries had absorbed pagan gods and transformed pagan feasts into such holy days as Christmas and Easter, in turn adapted Indian beliefs and rituals to its own purposes. The Mexican Virgin of Guadalupe Hidalgo, for instance, evoked memories of feminine divinities in native cults. Thus Spanish America, in the words of the modern-day Mexican writer Octavio Paz, became a land of superimposed pasts: “Mexico City was built on the ruins of Tenochtitlán, the Aztec city that was built in the likeness of Tula, the Toltec city that was built in the likeness of Teotihuacán, the first great city on the American continent. Every Mexican bears within him this continuity, which goes back two thousand years.”

SPANISH EXPLORATIONS Throughout the sixteenth century no European power other than Spain had more than a brief foothold in the New World. Spain had the advantage not only of having sponsored the discovery but also of having stumbled onto those parts of America that would bring the quickest profits. While France and England struggled with domestic quarrels and religious conflict, Spain had forged an intense national unity. Under Charles V, heir to the throne of Austria and the Netherlands and Holy Roman emperor to boot, Spain dominated Europe as well as the

New World. The treasures of the Aztecs and the Incas added to its power, but the easy reliance on American gold and silver also undermined the basic economy of Spain and tempted the government to live beyond its means. The influx of gold from the New World also caused inflation throughout Europe.

For most of the colonial period, much of what is now the United States belonged to Spain, and Spanish culture has left a lasting imprint upon American ways of life. Spain's colonial presence lasted more than three centuries, much longer than either England's or France's. New Spain was centered in Mexico, but its frontiers extended from the Florida Keys to Alaska and included areas not currently thought of as formerly Spanish, such as the Deep South and the lower Midwest. Hispanic place-names—San Francisco, Santa Barbara, Los Angeles, San Diego, Tucson, Santa Fe, San Antonio, Pensacola, and St. Augustine—survive to this day, as do Hispanic influences in art, architecture, literature, music, law, and cuisine.

The Spanish encounter with Native American populations and their diverse cultures produced a two-way exchange by which the two societies blended, coexisted, and interacted. Even when locked in mortal conflict and riven by hostility and mutual suspicion, the two cultures necessarily affected each other. The imperative of survival forced both natives and conquerors to devise creative adaptations. In other words, the frontier world, while permeated with violence, coercion, and intolerance, also produced a mutual accommodation that enabled two living traditions to persist side by side. For example, the Pueblo Indians of the Southwest practiced two religious traditions simultaneously, adopting Spanish Catholicism while retaining the essence of their inherited animistic faith.

The "Spanish borderlands" of the southern United States preserve many reminders of the Spanish presence. The earliest known exploration of Florida was made in 1513 by Juan Ponce de León, then governor of Puerto Rico. Meanwhile, Spanish explorers skirted the Gulf coast from Florida to Vera Cruz, scouted the Atlantic coast from Key West to Newfoundland, and established a short-lived colony on the Carolina coast.

Sixteenth-century knowledge of the North American interior came mostly from would-be conquistadores who sought to plunder the hinterlands. The first, Pánfilo de Narváez, landed in 1528 at Tampa Bay, marched northward to Apalachee, an Indian village in present-day Alabama, and then returned to the coast near present-day St. Marks, Florida, where his party contrived crude vessels in the hope of reaching Mexico. Wrecked on the coast of Texas, a few survivors under Álvar Núñez Cabeza de Vaca worked their way painfully overland and after eight years stumbled into a Spanish outpost in western Mexico.

What were the Spanish conquistadores' goals for exploring the Americas? How did Cortés conquer the Aztecs? Why did the Spanish first explore North America, and why did they establish St. Augustine, the first European settlement in what would become the United States?

Hernando de Soto followed their example. With 600 men, as well as horses, and war dogs, he landed on Florida's west coast in 1539, hiked up as far as western North Carolina and then moved westward beyond the Mississippi River and up the Arkansas River, looting and destroying Indian villages along the way. In the spring of 1542, de Soto died near Natchez; the next year the

survivors among his party floated down the Mississippi, and 311 of the original adventurers found their way to Mexico. In 1540 Francisco Vázquez de Coronado, inspired by rumors of gold, traveled northward into New Mexico and northeast across Texas and Oklahoma as far as Kansas. He returned in 1542 without gold but with a more realistic view of what lay in those arid lands.

The Spanish established provinces in North America not so much as commercial enterprises but as defensive buffers protecting their more lucrative trading empire in Mexico and South America. They were concerned about French traders infiltrating from Louisiana, English settlers crossing into Florida, and Russian seal hunters wandering down the California coast.

Yet the Spanish settlements in what is today the United States never flourished. Preoccupied with a lust for gold, the Spanish never understood the significance of developing a viable market economy. England and France eventually surpassed Spain in America because Spain mistakenly assumed that developing a thriving trade in goods with the Native Americans was less important than the conversion of “heathens” and the relentless search for gold and silver.

The first Spanish outpost in the present United States emerged in response to French encroachments on Spanish claims. In the 1560s French Huguenots (Protestants) established short-lived colonies in what became South Carolina and Florida. In 1565 a Spanish outpost, St. Augustine, became the first European town in the present-day United States and is now its oldest urban center, except for the pueblos of New Mexico. Spain’s colony at St. Augustine included fort, church, hospital, fish market, and over 100 shops and houses—all built decades before the first English settlements at Jamestown and Plymouth. While other outposts failed, St. Augustine survived as a defensive base perched on the edge of a continent.

THE SPANISH SOUTHWEST The Spanish eventually established other permanent settlements in what is now New Mexico, Texas, and California. Eager to pacify rather than fight the far more numerous Indians of the region, the Spanish used religion as an effective instrument of colonial control. Missionaries, particularly Franciscans and Jesuits, established isolated Catholic missions where they taught Christianity to the Indians. After about ten years a mission would be secularized: its lands would be divided among the converted Indians, the mission chapel would become a parish church, and the inhabitants would be given full Spanish citizenship—including the privilege of paying taxes. The soldiers who were sent to protect the missions were housed in presidios, or forts; their families and the merchants accompanying them lived in adjacent villages.

The land that would later be called New Mexico was the first center of mission activity in the American Southwest. In 1598 Juan de Oñate, the

wealthy son of a Spanish mining family in Mexico, received a patent for the territory north of Mexico above the Rio Grande. With an expeditionary military force made up mostly of Mexican Indians and mestizos (sons of Spanish fathers and native mothers), he took possession of New Mexico, established a capital north of present-day Santa Fe at San Gabriel, and sent out expeditions to search for evidence of gold and silver deposits. He promised the Pueblo Indian leaders that Spanish dominion would bring them peace, justice, prosperity, and protection. Conversion to Catholicism offered even greater benefits: “an eternal life of great bliss” instead of “cruel and everlasting torment.”

Some Indians welcomed the missionaries as “powerful witches” capable of easing their burdens. Others tried to use the invaders as allies against rival tribes. Still others saw no alternative but to submit. The Indians living in Spanish New Mexico were required to pay tribute to their *encomenderos* and perform personal tasks for them, including sexual favors. Disobedient Indians were flogged, by soldiers and priests.

Cultural Conflict

This 1616 Peruvian illustration, from a manuscript by Felipe Guamán Poma de Ayala, shows a Dominican friar forcing a native woman to weave.

Before the end of the province’s first year, the Indians revolted, killing several soldiers and incurring Oñate’s wrath. During three days of relentless fighting, the army killed 500 Pueblo men and 300 women and children. Survivors were enslaved. Pueblo males over the age of twenty-five had one foot severed in a public ritual intended to strike fear in the hearts of the Indians and keep them from escaping or resisting. Children were taken from their parents and placed under the care of a Franciscan mission, where, Oñate remarked, “they may attain the knowledge of God and the salvation of their souls.”

During the first three quarters of the seventeenth century, Spanish New Mexico expanded very slowly. The hoped-for deposits of gold and silver were never found,

and a sparse food supply blunted the interest of potential colonists. The Spanish king prepared to abandon the colony only to realize that Franciscan missionaries had baptized so many Pueblo Indians that they could not be deserted. In 1608 the government decided to turn New Mexico into a royal province. The following year it dispatched a royal governor, and in 1610, as English settlers were struggling to survive at Jamestown, in Virginia, the Spanish moved the capital of New Mexico to Santa Fe, the first permanent seat of government in the present-day United States. By 1630 there were fifty Catholic churches and friaries in New Mexico and some 3,000 Spaniards.

The leader of the Franciscan missionaries claimed that 86,000 Pueblo Indians had been converted to Christianity. In fact, however, resentment among the Indians increased with time. In 1680 a charismatic Indian leader named Popé organized a massive rebellion that spread across hundreds of miles. Within a few weeks the Spaniards had been driven from New Mexico. The outraged Indians burned churches; tortured, mutilated, and executed priests; and destroyed all relics of Christianity. The Pueblo revolt of 1680 was the greatest setback that the natives ever inflicted on European efforts to conquer and colonize the New World. It took fourteen years and four military assaults for the Spaniards to reestablish control over New Mexico. Thereafter, except for sporadic raids by Apaches and Navajos, the Spanish pacified the region. Spanish outposts on the Florida and Texas Gulf coasts and in California did not appear until the eighteenth century.

HORSES AND THE GREAT PLAINS Another major consequence of the Pueblo Revolt was the opportunity it afforded Indian rebels to acquire hundreds of coveted Spanish horses (Spanish authorities had made it illegal for Indians to own horses). The Pueblos in turn established a thriving horse trade with Navajos, Apaches, and other tribes. By 1690 horses were evident in Texas, and they soon spread across the Great Plains, the vast rolling grasslands extending from the Missouri River valley in the east to the base of the Rocky Mountains in the west.

Horses were a disruptive ecological force in North America; they provided the pedestrian Plains Indians with a transforming source of mobility and power. Prior to the arrival of horses, Indians hunted on foot and used dogs as their beasts of burden, hauling their supplies on travois, devices made from two long poles connected by leather straps. But dogs are carnivores, and it was often difficult to find enough meat to feed them. Horses changed everything. They are grazing animals, and the endless grasslands of the Great Plains offered plenty of forage. Horses could also haul up to seven times as much weight as dogs, and their speed and endurance made the Indians much

more effective hunters and warriors. In addition, horses enabled Indians to travel farther to trade and fight.

The ready availability of large numbers of horses thus worked a revolution in the economy and ecology of the Great Plains. Such tribes as the Arapaho, Cheyenne, Comanche, Kiowa, and Sioux reinvented themselves as equestrian societies. They left their traditional woodland villages on the fringes of the plains and became nomadic bison (buffalo) hunters. Using horses, they could haul larger tepees and more meat and hides with them, building temporary camps as they migrated year-round with the immense bison herds, wintering in sheltered glades along rivers. The once-deserted plains soon were a crossroads of activity. Indians used virtually every part of the bison they killed: meat for food; hides for clothing, shoes, bedding, and shelter; muscles and tendons for thread and bowstrings; intestines for containers; bones for tools; horns for eating utensils; hair for headdresses; and dung for fuel. One scholar has referred to the bison as the “tribal department store.” The Plains Indians supplemented bison meat with roots and berries they gathered along the way. In the fall the nomadic tribes would travel

Plains Indians

The horse-stealing raid depicted in this hide painting demonstrates the essential role horses played in Plains life.

south to exchange hides and robes for food or to raid Indian farming villages.

In the short run the horse brought prosperity and mobility to the Plains Indians. Horses became the center and symbol of Indian life on the plains. Yet the noble animal also brought insecurity, instability, and conflict. Indians began to kill more bison than the herds could replace. In addition, the herds of horses competed with the bison for food, often depleting the grass and compacting the soil in the river valleys during the winter. As tribes traveled greater distances and encountered more people, infectious diseases spread more widely.

Horses became so valuable that they provoked thievery and intensified intertribal competition and warfare. Within tribes a family's status was determined by the number of horses it possessed. Horses eased some of the physical burdens on women but imposed new demands. Women and girls were assigned the responsibility of tending to the horses. They also had to butcher and dry the buffalo meat and tan the hides. As the value of the hides grew, male hunters began to indulge in polygamy: more wives could process more buffalo. The rising economic value of wives eventually led Plains Indians to raid farming tribes in search of captive brides as well as horses. The introduction of horses into the Great Plains, then, was a decidedly mixed blessing. By 1800 a plains trader could observe that "this is a delightful country, and were it not for perpetual wars, the natives might be the happiest people on earth."

THE PROTESTANT REFORMATION

While Spain was building her empire in the Americas, a new movement was growing in Europe: the Protestant Reformation. It would intensify national rivalries and, by encouraging serious challenges to Catholic Spain's power, profoundly affect the course of early American history. When Columbus sailed in 1492, all of western Europe acknowledged the supremacy of the Catholic Church and its pope in Rome. The unity of Christendom began to crack in 1517, however, when Martin Luther, a German theologian and monk, posted his ninety-five theses in protest against abuses in the church. He especially criticized the sale of indulgences, whereby priests would forgive sins in exchange for money or goods. Sinners, Luther argued, could win salvation neither by good works nor through the mediation of the church but only by faith in the redemptive power of Christ and through a direct relationship with God—the "priesthood of all believers."

Lutheranism spread rapidly among the people and their rulers—some of them with an eye to seizing church property. When the pope expelled Luther

from the church in 1521, reconciliation became impossible. The German states erupted in conflict over religious differences; a settlement did not come until 1555, when they agreed to let each prince determine the religion of his subjects. Most of northern Germany, along with Scandinavia, became Lutheran. The principle of close association between church and state thus carried over into Protestant lands, but Luther had unleashed volatile ideas that ran beyond his control.

Other Protestants pursued Luther's doctrine to its logical end and preached religious liberty for all. Further divisions on doctrinal matters led to the appearance of various sects, such as the Anabaptists, who rejected infant baptism and favored the separation of church and state. Other offshoots—including the Mennonites, Amish, Bretheren (Dunkers), Familists, and Schwenkfelders—appeared first in Europe and later in America, but the more numerous like-minded groups would be the Baptists and the Quakers, whose origins were English.

CALVINISM Soon after Martin Luther began his revolt, Swiss Protestants also challenged the authority of Rome. In Geneva the reform movement looked to John Calvin, a French scholar who had fled to that city and brought it under the sway of his beliefs. In his great theological work, *The Institutes of the Christian Religion* (1536), Calvin set forth a stern doctrine. All people, he taught, were damned by Adam's original sin, but the sacrifice of Christ made possible their redemption. The experience of grace, however, was open only to those whom God had elected and thus had predestined to salvation from the beginning of time. Predestination was an uncompromising doctrine, but the infinite wisdom of God was beyond human understanding.

Calvin insisted upon strict morality and hard work, values that especially suited the rising middle class. Moreover, he taught that people serve God through any legitimate labor, and he permitted lay members a share in the governance of the church through a body of elders and ministers called the presbytery. Calvin's doctrines became the basis for the beliefs of the German Reformed Church, the Dutch Reformed Church, the Presbyterians in Scotland, some of the Puritans in England, and the Huguenots in France. Through these and other groups, Calvin exerted a greater effect upon religious belief and practice in the English colonies than did any other single leader of the Reformation.

THE REFORMATION IN ENGLAND In England the Reformation followed a unique course. The Church of England, or the Anglican Church, took form through a gradual process of integrating Calvinism with English

Catholicism. In early modern England, church and state were united and mutually supportive. The government required citizens to attend religious services and to pay taxes to support the Church of England. The English monarchs also supervised the hierarchy of church officials: two archbishops, twenty-six bishops, and thousands of parish clergy. The royal rulers often instructed the religious leaders to preach sermons in support of particular government policies. As one English king explained, “People are governed by the pulpit more than the sword in time of peace.”

Purely political reasons initially led to the rejection of papal authority in England. Henry VIII (r. 1509–1547), the second monarch of the Tudor dynasty, had in fact won from the pope the title of Defender of the Faith for refuting Martin Luther’s ideas. But Henry’s marriage to Catherine of Aragon had produced no male heir, and to marry again he required an annulment. In the past, popes had found ways to accommodate such requests, but Catherine was the aunt of Charles V, king of Spain and ruler of the Holy Roman Empire, whose support was vital to the church’s cause on the Continent. So the pope refused to grant an annulment. Unwilling to accept the rebuff, Henry severed England’s connection with Rome, named a new archbishop of Canterbury, who granted the annulment, and married his mistress, the lively Anne Boleyn.

In one of history’s greatest ironies, Anne Boleyn gave birth not to the male heir that Henry demanded but to a daughter, named Elizabeth. The disappointed king later accused his wife of adultery, ordered her beheaded, and declared the infant Elizabeth a bastard. Yet Elizabeth received a first-rate education and grew up to be quick-witted and nimble, cunning and courageous. After the bloody reigns of her Protestant half brother, Edward VI, and her Catholic half sister, Mary I, she ascended the throne in 1558 and over the next forty-five years proved to be the most remarkable female ruler in history. Her long reign over the troubled island kingdom was punctuated by political turmoil, religious tension, economic crises, and foreign wars. Yet Queen Elizabeth came to rule over England’s golden age.

Queen Elizabeth I

Shown here in her coronation robes, ca. 1590.

Born into a man's world and given a man's role, Elizabeth could not be a Catholic, for in the Catholic view she was illegitimate. During her reign, therefore, the Church of England became Protestant, but in its own way. The organizational structure, centered on bishops and archbishops, remained much the same, but the doctrine and practice changed: the Latin liturgy became, with some changes, the English *Book of Common Prayer*, the cult of saints was dropped, and the clergy were permitted to marry. For the sake of unity, the "Elizabethan settlement" allowed some latitude in theology and other matters, but this did not satisfy all. Some Britons tried to enforce the letter of the law, stressing traditional Catholic practices. Many others, however, especially those under Calvinist influence, wished to "purify" the church of all its Catholic remnants. Some of these Puritans would leave England to build their own churches in America. Those who broke altogether with the Church of England were called Separatists. Thus, the religious controversies associated with the English Reformation so dominated the nation's political life that interest in colonizing the New World was forced to the periphery of concern.

CHALLENGES TO THE SPANISH EMPIRE

The Spanish monopoly on New World colonies remained intact throughout the sixteenth century, but not without challenge from national rivals spurred by the emotion unleashed by the Protestant Reformation. The French were the first to pose a serious threat. Spanish treasure ships from the New World were tempting targets for French privateers. In 1524 the French king sent the Italian Giovanni da Verrazano in search of a passage to Asia. Sighting land (probably at Cape Fear, North Carolina), Verrazano ranged along the coast as far north as Maine. On a second voyage, in 1528, his life met an abrupt end in the West Indies at the hands of the Caribs.

Unlike the Verrazano voyages, those of Jacques Cartier, beginning in the next decade, led to the first French effort at colonization. On three voyages, Cartier explored the Gulf of St. Lawrence and ventured up the St. Lawrence River. Twice he got as far as present-day Montreal and twice wintered at or near the site of Quebec, near which a short-lived French colony appeared in 1541–1542. From that time forward, however, French kings lost interest in Canada. France after midcentury plunged into religious civil wars, and the colonization of Canada had to await the coming of Samuel de Champlain, "the Father of New France," after 1600.

From the mid-1500s, greater threats to Spanish power arose from the growing strength of the Dutch and the English. The provinces of the Netherlands,

Who were the first European explorers to rival Spanish dominance in the New World, and why did they cross the Atlantic? Why was the defeat of the Spanish Armada important to the history of English exploration? What was the significance of the voyages of Gilbert and Raleigh?

which had passed by inheritance to the Spanish king and had become largely Protestant, rebelled against Spanish rule in 1567. A bloody struggle for independence ensued. Spain did not accept the independence of the Dutch republic until 1648.

Almost from the beginning of the Dutch revolt against Spain, the Dutch “Sea Beggars,” privateers working out of English and Dutch ports, plundered Spanish ships in the Atlantic and carried on illegal trade with Spain’s colonies. The Sea Beggars soon had their counterpart in the English “sea dogges”: John Hawkins, Francis Drake, and others. While Queen Elizabeth steered a tortuous course to avoid open war with Catholic Spain, she encouraged both Dutch and English captains to engage in smuggling and piracy. In 1577 Drake embarked on his famous adventure around South America, raiding Spanish towns along the Pacific and surprising a treasure ship from Peru. Continuing in a vain search for a passage back to the Atlantic, he spent seven weeks at Drake’s Bay in New Albion, as he called California. Eventually he found his way westward around the world and arrived home in 1580. Elizabeth knighted him upon his return.

THE ARMADA’S DEFEAT The plundering of Spanish shipping by English privateers continued for some twenty years before open war erupted. In 1568 Queen Elizabeth’s cousin Mary, Queen of Scots, ousted by Scottish Presbyterians in favor of her infant son, fled to England. Mary, who was Catholic, had a claim to the English throne by virtue of her descent from Henry VII and soon became the focus of Spanish-Catholic intrigues to overthrow the Protestant Elizabeth. In 1587, after the discovery of a plot to kill her and elevate Mary to the throne, Elizabeth yielded to the demands of her ministers and had Mary beheaded.

Seeking revenge for Mary’s execution, Spain’s king, Philip II, decided to crush Protestant England and so began to gather his ill-fated Armada, whereupon Admiral Francis Drake’s warships destroyed part of the Spanish fleet before it was ready to sail. Drake’s foray postponed for a year the departure of the “Invincible Armada,” which set out to invade England in 1588. As the two fleets positioned themselves for the great naval battle, Elizabeth donned a silver breastplate and told the English forces, “I know I have the body of a weak and feeble woman, but I have the heart and stomach of a king, and a King of England too.” As the battle unfolded, the heavy Spanish galleons could not compete with the smaller, faster English vessels. Drake’s fleet harried the Spanish ships through the English Channel on their way to the Netherlands, where the Armada was to pick up an invasion force. But caught up in a powerful “Protestant wind” from the south, the storm-tossed

The “Invincible Armada”

The fleet of the Spanish Armada in a contemporary English oil painting.

Spanish fleet was swept into the North Sea instead. What was left of it finally found its way home around the British Isles, scattering wreckage on the shores of Scotland and Ireland.

Defeat of the Spanish Armada marked the beginning of English naval supremacy and cleared the way for English colonization of America. The naval victory was the climactic event of Queen Elizabeth’s reign. England at the end of the sixteenth century was in the springtime of its power, filled with a youthful zest for new worlds and new wonders.

ENGLISH EXPLORATION The history of the English efforts to colonize America begins with Sir Humphrey Gilbert and his half brother, Sir Walter Raleigh. In 1578 Gilbert, who had long been a favorite of the queen’s, secured a royal patent to possess “heathen and barbarous landes countries and territories not actually possessed of any Christian prince or people.” Significantly, the patent guaranteed to settlers and their descendants in such a colony the rights and privileges of Englishmen “in suche like ample manner and fourme as if they were borne and personally residaunte within our

sed Realme of England.” Their laws had to be “agreable to the forme of the lawes and pollicies of England.”

Gilbert, after two false starts, set out with a colonial expedition in 1583, intending to settle near Narragansett Bay (in present-day Rhode Island). He instead landed in Newfoundland and took possession of the land for Elizabeth. With winter approaching and his largest vessels lost, Gilbert resolved to return home. While in transit, however, his ship vanished, and he was never seen again.

RALEIGH’S LOST COLONY The next year, Sir Walter Raleigh persuaded the queen to renew Gilbert’s colonizing mission in his own name. Sailing by way of the West Indies, the flotilla came to the Outer Banks of North Carolina and discovered Roanoke Island, where the soil seemed fruitful and the natives friendly. After several false starts, Raleigh in 1587 sponsored an expedition of about 100 colonists, including women and children,

The Arrival of the English in Virginia

The 1585 arrival of English explorers on the Outer Banks, with Roanoke Island at left.

under Governor John White. White spent a month in Roanoke and then returned to England for supplies, leaving behind his daughter Elinor and his granddaughter Virginia Dare, the first English child born in the New World. White's return was delayed because of the war with Spain. When he finally landed, in 1590, he found Roanoke abandoned and pillaged.

No trace of the "lost colonists" was ever found. Hostile Indians may have destroyed the colony, or hostile Spaniards—who had certainly planned to attack—may have done the job. The most recent evidence indicates that the "Lost Colony" fell prey to the region's worst drought in eight centuries. Tree-ring samples reveal that the colonists arrived during the driest seven-year period in 770 years. While some may have gone south, the main body of colonists appears to have gone north, to the southern shores of Chesapeake Bay, as they had talked of doing, and lived there for some years until they were killed by local Indians. Unless some remnant of the Roanoke settlement did survive in the woods, there was not a single English colonist in North America when Queen Elizabeth died in 1603.

MAKING CONNECTIONS

- The funding of the voyages of discovery by various European nations had implications for the settlement and control of the New World, as will be discussed in later chapters.
- The settlement pattern of the Spanish in the New World and the wealth they plundered will be contrasted in the next chapter with the patterns of English settlement and the English sources of wealth in the New World.
- The next chapter describes how the Reformation and religious controversies in Europe led various groups to found their own settlements in the New World, where they did not face religious discrimination and persecution.

BRITAIN AND ITS COLONIES

FOCUS QUESTION

- What were the reasons for the founding of the different colonies in North America?
- How did the British colonists and the Native Americans adapt to each other's presence?
- What factors made England successful in North America?

The England that Queen Elizabeth bequeathed to the Scottish King James I in 1603, like the colonies it would plant, was a unique blend of elements. The language and the people themselves mixed Germanic and Latin ingredients. The Anglican Church mixed Protestant theology and Catholic rituals. And the growth of royal power paradoxically had been linked to the rise of English liberties, in which even Tudor monarchs took pride. In the course of their history, the English people have displayed a genius for “muddling through,” a gift for the pragmatic compromise that defies logic but in the light of experience somehow works.

THE ENGLISH BACKGROUND

Dominated by England, the British Isles included the distinct kingdoms of Wales, Ireland, and Scotland. England, set off from continental Europe by the English Channel, had safe frontiers after the union of the English and Scottish crowns in 1603. Such comparative isolation enabled the nation to develop institutions quite different from those on the Continent. Unlike the absolute monarchs of France and Spain, the British rulers had to share power with the aristocracy and a lesser aristocracy, known as the gentry, whose representatives formed the bicameral legislature known as Parliament.

By 1600 the decline of feudal practices was far advanced. The great nobles, decimated by the Wars of the Roses, had been brought to heel by Tudor monarchs and their ranks filled with men loyal to the crown. In fact the only nobles left, strictly speaking, were those who sat in the House of Lords. All others were commoners, and among their ranks the aristocratic pecking order ran through a great class of landholding squires, distinguished mainly by their wealth and bearing the simple titles of “esquire” and “gentleman,” as did many well-to-do townsmen. They in turn mingled freely, and often intermarried, with the classes of yeomen (small freehold farmers) and merchants.

ENGLISH LIBERTIES It was to these middle classes that the Tudors looked for support and, for want of bureaucrats or a standing army, local government. Chief reliance in the English counties was on the country gentlemen, who usually served as officials without pay. Government, therefore, allowed a large measure of local initiative. Self-rule in the counties and towns became a habit—one that, along with the offices of justice of the peace and sheriff, English colonists took along to the New World as part of their cultural baggage.

In the making of laws, the monarch’s subjects consented through representatives in the House of Commons. Subjects could be taxed only with the consent of Parliament. By its control of the purse strings, Parliament drew other strands of power into its hands. This structure of powers served as an unwritten constitution. The Magna Carta (Great Charter) of 1215 was a statement of privileges wrested by certain nobles from the king, but it became part of a broader assumption that the people as a whole had rights that even the monarch could not violate.

A further safeguard of English liberty was the tradition of common law, which had developed since the twelfth century in royal courts established to

check the arbitrary power of local nobles. Without laws to cover every detail, judges had to exercise their own ideas of fairness in settling disputes. Decisions once made became precedents for subsequent decisions, and over the years a body of judge-made law developed, the outgrowth more of practical experience than of abstract logic. The courts evolved the principle that people could be arrested or their goods seized only upon a warrant issued by a court and that individuals were entitled to a trial by a jury of their peers (their equals) in accordance with established rules of evidence.

ENGLISH ENTERPRISE English liberties inspired a sense of personal initiative and enterprise that spawned prosperity and empire. The ranks of entrepreneurs and adventurers were constantly replenished by the younger sons of the squirearchy, cut off from the estate that the oldest son inherited according to the law of primogeniture (or firstborn). At the same time the formation of joint-stock companies spurred commercial expansion. These entrepreneurial companies were the ancestors of the modern corporation, in which stockholders, not the government, shared the risks and profits, sometimes for a single venture but more and more on a permanent basis. In the late sixteenth century some of the larger companies managed to get royal charters that entitled them to monopolies in certain areas and even government powers in their outposts. Such companies would become the first instruments of colonization.

For all the vaunted glories of English liberty and enterprise, it was not the best of times for the common people. During the late sixteenth century the “lower sort” in Britain experienced a population explosion that outstripped the ability of the economy to support so many workers. An additional strain on the population was the “enclosure” of farmlands where peasants had lived and worked. For more than two centuries, serfdom had been on the way to extinction as the feudal duties of serfs were transformed into rents and the serfs themselves into tenants. But while tenancy gave people a degree of independence, it also allowed landlords to increase demands and, as the trade in woolen products grew, to “enclose” farmlands and evict the human tenants in favor of sheep. The enclosure movement of the sixteenth century, coupled with the rising population, gave rise to the great number of beggars and rogues who peopled the literature of Elizabethan times and gained immortality in Mother Goose: “Hark, hark, the dogs do bark. The beggars have come to town.” The needs of this displaced peasant population, on the move throughout Great Britain, became another powerful argument for colonial expansion. The displaced poor migrated from farms to crowded towns and cities. London became a powerful magnet for vagabonds. By the seventeenth

century the English capital was notorious for its filth, poverty, crime, and class tensions—all of which helped persuade the ruling elite to send idle and larcenous commoners abroad to settle new colonies.

PARLIAMENT AND THE STUARTS With the death of Elizabeth, who never married and did not give birth to an heir, the Tudor family line ran out and the throne fell to the first of the Stuarts, whose dynasty would span most of the seventeenth century, a turbulent time during which the English planted their overseas empire. In 1603 James VI of Scotland, son of the ill-fated Mary, Queen of Scots, and great-great-grandson of Henry VII, became James I of England—as Elizabeth had planned. A man of ponderous learning, James fully earned his reputation as the “wisest fool in Christendom.” Tall and broad-shouldered, he was bisexual, conceited, profligate, and lazy and possessed an undiplomatic tongue. He lectured the people on every topic but remained blind to English traditions and sensibilities. Whereas the Tudors had wielded absolute power through constitutional forms, James promoted the theory of divine right, by which monarchs answered only to God. Whereas the Puritans hoped to find a Presbyterian ally in their opposition to Anglican trappings, they found instead a testy autocrat who

promised to banish them. He even offended Anglicans, by deciding to end his cousin Elizabeth's war with Catholic Spain.

Charles I, who succeeded his father James, in 1625, proved even more stubborn about royal power. He disbanded Parliament from 1629 to 1640 and levied taxes by decree. In the religious arena the archbishop of Canterbury, William Laud, directed a systematic persecution of Puritans but finally overreached himself when he tried to impose Anglican worship on Presbyterian Scots. In 1638 Scotland rose in revolt, and in 1640 Charles called Parliament to raise money for the defense of his kingdom. The "Long Parliament" impeached Laud instead and condemned to death the king's chief minister. In 1642, when the king tried to arrest five members of Parliament, civil war erupted between the "Roundheads," who backed Parliament, and the "Cavaliers," who supported the king.

In 1646 Royalist resistance collapsed, and parliamentary forces captured the king. Parliament, however, could not agree on a permanent settlement. A dispute arose between Presbyterians and Independents (who preferred a congregational church government), and in 1648 the Independents purged the Presbyterians, leaving a "Rump Parliament" that then instigated the trial and execution of King Charles I on charges of treason.

Oliver Cromwell, the tenacious commander of the army, operated like a military dictator, ruling first through a council chosen by Parliament (the Commonwealth) and, after forcible dissolution of Parliament, as lord protector (the Protectorate). Cromwell extended religious toleration to all Britons except Catholics and Anglicans, but his arbitrary governance and his stern moralistic codes provoked growing public resentment. When, after his death in 1658, his son proved too weak to carry on, the army once again took control, permitted new elections for Parliament, and in 1660 supported the Restoration of the monarchy under Charles II, son of the martyred king.

Charles II accepted as terms of the Restoration settlement the principle that he must rule jointly with Parliament. By tact or shrewd maneuvering, he managed to hold his throne. His younger brother, the duke of York (who became James II upon succeeding to the throne in 1685), was less flexible. He openly avowed Catholicism and assumed the same unyielding stance as the first two Stuarts. The people could bear it so long as they expected one of his Protestant daughters, Mary or Anne, to succeed him. In 1688, however, the birth of a son who would be reared a Catholic finally brought matters to a crisis. Leaders of Parliament invited Mary and her husband, William of Orange, a Dutch prince, to assume the throne jointly, and James fled the country.

By this “Glorious Revolution,” Parliament finally established its freedom from royal control. Under the Bill of Rights, in 1689, William and Mary gave up the royal prerogatives of suspending laws, erecting special courts, keeping a standing army, or levying taxes except by Parliament’s consent. They further agreed to hold frequent legislative sessions and allow freedom of speech in Parliament, freedom of petition to the crown, and restrictions against excessive bail and cruel and unusual punishments. The Act of Toleration of 1689 extended a degree of freedom of worship to all Christians except Catholics and Unitarians, although dissenters from the established church still had few political rights. In 1701 the Act of Settlement ensured Protestant succession through Queen Anne (r. 1702–1714). And by the Act of Union in 1707, England and Scotland became the United Kingdom of Great Britain.

SETTLING THE CHESAPEAKE

During these eventful years all but one of Britain’s thirteen North American colonies had their start. They began as corporations rather than new countries. In 1606 King James I chartered a joint-stock enterprise called the Virginia Company, with two divisions, the First Colony of London and the Second Colony of Plymouth. The London group of investors could plant a settlement between the 34th and 38th parallels, the Plymouth group between the 41st and 45th parallels, and either between the 38th and 41st parallels, provided they kept 100 miles apart. The stockholders expected a potential return from gold and other minerals; products—such as wine, citrus fruits, and olive oil—that would free England from dependence on Spain; trade with the Indians; pitch, tar, potash, and other forest products needed for naval use; and perhaps a passage to east Asia. Some investors saw colonization as an opportunity to transplant the growing number of jobless vagrants from Britain to the New World. Others dreamed of finding another Aztec or Inca Empire. Few if any foresaw what the first English colony would actually become: a place to grow tobacco.

From the outset the pattern of English colonization diverged significantly from the Spanish pattern, which involved conquering highly sophisticated peoples and regulating all aspects of colonial life. While interest in America was growing, the English were already involved in planting settlements, or “plantations,” in Ireland, which the English had conquered by military force under Queen Elizabeth. Within their own pale (or limit) of settlement in Ireland, the English set about transplanting their familiar way of life insofar as possible.

The English would apply the same pattern as they settled North America, subjugating (and converting) the Indians there as they had the Irish in Ireland. Yet in America the English settled along the Atlantic seaboard, where the native populations were relatively sparse. There was no Aztec or Inca Empire to conquer. The colonists thus had to establish their own communities in a largely wilderness setting. Describing the “settlement” of the Atlantic seaboard is somewhat misleading, however, for the British colonists who arrived in the seventeenth century rarely *settled* in one place for long. They were migrants more than settlers, people who had been on the move in Britain and continued to pursue new opportunities in different places once they arrived in America.

VIRGINIA The London group of the Virginia Company planted the first permanent colony in Virginia, named after Elizabeth I, “the Virgin Queen.” On May 6, 1607, three tiny ships carrying 105 men reached Chesapeake Bay

after four storm-tossed months at sea. They chose a river with a northwest bend—in the hope of finding a passage to Asia—and settled about forty miles inland, to hide from marauding Spaniards.

The river they called the James and the colony, Jamestown. The seaweary colonists began building a fort, thatched huts, a storehouse, and a church. They then set to planting, but most were either townsmen unfamiliar with farming or “gentleman” adventurers who scorned manual labor. They had come expecting to find gold, friendly natives, and easy living. Instead they found disease, starvation, dissension, and death. Ignorant of woodlore, they did not know how to exploit the area’s abundant game and fish. Supplies from England were undependable, and only some effective leadership and trade with the Indians, who taught the colonists to grow maize, enabled them to survive.

The Indians of the region were loosely organized. Powhatan was the powerful, charismatic chief of numerous Algonquian-speaking towns in eastern Virginia, representing over 10,000 Indians. The Indians making up the so-called Powhatan Confederacy were largely an agricultural people focused on raising corn. They lived along rivers in fortified towns and resided in wood houses sheathed with bark. Chief Powhatan collected tribute from the tribes he had conquered—fully 80 percent of the corn that they grew was handed over. Despite occasional clashes with the colonists, the Indians initially adopted a stance of nervous assistance and watchful waiting. Powhatan developed a lucrative trade with the colonists, exchanging corn and hides for hatchets, swords, and muskets; he realized too late that the newcomers intended to expropriate his lands and subjugate his people.

The colonists, as it happened, had more than a match for Powhatan in Captain John Smith, a stocky twenty-seven-year-old soldier of fortune with rare powers of leadership and self-promotion. The Virginia Company, impressed by Smith’s exploits in foreign wars, had appointed him a member of the council to manage the new colony in America. It was a wise decision. Of the original 105 settlers, only 38 survived the first nine months. With the colonists on the verge of starvation, Smith imposed strict discipline and forced all to labor, declaring that “he that will not work shall not eat.” In dealing with mutinies, skirmishes, and ambushes, he imprisoned, whipped, and forced colonists to labor. Smith also bargained with the Indians and explored and mapped the Chesapeake region. Through his efforts, Jamestown survived, but Smith’s dictatorial acts did not endear him to many of the colonists.

In 1609 the Virginia Company moved to reinforce Jamestown. More colonists were dispatched, including several women. A new charter replaced

What did the stockholders of the Virginia company hope to gain from the first two English colonies in North America? How were the first English settlements different from the Spanish settlements in North America? What were the major differences between the first colony of London and the second colony of Plymouth?

the largely ineffective council with an all-powerful governor whose council was only advisory. The company then lured new investors and attracted new settlers with the promise of free land after seven years of labor. The company in effect had given up hope of prospering except through the sale of land, which would rise in value as the colony grew. The governor, the noble Lord De La Warr (Delaware), sent as interim governor Sir Thomas Gates. In 1609 Gates set out with a fleet of nine vessels and about 500 passengers and crew. On the way he was shipwrecked on Bermuda, where he and the other survivors wintered in comparative ease, subsisting on fish, fowl, and wild pigs. (Their story was transformed by William Shakespeare into his play *The Tempest*.)

Most of the fleet did reach Jamestown, however. Some 400 settlers overwhelmed the remnant of about 80. All chance that John Smith might control things was lost when he suffered a gunpowder burn and sailed back to England. The consequence was anarchy and the “starving time” of the winter of 1609–1610, during which most of the colonists, weakened by hunger, died of disease or starvation. A prolonged drought had hindered efforts to grow

Colonial Necessities

food. By May 1610, when Gates and his companions made their way to Jamestown on two small ships built in Bermuda, only about 60 settlers remained alive. During the winter of 1610, as starvation grew pervasive, desperate colonists consumed their horses, cats, and dogs, then rats and mice. A few even ate the leather from their shoes and boots. Some fled to nearby Indian villages, only to be welcomed with arrows. One man was executed for killing his pregnant wife and feasting on her remains.

In June 1610, as the colonists made their way down the river toward the sea, the new governor, Lord Delaware, providentially arrived with three ships and 150 men. The colonists returned to Jamestown and created new settlements upstream at Henrico (Richmond) and two more downstream, near the mouth of the river. It was a critical turning point for the colony, whose survival required a combination of stern measures and not a little luck. When Lord Delaware returned to England in 1611, Gates took charge of the colony and established a strict system of laws. Severe even by the standards of a ruthless age, the new code enforced a militaristic discipline needed for survival. When one laborer was caught stealing oatmeal, the authorities had a long needle thrust through his tongue, chained him to a tree, and let him starve to death as a grisly example to the community. Desperate colonists who fled to join the Indians were caught and hanged or burned at the stake. The new colonial regime also assaulted the local Indians. English colonists attacked Indian villages and destroyed their crops. One commander reported that they marched a captured Indian queen and her children to the river, where they “put the Children to death . . . by throwing them overboard and shooting out their brains in the water.”

Over the next seven years the Jamestown colony limped along until it gradually found a reason for being: tobacco. The plant had been grown in the West Indies for years, and smoking had become a popular habit in Europe. In 1612 John Rolfe had begun to experiment with the harsh Virginia tobacco. Eventually he got hold of some seed from the more savory Spanish varieties, and by 1616 the weed had become a profitable export staple. Even though King James dismissed smoking as “loathsome to the eye, hateful to the nose, harmful to the brain, and dangerous to the lungs,” he swallowed his objections to the “noxious weed” when he realized how much revenue it provided the monarchy. Virginia’s tobacco production soared during the seventeenth century. Tobacco was such a profitable crop for Virginia planters that they could afford to purchase more indentured servants, thus increasing the flow of immigrants to the colony.

Meanwhile John Rolfe had made another contribution to stability by marrying Pocahontas, the daughter of Chief Powhatan. Pocahontas (a nickname

Pocahontas

Shown here in European dress, by 1616 Pocahontas was known as “Lady Rebecca.”

usually translated as “Frisky”; her given name was Matoaka) had been a familiar figure in Jamestown almost from the beginning. In 1607, then only eleven, she figured in perhaps the best-known story of the settlement, her plea for the life of John Smith. Smith had gotten into trouble when he led a small group up the James River in search of a northwest passage. When the Englishmen trespassed on Powhatan’s territory, the Indians attacked. Smith was wounded and captured. Others in his scouting party were tortured and disemboweled. Smith was marched to Powhatan’s village, interrogated, and readied for execution. At that point, according to

Smith, Pocahontas made a dramatic appeal for his life, and Powhatan eventually agreed to release the foreigner in exchange for muskets, hatchets, beads, and trinkets.

Schoolchildren still learn the dramatic story of Pocahontas intervening to save Smith. Such dramatic events are magical; they inspire movies, excite our imagination, animate history—and confuse it. Pocahontas and John Smith were never in love. Moreover, the young Indian princess saved the swash-buckling Smith on more than one occasion. Then she herself was captured. In 1614 the Jamestown settlers kidnapped Pocahontas in an effort to blackmail Powhatan. As the weeks passed, however, she surprised her captors by choosing to join them. She embraced Christianity, was renamed Rebecca, and fell in love with John Rolfe. They married and in 1616 moved with their infant son, Thomas, to London. There the young princess drew excited attention from the royal family and curious Londoners. But only a few months after arriving, Rebecca, aged twenty, contracted a lung disease and died.

In 1618 Sir Edwin Sandys, a prominent member of Parliament, became head of the Virginia Company and instituted a series of reforms. First of all he inaugurated a new “headright” policy: anyone who bought a share in the company and could get to Virginia could have fifty acres, and fifty more for any servants. The following year the company relaxed the colony’s military regime and promised that the settlers would have the “rights of Englishmen,” including a representative assembly.

A new governor arrived with instructions to put the new order into effect, and on July 30, 1619, the first General Assembly of Virginia, including the governor, six councilors, and twenty-two burgesses, met in the church at Jamestown and deliberated for five days, “sweating & stewing, and battling flies and mosquitoes.” It was an eventful year in two other respects. The promoters also saw a need to send out more wives for the men. During 1619 a ship arrived with ninety young women, who were to be sold to likely husbands of their own choice for the cost of transportation (about 125 pounds of tobacco). And a Dutch ship stopped by and dropped off “20 Negars,” the first Africans known to have reached English America.

The profitable tobacco trade intensified the settlers’ lust for land. They especially coveted Indian fields because they had already been cleared and were ready to be planted. In 1622 the Indians, led by Opechancanough, Powhatan’s brother and successor, tried to repel the land-grabbing English. They killed one fourth of the settlers, some 350 colonists, including John Rolfe (who had returned from England). In England, John Smith denounced the Indian assault as a “massacre” and dismissed the “savages” as “cruel beasts” whose “brutishness” exceeded that of wild animals. Whatever moral doubts had earlier plagued English settlers were now swept away. The English thereafter sought to wipe out the Indian presence along their frontier.

Some 14,000 men, women, and children had migrated to Jamestown since 1607, but most of them had died; the population in 1624 stood at a precarious 1,132. Despite the initial achievements of the company, after about 1617 a handful of insiders appropriated large estates and began to monopolize the indentured workers. Some made fortunes from the tobacco boom, but most of the thousands sent out died before they could prove themselves. In 1624 an English court dissolved the struggling Virginia Company, and Virginia became a royal colony.

The king did not renew instructions for a legislative assembly, but his governors found it impossible to rule the troublesome Virginians without one. Annual assemblies met after 1629, although they were not recognized by the crown for another ten years. After 1622 relations with the Indians continued in a state of what the governor’s council called “perpetual enmity.” The combination of warfare and disease decimated the Indians in Virginia. The 24,000 Algonquians who inhabited the colony in 1607 were reduced to 2,000 by 1669.

Sir William Berkeley, who arrived as Virginia’s governor in 1642, presided over the colony’s growth for most of the next thirty-five years. The turmoil of Virginia’s early days gave way to a more stable period. Tobacco prices peaked, and the large planters began to consolidate their

economic gains through political action. They assumed key civic roles as justices of the peace and sheriffs, helped initiate internal improvements such as roads and bridges, supervised elections, and collected taxes. They also formed the able-bodied men into local militias. Despite the presence of a royal governor, the elected Virginia assembly continued to assert its sovereignty, making laws for the colony and resisting the governor's encroachments.

Virginia at midcentury continued to serve as a magnet for new settlers. As the sharp rise in tobacco profits leveled off, planters began to grow corn and raise cattle. The increase in the food supply helped lower mortality rates and fuel a rapid rise in population. By 1650 there were 15,000 white residents of Virginia. Many former servants became planters in their own right. Women typically improved their status through marriage. If they outlived their husbands—and many did—they inherited the property and often increased their wealth through second and even third marriages.

The relentless stream of new settlers into Virginia exerted constant pressure on Indian lands and produced unwanted economic effects. The increase in the number of planters spurred a dramatic rise in agricultural production. That in turn caused the cost of land to soar and the price of tobacco to plummet. To sustain their competitive advantage, the largest planters bought up the most fertile land along the coast, thereby forcing freed servants to become tenants or claim less fertile land inland. In either case the tenants found themselves at a disadvantage. They grew dependent on planters for land and credit, and small farmers along the frontier became more vulnerable to Indian attacks.

The plight of the common folk worsened after 1660, when a restored monarchy under Charles II instituted new trade regulations for the colonies. By 1676 one fourth of the free white men in Virginia were landless. Vagabonds roamed the roads, squatting on private property, working at odd jobs, or poaching game or engaging in other petty crimes in order to survive. Alarmed by the growing social unrest, the large planters who controlled the assembly—generally ruthless and callous men—lengthened terms of indenture, passed more stringent vagrancy laws, stiffened punishments, and stripped the landless of their political rights. Such efforts only increased social friction.

BACON'S REBELLION A variety of simmering tensions—caused by depressed tobacco prices, rising taxes, roaming livestock, and crowds of freed servants greedily eyeing Indian lands—contributed to the tangled events that have come to be labeled Bacon's Rebellion. The roots of the revolt grew out of a festering hatred for the domineering colonial governor,

William Berkeley. He had limited his circle of friends to the wealthiest planters, and he had granted them most of the frontier land and public offices. He despised commoners. The large planters who dominated the assembly levied high taxes to finance Berkeley's regime, which in turn supported their interests at the expense of the small farmers and servants. With little nearby land available, newly freed indentured servants were forced to migrate westward in their quest for farms. Their lust for land led them to displace the Indians. When Governor Berkeley failed to support the aspiring farmers, they rebelled. The tyrannical governor expected as much. Just before the outbreak of rebellion, Berkeley had remarked in a letter: "How miserable that man is that Governes a People where six parts of seaven at least are Poore, Endebted, Discontented and Armed."

The discontent turned to violence in 1675 when a petty squabble between a frontier planter and the Doeg Indians on the Potomac River led to the murder of the planter's herdsman and, in turn, to retaliation by frontier militiamen, who killed ten or more Doegs and, by mistake, fourteen Susquehannocks. Soon a force of Virginia and Maryland militiamen attacked the Susquehannocks and murdered five chieftains who had come out to negotiate. The enraged survivors took their revenge on frontier settlements. Scattered attacks continued on down to the James River, where Nathaniel Bacon's overseer was killed.

By then, their revenge accomplished, the Susquehannocks had pulled back. What followed had less to do with a state of war than with a state of hysteria. Governor Berkeley proposed that the assembly erect a series of forts along the frontier. But that would not slake the English thirst for revenge—nor would it open new lands to settlement. Besides, it would be expensive. Some thought Berkeley was out to preserve a profitable fur trade for himself.

In 1676 Nathaniel Bacon defied Governor Berkeley's authority by assuming command of a group of frontier vigilantes. The tall, slender twenty-nine-year-old Bacon, a graduate of Cambridge University, had been in Virginia only two years, but he had been well set up by an English father relieved to get his vain, ambitious, hot-tempered son out of the country. Later historians would praise Bacon as the "Torchbearer of the Revolution" and leader of the first struggle of common folk versus aristocrats. In part that was true. The rebellion he led was largely a battle of servants, small farmers, and even slaves against Virginia's wealthiest planters and political leaders. But Bacon was also a rich squire's spoiled son with a talent for trouble. It was his ruthless assaults against peaceful Indians and his desire for power and land rather than any commitment to democratic principles that sparked his conflict with the governing authorities.

Bacon despised the Indians and resolved to kill them all. Berkeley opposed Bacon's genocidal plan not because he liked Indians but because he wanted to protect his lucrative monopoly over the deerskin trade with the Indians. Bacon ordered the governor arrested. Berkeley's forces resisted—but only feebly—and Bacon's men burned Jamestown. Bacon, however, could not savor the victory long; he fell ill and died of dysentery a month later.

Governor Berkeley quickly regained control; he hanged twenty-three rebels and confiscated several estates. When his men captured one of Bacon's closest lieutenants, Berkeley gleefully exclaimed: "I am more glad to see you than any man in Virginia. Mr. Drummond, you shall be hanged in half an hour." For such severity the king denounced Berkeley as a "fool" and recalled him to England, where he died within a year. A royal commission made peace treaties with the remaining Indians, about 1,500 of whose descendants still live in Virginia on tiny reservations guaranteed them in 1677. The end result of Bacon's Rebellion was that new lands were opened to the colonists, and the wealthy planters became more cooperative with the small farmers.

MARYLAND In 1634, ten years after Virginia became a royal colony, a neighboring settlement appeared on the northern shores of Chesapeake Bay. Named Maryland in honor of Queen Henrietta Maria, it was granted to Lord Baltimore by King Charles I and became the first proprietary colony—that is, it was owned by an individual, not a joint-stock company. Sir George Calvert, the first Lord Baltimore, had announced in 1625 his conversion to Catholicism and sought the colony as a refuge for English Catholics, who were subjected to discrimination at home. His son, Cecilius Calvert, the second Lord Baltimore, actually founded the colony.

In 1634 Calvert planted the first settlement in Maryland at St. Marys, on a small stream near the mouth of the Potomac River. Calvert brought Catholic gentlemen as landholders, but a majority of the servants were Protestants. The charter gave Calvert power to make laws with the consent of the freemen (all property holders). The first legislative assembly met in 1635 and divided into two houses in 1650, with governor and council sitting separately. This action was instigated by the predominantly Protestant freemen—largely servants who had become landholders and immigrants from Virginia. The charter also empowered the proprietor to grant huge manorial estates, and Maryland had some sixty before 1676, but the Lords Baltimore soon found that to draw settlers they had to offer them small farms. The colony was meant to rely upon mixed farming, but its fortunes, like those of Virginia, soon came to depend upon tobacco.

SETTLING NEW ENGLAND

Far to the north of the Chesapeake Bay colonies, quite different settlements were emerging. The New England colonists were generally made up of middle-class families who could pay their own way across the Atlantic. In the Northeast there were relatively few indentured servants, and there was no planter elite. Most male settlers were small farmers, merchants, seamen, or fishermen. New England also became home to more women than did the southern colonies. Although its soil was not as fertile as that of the Chesapeake and its farmers not as wealthy as the southern planters, New England was a much healthier place to settle. Because of its colder climate, the region did not foster the infectious diseases that ravaged the southern colonies. Life expectancy was much longer. During the seventeenth century only 21,000

colonists arrived in New England, compared with the 120,000 who went to the Chesapeake. But by 1700 New England's white population exceeded that of Maryland and Virginia.

Most early New Englanders were devout Puritans, who embraced a much more rigorous faith than the Anglicans of Virginia and Maryland. In 1650, for example, Massachusetts boasted one minister for every 415 persons, compared with one minister per 3,239 persons in Virginia. The Puritans who arrived in America believed themselves to be on a divine mission to create a model society committed to the proper worship of God. In their efforts to separate themselves from a sinful England and its authoritarian Anglican bishops, New England's zealous Puritans sought to create "holy commonwealths" that would help inspire a spiritual transformation in their homeland. In the New World these self-described "saints" could purify their churches of all Catholic and Anglican rituals, supervise one another in practicing a communal faith, and enact a code of laws and a government structure based on biblical principles. Such a holy settlement, they hoped, would provide a beacon of righteousness for a wicked England to emulate.

PLYMOUTH In 1620 a band of English settlers headed for Virginia strayed off course and made landfall at Cape Cod, off the coast of Massachusetts. There they decided to establish a colony, naming it Plymouth after the English port from which they had embarked. The "Pilgrims" who established the Plymouth Plantation belonged to the most uncompromising sect of Puritans, the Separatists, who had severed all ties with the Church of England. Many Separatists had fled to Holland in 1607 to escape persecution. After ten years in the Dutch city of Leiden, they longed for English ways and the English flag. If they could not have them at home, perhaps they might transplant them to the New World.

The Leiden Separatists secured a land patent from the Virginia Company and set up a joint-stock company. In 1620, 102 men, women, and children, led by William Bradford, crammed aboard the three-masted *Mayflower*. Their ranks included both "saints" (people recognized as having been elected by God for salvation) and "strangers" (those yet to receive the gift of grace). The latter group included John Alden, a cooper (barrel maker), and Myles Standish, a soldier hired to organize their defenses. The stormy voyage had led them to Cape Cod. "Being thus arrived at safe harbor, and brought safe to land," William Bradford wrote, "they fell upon their knees and blessed the God of Heaven who had brought them over the vast and furious ocean." Since they were outside the jurisdiction of any organized government, forty-one of the Pilgrim leaders entered into a formal agreement

New World Navigation

Sailors on a sixteenth-century oceangoing vessel navigating by the stars.

to abide by the laws made by leaders of their own choosing—the Mayflower Compact.

On December 26 the *Mayflower* reached the harbor of the place they named Plymouth and stayed there until April to give shelter and support while the Pilgrims built dwellings on the site of an abandoned Indian village. Nearly half the colonists died of exposure and disease, but friendly relations with the neighboring Wampanoag Indians proved their salvation. In the spring of 1621, the colonists met Squanto, an Indian who spoke English and showed them how to grow maize. By autumn the Pilgrims had a bumper crop of corn, a flourishing fur trade, and a supply of lumber for shipment. To celebrate, they held a harvest feast in the company of Chief Massasoit and the Wampanoags. That event provided the inspiration for what has become Thanksgiving.

In 1623 Plymouth gave up its original communal economy and stipulated that now each male settler was to provide for his family from his own land. Throughout its separate existence, until absorbed into Massachusetts in 1691, the Plymouth colony remained in the anomalous position of holding a

Why did European settlers first populate the Plymouth colony? How were the settlers of the Massachusetts Bay Colony different from those of Plymouth? What was the origin of the Rhode Island colony?

land grant but no charter of government from any English authority. The government grew instead out of the Mayflower Compact, which was neither exactly a constitution nor a precedent for later constitutions. Rather, it was the obvious recourse of a group that had made a covenant (or agreement) to form a church and believed God had made a covenant with them to provide a way to salvation. Thus the civil government grew naturally out of the church government, and the members of each were identical at the start. The

signers of the compact at first met as the General Court, which chose the governor and his assistants (or council). Later others were admitted as members, or “freemen,” but only church members were eligible. Eventually, as the colony grew, the General Court became a body of representatives from the various towns.

MASSACHUSETTS BAY The Plymouth colony’s population never rose above 7,000, and after ten years it was overshadowed by its larger neighbor, the Massachusetts Bay Colony. It, too, was originally intended to be a holy commonwealth made up of religious folk bound together in the harmonious worship of God and the pursuit of their “callings.” Like the Pilgrims, most of the Puritans who colonized Massachusetts Bay were Congregationalists, who formed self-governing churches with membership limited to “visible saints”—those who could demonstrate receipt of the gift of God’s grace. But unlike the Plymouth Separatists, the Puritans (who referred to themselves as the “godly”) still hoped to reform the Church of England, and therefore they were called Nonseparating Congregationalists.

In 1629 King Charles I issued a charter for the Massachusetts Bay Company to a group of English Puritans led by John Winthrop, a lawyer from East Anglia animated by profound religious convictions. Winthrop, tall and strong with a long face, resolved to use the colony as a refuge for persecuted Puritans and as an instrument for building a “wilderness Zion” in America.

Winthrop shrewdly took advantage of a fateful omission in the royal charter for the Massachusetts Bay Company: the usual proviso that the company maintain its home office in England. Winthrop’s group took its charter with them, thereby transferring government authority to Massachusetts Bay, where they hoped to ensure Puritan control. So unlike the Virginia Company, which ruled Jamestown from London, the Massachusetts Bay Company was self-governing.

In 1630 the *Arbella*, with John Winthrop and the charter aboard,

John Winthrop

The first governor of Massachusetts Bay Colony, in whose vision the colony would be as “a city upon a hill.”

embarked with six other ships for Massachusetts. In “A Modell of Christian Charity,” a lay sermon delivered on board, Winthrop told his fellow Puritans that “we must consider that we shall be a city upon a hill”—a shining example of what a godly community could be. They landed in Massachusetts, and by the end of the year seventeen ships bearing 1,000 more colonists had arrived. As settlers—both Puritan and non-Puritan—poured into the region, Boston became the new colony’s chief city and capital.

The *Arbella* migrants proved to be the vanguard of a massive movement, the Great Migration, that carried some 80,000 Britons to new settlements around the world over the next decade. Fleeing religious persecution and economic depression at home, they gravitated to Ireland, the Netherlands, and the Rhineland. But the majority traveled to the New World. They went not only to New England and the Chesapeake but also to new English settlements in the Caribbean.

The transfer of the Massachusetts charter, whereby an English trading company evolved into a provincial government, was a unique venture in colonization. Under the royal charter, power in the company rested with the Massachusetts General Court, which elected the governor and the assistants. The General Court consisted of shareholders, called freemen (those who had the “freedom of the company”), but only a few besides Winthrop and his assistants had such status. That suited Winthrop and his friends, but then over 100 settlers asked to be admitted as freemen. Rather than risk trouble, the ruling group finally admitted 118 in 1631, stipulating that only church members could become freemen.

At first the freemen had no power except to choose “assistants,” who in turn chose the governor and deputy governor. The procedure violated provisions of the charter, but Winthrop kept the document hidden and few knew of the exact provisions. Controversy simmered until 1634, when each town sent two delegates to Boston to confer on matters coming before the General Court. There they demanded to see the charter, which Winthrop reluctantly produced, and they read that the power to pass laws and levy taxes rested in the General Court. Winthrop argued that the body of freemen had grown too large, but when it met, the General Court responded by turning itself into a representative body with two or three deputies to represent each town. The freemen also chose a new governor, and Winthrop did not resume the office until three years later.

A final stage in the evolution of the government, a two-house legislature, came in 1644, when, according to Winthrop, “there fell out a great business upon a very small occasion.” The “small occasion” pitted a poor widow against a well-to-do merchant over ownership of a stray sow. The General Court, being the supreme judicial as well as legislative body, was the final authority in the case. Popular sympathy and the deputies favored the widow,

Why did Britons settle in the West Indies in the seventeenth and eighteenth centuries? Keeping in mind what you have read in Chapter 1 about the colonies in the West Indies, what products would you expect those colonies to produce? Why would those colonies have had strategic importance to the British?

but the assistants disagreed. The case was finally settled out of court, but the assistants feared being outvoted on some greater occasion. They therefore secured a separation into two houses, and Massachusetts thenceforth had a bicameral assembly, the deputies and assistants sitting apart, with all decisions requiring a majority in each house.

Thus over a period of fourteen years, the Massachusetts Bay Company, a trading corporation, evolved into the governing body of a commonwealth. Membership in a Puritan church replaced the purchase of stock as the means of becoming a freeman, which was to say a voter. The General Court, like Parliament, became a representative body of two houses: the House of Assistants corresponding roughly to the House of Lords and the House of Deputies corresponding to the House of Commons. The charter remained unchanged, but practice under the charter was quite different from the original expectation.

It is hard to exaggerate the crucial role played by John Winthrop in establishing the Massachusetts Bay Colony. He had been a man of limited means and little stature who nonetheless, as the new colony's godly governor, summoned up extraordinary leadership abilities. A devout pragmatist who often governed as an enlightened despot, he steadfastly sought to steer a middle course between clerical absolutists and Separatist zealots. Winthrop firmly believed that God had chosen him to create a godly community in the New World. His stern charisma and his indefatigable faith in the ideal of Christian republicanism enabled him to fend off Indian attacks and antinomian insurgencies as well as political challenges. He also thwarted the efforts of powerful foes in England who challenged the infant colony's legality. An iron-souled man governing a God-saturated community, John Winthrop provided the foundation not only for a colony but also for major elements in America's cultural and political development.

RHODE ISLAND More by accident than design, Massachusetts became the staging area for the rest of New England as new colonies grew out of religious quarrels within the fold. Young Roger Williams, who had arrived from England in 1631, was among the first to cause problems, precisely because he was the purest of Puritans, troubled by the failure of Massachusetts Nonconformists to repudiate the Church of England entirely. Whereas John Winthrop cherished authority, Roger Williams championed liberty. Unlike the Puritans and the Pilgrims, who asserted that God created a covenant with each congregation, Williams came to believe that the true covenant was between God and the individual. He was one of a small but growing number of Puritans who began to question the seeming contradiction at the heart of Calvinism: if one's salvation depends solely upon God's grace and one can do nothing to affect it, why bother to have churches at all? Why not endow individuals with the authority to exercise their free will in worshipping God?

Williams held a brief pastorate in Salem, then moved to Separatist Plymouth. Governor Bradford found Williams to be gentle and kind in his personal relations as well as a charismatic speaker. But he charged that

The Church of England

Religious quarrels within the Puritan fold led to the founding of new colonies. In this seventeenth-century cartoon, four Englishmen, each representing a party in opposition to the established church, are shown fighting over the Bible.

Williams “began to fall into strange opinions,” specifically, questioning the king’s right to confiscate Indian lands. Williams then returned to Salem. Williams’s belief that a true church must include only those who had received God’s gift of grace led him eventually to the conclusion that no true church was possible, unless perhaps consisting of his wife and himself.

In Williams’s view the purity of the church required complete separation of church and state and freedom from coercion in matters of faith. “Forced worship,” he declared, “stinks in God’s nostrils.” Williams therefore questioned the

authority of government to impose an oath of allegiance and rejected laws imposing religious conformity. Such views were too radical even for the progressive church of Salem, which finally removed him, whereupon Williams retorted so hotly against “ulcered and gangrened” churches that the General Court in 1635 banished him to England. Governor Winthrop, however, permitted Williams to slip away with his family and a few followers and seek shelter among the Narragansett Indians, whom he had befriended. In 1636 Williams established the town of Providence at the head of Narragansett Bay, the first permanent settlement in Rhode Island and the first in America to legislate freedom of religion. There he welcomed all who fled religious persecution in Massachusetts Bay. For their part, Boston officials came to view Rhode Island as a refuge for rogues.

Anne Hutchinson quarreled with the Puritan leaders for different reasons. The articulate, strong-willed, intelligent wife of a prominent merchant, she raised thirteen children, served as a healer and midwife, and hosted meetings in her Boston home to discuss sermons. Soon, however, the discussions turned into large forums for Hutchinson’s commentaries on religious matters. She claimed to have experienced direct revelations from the Holy Spirit that convinced her that only two or three Puritan ministers actually preached the appropriate “covenant of grace.” The others, she claimed, were godless hypocrites, deluded and incompetent; the “covenant of works” they promoted led people to believe that good conduct would ensure salvation. Eventually Hutchinson claimed to know which of her neighbors had been saved and which were damned.

Hutchinson’s beliefs were provocative for several reasons. Puritan theology was grounded in the Calvinist doctrine that people could be saved only by God’s grace rather than through their own willful actions. But Puritanism in practice also insisted that ministers were necessary to interpret God’s will for the people so as to “prepare” them for the possibility of their being selected for salvation. In challenging the very legitimacy of the ministerial community as well as the hard-earned assurances of salvation enjoyed by current church members, Hutchinson was undermining the stability of an already fragile social system. Moreover, her critics likened her claim of direct revelations from the Holy Spirit to the antinomian heresy, a subversive belief that one is freed from obeying the moral law by one’s own faith and by God’s grace. Unlike Roger Williams, Hutchinson did not advocate religious individualism. Instead, she sought to eradicate the concept of “grace by good works” infecting Puritan orthodoxy. She did not represent a forerunner of modern feminism or freedom of conscience. Instead, she was a proponent of a theocratic extremism that threatened the solidarity of the commonwealth.

What made the situation worse in the male-dominated society of seventeenth-century New England was that a *woman* was making such charges and assertions. Mrs. Hutchinson had both offended authority and sanctioned a disruptive self-righteousness.

A pregnant Hutchinson was hauled before the General Court in 1637, and for two days she sparred on equal terms with the presiding magistrates and testifying ministers. Her skillful deflections of the charges and her ability to cite chapter-and-verse biblical defenses of her actions led an exasperated Governor Winthrop at one point to explode, “We do not mean to discourse with those of your sex.” He found Hutchinson to be “a woman of haughty and fierce carriage, of a nimble wit and active spirit, and a very voluble tongue.” As the trial continued, an overwrought Hutchinson was eventually lured into convicting herself by claiming direct divine inspiration—blasphemy in the eyes of orthodox Puritans.

Banished in 1638 as a leper not fit for “our society,” Hutchinson settled with her family and a few followers on an island south of Providence, near what is now Portsmouth, Rhode Island. But the arduous journey had taken its toll. Hutchinson grew sick, and her baby was stillborn, leading her critics in Massachusetts to assert that the “monstrous birth” was God’s way of punishing her for her sins. Hutchinson’s spirits never recovered. After her husband’s death, in 1642, she moved to New York City, then under Dutch jurisdiction, and the following year she and five of her children were massacred and scalped during an Indian attack. Her fate, wrote a vindictive Winthrop, was “a special manifestation of divine justice.”

Thus the colony of Rhode Island and Providence Plantations, the smallest in America, grew up in Narragansett Bay as a refuge for dissenters who agreed that the state had no right to coerce religious belief. In 1640 they formed a confederation and in 1643 secured their first charter of incorporation as Providence Plantations. Roger Williams lived until 1683, an active and beloved citizen of the commonwealth he founded, in a society that, during his lifetime at least, lived up to his principles of religious freedom and a government based on the consent of the people.

CONNECTICUT Connecticut had a more orthodox beginning than Rhode Island. In 1633 a group from Plymouth settled in the Connecticut River valley. Three years later Thomas Hooker led three entire church congregations from Massachusetts Bay to the Connecticut River towns of Wethersfield, Windsor, and Hartford.

For a year the settlers in the river towns were governed under a commission from the Massachusetts General Court, but the inhabitants organized

the self-governing colony of Connecticut in 1637. Two years later the Connecticut General Court adopted the Fundamental Orders, a series of laws that provided for a government like that of Massachusetts, except that voting was not limited to church members. New Haven had by then emerged as a major settlement within Connecticut. A group of English Puritans, led by their minister and a wealthy merchant, had migrated first to Massachusetts and then, seeking a place to establish themselves in commerce, to New Haven, on Long Island Sound, in 1638. The New Haven colony became the most rigorously Puritan of all. Like all the other offshoots of Massachusetts, it lacked a charter and for a time maintained a self-governing independence. In 1662 it was absorbed into Connecticut under the terms of that colony's first royal charter.

NEW HAMPSHIRE AND MAINE To the north of Massachusetts, most of what are now the states of New Hampshire and Maine was granted in 1622 by the Council for New England to Sir Ferdinando Gorges and Captain John Mason and their associates. In 1629 Mason and Gorges divided their territory at the Piscataqua River, Mason taking the southern part, which he named New Hampshire, and Gorges taking the northern part, which became the province of Maine. In the 1630s Puritan immigrants began filtering in, and in 1638 the Reverend John Wheelwright, one of Anne Hutchinson's group, founded Exeter, New Hampshire. Maine at that time consisted of a few scattered settlements, mostly fishing stations.

An ambiguity in the Massachusetts charter brought the proprietorships into doubt, however. The charter set the boundary three miles north of the Merrimack River, and the Bay Colony took that to mean north of the river's northernmost reach, which gave it a claim to nearly the entire Gorges-Mason grant. During the English civil strife in the early 1640s, Massachusetts took over New Hampshire and in the 1650s extended its authority to the scattered settlements in Maine. This led to lawsuits with the heirs of the proprietors, and in 1678 English judges and the Privy Council decided against Massachusetts in both cases. In 1679 New Hampshire became a royal colony, but Massachusetts bought out the Gorges heirs and continued to control Maine as its proprietor. A new Massachusetts charter in 1691 finally incorporated Maine into Massachusetts.

INDIANS IN NEW ENGLAND

The English settlers who poured into New England found not a "virgin land" of uninhabited wilderness but a developed region populated by over 100,000 Indians of diverse tribes. The white colonists considered the natives

wild pagans incapable of fully exploiting nature's bounty. In their view, God meant for the Puritans to take over Indian lands as a reward for their piety and hard work. The town meeting of Milford, Connecticut, for example, voted in 1640 that the land was God's "and that the earth is given to the Saints; voted, we are the Saints."

Indians coped with the newcomers in different ways. Many resisted, others sought accommodation, and still others grew dependent on European culture. In some areas, Indians survived and even flourished in concert with European settlers over long periods of time and with varying degrees of advantage. In other areas, land-hungry whites quickly displaced or decimated the native populations. The interactions of the two cultures involved misunderstandings, the mutual need for trade and adaptation, and sporadic outbreaks of epidemics and warfare.

In general, the English colonists adopted a strategy for dealing with the Native American quite different from that of the French and the Dutch. Merchants from France and the Netherlands were preoccupied with exploiting the fur trade. To do so, they built permanent trading outposts and established amicable relations with the far more numerous Indians in the region. In contrast, the English colonists were more interested in pursuing their "God-given" right to fish and farm. They were quite willing to manipulate and exploit Indians rather than deal with them on an equal footing. Their goal was subordination rather than reciprocity.

THE NEW ENGLAND INDIANS In Maine the Abenakis were primarily hunters and gatherers dependent upon the natural offerings of the land and waters. The men did the hunting and fishing; the women retrieved the dead game and prepared it for eating. Women were also responsible for setting up and breaking camp, gathering fruits and berries, and raising the children. The Algonquian tribes of southern New England—the Massachusetts, Nausets, Narragansets, Pequots, and Wampanoags—were more horticultural. Their highly developed agricultural system centered on three primary crops: corn, beans, and pumpkins.

The Indians' dependence on nature for their survival shaped their religious beliefs. They believed in a Creator who provided them with the land and its bountiful resources. Many rituals, ceremonies, and taboos acknowledged their dependence upon the gods. Rain dances, harvest festivals, and sacrificial offerings bespoke a culture whose fate was dependent upon supernatural powers.

Initially the coastal Indians helped the white settlers develop a subsistence economy. They taught the Europeans how to plant corn and use fish for fertilizer. They also developed a flourishing trade with the newcomers, exchanging furs for manufactured goods and "trinkets." The various Indian

tribes of New England often fought among themselves, usually over disputed land. Had they been able to forge a solid alliance, they would have been better able to resist the encroachments of white settlers. As it was, they were not only fragmented but also vulnerable to the infectious diseases carried on board the ships transporting European settlers to the New World. Epidemics of smallpox soon devastated the Indian population, leaving the coastal areas “a widowed land.” Between 1610 and 1675 the Abenakis declined from 12,000 to 3,000 and the southern New England tribes from 65,000 to 10,000. Governor William Bradford of Plymouth reported that the Indians “fell sick of the smallpox, and died most miserably.” By the hundreds they died “like rotten sheep.”

THE PEQUOT WAR Indians who survived the epidemics and refused to yield their lands were often dislodged by force. In 1636 settlers in Massachusetts accused a Pequot of murdering a colonist. Joined by Connecticut colonists, they exacted their revenge by setting fire to a Pequot village on the Mystic River. As the Indians fled their burning huts, the Puritans shot and killed them—men, women, and children. In less than an hour, all but seven escapees were dead.

Sassacus, the Pequot chief, organized the survivors among his followers and attacked the whites. During the Pequot War of 1637, the colonists and their Narragansett allies indiscriminately killed hundreds of Pequots in their village near West Mystic, in the Connecticut River valley. The magisterial Puritan minister Cotton Mather later described the slaughter as a “sweet sacrifice” and “gave the praise thereof to God.”

Only a few colonists regretted the massacre. Roger Williams warned that the lust for land would become “as great a God with us English as God Gold was with the Spanish.” With poignant clarity, Pequot survivors recognized the motives of the English settlers: “We see plainly that their chiefest desire is to deprive us of the privilege of our land, and drive us to our utter ruin.” Indeed, the colonists captured most of the surviving Pequots and sold them into slavery in Bermuda. Under the terms of the Treaty of Hartford (1638), the Pequot Nation was declared dissolved.

KING PHILIP’S WAR After the Pequot War the prosperous fur trade contributed to peaceful relations between whites and the remaining Indians, but the relentless growth of the New England colonies and the decline of the beaver population began to reduce the eastern tribes to relative poverty. The colonial government repeatedly encroached upon Indian settlements, forcing them to acknowledge English laws and customs. At the same time that colonial leaders expropriated Indian lands, Puritan missionaries sought to

Pequot Fort

The Puritans and their Indian allies, the Narragansetts, mount a ferocious attack on the Pequots at Mystic, Connecticut (1637).

convert the tribes to Christianity. Hundreds of converts settled in special “praying Indian” towns. By 1675 the natives and settlers had come to know each other well—and fear each other deeply.

The era of fairly peaceful coexistence that began with the Treaty of Hartford came to an end during the last quarter of the seventeenth century. In 1675 Philip (Metacom), chief of the Wampanoags and the son of Massasoit, who had helped the original Pilgrims, forged an alliance among the remaining tribes of southern New England. The spark that set New England ablaze was the murder of John Sassamon, a “praying Indian” who had attended Harvard and served as a British spy. He had warned the colonists that Metacom was planning to attack them. The officials of the Plymouth colony tried and executed three Wampanoags for the murder of Sassamon. In retaliation the Indians attacked and burned colonial settlements throughout Massachusetts.

Both sides suffered incredible losses in what came to be called King Philip’s War or Metacomet’s War. The fighting killed more people and caused more

destruction in New England in proportion to the population than any American conflict since. Bands of Indian warriors assaulted thirty towns. Within a year the Indians were threatening Boston itself. Finally, however, depleted supplies and staggering casualties wore down Indian resistance. Philip's wife and son were captured and sold into slavery. Some of the tribes surrendered, a few succumbed to disease, while others fled to the west. Those who remained were forced to resettle in villages supervised by white settlers. Philip initially escaped, only to be hunted down and killed in 1676. The victorious colonists marched Philip's severed head on a pike to Plymouth, where it sat atop a pole for twenty years, a gruesome reminder of the British determination to assert control over the Indians. King Philip's War devastated the Native American culture in New England. Combat deaths, deportations, and flight cut the region's Indian population in half. Military victory also enabled the Puritan authorities to increase their political, economic, legal, and religious control over the 9,000 Indians who remained.

THE ENGLISH CIVIL WAR IN AMERICA

By 1640 English settlers in New England and around Chesapeake Bay had established two great beachheads on the Atlantic coast, with the Dutch colony of New Netherland in between. After 1640, however, the struggle between king and Parliament distracted attention from colonization, and migration dwindled to a trickle for more than twenty years. During the English Civil War and Oliver Cromwell's Puritan dictatorship, the struggling colonies were left pretty much to their own devices, especially in New England, where English Puritans saw little need to intervene.

In 1643 four of the New England colonies—Massachusetts Bay, Plymouth, Connecticut, and New Haven—formed the New England Confederation to provide joint defense against the Dutch, French, and Indians. Two commissioners from each colony met annually to transact business. In some ways the confederation behaved like a sovereign power. It made treaties, and in 1653 it declared war against the Dutch, who were supposedly inciting the Indians to attack Connecticut. Massachusetts, far from the scene of trouble, failed to cooperate, greatly weakening the confederation. But the commissioners continued to meet annually until 1684, when Massachusetts lost its charter.

Virginia and Maryland remained almost as independent as New England. At the behest of Governor William Berkeley, the Virginia burgesses in 1649 denounced the execution of King Charles and recognized his son, Charles II, as the lawful king. In 1652, however, the assembly yielded to parliamentary commissioners and overruled the governor. In return for the surrender, the

commissioners let the assembly choose its own council and governor, and the colony grew rapidly in population during its years of independent government, some of the growth coming from the arrival of Royalists, who found a friendly haven in Virginia, despite its capitulation to the English Puritans.

The parliamentary commissioners who won the submission of Virginia proceeded to Maryland where the proprietary governor faced particular difficulties with his Protestant majority, largely Puritan but including some earlier refugees from Anglican Virginia. At the governor's suggestion the assembly had passed, and the proprietor had accepted, the Maryland Toleration Act of 1649, an assurance that Puritans would not be molested in the practice of their religion. In 1654 the commissioners revoked the Toleration Act and deprived Lord Baltimore of his government rights, though not of his lands and revenues. Still, the more extreme Puritan elements were dissatisfied, and a brief clash in 1654 brought civil war to Maryland and led to the deposing of the governor. But Oliver Cromwell took the side of Lord Baltimore and restored his full rights in 1657, whereupon the Toleration Act was reinstated. The act deservedly stands as a landmark to human liberty, albeit enacted more out of expediency than conviction.

Cromwell let the colonies go their own way, but he was not indifferent to Britain's North American empire. He fought trade wars with the Dutch, and his navy harassed England's traditional enemy, Catholic Spain, in the Caribbean. In 1655 a British force wrested Jamaica from the Spaniards, thereby improving the odds for English privateers and pirates who pillaged Spanish ships.

The Restoration of King Charles II in 1660 led to an equally painless restoration of previous governments in the colonies. The process involved scarcely any change since little had changed under Cromwell. Immigration rapidly expanded the populations in Virginia and Maryland. Fears of reprisals against Puritan New England proved unfounded, at least for the time being. Agents hastily dispatched by the colonies won reconfirmation of the Massachusetts charter in 1662 and the very first royal charters for Connecticut and Rhode Island in 1662 and 1663. All three retained their status as self-governing corporations. Plymouth still had no charter, but it went unmolested. New Haven, however, disappeared as a separate entity, absorbed into the colony of Connecticut.

SETTLING THE CAROLINAS

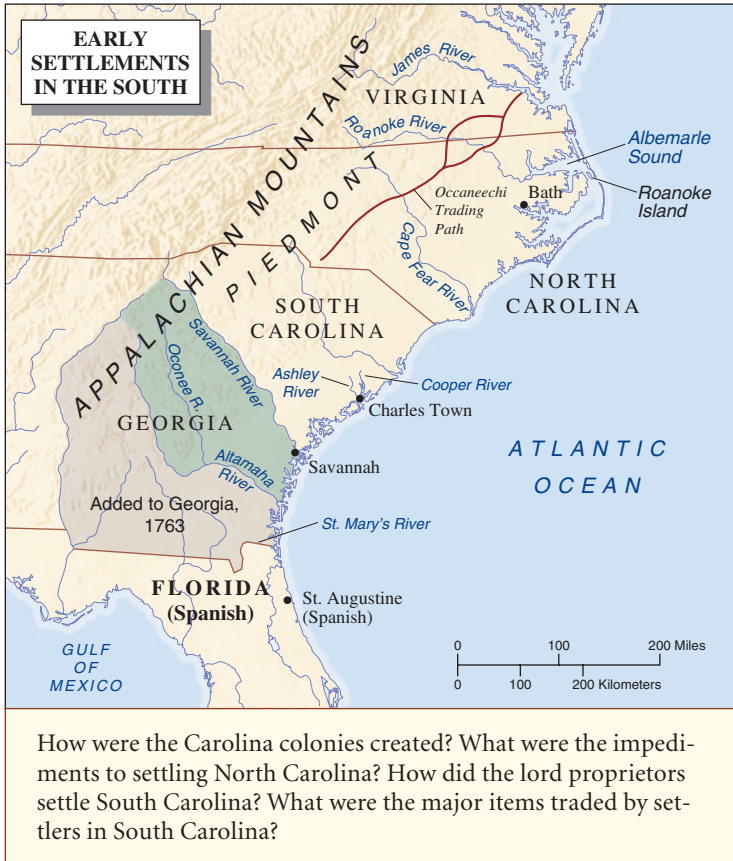

The Restoration of Charles II in 1660 revived interest in colonial expansion. Within twelve years the English would conquer New Netherland, settle Carolina, and very nearly fill out the shape of the colonies. In the middle

region formerly claimed by the Dutch, four new colonies sprang into being: New York, New Jersey, Pennsylvania, and Delaware. Without exception the new colonies were proprietary, awarded by the king to men who had remained loyal or had brought about his restoration or, in one case, to whom he was indebted. In 1663, for example, he granted Carolina to eight prominent allies, who became lords proprietors of the region.

NORTH CAROLINA Carolina was from the start made up of two widely separated areas of settlement, which finally became separate colonies. The northernmost part, long called Albemarle, had been settled in the 1650s by stragglers who had drifted southward from Virginia. For half a century, Albemarle remained a remote scattering of settlers along the shores of Albemarle Sound, isolated from Virginia by the Dismal Swamp and lacking easy access for oceangoing vessels. Albemarle had no governor until 1664, no assembly until 1665, and not even a town until a group of French Huguenots founded the village of Bath in 1704.

SOUTH CAROLINA The eight lords proprietors (owners) to whom the king had given Carolina neglected Albemarle from the outset and focused on more promising sites to the south. They recruited seasoned British planters from Barbados to replicate in South Carolina the West Indian sugar-plantation system based on African slave labor. The first British colonists arrived in South Carolina in 1669 at Charles Town (later named Charleston). Over the next twenty years, half the British colonists came from Barbados.

The government of South Carolina rested upon one of the most curious documents of colonial history, the Fundamental Constitutions of Carolina, drawn up by one of the proprietors, Lord Anthony Ashley Cooper, with the help of his secretary, the philosopher John Locke. Its cumbersome frame of government and its provisions for an elaborate nobility had little effect in the colony except to encourage a practice of large land grants. From the beginning, however, smaller headrights were given to every immigrant who could afford the cost of transit. The most enticing provision was a grant of religious toleration, designed to encourage immigration, which gave South Carolina a greater degree of indulgence (extending even to Jews and “heathens”) than England or any other colony except Rhode Island and, once it was established, Pennsylvania. South Carolina became a separate royal colony in 1719. North Carolina remained under the proprietors’ rule for ten more years, until they transferred their governing rights to the British crown.

THE SOUTHERN INDIAN TRADE The English proprietors of South Carolina wanted the colony to focus on producing commercial crops (staples). Such production took time to develop, however. Land had to be cleared and grubbed, crops planted and harvested. These activities required laborers. Some Carolina planters brought enslaved Africans and indentured servants with them. But many more workers were needed, yet slaves and servants were expensive. The quickest way to raise capital in the early years of South Carolina's development was through trade with the Indians.

In the late seventeenth century, English merchants—mostly illiterate adventurers—began traveling southward from Virginia into the Piedmont region of Carolina, where they developed a prosperous exchange with the Catawba Indians. By 1690 traders from Charles Town, South Carolina, had made their way up the Savannah River to arrange deals with the Cherokees,

The Broiling of Their Fish Over the Flame

In this drawing by John White, reproduced in an engraving by Theodor de Bry, Algonquian men in North Carolina broil fish, a dietary staple of coastal societies.

Creeks, and Chickasaws. Thus between 1699 and 1715 Carolina exported an average of 54,000 deerskins per year. Europeans transformed the valuable hides into bookbindings, gloves, belts, hats, and work aprons. The voracious demand for the soft skins almost exterminated the deer population.

The growing trade with the English exposed the Indians to contagious diseases that decimated the population. Commercial activity also entwined the Indians in a dependent relationship that would prove disastrous to their traditional way of life. Eager to receive more finished goods, weapons, and ammunition, the Indians became pliable trading partners, easily manipulated by wily English entrepreneurs and government officials. The English traders began providing the Indians with firearms and rum as incentives to persuade them to capture rivals to be sold as slaves.

While colonists themselves captured and enslaved Indians, the Westos, Creeks, and most other tribes willingly captured other Indians and drove them to the coast to be exchanged for British trade goods, guns, and rum. Colonists, in turn, put some of the Indian captives to work on their plantations. But because Indian captives often ran away, the traders preferred to ship the enslaved Indians to New York, Boston, and the West Indies and import enslaved Africans to work in the Carolinas.

Cherokee Chiefs

A contemporary print depicting seven chiefs of the Cherokee Indians who had been taken from Carolina to England in 1730.

The complex profitability of Indian captives prompted a frenzy of slaving activity. Slave traders turned Indian tribes against one another in order to ensure a continuous supply of captives. As many as 50,000 Indians, most of them women and children, were sold as slaves in Charles Town between 1670 and 1715. More Indians were exported during that period than Africans were imported. Thousands more captured Indians circulated through such New England ports as Boston and Salem. Although the South Carolina proprietors in England expressly prohibited the enslavement of Indians, the traders paid no attention. The burgeoning trade in Indian slaves triggered bitter struggles between tribes, gave rise to unprecedented colonial warfare, and spawned massive internal migrations across the southern colonies.

During the last quarter of the seventeenth century, the trade in Indian slaves spread across the entire Southeast. Slave raiding became the region's single most important economic activity and a powerful weapon in Britain's global conflict with France and Spain. During the early eighteenth century, Indians equipped with British weapons and led by English soldiers crossed into Spanish territory in south Georgia and north Florida. They destroyed thirteen Spanish missions, killed several hundred Indians and Spaniards, and enslaved over 300 Indian men, women, and children. By 1710 the Florida tribes were on the verge of extinction. In 1708, when the total population of

A War Dance

The Westo Indians of Georgia, pictured here doing a war dance, were among the first Native Americans to obtain firearms and used this advantage to enslave Indians throughout Georgia, Florida, and the Carolinas.

South Carolina was 9,580, including 2,900 Africans, there were 1,400 enslaved Indians.

The continuing Indian trade led to escalating troubles. Fears of slave raids disrupted the planting cycle in Indian villages. Some tribes fled the South altogether. In 1712 the Tuscaroras of North Carolina attacked German and English colonists who had encroached upon their land. North Carolina authorities appealed to South Carolina for aid, and the colony, eager for more slaves, dispatched two expeditions made up mostly of Indian allies—Yamasees, Cherokees, Creeks, and Catawbas—led by whites. In 1713 they destroyed a Tuscarora town, executed 162 male warriors, and took 392 women and children

captive for sale in Charles Town. The surviving Tuscaroras fled north, where they joined the Iroquois Confederacy.

The Tuscarora War led to more conflict. The Yamasees felt betrayed when white traders paid them less for their Tuscarora captives than they wanted. What made this shortfall so acute was that the Yamasees owed debts to traders totaling 100,000 deerskins—almost five years worth of hunting. To recover their debts, white traders cheated Yamasees, confiscated their lands, and began enslaving their women and children. In April 1715 the enraged Yamasees attacked coastal plantations and killed over 100 whites. Their vengeful assaults continued for months, aided by Creeks. Most of the white traders were killed, including one who had pine splinters shoved under his skin and then lit. Whites throughout the low country of South Carolina panicked; hundreds fled to Charles Town. The governor mobilized all white and black males to defend the colony. Other colonies supplied weapons. But it was not until the governor persuaded the Cherokees (with the inducement of many gifts) to join them against the Yamasees and Creeks that the Yamasee War ended—in the spring of 1716. The defeated Yamasees fled to Spanish-controlled Florida. By then some 400 whites had been killed and dozens of

plantations destroyed and abandoned. To prevent another tragic conflict, the colonial government outlawed all private trading with Indians. Commerce between whites and Indians could now occur only through a colonial agency created to end abuses and shift activity from slaving to deerskins.

The end of the Yamasee War did not stop infighting among the Indians, however. For the next ten years or so the Creeks and Cherokees engaged in a costly blood feud, much to the delight of the English. One Carolinian explained that their challenge was to figure “how to hold both [tribes] as our friends, for some time, and assist them in cutting one another’s throats without offending either. This is the game we intend to play if possible.” The French played the same brutal game, doing their best to excite hatred between the Choctaws and the Chickasaws. Between 1700 and 1730 the Indian population in the Carolinas dwindled from 15,000 to just 4,000.

SETTLING THE MIDDLE COLONIES AND GEORGIA

NEW NETHERLAND BECOMES NEW YORK King Charles II resolved early to pluck out that old thorn in the side of the English colonies: New Netherland. The Dutch colony was older than New England, having been planted when the two Protestant powers allied in opposition to Catholic Spain. The Dutch East India Company (organized in 1602) had hired an English captain, Henry Hudson, to seek the elusive passage to China. Sailing along the upper coast of North America in 1609, Hudson had discovered Delaware Bay and explored the river named for him, venturing 160 miles to a point probably beyond what is now Albany, where he and a group of Mohawks began a lasting trade relationship between the Dutch and the Iroquois Nations. In 1610 the Dutch established fur-trading posts on Manhattan Island and upriver at Fort Orange (later Albany). In 1626 Governor Peter Minuit purchased Manhattan from the resident Indians, and a Dutch fort appeared at the lower end of the island. The village of New Amsterdam, which grew up around the fort, became the capital of New Netherland and developed into the rollicking commercial New World powerhouse. Unlike their Puritan counterparts in Massachusetts Bay, the Dutch in New Amsterdam were preoccupied more with profits and freedoms than with piety and restrictions. They embraced free enterprise and ethnic and religious diversity.

Dutch settlements gradually dispersed in every direction in which furs might be found. In 1638 a Swedish trading company established Fort

Christina at the site of present-day Wilmington, Delaware, and scattered a few hundred settlers up and down the Delaware River. The Dutch, at the time allied with the Swedes in the Thirty Years' War, made no move to challenge the claim until 1655, when a force outnumbering the entire Swedish colony subjected them without bloodshed to the rule of New Netherland. The chief contribution of the short-lived New Sweden to American culture was the idea of the log cabin, which the Swedes and a few Finnish settlers had brought from the woods of Scandinavia.

Like the French, the Dutch were interested mainly in the fur trade rather than agricultural settlements. In 1629, however, the Dutch West India Company (organized in 1623) decided that it needed a mass of settlers to help protect the colony's "front door" at the mouth of the Hudson River. It provided that any stockholder might obtain a large estate (a *patroonship*) if he peopled it with fifty adults within four years. The "patroon" was obligated to supply cattle, tools, and buildings. His tenants, in turn, paid him rent, used his gristmill, gave him first option to purchase surplus crops, and submitted to a court he established. It amounted to transplanting the feudal manor to the New World, and it met with as little luck as similar efforts in Maryland and South Carolina. Volunteers for serfdom were hard to find when there was land to be had elsewhere; most settlers took advantage of the company's provision that one could have as farms (*bouweries*) all the lands one could improve.

The colony's government was under the almost absolute control of a governor sent out by the Dutch West India Company. The governors were mostly stubborn autocrats, either corrupt or inept, and especially clumsy at Indian relations. They depended on a small army garrison for defense, and the inhabitants (including a number of English on Long Island), were hardly devoted to the Dutch government. New Amsterdam was by far the most diverse of the American colonies. Its residents included Swedes, Norwegians, Spaniards, Sephardic Jews, free blacks, English, Germans, and Finns—as well as Dutch. The polyglot colonists prized their liberties and lived in a smoldering state of near mutiny against the colony's governors. In fact, in 1664 they showed almost total indifference when Governor Peter Stuyvesant called them to arms against a threatening British fleet. Almost defenseless, old soldier Stuyvesant blustered and stomped about on his wooden leg but finally surrendered without firing a shot and stayed on quietly at his farm in what became the colony of New York.

The plan of conquest had been hatched by the king's brother, the duke of York, later King James II. As lord high admiral and an investor in the African trade, he had already harassed Dutch shipping and forts in Africa. When he

Castello Plan of New Amsterdam

and his advisers counseled that New Netherland could easily be conquered, Charles II simply granted the region to his brother as proprietor and permitted the hasty gathering of an invasion force, and the English thus transformed New Amsterdam into New York and Fort Orange into Albany. The Dutch, however, left a permanent imprint on the land and the language: the Dutch vernacular faded, but place-names such as Block Island, Wall Street (the original wall being for protection against Indians), and Broadway (Breede Wegh) remained, along with family names like Rensselaer, Roosevelt, and Van Buren. The Dutch presence lingered, too, in the Dutch Reformed Church; in words like *boss*, *cookie*, *crib*, *snoop*, *stoop*, *spook*, and *kill* (for “creek”); and in the legendary Santa Claus and in Washington Irving’s Rip van Winkle.

Even more important to the development of the American colonies was New Netherland’s political principles, as embodied in the formal document transferring governance of the colony from the Dutch to the British. Called

the Articles of Capitulation, the document provided a guarantee of individual rights unparalleled in the colonies. The articles, which endorsed free trade, religious liberty, and local political representation, were incorporated into the New York City Charter of 1686 and thereafter served as a benchmark for disputes with Britain over colonial rights.

THE IROQUOIS LEAGUE One of the most significant effects of European settlement in North America during the seventeenth century was the intensification of warfare among Indian peoples. The same combination of forces that decimated the Indian populations of New England and the Carolinas affected the tribes around New York City and the lower Hudson Valley. Dissension among the Indians and susceptibility to infectious disease left them vulnerable to exploitation by whites and other Indians.

In the interior of New York, however, a different situation arose. There the tribes of the Iroquois (an Algonquian term signifying “Snake” or “Terrifying Man”) forged an alliance so strong that the outnumbered Dutch and, later, English traders were forced to work with the Indians in exploiting the lucrative fur trade. By the early 1600s some fifty sachems (chiefs) governed the 12,000 members of the Iroquois League, or Iroquois Confederacy. The sachems made decisions for all the villages and mediated tribal rivalries and dissension within the confederacy.

Wampum Belt

The diamond shapes at the center of this “covenant chain” belt indicate community alliances. Wampum belts such as this one were often used to certify treaties or record transactions.

When the Iroquois began to deplete the local game during the 1640s, they used firearms supplied by their Dutch trading partners to seize the Canadian hunting grounds of the neighboring Hurons and Eries. During the so-called Beaver Wars the Iroquois defeated the western tribes and thereafter hunted the beaver in the region to extinction.

Iroquois men were proud, ruthless warriors. Participation in a war party served as the crucial rite of passage for young men. They fought opponents to gain status or ease the grief caused by the deaths of friends and relatives. Their skill and courage in battle determined their social status. A warrior's success was measured not only by his fighting prowess but also by his ability to take prisoners and bring them back alive for adoption or ritualistic execution.

During the second half of the seventeenth century, the relentless search for furs and captives led Iroquois war parties to range far across what is today eastern North America. They gained control over a huge area from the St. Lawrence River to Tennessee and from Maine to Michigan. The Iroquois's wars helped reorient the political relationships in the whole eastern half of the continent, especially in the area from the Ohio River valley northward across the Great Lakes basin. Besieged by the Iroquois League, the western tribes forged defensive alliances with the French.

For over twenty years, warfare raged across the Great Lakes region. In the 1690s the French and their Indian allies gained the advantage over the Iroquois. They destroyed Iroquois crops and villages, infected them with smallpox, and reduced the male population by more than one third. Facing extermination, the Iroquois made peace with the French in 1701. During the first half of the eighteenth century, they maintained a shrewd neutrality in the struggle between the two rival European powers, which enabled them to play the British off against the French while creating a thriving fur trade for themselves.

NEW JERSEY Shortly after the conquest of New Netherland, the duke of York granted his lands between the Hudson and Delaware rivers to Sir George Carteret and Lord John Berkeley (brother of Virginia's governor) and named the territory for Carteret's native Jersey, an island in the English Channel. In 1676, by mutual agreement, the colony was divided by a diagonal line into East and West Jersey, with Carteret taking the east. Finally, in 1682, Carteret sold out to a group of twelve, including William Penn, who in turn brought into the partnership twelve more proprietors, for a total of twenty-four. In East Jersey, peopled at first by perhaps 200 Dutch who had crossed the Hudson River, new settlements gradually arose: some disaffected Puritans from New Haven founded Newark, Carteret's brother brought a

group to found Elizabethtown (Elizabeth), and a group of Scots founded Perth Amboy. In the west, facing the Delaware River, a scattering of Swedes, Finns, and Dutch remained, soon to be overwhelmed by swarms of English Quakers. In 1702 East and West Jersey were united as the single royal colony of New Jersey.

PENNSYLVANIA AND DELAWARE The Quaker sect, as the Society of Friends was called in ridicule (because they were supposed to “tremble at the word of the Lord”), became the most influential of many radical

A Quaker meeting, at which the presence of women is evidence of Quaker views on the equality of the sexes.

groups that sprang from the turbulence of the English Civil War. Founded by George Fox in about 1647, the Quakers carried further than any other group the doctrine of individual inspiration and interpretation—the “inner light,” they called it. They discarded all formal sacraments and formal ministry, refused deference to persons of rank, used the familiar *thee* and *thou* in addressing everyone, refused to take oaths, claiming they were contrary to Scripture, and embraced pacifism. Quakers were subjected to intense persecution—often in their zeal they seemed to invite it—but never inflicted it on others. Their tolerance extended to complete religious freedom for everyone, whatever one’s belief or disbelief, and to the equality of the sexes, including the full participation of women in religious affairs.

The settling of Quakers in West Jersey encouraged other Friends to migrate, especially to the Delaware River side of the colony. And soon across the river arose William Penn's Quaker commonwealth, the colony of Pennsylvania.

Penn was the son of Admiral Sir William Penn, who had supported Parliament in the civil war. Young William was reared as a proper gentleman, but as a student at Oxford he had become a Quaker. Upon his father's death, Penn inherited a substantial estate, including proprietary rights to a huge tract in America. The land was named, at the king's insistence, for Penn's father: Pennsylvania (literally, "Penn's Woods").

When Penn assumed control of the area, there was already a scattering of Dutch, Swedish, and English settlers on the west bank of the Delaware. But Penn soon made vigorous efforts to bring more settlers. He published glowing descriptions of the colony, which were translated into German, Dutch, and French. By the end of 1681, about 1,000 settlers were living in his province. By that time a town was growing up at the junction of the Schuylkill and Delaware rivers. Penn called it Philadelphia (City of Brotherly Love). Because of the generous terms on which Penn offered land—because indeed he offered aid to immigrants—the colony grew rapidly.

The relations between the Indians and the Quakers were cordial from the beginning, because of the Quakers' friendliness and because of Penn's careful policy of purchasing land titles from the Indians. Penn even took the trouble to learn an Indian language, something few colonists ever tried. For some fifty years the settlers and the natives lived side by side in peace, in relationships of such trust that Quaker farmers sometimes left their children in the care of Indians when they were away from home.

The colony's government, which rested on three Frames of Government promulgated by Penn, resembled that of other proprietary colonies except that the freemen (taxpayers and property owners) elected the councilors as well as the assembly. The governor had no veto—although Penn, as proprietor, did. Penn hoped to show that a government could operate in accordance with Quaker principles, that it could maintain peace and order without oaths or wars, and that religion could flourish without an established church and with absolute freedom of conscience. Because of its tolerance, Pennsylvania became a refuge not only for Quakers but also for a variety of dissenters—as well as Anglicans—and early reflected the ethnic mixture of Scotch-Irish and Germans that became common to the middle colonies and the southern backcountry. Penn himself stayed only four years in the colony.

In 1682 the duke of York also granted Penn the area of Delaware, another part of the former Dutch territory. At first, Delaware became part of Pennsylvania, but after 1704 it was granted the right to choose its own assembly. From then until the American Revolution, it had a separate assembly but shared Pennsylvania's governor.

GEORGIA Georgia was the last of the British continental colonies to be established—half a century after Pennsylvania. During the seventeenth century, English settlers pushed southward into the borderlands between the Carolinas and Florida. They brought with them their African slaves and a desire to win the Indian trade from the Spanish. Each side used guns, goods, and rum to influence the Indians, and the Indians in turn played off the English against the Spanish in order to gain the most favorable terms.

In 1732 King George II gave the land between the Savannah and Altamaha rivers to the twenty-one trustees of Georgia. In two respects, Georgia was unique among the colonies: it was set up as a philanthropic

Savannah, Georgia

The earliest known view of Savannah, Georgia (1734). The town's layout was carefully planned.

How were the relationships between the settlers and the members of the Iroquois League different from those between settlers and tribes in other regions?

experiment and as a military buffer against Spanish Florida. General James E. Oglethorpe, who accompanied the first colonists as resident trustee, represented both concerns: he served as a soldier who organized the defenses and as a philanthropist who championed prison reform and sought a colonial refuge for the poor and religiously persecuted.

In 1733 a band of about 120 colonists founded Savannah on the coast near the mouth of the Savannah River. Carefully laid out by Oglethorpe, the old town, with its geometric pattern and numerous little parks, remains a monument to the city planning of a bygone day. A group of Protestant refugees from Austria began to arrive in 1734, followed by Germans and German-speaking Moravians and Swiss, who made the colony for a time more German than English. The addition of Welsh, Highland Scots, Sephardic Jews, and others gave the early colony a cosmopolitan character much like that of Charleston.

As a buffer against Florida, the colony succeeded, but as a philanthropic experiment it failed. Efforts to develop silk and wine production foundered. Landholdings were limited to 500 acres, rum was prohibited, and the importation of slaves was forbidden, partly to leave room for servants brought on charity, partly to ensure security. But the utopian rules soon collapsed. The regulations against rum and slavery were widely disregarded and finally abandoned. By 1759 all restrictions on landholding had been removed.

In 1754 the trustees' charter expired, and the province reverted to the crown. As a royal colony, Georgia acquired an effective government for the first time. The province developed slowly over the next decade but grew rapidly in population and wealth after 1763. Instead of wine and silk, as was Oglethorpe's plan, Georgians exported rice, indigo, lumber, beef, and pork and carried on a lively trade with the West Indies. The colony had become a commercial success.

THRIVING COLONIES

By the early eighteenth century the English had outstripped both the French and the Spanish in the New World. British America had become the most populous, prosperous, and powerful region on the continent. By the mid-seventeenth century, American colonists on average were better fed, clothed, and housed than their counterparts in Europe, where a majority of the people lived in destitution. But the English

colonization of North America included many failures as well as successes. Lots of settlers found only hard labor and an early death in the New World. Others flourished only because they exploited Indians, indentured servants, or Africans.

The British succeeded in creating a lasting American empire because of crucial advantages they had over their European rivals. The centralized control imposed by the monarchs of Spain and France got them off the mark more quickly but eventually hobbled innovation and responsiveness to new circumstances. The enterprising British acted by private investment and with a minimum of royal control. Not a single colony was begun at the direct initiative of the crown. In the English colonies poor immigrants had a much greater chance of getting at least a small parcel of land. The English, unlike their rivals, welcomed people from a variety of nationalities and dissenting sects who came in search of a new life or a safe harbor. And a greater degree of self-government made the English colonies more responsive to new circumstances—though they were sometimes hobbled by controversy.

The compact pattern of English settlement contrasted sharply with the pattern of Spain's far-flung conquests and France's far-reaching trade routes to the interior by way of the St. Lawrence and Mississippi rivers (discussed in Chapter 4). Geography reinforced England's bent for the concentrated occupation and settlement of its colonies. The rivers and bays that indent the Atlantic seaboard served as communication arteries along which colonies first sprang up, but no great river offered a highway to the far interior. About 100 miles inland in Georgia and the Carolinas, and nearer the coast to the north, the fall line of the rivers presented rocky rapids that marked the limit of navigation and the end of the coastal plain. About 100 miles beyond that, and farther back in Pennsylvania, stretched the rolling expanse of the Piedmont, literally, "Foothills." And the final backdrop of English America was the Appalachian Mountain range, some 200 miles from the coast in the South and reaching the coast at points in New England, with only one significant break—up the Hudson and Mohawk valleys of New York. For 150 years the farthest outreach of British settlement stopped at the slopes of those mountains. To the east lay the wide expanse of ocean, which served not only as a highway for the transport of ideas and ways of life from Europe to America but also as a barrier that separated old ideas from new, allowing the new to evolve in the new environment.

MAKING CONNECTIONS

- What we now know about the early settlements sets the stage for the regional differences in social patterns discussed in the next chapter.
- This chapter contained the observation that in founding its American colonies, “the British acted by private investment and with a minimum of royal control.” As we will see in Chapter 4, that situation changed as England began to take control of the American colonies.
- Later relations between colonists and Native Americans, described in Chapter 4, had their roots in the history of these early settlements.

COLONIAL WAYS OF LIFE

FOCUS QUESTIONS

- What were the social and economic differences among the southern, middle, and New England colonies?
- How did people of different genders, races, and classes fit into colonial society?
- What was the impact of the Enlightenment and the Great Awakening on the American colonies?

The process of carving a new civilization out of an abundant yet violent frontier involved a clash of European, African, and Indian cultures. War, duplicity, displacement, and enslavement were the tragic results. Yet on another level the process of transforming the “New World” was largely the story of thousands of diverse folk engaged in the everyday tasks of building homes, planting crops, trading goods, raising families, enforcing laws, and worshipping their God. Those who colonized America during the seventeenth and eighteenth centuries were part of a massive social migration occurring throughout Europe and Africa. Everywhere, it seemed, people were moving from farms to villages, from villages to cities, and from homelands to colonies. They moved for different reasons. Most were responding to powerful social and economic forces as rapid population growth and the rise of commercial agriculture squeezed people off the land. Many traveled in search of political security or religious freedom. An exception was the Africans, who were captured and transported to new lands against their will.

America's settlers were mostly young (over half were under twenty-five), male, and poor. Almost half were indentured servants or slaves, and during the eighteenth century England would transport some 50,000 convicts to the North American colonies. Only about one third of the settlers came with their families. Once in America, many kept moving, trying to take advantage of new opportunities. Whatever their status or ambition, this extraordinary mosaic of ordinary yet adventurous people created America's enduring institutions and values.

THE SHAPE OF EARLY AMERICA

BRITISH FOLKWAYS The vast majority of early European settlers came from the British Isles in four mass migrations over the seventeenth and eighteenth centuries. The first involved some 20,000 Puritans who settled Massachusetts between 1630 and 1641 and for the most part hailed from the East Anglian counties east of London. A generation later a smaller group of wealthy Royalist Cavaliers and their indentured servants migrated from southern England to Virginia. These English aristocrats, mostly Anglicans, had few qualms about the introduction of African slavery. The third wave brought some 23,000 Quakers from the north Midlands of England to the Delaware Valley colonies of West Jersey, Pennsylvania, and Delaware. They brought with them a sense of spiritual equality, a suspicion of class distinctions and powerful elites, and a commitment to plain living and high thinking. The fourth and largest surge of colonization occurred between 1717 and 1775 and included hundreds of thousands of Celtic Britons and Scotch-Irish from northern Ireland; these were mostly coarse, feisty, clannish folk who settled in the rugged backcountry along the Appalachian Mountains. Generally poorer than their English counterparts, the Scots and Scotch-Irish had more to gain by moving to the New World.

It was long assumed that the strenuous demands of the American frontier served as a great “melting pot” that stripped such immigrants of their native identities and melded them into homogeneous Americans. Yet for all of the transforming effects of the New World, British ways of life have persisted to this day. Although most British settlers spoke a common language and shared the Protestant faith, they carried with them—and retained—sharply different cultural attitudes and customs. They spoke distinct dialects, cooked different foods, named and raised their children differently, adopted different philosophies of education and attitudes toward time, preferred different architectural styles, and organized their societies differently.

In gender relations, religious practices, criminal propensities, and dozens of other ways, many American customs today reflect age-old British customs. Of course, such cultural continuity is not unique to British Americans. Enduring folkways are also evident among the descendants of settlers from Africa, continental Europe, Latin America, the Middle East, and Asia. Americans thus constitute a mosaic rather than a homogeneous mass, and they share a quite varied social and cultural heritage.

SEABOARD ECOLOGY One of the cherished legends of American history has it that those settling the New World arrived to find an unspoiled wilderness little touched by human activity. But that was not the case. For thousands of years, Indian hunting practices had produced what one scholar has called the “greatest known loss of wild species” in the continent’s history. The Indians had regularly burned forests and dense undergrowth in order to provide cropland, ease travel through hardwood forests, and make way for grasses, berries, and other forage for the animals they hunted. Indians worked the cleared lands for six to eight years, until the nutrients in the soil were depleted, and then they moved on to new areas. This migratory “slash-and-burn” agriculture increased the rate at which plant nutrients were recycled and allowed more sunlight to reach the forest floor. These conditions in turn created rich soil and ideal grazing

grounds for elk, deer, turkeys, bears, moose, and beavers. Nutrients from the topsoil also fertilized the streams and helped produce teeming schools of sturgeons, smelts, and small herrings called alewives. Indian farming practices also halted the normal forest succession and, especially in the Southeast, created large stands of longleaf pine, still the most common source of timber in the region.

Equally important in shaping the ecosystem of America was the European attitude toward the environment. Whereas the Native Americans tended to be migratory, considering land and animals

Colonial Farm

This plan of a newly cleared American farm shows how trees were cut down and the stumps left to rot.

as communal resources to be shared and consumed only as necessary, many European colonizers viewed natural resources as privately owned commodities to be sold for profit. Settlers thus quickly set about evicting Indians; clearing, fencing, improving, and selling land; cutting timber for masts; growing surplus crops and trapping game for commercial use. These practices transformed the seaboard environment. In many places—Plymouth, for instance, and St. Marys, Maryland—settlers occupied the sites of former Indian towns, and corn, beans, and squash quickly became colonial staples, along with new crops brought from Europe.

British ships brought to America domesticated animals—such as cattle, oxen, sheep, goats, horses, and pigs—that were unknown in the New World. By 1650 English farm animals outnumbered the colonists. Rapidly multiplying livestock reshaped the American environment and affected Indian life in unexpected ways. British settlers discovered that they did not have time to feed and care for livestock in pens, as they had in the Old World. Chesapeake farmers, for example, were too busy tending profitable tobacco plants to devote time to animal husbandry. So from late spring to harvest time in New England and year-round in Maryland and Virginia, hard-pressed farmers allowed their cows, horses, and pigs to roam freely through the woods, clipping their ears to identify them. Such free-range husbandry made sense in the short run, since the labor shortage made it too expensive to pen the animals in barnyards or fence them in pastures. In the longer term, however, the failure to constrain farm animals denied the planted fields dung for use as a valuable fertilizer. The fertility of the soil declined with each passing year. The Virginia planter Robert Beverley chastised his neighbors for engaging in such “exceeding ill-husbandry” and for making their hogs “find their own support in the woods.”

Hogs especially thrived in the New World. The animals eat virtually anything and breed frequently. In a few years a dozen transplanted English pigs had spawned thousands of hogs throughout the colonies. A sow can give birth three times a year to as many as sixteen piglets at a time. In 1700 a visitor to Virginia observed that the pigs “swarm like vermin upon the earth. . . . The hogs run where they want and find their own support in the woods without any care of the owners.”

Many of the farm animals turned wild (feral), ran amok in Indian cornfields, and devastated native flora and fauna. In New England, rooting pigs devoured the shellfish that local Indians depended upon for subsistence. Colonists often had trouble finding their wandering herds. One Marylander spent three days hunting for stray hogs. Others hired Indians to track them down. As livestock herds grew, settlers felt the need to acquire more land,

which often meant seizing Indian land. A single cow needed five acres of woodland to subsist. Trespassing livestock and expanding colonial settlements caused friction with the Indians, which in turn helped ignite such violent confrontations as King Philip's War and Bacon's Rebellion. One historian, in fact, has referred to roaming English livestock as four-legged "agents of empire" invading Indian land. As a frustrated Maryland Indian charged in 1666, "Your hogs & cattle injure us. You come too near us to live & drive us from place to place. We can fly no farther. Let us know where to live & how to be secured for the future from the hogs & cattle."

Roaming livestock exacerbated other environmental problems. European ships brought weeds as well as animals. Native weeds, such as ragweed, goldenrod, and milkweed, were not nearly as tenacious as the weeds that arrived from Europe: dandelion, thistle, plantain, and sedge. Their seeds were transported in the hay and grain brought from abroad. As pigs, cattle, and horses ate the hay, the weed seeds passed through their digestive tracts and were deposited in manure wherever the animals roamed. In 1672 a British naturalist reported that he had identified twenty-two English weeds that were flourishing in America. The Indians nicknamed plantain Englishman's foot because it seemed to sprout wherever the colonists walked. Today biologists estimate that half the weeds in the United States originated in Europe or Africa.

In time a more dense population of humans and their domestic animals created a new landscape of fields, meadows, fences, barns, and houses. Such innovations further altered the ecology of the New World. Foraging cattle, sheep, horses, and pigs gradually changed the distribution of trees, shrubs, and grasses. Because cleared and grazed land is warmer, drier, and more compacted, it floods and erodes more easily. The transformed landscape made such regions as New England sunnier, windier, and colder than they had been before colonization. And many Indians, far from being passive observers in this frenzy of environmental change, contributed to the process by trading furs for metal or glass trinkets. The increased hunting ravaged the populations of large mammals and rodents that had earlier been central to Indian culture—and to the ecological balance. Between 1600 and 1800 the physical environment of the eastern seaboard changed markedly.

POPULATION GROWTH England's first footholds in America were bought at a fearsome price: many settlers died in the first years. But once the brutal seasoning was past and the colonies were on their feet, Virginia and its successors grew rapidly. By 1750 the number of colonists had passed 1 million; by 1775 it stood at about 2.5 million. In 1700 the English at home outnumbered the colonists by about twenty to one; by 1775, on the eve of the

American Revolution, the ratio had fallen to three to one. The prodigious increase of the colonial population did not go unnoticed. Benjamin Franklin, a keen observer of many things, published in 1751 his *Observations Concerning the Increase of Mankind*, in which he pointed out two facts of life that distinguished the colonies from Europe: land was plentiful and cheap, and labor was scarce and expensive. The opposite conditions prevailed in the Old World. From this reversal of conditions flowed many of the changes that European culture underwent in the New World—not the least being that good fortune beckoned the enterprising immigrant and induced the settlers to replenish the earth with large families. Where labor was scarce, children could lend a hand and, once grown, find new land for themselves if need be. Colonists tended, as a result, to marry and start families at an earlier age than did their Old World counterparts.

BIRTHRATES AND DEATH RATES Given the better economic prospects in the colonies, a greater proportion of American women married, and the birthrate remained much higher than it did in Europe. Whereas in England the average age at marriage for women was twenty-five or twenty-six, in America it dropped to twenty or twenty-one. Men also married younger in the colonies than in the Old World. The birthrate rose accordingly, since women who married earlier had time for about two additional pregnancies during the childbearing years.

John Freake, and Mrs. Elizabeth Freake and Baby Mary

Elizabeth married John at age nineteen; Mary, born when Elizabeth was thirty-two, was the Freakes' eighth and last child.

Equally responsible for the burgeoning population in the colonies was a much lower death rate than that in Europe. After the difficult first years of settlement, infants generally had a better chance of reaching maturity, and adults had a better chance of reaching old age. In seventeenth-century New England, apart from childhood mortality, men could expect to reach seventy and women nearly that age.

This longevity resulted from several factors. Since the land was bountiful, famine seldom occurred after the first year, and although the winters were more severe than those in England, firewood was plentiful. Being younger on the whole—the average age in the new nation in 1790 was sixteen!—Americans were less susceptible to disease than were Europeans. That they were more scattered than in the Old World meant they were also less exposed to disease. That began to change, of course, as population centers grew and trade and travel increased. By the mid-eighteenth century the colonies were beginning to have levels of contagion much like those in Europe.

The greatest variations in these patterns occurred in the earliest years of the southern colonies. From the first century after the Jamestown settlement until about 1700, a high rate of mortality and a chronic shortage of women meant that the population increase there could be sustained only by immigration. In the humid southern climate, English settlers contracted malaria, dysentery, and a host of other diseases. The mosquito-infested rice paddies of the Carolina Tidewater were notoriously unhealthy. And ships that docked at the Chesapeake tobacco plantations brought with their payloads unseen cargoes of smallpox, diphtheria, and other infections. Given the higher mortality rate, families were often broken by the early death of parents.

SEX RATIOS AND THE FAMILY Whole communities of religious or ethnic groups migrated more often to the northern colonies than to the southern, bringing more women in their company. There was no mention of any women among the first arrivals at Jamestown. Males were most needed in the early years of new colonies. In fact, as a pamphlet promoting opportunities in America stressed, the infant colonies needed “lusty labouring men . . . capable of hard labour, and that can bear and undergo heat and cold,” men adept with the “axe and the hoe.” Virginia’s seventeenth-century sex ratio of two or three white males to each female meant that many men never married, although nearly every adult woman did. Counting only the unmarried, the ratio was about eight men for every woman.

A population made up largely of bachelors without strong ties to family and the larger community made for instability of a high order in the first years. And the high mortality rates of the early years further loosened family

ties. A majority of the women who arrived in the Chesapeake colonies during the seventeenth century were unmarried indentured servants, most of whom died before the age of fifty. Whereas the first generations in New England proved to be long-lived and many more children there knew their grandparents than in the motherland, young people in the seventeenth-century South were apt never to see their grandparents and in fact to lose one or both parents before reaching maturity. But after a time of seasoning, immunities built up. Eventually the southern colonies reverted to a more even sex ratio, and family sizes approached those of New England.

WOMEN IN THE COLONIES Most colonists brought to America deeply rooted convictions about the inferiority of women. As one preacher stressed, “The woman is a weak creature not endowed with like strength and constancy of mind.” The prescribed role of women in life was clear: to obey and serve their husbands, nurture their children, and endure the taxing labor required to maintain their households. John Winthrop insisted that a “true wife” would find contentment only “in subjection to her husband’s authority.” Even high-spirited women such as Virginia’s Lucy Parke Byrd submitted to their husbands’ absolute authority. The imperious patrician William Byrd II of Westover managed his wife’s estate without consulting her, kept a tenacious grip on his property—even to the point of forbidding his wife to borrow a book from his library without explicit permission—and saw fit to interfere in her own field of domestic management. In his secret diary he recorded their stormy relationship:

[April 7] I reproached my wife with ordering the old beef to be kept and the fresh beef to be used first, contrary to good management, on which she was pleased to be very angry . . . then my wife came and begged my pardon and we were friends again. . . .

[April 8] My wife and I had another foolish quarrel about my saying she listened at the top of the stairs . . . she came soon after and begged my pardon.

[April 9] My wife and I had another scold about mending my shoes, but it was soon over by her submission.

Both social custom and legal codes ensured that most women, like Lucy Byrd, remained deferential. In most colonies they could not vote, preach, hold office, attend public schools or colleges, bring lawsuits, make contracts, or own property.

WOMEN'S WORK In the eighteenth century, “women’s work” typically involved activities in the house, garden, and yard. Farm women usually rose at four in the morning and prepared breakfast by five-thirty. They then fed and watered the livestock, wakened the children, churned butter, tended the garden, prepared lunch, played with the children, worked the garden again, cooked dinner, milked the cows, got the children ready for bed, and cleaned the kitchen before retiring, at about nine. Women also combed, spun, spooled, wove, and bleached wool for clothing, knit linen and cotton, hemmed sheets, pieced quilts, made candles and soap, chopped wood, hauled water, mopped floors, and washed clothes. Female indentured servants in the southern colonies commonly worked as field hands, weeding, hoeing, and harvesting.

Despite the conventions that limited the sphere of women, the scarcity of labor opened opportunities. Quite a few women went into gainful occupations by necessity or choice. In her role as a paid midwife, for example, Martha Ballard, a farm woman in Maine, delivered almost 800 babies. In the towns, women commonly served as tavern hostesses and shopkeepers and

The First, Second, and Last Scene of Mortality

Prudence Punderson’s needlework (ca. 1776) shows the domestic path, from cradle to coffin, followed by most colonial women.

occasionally also worked as doctors, printers, upholsterers, glaziers, painters, silversmiths, tanners, and shipwrights—often, but not always, they were widows carrying on their husbands' trades. Some managed plantations, again usually carrying on in the absence of husbands.

The New World environment did generate slight improvements in the status of women. The acute shortage of women in the early years made them more highly valued than in Europe, and the Puritan emphasis on well-ordered family life led to laws protecting wives from physical abuse and allowing for divorce. In addition, colonial laws allowed wives greater control over property that they had contributed to a marriage or that was left after a husband's death. But the traditional notion of female subordination and domesticity remained firmly entrenched in the New World. As a Massachusetts boy maintained in 1662, the superior aspect of life was "masculine and eternal; the feminine inferior and mortal."

SOCIETY AND ECONOMY IN THE SOUTHERN COLONIES

CROPS The southern colonies had one unique advantage: the climate. The warm climate and plentiful rainfall enabled the colonies to grow exotic staples (market crops) prized by the mother country. Virginia, as Charles I put it, was "founded upon smoke." By 1619 tobacco production had reached 20,000 pounds, and in the year of the Glorious Revolution, 1688, it was up to 18 million pounds. "In Virginia and Maryland," wrote Governor Leonard Calvert in 1629, "Tobacco as our Staple is our All, and indeed leaves no room for anything else."

After 1690 rice was as much the staple in South Carolina as tobacco was in Virginia. The rise and fall of tidewater rivers made the region ideally suited to a crop that required the alternate flooding and draining of fields. Annual rice exports soared from 400,000 pounds in 1700 to 43 million pounds in 1740.

In the 1740s another exotic staple appeared: indigo, the blue dyestuff that found an eager market in the British clothing industry. Southern pine trees provided harvests of lumber and key items for the maritime industry. The resin from pine trees could be boiled to make tar, which was in great demand for waterproofing ropes and caulking wooden ships. From their early leadership in the production of pine tar, North Carolinians would earn the nickname of Tar Heels. In the interior a fur trade flourished, and in the Carolinas a cattle industry presaged life on the Great Plains—with cowboys, roundups, brandings, and long drives to the market.

English customs records showed that for the years 1698 to 1717 South Carolina and the Chesapeake colonies enjoyed a favorable balance of trade with England. But the surplus revenues earned on American goods sold to England were more than offset by “invisible” charges: freight payments to shippers; commissions, storage charges, and interest payments to English merchants; insurance premiums; inspection and customs duties; and outlays to purchase indentured servants and slaves. Thus began a pattern that would plague the southern staple-crop system into the twentieth century. Planters’ investments went into land and slaves while the profitable enterprises of shipping, trade, investment, and manufacture fell under the sway of outsiders.

LAND The economy of the southern colonies centered on the fundamental fact of colonial life that Benjamin Franklin highlighted: land was plentiful, and laborers were scarce. The low cost of land lured most colonists. Under colonial law, land titles rested ultimately upon grants from the crown, and in

Virginia Plantation

Southern colonial plantations were constructed with easy access for oceangoing vessels, as shown on this 1730 tobacco label.

colonial practice the evolution of land policy in the first colony set patterns that were followed everywhere save in New England. In 1618 the Virginia Company, lacking any assets other than land, sold each investor a fifty-acre “share-right” and gave each settler a “headright” for paying his own way or bringing in others.

If one distinctive feature of the South’s agrarian economy was a ready market in England, another was a trend toward large-scale production. Those who planted tobacco discovered that it quickly exhausted the soil, thereby giving an advantage to the planter who had extra fields in which to plant beans and corn or to leave fallow. With the increase of the tobacco crop, moreover, a fall in prices meant that economies of scale might come into play—the large planter with the lower cost per unit might still make a profit. Gradually he would extend his holdings along the riverfronts and thereby secure the advantage of direct access to the oceangoing vessels that plied the waterways of the Chesapeake, discharging goods from London and taking on hogsheads of tobacco. So easy was the access, in fact, that the Chesapeake colonies never required a city of any size as a center of commerce, and the larger planters functioned as merchants and harbormasters for their neighbors.

LABOR Voluntary indentured servitude accounted for probably half the white settlers (mostly from England, Ireland, or Germany) in all the colonies outside New England. The name derived from the indenture, or contract, by which a penniless person promised to work for a fixed number of years in return for transportation to the New World. Poverty and disease in British cities prompted many rootless vagabonds and petty criminals to board ship for America. Not all the servants went voluntarily. The London underworld developed a flourishing trade in “kids” and “spirits,” who were “kidnapped” or “spirited” into servitude. After 1717, by act of Parliament, convicts guilty of certain crimes could escape the hangman by relocating to the colonies.

Once in the colonies, servants contracted with masters. Their rights were limited. They could own property but not engage in trade. Marriage required the master’s permission. Runaway servants were hunted down and punished just as runaway slaves were. Masters could whip servants and extend their indentures for bad behavior. Many servants died from disease or the exhaustion of cultivating tobacco in the broiling sun and intense humidity. In due course, however, usually after four to seven years, the indenture ended, and the servant claimed the “freedom dues” set by custom and law: money, tools, clothing, food, and occasionally small tracts of land. Some former servants did very well for themselves. In 1629 seven members of the

Indentured Servants

An advertisement from the *Virginia Gazette*, October 4, 1779, for indentured servants. The people whose services are being offered secured a life in America, but at a steep price. Servants endured years of labor before their contracts expired and they were granted their freedom.

Virginia legislature were former indentured servants. Others, including Benjamin Franklin's maternal grandmother, married the men who had originally bought their services. Many servants died before completing their indenture, however, and recent evidence suggests that most of those who served their term remained relatively poor thereafter.

SLAVERY Colonial America was a land of white opportunity and black slavery. Most immigrants to America were not British or European, and they did not come willingly. During the eighteenth century there were more than three times as many slaves as free immigrants in the British colonies. Black slavery evolved in the Chesapeake after 1619, when a Dutch vessel dropped off twenty Africans in Jamestown. Some of the first Africans were treated as indentured servants, with a limited term. Those few African servants who worked out their term of indenture gained freedom and a fifty-acre parcel of land. They themselves sometimes acquired slaves and white indentured servants. Gradually, however, with rationalizations based on color difference or "heathenism," the practice of hereditary life service for blacks became the

custom of the land. By the 1660s colonial assemblies recognized slavery through laws that were later expanded into elaborate and restrictive slave codes.

The sugar islands of the French and British West Indies and the cane fields of Portuguese Brazil had the most voracious appetite for enslaved Africans, using them up in the tropical heat on average within seven years. By 1675 the English West Indies had over 100,000 slaves while the colonies in North America had only about 5,000. But as staple crops became established on the American continent and as economic growth in England slowed the number of white laborers traveling to the New World, the demand for slaves grew. As readily available lands diminished, Virginians were less eager to bring in indentured servants, who would lay claim to them at the end of their service. Though British North America took less than 5 percent of the total slaves imported to the Western Hemisphere during more than three centuries of that squalid traffic, it offered better chances for survival, if few for human fulfillment. The natural increase of blacks in America approximated that of whites by the end of the colonial period. By that time every fifth American was either an African or a descendant of one. Slavery was recognized in the laws of all the colonies but flourished in the Tidewater South; one colony, South Carolina, had a black majority through most of the eighteenth century.

AFRICAN ROOTS Enslaved Africans are so often lumped together as a social group that their great ethnic diversity is overlooked. They came from lands as remote from each other as Angola and Senegal, and they spoke

REWARD.

RAN away, on the 23d inst. a handsome
active *Mulatto* slave, named ARCH, about 21 years of age,
is slender built and of middle stature, talks sensible and artful,
but if clofly examined is apt to tremble, has a ridge or scar on

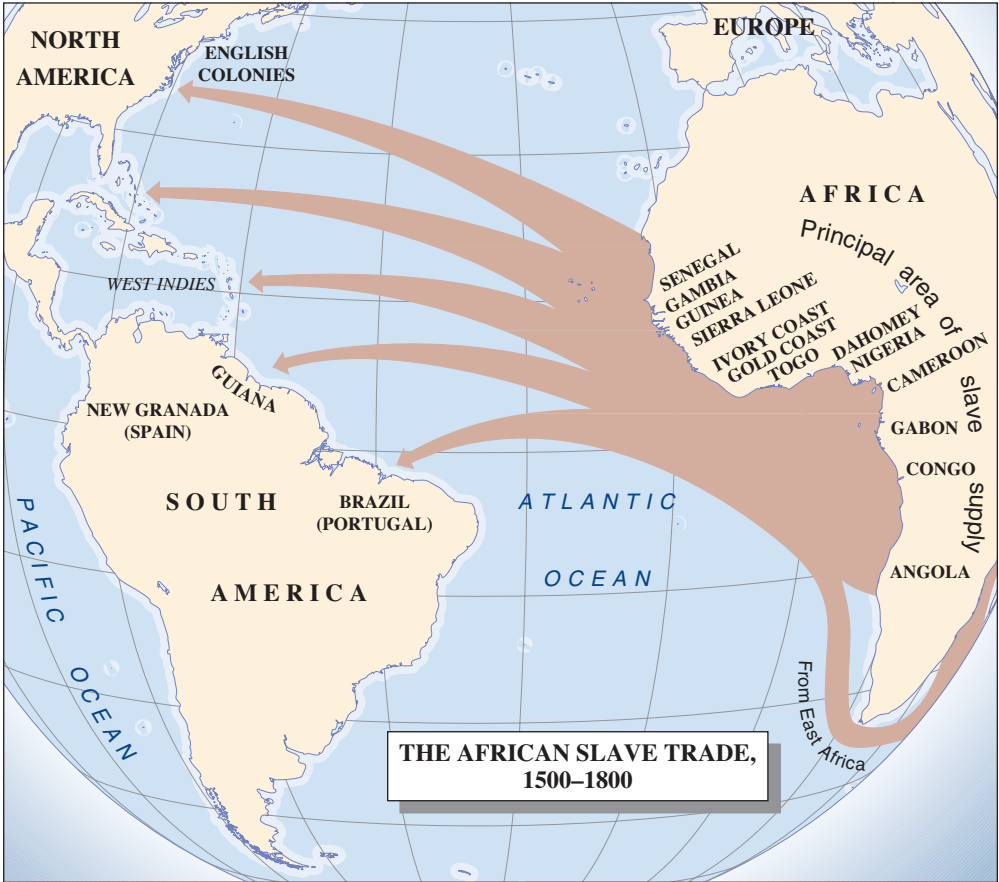

Mandingo, Ibo, Kongo, and other languages. Still, the many peoples of Africa did share similar kinship and political systems. Not unlike the Native American cultures, the African societies were often matrilineal: property and political status descended through the mother rather than the father. When a couple married, the wife did not leave her family; the husband left his family to join that of his bride.

West African tribes were organized hierarchically. Priests and the nobility lorded over the masses of farmers and craftspeople. Below the masses were the slaves, typically war captives, criminals, or debtors. Slaves in Africa, however, did have certain rights. They could marry, receive an education, and have children. Their servitude was not permanent, nor were children automatically slaves by virtue of their parentage, as would be the case in North America.

The West African economy centered on hunting, fishing, planting, and animal husbandry. Men and women typically worked alongside each other in the fields. Religious belief served as the spine of West African life. All tribal groups believed in a supreme Creator and an array of lesser gods tied to specific natural forces, such as rain, fertility, and animal life. West Africans were pantheistic in that they believed that spirits resided in trees, rocks, and streams. People who died were also subjects of reverence, because they served as mediators between the living and the gods.

Africans preyed upon Africans. For centuries rival tribes had conquered and enslaved one another, and during the seventeenth and eighteenth centuries African middlemen brought captives to the coast to sell to European slave traders. Once selected and purchased, the slaves were branded with a company mark and packed tightly in slave ships, where they endured a four- to six-week Atlantic passage so brutal that one in seven captives died en route. Once in America, they were thrown indiscriminately together and treated like animals. Some slaves rebelled against their new masters, resisting work orders, sabotaging crops and tools, or running away to the frontier. In a few cases they organized rebellions, which were ruthlessly suppressed. “You would be surprised at their perseverance,” noted one white planter. “They often die before they can be conquered.” Captured slaves faced ghastly retribution; many were burned at the stake. After rounding up slaves who participated in the Stono Uprising in South Carolina in 1739, enraged planters “cutt off their heads and set them up at every Mile Post.”

SLAVE CULTURE Slavery in British North America differed greatly from region to region. Africans were a small minority in New England

How were Africans captured and enslaved? What were some of the experiences faced by most Africans on the Middle Passage? How did enslaved African Americans create a new culture?

(about 2 percent) and in the middle colonies (about 8 percent). Most northern slaves lived in cities. In the South, slaves were far more numerous, and most of them worked on farms and plantations. In 1750 the vast majority of slaves in British America resided in Virginia and Maryland, about 150,000 compared with 60,000 in South Carolina and Georgia and only 33,000 in all of the northern colonies.

In the process of being forced into lives of bondage, diverse blacks from diverse homelands forged a new identity as African Americans while leaving entwined in the fabric of American culture more strands of African heritage

than historians and anthropologists can ever disentangle. Among them were new words that entered the language, such as *tabby*, *tote*, *cooter*, *goober*, *yam*, and *banana*, and the names of the Coosaw, Pee Dee, and Wando rivers.

More important were African influences in music, folklore, and religious practices. On one level, slaves used such cultural activities to distract themselves from their servitude; on another level they used songs, stories, and sermons as coded messages expressing their distaste for masters or overseers. Slave religion, a unique blend of African and Christian beliefs, was frequently practiced in secret. Its fundamental theme was deliverance: God would eventually free African Americans from slavery and open up the gates to heaven's promised land. The planters, however, sought to strip slave religion of its liberationist hopes. They insisted that being "born again" had no effect upon their workers' status as slaves. In 1667 the Virginia legislature

African Heritage

The survival of African culture among enslaved Americans is evident in this late-eighteenth-century painting of a South Carolina plantation. The musical instruments, pottery, and clothing are of African (probably Yoruban) origin.

declared that “the conferring of baptism does not alter the condition of the person as to his bondage or freedom.”

Africans brought to America powerful kinship ties. Even though most colonies outlawed slave marriages, many masters realized that slaves would work harder and be more stable if allowed to form families. Though many families were broken up when members were sold, slave culture retained its powerful domestic ties. It also developed gender roles distinct from those of white society. Most enslaved women were by necessity field workers as well as wives and mothers responsible for household affairs. Since they worked in proximity to enslaved men, they were treated more equally than were most of their white counterparts.

Most, but not all, slaves were fated to become field hands. Many from the lowlands of Africa used their talent as boatmen in the coastal waterways. Some had linguistic skills that made them useful interpreters. Others tended cattle and swine or hacked away at the forests and operated sawmills. In a society forced to construct itself, slaves became skilled artisans: blacksmiths, carpenters, coopers, bricklayers, and the like. Some worked as cooks or maids.

Slavery and the growth of a biracial South had economic, political, and cultural effects far into the future and set America on a course that would lead to tragic conflicts. Questions about the beginnings of slavery still have a bearing on the present. Did a deep-rooted color prejudice lead to slavery, for instance, or did the existence of slavery produce the prejudice? Clearly slavery evolved because of a demand for labor, and the English adopted a trade established by the Portuguese and Spanish more than a century before—the very word *negro* is Spanish for “black.” English settlers often enslaved Indian captives, but they did not enslave captured Europeans. Color was the crucial difference, or at least the crucial rationalization.

The English associated the color black with darkness and evil; they stamped the different appearance, behavior, and customs of Africans as “savagery.” At the very least such perceptions could soothe the conscience of people who traded in human flesh. On the other hand, most of the qualities that colonial Virginians imputed to blacks to justify slavery were the same qualities that the English assigned to their own poor to explain *their* status: their alleged bent for laziness, improvidence, treachery, and stupidity, among other shortcomings. Similar traits, moreover, were imputed by ancient Jews to the Canaanites and by the Mediterranean peoples of a later date to the Slavic captives sold among them. The names Canaanite and Slav both became synonymous with slavery—the latter lingers in our very word for it. Such expressions would seem to be the product of power relationships and

not the other way around. Dominant peoples repeatedly assign ugly traits to those they bring into subjugation.

THE GENTRY By the early eighteenth century, Virginia and South Carolina were moving into the golden age of the Tidewater gentry, leaving the more isolated and rustic colony of North Carolina as “a valley of humiliation between two mountains of conceit.” The first rude huts of Jamestown had given way to frame and brick houses, but it was only as the seventeenth century yielded to the eighteenth that the stately countryseats in the Georgian, or “colonial,” style began to emerge along the banks of the great rivers. In South Carolina the mansions along the Ashley, Cooper, and Wando rivers boasted spacious gardens and avenues of moss-draped live oaks.

The great houses of the new colonial aristocracy became centers of sumptuous living and legendary hospitality. In their zest for the good life, the planters purchased products that reflected the latest refinements of London style and fashion, living precariously on credit extended for future crops. Dependence on outside capital remained a chronic southern

problem far beyond the colonial period.

In season the carriages of the Chesapeake Bay elite rolled to the villages of Annapolis and Williamsburg, and the city of Charleston in South Carolina became the center of political life and high fashion. Throughout much of the year, the outdoors beckoned planters to the pleasures of hunting, fishing, and riding. Gambling on horse races, cards, and dice became consuming passions for men and women alike. But a few cultivated high culture. Virginia’s William Byrd of Westover pursued learning with a passion. He built a library of some 3,600 volumes and often rose early to keep up his Latin, Greek, and Hebrew. The wealthy families commonly sent their sons—and often

Colonial Aristocracy

This painting from about 1710 portrays Henry Darnall III, a youth from one of Maryland’s richest families, flanked by a slave. In the background are buildings and gardens that attest to the southern preoccupation with the trappings of English nobility.

their daughters—abroad for an education, usually to England, sometimes to France.

RELIGION After 1642 Virginia governor William Berkeley decided that his colony was to be Anglican, and he passed laws requiring “all nonconformists . . . to depart the colony with all conveniency.” Puritans and Quakers were hounded out. By the end of the seventeenth century, Anglicanism predominated in the Chesapeake region, and it proved especially popular among the large landholders. In the early eighteenth century it became the established (official) church in all the South—and some counties of New York and New Jersey, despite the presence of many dissenters. In the new American environment, however, the Anglican Church evolved into something quite unlike the state church of England. The scattered population and the absence of bishops made centralized control difficult.

It has often been said that Americans during the seventeenth century took religion more seriously than they have at any time since. That may have been true, but it is important to remember how many early Americans were not active communicants. One estimate holds that fewer than one in fifteen residents of the southern colonies was a church member. There the tone of

Anglicanism in the South

The exterior of St. James Episcopal Church, built in the 1700s in an Anglican parish in Maryland.

religious belief and practice was different from that in Puritan New England or Quaker Pennsylvania. As in England, colonial Anglicans tended to be more conservative, rational, and formal in their forms of worship than their Puritan, Quaker, or Baptist counterparts. Anglicans tended to stress collective rituals over personal religious experience.

SOCIETY AND ECONOMY IN NEW ENGLAND

TOWNSHIPS In contrast to the seaboard planters, who transformed the English manor into the southern plantation, the Puritans transformed the English village into the New England town, although there were several varieties. Land policy in New England had a stronger social and religious purpose than elsewhere. Towns shaped by English precedent and Puritan policy also fitted the environment of a rockbound land, confined by sea and mountains and unfit for large-scale agriculture.

Unlike the pattern of settlement in the southern colonies or in Dutch New York, few New England colonists received huge tracts of land. The standard system was one of township grants to organized groups. A group of settlers, often gathered already into a church, would petition the general court for a town (what elsewhere was commonly called a township) and then divide it according to a rough principle of equity—those who invested more or had larger families or greater status might receive more land—retaining some pasture and woodland in common and holding some for later arrivals. In some early cases the towns arranged each settler's land in separate strips after the medieval practice, but with time land was commonly divided into separate farms to which landholders would move, away from the close-knit village. Still later, by the early eighteenth century, the colonies used their remaining land as a source of revenue, selling townships to proprietors whose purpose, more often than not, was speculation and resale.

DWELLINGS AND DAILY LIFE The first colonists in New England initially lived in caves, tents, or "English wigwams," but they soon built simple small frame houses clad with hand-split clapboards. The roofs were steeply pitched to reduce the buildup of snow and were covered with thatched grasses or reeds. By the end of the seventeenth century, most New England homes were plain but sturdy dwellings centered on a fireplace. Some had glass windows brought from England. The interior walls were often plastered and whitewashed, but the exterior boards were rarely painted. It was not until the eighteenth century that most houses were painted, and

Housing in New England

This frame house, built in the 1670s, belonged to Rebecca Nurse, one of the women hanged as a witch in Salem Village in 1692.

they were usually a dark “Indian red.” New England homes were not commonly painted white until the nineteenth century. The interiors were dark, illuminated only by candles or oil lamps, both of which were expensive; most people usually went to sleep soon after sunset.

Family life revolved around the main room on the ground floor, called the hall, where meals would be cooked in a large fireplace. Pots would be suspended on an iron rod over the fire, and food would be served at a table of rough-hewn planks, called the board. The father was sometimes referred to as the chair man because he sat in the only chair (hence the origin of the term *chairman of the board*). The rest of the family usually stood to eat or sat on stools or benches. People in colonial times ate with their hands and wooden spoons. Forks were not introduced until the eighteenth century. The fare was usually corn, boiled meat, and vegetables washed down with beer, cider, rum, or milk. Corn bread was a daily staple, as was cornmeal mush, known as hasty pudding. Colonists also relished succotash, an Indian meal of corn and kidney beans cooked in bear grease.

ENTERPRISE New England farmers faced strenuous challenges. Simply clearing rocks from the glacier-scoured soil might require sixty days of hard

Profitable Fisheries

Fishing for, curing, and drying codfish in Newfoundland in the early 1700s. For centuries the rich fishing grounds of the North Atlantic provided New Englanders with a prosperous industry.

labor per acre. The growing season was short, and no profitable crops grew in that harsh climate. The crops and livestock were those familiar to the English countryside: wheat, barley, oats, some cattle, swine, and sheep.

With rich fishing grounds that stretched northward to Newfoundland, it is little wonder that New Englanders turned to the sea for their livelihood. The Chesapeake Bay region afforded a rich harvest of oysters, but New England, by its proximity to waters frequented by cod, mackerel, halibut, and other varieties of fish, became the more important maritime center. Whales, too, abounded in New England waters and supplied oil for lighting and lubrication, as well as ambergris, a waxy substance used in the manufacture of perfumes.

The fisheries, unlike the farms, supplied profitable exports to Europe, while lesser grades of fish went to the West Indies as food for slaves. Fisheries encouraged the development of shipbuilding, and experience at seafaring spurred commerce. This in turn encouraged wider contacts in the Atlantic world and a degree of materialism and cosmopolitanism that clashed with the Puritan credo of plain living and high thinking. In 1714 a worried Puritan deplored the “great extravagance that people are fallen into, far beyond their circumstances, in their purchases, buildings, families, expenses, apparel, generally in the whole way of living.”

NEW ENGLAND SHIPBUILDING The abundant forests of New England represented a source of enormous wealth. Old-growth trees were especially prized by the British government for maritime use as masts and spars. Early on, the British government claimed the tallest and straightest American trees, mostly white pines and oaks, for use by the Royal Navy. At the same time, British officials encouraged the colonists to develop their own shipbuilding industry. The New England economy was utterly dependent on fishing and maritime commerce, and this placed a premium on the availability of boats and ships—and shipbuilders. In 1641 the Massachusetts General Court declared that shipbuilding “is a business of great importance to the common good” and therefore care must be taken to ensure that boatbuilding was “well performed.” American seaports recruited British shipwrights to emigrate. In 1637, for example, the town of Salem lured William Stevens, a skilled London shipwright, by granting him free land “for the building of Ships, provided that it shall be employed for that end.” American-built ships quickly became prized by British and European traders for their quality and price. It was much less expensive to purchase American-built ships than to transport American timber to Britain for ship construction, especially since a large ship might require the timber from as many as 2,000 trees.

Nearly one third of all British ships were made in the colonies. Shipbuilding was one of colonial America’s first big industries, and it in turn helped nurture many businesses: timber, sawmills, iron foundries, sail lofts, fisheries, and taverns. The availability of “all manner of materials for ship building very cheap” allowed New Englanders to keep freight charges low compared with those of other trading nations, thus winning the entire West Indian and North American trade with the exception of products only the English could produce.

Constructing a large ship required as many as thirty skilled trades and 200 workers. The vessel’s hull was laid out by master shipwrights, talented maritime carpenters who used axes and adzes to cut and fit together the pieces to form the keel, or spine of the hull. They then fashioned U-shaped ribs for the hull before enclosing the frame with planking and decking boards that had been prepared by sawyers. Carpenters carefully secured the boards with trenails (pronounced—and sometimes spelled—“trunnels”), strong wooden pegs pounded into bored holes. Caulkers made the ship watertight by stuffing the seams with oakum, a loose hemp fiber that was sealed with hot tar.

As the new ship took shape, rope makers created the ship’s extensive rigging. Rope was made by hand. Workers walked backward, away from a spinning wheel, twisting handfuls of hemp into a long coil. The workers were called rope walkers, and the wooden shed where they worked, often 1,000 feet

long, was called a ropewalk. After the coils of rope were spun, they were dipped in heated tar to preserve them from saltwater rot. Sailmakers, meanwhile, fashioned sails out of canvas, laying them out in large lofts.

Other craftsmen produced the dozens of other items needed for a sailing vessel: blacksmiths forged iron anchors, chains, hinges, bolts, rudder braces, and circular straps that secured sections of a mast to each other. Block makers created the dozens of metal-strapped wooden pulleys needed to hoist sails. Joiners built hatches, ladders, lockers, and furnishings. Painters finished the trim and interiors. Ship chandlers provided lamps, oil, and candles. Instrument makers fashioned compasses, chronometers, and sextants for navigation.

Such skilled workers were trained in the apprentice-journeyman system then common in England. A master craftsman taught an apprentice the skills of his trade in exchange for wages. After the apprenticeship period, lasting from four to seven years, a young worker would receive a new suit of clothes from the master craftsman and then become a journeyman, literally moving from shop to shop, working for wages as he honed his skills. Over time, journeymen joined local guilds and became master craftsmen, who themselves took on apprentices. In the colonies the acute demand for skilled laborers and the absence of guilds to regulate work standards and wages by limiting competition resulted in a more flexible labor system. With wages high and land cheap or free, journeymen could often start their own shipyards with a small amount of capital. The workday in a colonial shipyard lasted from dawn to dusk. Laborers were given breaks, at eleven in the morning and four in the afternoon, for grog, a heated mixture of rum and water.

It took four to six months to build a major sailing ship. The ship christenings and launchings were festive occasions that attracted large crowds and dignitaries. Shops and schools would often close to enable workers and students to attend. All of the workers joined the celebration. The ceremony would begin with a clergyman blessing the new vessel. Then the ship's owner or a senior member of the crew would "christen" the ship before ropes were cut and blocks removed to allow the hull to slide into the water.

TRADE By the end of the seventeenth century, the colonies had become part of a great North Atlantic commercial connection, trading not only with the British Isles and the British West Indies but also—and often illegally—with Spain, France, Portugal, Holland, and their colonies from America to the shores of Africa. Out of necessity the colonists imported manufactured goods from Europe: hardware, machinery, paint, instruments for navigation, and various household items. The colonies thus served as an important market for goods from the mother country. The central problem for the

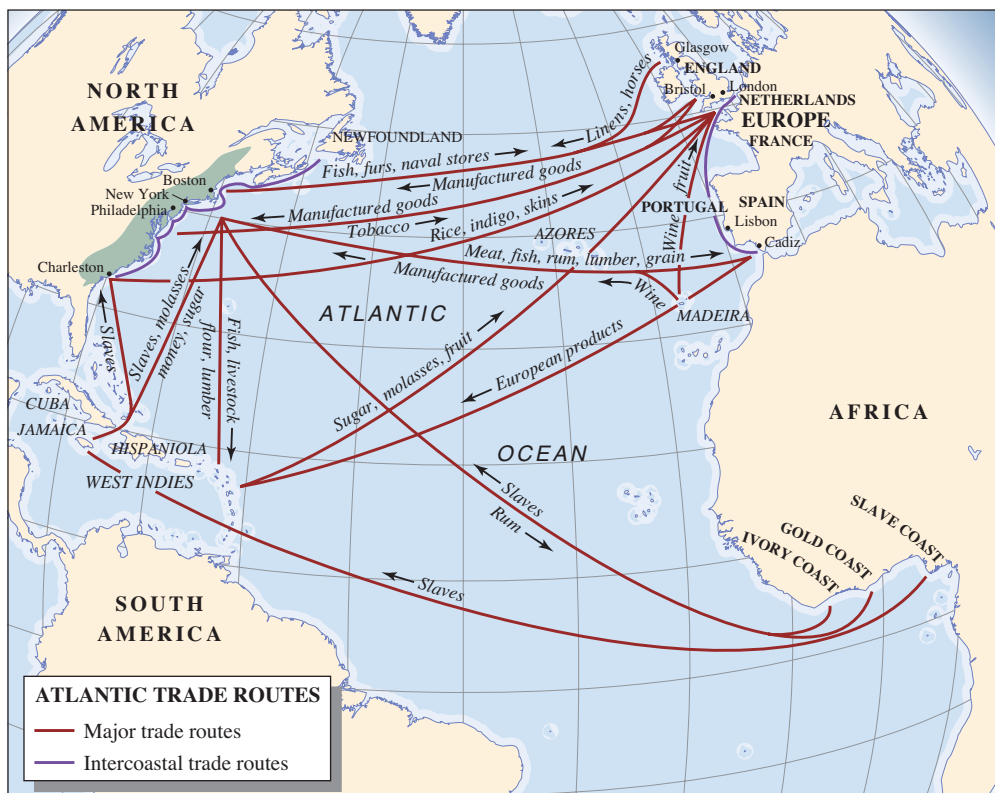

colonies was to find the means to pay for the imports—the eternal problem of the balance of trade and the shortage of currency.

The mechanism of trade in New England and the middle colonies differed from that in the South in two respects: the lack of staples to exchange for English goods was a relative disadvantage, but the abundance of their own shipping and mercantile enterprise worked in their favor. After 1660, in order to protect England's agriculture and fisheries, the English government placed prohibitive duties on certain major colonial exports—fish, flour, wheat, and meat—while leaving the door open to timber, furs, and whale oil, products in great demand in the home country. New York and New England between 1698 and 1717 bought more from England than they sold there, incurring an unfavorable trade balance.

The northern colonies solved the problem partly by using their own ships and merchants, thus avoiding the “invisible” charges for trade and transport, and by finding other markets for the staples excluded from England, thus acquiring goods or bullion to pay for imports from the mother country. American lumber and fish therefore went to southern Europe, Madeira, and the Azores for money or in exchange for wine; lumber, rum, and provisions went to Newfoundland; and all of these and more went to the West Indies, which became the most important outlet of all. American merchants could sell fish, bread, flour, corn, pork, bacon, beef, and horses to West Indian planters, who specialized in sugarcane. In return they got money, sugar, molasses, rum, indigo, dyewoods, and other products, many of which went eventually to England.

These circumstances gave rise to the famous “triangular trade” (more a descriptive convenience than a rigid pattern), in which New Englanders shipped rum to the west coast of Africa, where they bartered for slaves; took the slaves to the West Indies; and returned home with various commodities, including molasses, from which they manufactured rum. In another version they shipped provisions to the West Indies, carried sugar and molasses to England, and returned with goods manufactured in Europe.

The colonies suffered from a chronic shortage of hard currency, which drifted away to pay for imports and shipping charges. Various expedients met the shortage of currency: the use of wampum or commodities, the monetary value of which colonial governments tried vainly to set by law. Promissory notes of individuals or colonial treasurers often passed as a crude sort of paper money. Most of the colonies at one time or another issued bills of credit, on promise of payment later (hence the dollar “bill”), and most set up land banks that issued paper money for loans to farmers on the security of their land, which was mortgaged to the banks. Colonial

How was overseas trade in the South different from that in New England and the middle Atlantic colonies? What was the “triangular trade”? What were North America’s most important exports?

farmers began to recognize that an inflation of paper money led to an inflation of crop prices and therefore asked for more and more paper money. Thus began in colonial politics what was to become a recurrent issue in later times, the question of currency inflation. Whenever the issue arose, debtors commonly favored growth in the money supply, which would make it easier for them to settle accounts, whereas creditors favored a limited money supply, which would increase the value of their capital. Parliament outlawed legal-tender paper money in New England in 1751 and throughout the colonies in 1764.

RELIGION New England was settled by religious fundamentalists. The Puritans were colonists for God who looked to the Bible for authority and

inspiration. They read the Bible daily and memorized its passages and stories. They read it silently alone and aloud as families and in church services, which lasted from eight until noon on Sunday mornings. The Christian faith was a living source of daily inspiration and obligation for most New Englanders.

The Puritans had come to America to create pious and prosperous communities, not to tolerate sinfulness in their new Zion. Yet the picture of the dour Puritan, hostile to anything that gave pleasure, is false. Puritans, especially those of the upper class, wore colorful clothing, enjoyed secular music, and imbibed prodigious quantities of rum. "Drink is in itself a good creature of God," said the Reverend Increase Mather, "but the abuse of drink is from Satan." If found incapacitated by reason of strong drink, a person was subject to arrest. A Salem man, for example, was tried for staggering into a house where he "eased his stomak in the Chimney." Repeat offenders were forced to wear the letter *D* in public.

Moderation in all things except piety was the Puritan guideline, and it applied to sexual activity as well. Contrary to prevailing images of Puritan prudery, Puritans quite openly acknowledged natural human desires. Of course, sexual activity outside the bounds of marriage was strictly forbidden, but like most social prohibitions it provoked transgression. New England court records are filled with cases of adultery and fornication. A man found guilty of coitus with an unwed woman could be jailed, whipped, fined, disenfranchised, and forced to marry the woman. Female offenders were also jailed and whipped, and in some cases adulterers were forced to wear the letter *A* in public. In part the abundance of sex offenses is explained by the disproportionate number of men in the colonies. Many were unable to find a wife and were therefore tempted to satisfy their sexual desires outside marriage.

The Puritans who settled Massachusetts, unlike the Separatists of Plymouth, proposed only to form a purified version of the Anglican Church. They believed that they could remain loyal to the Church of England, the unity of church and state, and the principle of compulsory uniformity. But their remoteness from England led them to adopt a congregational form of church government identical with that of the Pilgrim Separatists and for that matter little different from the practice of Anglicans in the southern colonies.

In the Puritan version of John Calvin's theology, God had voluntarily entered into a covenant, or contract, with worshippers through which they could secure salvation. By analogy, therefore, an assembly of true Christians could enter into a church covenant, a voluntary union for the common worship of God. From this it was a fairly short step to the idea of a voluntary

union for the purpose of government. The history of New England affords examples of several such limited steps toward constitutional government: the Mayflower Compact, the Cambridge Agreement of John Winthrop and his followers, the Fundamental Orders of Connecticut, and the informal arrangements whereby the Rhode Island settlers governed themselves until they secured a charter in 1663.

The covenant theory contained certain kernels of democracy in both church and state, but democracy was no part of Puritan political thought, which like so much else in Puritan belief began with original sin. Humanity's innate depravity made government necessary. The Puritan was dedicated to seeking not the will of the people but the will of God, and the ultimate source of authority was the Bible. But the Bible had to be explained. Hence, most Puritans deferred to an intellectual elite for a true knowledge of God's will. By law every town had to support a church through taxes levied on every household. And every community member was required to attend midweek and Sunday religious services. The average New Englander heard 7,000 sermons in a lifetime.

The church exercised a pervasive influence over the life of the New England town, but unlike the Church of England it technically had no political power. Thus although Puritan New England has often been called a theocracy, the church was entirely separate from the state—except that the residents were taxed for its support. And if not all inhabitants were church members, all were nonetheless required to attend church services.

New England Puritans were assailed by doubts, by a fear of falling away from godly living, by the haunting fear that despite their best outward efforts they might not be among God's elect. Add such concerns to the long winters that kept the family cooped up during the dark, cold months, and one has a formula for seething resentments and recriminations that, for the sake of peace in the family, had to be projected outward, toward neighbors. The New Englanders of those peaceable kingdoms therefore built a reputation as the most litigious people on the face of God's earth, continually quarreling over property disputes, business dealings, and other issues and building in the process a flourishing legal profession.

DIVERSITY AND SOCIAL STRAINS Despite long-enduring myths, New England towns were not always pious, harmonious, and self-sufficient utopias populated by praying Puritans. Many communities were founded not as religious refuges but as secular centers of fishing, trade, or commercial agriculture, and the animating concerns of residents in such towns tended to be more entrepreneurial than spiritual. After a Puritan minister delivered his

first sermon to a congregation in the fishing port of Marblehead, a crusty fisherman admonished him: “You think you are preaching to the people of the Bay. Our main end was to catch fish.”

In many of the godly backwoods communities, social strains increased as time passed, a consequence primarily of population pressure on the land and increasing disparities of wealth. “Love your neighbor,” said Benjamin Franklin’s *Poor Richard*, “but don’t pull down your fence.” Initially among the first settlers, fathers exercised strong authority over sons through their control of the land. They kept the sons and their families in the town, not letting them set up their own households or get title to their farmland until they reached middle age. In New England, as elsewhere, fathers tended to subdivide their land among all the male children. But by the eighteenth century, with land scarcer, the younger sons were either getting control of the property early or moving on. Often they were forced out, with family help and blessings, to seek land elsewhere or new kinds of work in the commercial cities along the coast or inland rivers. With the growing pressure on land in the settled regions, poverty and social tension increased in what had once seemed a country of unlimited opportunity.

The emphasis on a direct accountability to God, which lies at the base of all Protestant theology, itself caused a persistent tension and led believers to challenge authority in the name of private conscience. Massachusetts repressed such heresy in the 1630s, but it resurfaced during the 1650s among

Quakers and Baptists, and in 1659–1660 the colony hanged four Quakers who persisted in returning after they had been expelled. These acts caused such revulsion—and an investigation by the crown—that they were not repeated, although heretics continued to face harassment and persecution.

More damaging to the Puritan utopia was the growing materialism of New England, which placed strains on church discipline. More and more children of the “visible saints” found themselves unable to give the required testimony of regeneration. In 1662 an assembly of ministers at Boston accepted the “Half-Way Covenant,” whereby baptized children of church members could be admitted to a “halfway” membership and secure baptism for their own children in turn. Such members, however, could neither vote in church nor take communion. A further blow to Puritan control came with the Massachusetts royal charter of 1691, which required toleration of dissenters and based the right to vote in public elections on property rather than church membership.

THE DEVIL IN NEW ENGLAND The strains accompanying Massachusetts’s transition from Puritan utopia to royal colony reached an unhappy climax in the witchcraft hysteria at Salem Village (now the town of Danvers) in 1692. Belief in witchcraft was widespread throughout Europe and New England in the seventeenth century. Prior to the dramatic episode in Salem, almost 300 New Englanders (mostly middle-aged women) had been accused of being witches, and more than 30 had been hanged. New England was, in the words of Cotton Mather, “a country . . . extraordinarily alarum’d by the wrath of the Devil.”

Still, the outbreak in Salem was distinctive in its scope and intensity. Salem Village was about eight miles from the larger Salem Town, a thriving port. A contentious community made up of independent farm families and people who depended upon the commercial activity of the port, the village struggled to free itself from the influence and taxes of Salem proper. The tensions that arose apparently made the residents especially susceptible to the idea that the devil was at work in the village.

During the winter of 1691–1692, several adolescent girls began meeting in the kitchen of the town minister, the Reverend Samuel Parris. There they gave rapt attention to the African tales told by Tituba, Parris’s West Indian slave. As the days passed, the entranced girls began to behave oddly—shouting, barking, groveling, and twitching for no apparent reason. A doctor concluded that the girls were bewitched. When asked who was tormenting them, the girls replied that three women—Tituba, Sarah Good, and Sarah Osborne—were Satan’s servants.

Authorities thereupon arrested the three women. At a special hearing before the magistrates, the “afflicted” girls rolled on the floor in convulsive fits

as the accused women were questioned. In the midst of the hearing, Tituba shocked listeners by not only confessing to the charge but also divulging the names of many others in the community who she claimed were also performing the devil's work. Soon thereafter, dozens more girls and young women began to experience the same violent contortions. The accusations spread throughout the community. Within a few months the Salem Village jail was filled with townspeople—men, women, and children—accused of practicing witchcraft.

At the end of May, the authorities arrested Martha Carrier. A farmer had testified that several of his cattle suffered “strange deaths” soon after he and Carrier had had an argument. Little Phoebe Chandler added that she had been stricken with terrible stomach pains soon after she heard Carrier's voice telling her she was going to be poisoned. Even Carrier's own children testified against her: they reported that their mother had recruited them to be witches. But the most damning testimony was provided by several young girls. When they were brought into the hearing room, they began writhing in agony at the sight of Carrier. They claimed that they could see the devil whispering in her ear. Carrier declared that it was “a shameful thing that you should mind these folks that are out of their wits. I am wronged.” A few days later she was hanged. Rebecca Nurse, a pious seventy-one-year-old matriarch of a large family, went to the gallows in July. George Jacobs, an old man whose servant girl accused him of witchcraft, dismissed the whole chorus of accusers as “bitch witches.” He was hanged in August.

But as the net of accusation spread wider, extending far beyond the confines of Salem, leaders of the Massachusetts Bay Colony began to worry that

The Wonders of the Invisible World

the witch hunts were out of control. The governor intervened when his own wife was accused of serving the devil. He disbanded the special court in Salem and ordered the remaining suspects released. A year after it had begun, the fratricidal event was finally over. Nineteen people (including some men married to women who had been convicted) had been hanged, one man—the stubborn Giles Corey—was pressed to death by heavy stones, and more than 100 others were jailed. Nearly everybody responsible for the Salem executions later recanted, and nothing quite like it happened in the colonies again.

What explains the witchcraft hysteria at Salem? Some have argued that it may have represented nothing more than a contagious exercise in adolescent imagination intended to enliven the dreary routine of everyday life. Yet adults pressed the formal charges against the accused and provided most of the testimony. This fact has led some scholars to speculate that long-festered local feuds and property disputes may have triggered the prosecutions.

More recently historians have focused on the most salient fact about the accused witches: almost all of them were women. Many of the supposed witches, it turns out, had in some way defied the traditional roles assigned to females. Some had engaged in business transactions outside the home; others did not attend church; some were curmudgeons. Most of them were middle-aged or older and without sons or brothers. They thus stood to inherit property and live as independent women. The notion of autonomous spinsters flew in the face of prevailing social conventions.

Still another interpretation stresses the hysteria caused in the late seventeenth century by frequent Indian attacks occurring just north of Salem, along New England's northern frontier. The outbreak of King William's War in 1689 had revived fighting with the northern Indians, and some of the participants in the witch trials were orphan girls from Maine who had witnessed the violence firsthand. Their proximity to such horrific events and the terrifying specter of new Indian attacks exacerbated anxieties and may help explain why witchcraft hysteria developed so rapidly and extensively. "Are you guilty or not?" the Salem magistrate John Hathorne demanded of fourteen-year-old Abigail Hobbs in 1692. "I have seen sights and been scared," she answered.

Whatever the precise cause, there is little doubt that the witchcraft controversy reflected the peculiar social dynamics of the Salem community. Late in 1692, as the hysteria in Salem subsided, several of the afflicted girls were traveling through nearby Ipswich when they encountered an old woman resting on a bridge. "A witch!" they shouted and began writhing as if possessed. But the people of Ipswich were unimpressed. Passersby showed no

interest in the theatrics. Unable to generate either sympathy or curiosity, the girls picked themselves up and continued on their way.

SOCIETY AND ECONOMY IN THE MIDDLE COLONIES

AN ECONOMIC MIX Both geographically and culturally the middle colonies stood between New England and the South, blending their own influences with elements derived from the older regions on either side. In so doing, they more completely reflected the diversity of colonial life and more fully foreshadowed the pluralism of the American nation than the other regions did. Their crops were those of New England but more bountiful, owing to better land and a longer growing season, and they developed surpluses of foodstuffs for export to the plantations of the South and the West Indies: wheat, barley, oats, and other cereals, flour, and livestock. Three great rivers—the Hudson, the Delaware, and the Susquehanna—and their tributaries gave the middle colonies ready access to the backcountry and to the fur trade of the interior, where New York and Pennsylvania long enjoyed friendly relations with the Iroquois, the Delaware, and other tribes. As a consequence the region's commerce rivaled that of New England, and indeed Philadelphia in time supplanted Boston as the largest city in the colonies.

Land policies in the middle colonies followed the headright system of the South. In New York the early royal governors carried forward, in practice if not in name, the Dutch device of the patroonship, granting influential favorites vast estates on Long Island and up the Hudson and Mohawk River valleys. These realms most nearly approached the medieval manor. They were self-contained domains farmed by tenants who paid fees to use the landlords' mills, warehouses, smokehouses, and wharves. But with free land available elsewhere, New York's population languished, and the new waves of immigrants sought the promised land of Pennsylvania.

AN ETHNIC MIX In the makeup of their population, the middle colonies stood apart from both the mostly English Puritan settlements and the biracial plantation colonies to the south. In New York and New Jersey, for instance, Dutch culture and language lingered, along with the Dutch Reformed Church. Along the Delaware River the few Swedes and Finns, the first settlers, were overwhelmed by the influx of English and Welsh Quakers, followed in turn by Germans and Scotch-Irish.

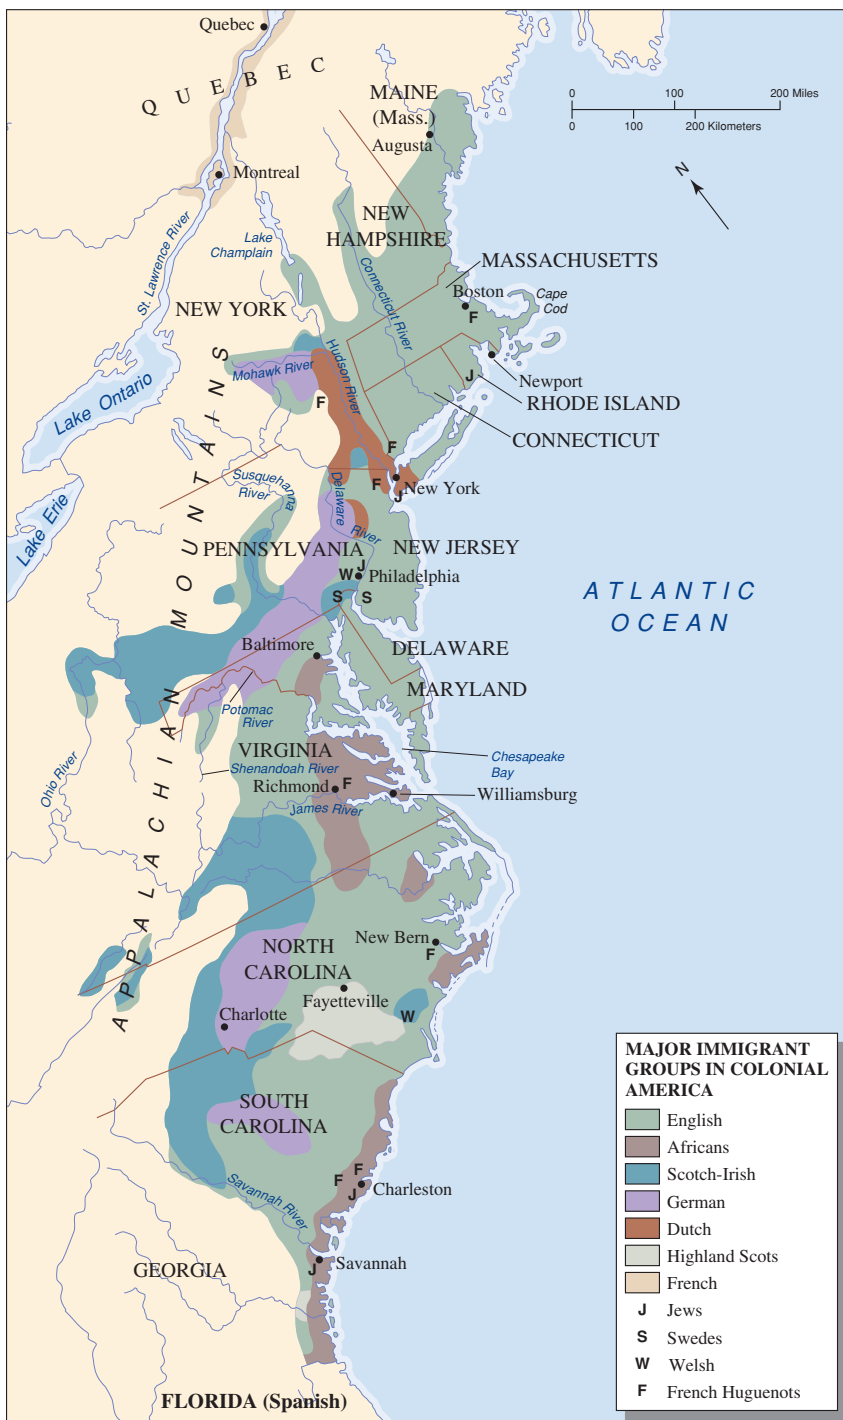

The Germans came mainly from the Rhineland, a region devastated by incessant war. (Until German unification in 1871, ethnic Germans—those Europeans speaking German as their native language—lived in a variety of areas and principalities in central Europe.) William Penn's brochures encouraging settlement in Pennsylvania circulated throughout central Europe in German translation, and his promise of religious freedom appealed to persecuted sects, especially the Mennonites, German Baptists whose beliefs resembled those of the Quakers.

In 1683 a group of Mennonites founded Germantown, near Philadelphia. They were the vanguard of a swelling migration in the eighteenth century that included Lutherans, Reformed Calvinists, Moravians, and others, a large proportion of whom paid their way as indentured servants, or "redemptioners," as they were commonly called. West of Philadelphia they created a belt of settlement in which the "Pennsylvania Dutch" (a corruption of *Deutsch*, meaning "German") predominated, as well as a channel for the dispersion of German populations throughout the colonies.

The feisty Scotch-Irish began to arrive later and moved still farther out into the backcountry throughout the eighteenth century. (*Scotch-Irish* is an enduring misnomer for Ulster Scots, Presbyterians transplanted from Scotland to confiscated lands in northern Ireland to give that country a more Protestant tone.) The Scotch-Irish, mostly Presbyterians, fled both Anglican persecution and economic disaster caused by English taxes. Between 1717 and 1775 over 250,000 Scots and Scotch-Irish left northern England, southern Scotland, and northern Ireland for America. They settled in Pennsylvania and the fertile valleys stretching southwestward into Virginia and Carolina.

The Germans and Scotch-Irish became the largest non-English elements in the colonies, but other groups enriched the population in New York and the Quaker colonies: Huguenots (Calvinists whose religious freedom had been revoked in France in 1685), Irish, Welsh, Swiss, Jews, and others. New York had inherited from the Dutch a tradition of tolerance that had given the colony a diverse population before the English conquest: French-speaking Walloons and French, Germans, Danes, Portuguese, Spaniards, Italians, Bohemians, Poles, and others, including some New England Puritans. The Protestant Netherlands had given haven to the Sephardic Jews expelled from Spain and Portugal, and enough of them found their way into New Netherland to found a synagogue there.

What could be said of Pennsylvania as a refuge for the persecuted might be said as well of Rhode Island and South Carolina, which practiced a similar religious toleration. Newport and Charleston, like New York and Philadelphia, became centers of minuscule Jewish populations. Huguenots

What attracted German immigrants to the Middle Colonies? Why did the Scotch-Irish spread across the Appalachian backcountry? What major population changes were reflected in the 1790 census?

made their greatest mark on South Carolina, more by their enterprise than by their numbers. A number of Highland Scots came directly from their homeland rather than by way of Ulster, especially after the suppression of a rebellion in 1745 on behalf of the Stuart pretender to the throne, Bonnie Prince Charlie.

The eighteenth century was the period of great expansion and population growth in British North America, and during those years a large increase in the non-English stock took place. A rough estimate of the national origins of the white population as of 1790 found it to be 61 percent English, 14 percent Scottish and Scotch-Irish, 9 percent German, 5 percent Dutch, French, and Swedish, 4 percent Irish, and 7 percent miscellaneous or unassigned. If one adds to the 3,172,444 whites in the 1790 census the 756,770 nonwhites, not even considering uncounted Indians, it seems likely that only about half the populace, and perhaps fewer, could trace their origins to England. Of the black slaves, about 75 percent had been transported from the bend of the African coastline between the Senegal and Niger rivers; most of the rest came from the Congo-Angola region.

THE BACKCOUNTRY Pennsylvania in the eighteenth century became the great distribution point for the different ethnic groups of European origin, just as the Chesapeake Bay region and Charleston became the distribution points for African peoples. Before the mid-eighteenth century, settlers in the Pennsylvania backcountry had reached the Appalachian Mountain range. Rather than crossing the steep ridges, the Scotch-Irish and Germans filtered southward along what came to be called the Great Philadelphia Road, the primary internal migration route during the colonial period. It headed west from the port city, traversing Chester and Lancaster counties, and turned southwest at Harris' Ferry (now Harrisburg), where it crossed the Susquehanna River. Continuing south across western Maryland, it headed down the Shenandoah Valley of Virginia and on into the Carolina and Georgia backcountry. Germans were the first white settlers in the upper Shenandoah Valley, and Scotch-Irish filled the lower valley.

COLONIAL CITIES

During the seventeenth century the American colonies remained in comparative isolation from one another, evolving distinctive folkways and unfolding separate histories. Boston and New York and Philadelphia and Charleston were more likely to keep in close touch with London than with

each other. The Carolina up-country had more in common with the Pennsylvania backcountry than either had with the urban cultures of Charleston or Philadelphia. Since commerce was their chief reason for being, colonial cities hugged the coastline or, like Philadelphia, sprang up on rivers where oceangoing vessels could reach them. Never holding more than 10 percent of the colonial population, the large cities exerted a disproportionate influence in commerce, politics, and culture. By the end of the colonial period, Philadelphia, with some 30,000 people, was the largest city in the colonies and second only to London in the British Empire. New York, with about 25,000, ranked second; Boston numbered 16,000; Charleston, 12,000; and Newport, 11,000.

THE SOCIAL AND POLITICAL ORDER The urban social elite was dominated by the merchants who bartered the products of American farms and forests for the molasses and rum of the West Indies, the manufactured goods of Europe, and the slaves of Africa. After the merchants, who constituted the chief urban aristocracy, came a middle class of retailers, innkeepers, and artisans. Almost two thirds of the urban adult male workers were artisans, people who made their living at handicrafts. They included carpenters and coopers (barrel makers), shoemakers and tailors, silversmiths and blacksmiths, sailmakers, stonemasons, weavers, and potters. At the bottom of the pecking order were sailors and unskilled workers.

Class stratification in the cities became more pronounced as time passed. One study of Boston found that in 1687 the richest 15 percent of the population held 52 percent of the taxable wealth; by 1771 the top 15 percent held about 67 percent and the top 5 percent held some 44 percent. In Philadelphia the concentration of wealth was even more pronounced.

Colonial cities were busy, crowded, and dangerous. They

The Rapalje Children

John Durand (ca. 1768). These children of a wealthy Brooklyn merchant wear clothing typical of upper-crust urban society.

required not only paved roads and streetlights but regulations to protect children and animals from reckless riders. Regulations restrained citizens from tossing their garbage into the street. Fires that on occasion swept through closely packed buildings led to preventive standards in building codes, restrictions on burning rubbish, and the organization of fire companies. Rising crime and violence required more police protection. And in cities the poor became more visible than they were in the countryside.

Colonists brought with them the English principle of public responsibility for the indigent. The number of Boston's poor receiving public assistance rose from 500 in 1700 to 4,000 in 1736; in New York the number rose from 250 in 1698 to 5,000 in the 1770s. Most of such public assistance went to "outdoor" relief in the form of money, food, clothing, and fuel. Almshouses appeared to house the destitute.

THE URBAN WEB Transit within and between cities was initially difficult. The first roads were Indian trails, which themselves often followed the tracks of bison through the forests. Those trails widened with travel, then were made into roads by order of provincial and local authorities. Land travel was initially by horse or by foot. The first public stagecoach line opened in 1732. From the main ports good roads might reach thirty or forty miles inland, but all were dirt roads subject to washouts and mud holes. Aside from city streets there was not a single hard-surfaced road constructed during the entire colonial period.

Taverns were an important aspect of colonial travel, since movement by night was too risky to undertake. By the end of the seventeenth century, there were more taverns in America than any other business. Indeed, they became the most important social institution in the colonies—and the most democratic. By 1690 there were fifty-four taverns in Boston alone, half of them operated by women. Colonial taverns and inns were places to drink, relax, read the newspaper, play cards or billiards, gossip about people or politics, learn news from travelers, or conduct business. Local ordinances regulated them, setting prices and usually prohibiting them from serving liquor to African Americans, Indians, servants, or apprentices.

In 1726 a concerned Bostonian wrote a letter to the community, declaring that "the abuse of strong Drink is becoming Epidemical among us, and it is very justly Supposed . . . that the Multiplication of Taverns has contributed not a little to this Excess of Riot and Debauchery." Despite the objections by some that crowded taverns engendered disease and unruly behavior, colonial taverns and inns continued to proliferate, and by the mid-eighteenth century they would become the gathering place for protests against British rule.

Taverns

A tobacconist's business card from 1770 captures the atmosphere of late-eighteenth-century taverns. Here men in a Philadelphia tavern share conversation while they drink ale and smoke pipes.

Taverns served as a collective form of communication; long-distance communication, however, was more complicated. Postal service in the seventeenth century was almost nonexistent—people entrusted letters to travelers or sea captains. Under a parliamentary law of 1710, the postmaster of London named a deputy in charge of the colonies, and a postal system eventually extended the length of the Atlantic seaboard. Benjamin Franklin, who served as deputy postmaster for the colonies from 1753 to 1774, sped up the service with shorter routes and night-traveling post riders, and he increased the volume by inaugurating lower rates.

More reliable mail delivery gave rise to newspapers in the eighteenth century. Before 1745 twenty-two newspapers had been started: seven in New England, ten in the middle colonies, and five in the South. An important landmark in the progress of freedom of the press was John Peter Zenger's trial for seditious libel, for publishing criticisms of New York's governor in his newspaper, the *New York Weekly Journal*. Zenger was imprisoned for ten months and brought to trial in 1735. English common law held that one might be punished for criticism that fostered "an ill opinion of the government." The jury's function was only to determine whether the defendant had published the opinion. Zenger's lawyer startled the court with his claim that the editor had published the truth—which the judge ruled an unacceptable

defense. The jury, however, agreed with the assertion and held the editor not guilty. The libel law remained standing as before, but editors thereafter were emboldened to criticize officials more freely.

THE ENLIGHTENMENT

DISCOVERING THE LAWS OF NATURE Through their commercial contacts, newspapers, and other channels, colonial cities became centers for the dissemination of fashion and ideas. In the world of ideas, a new fashion was abroad: the Enlightenment. During the seventeenth century, Europe experienced a scientific revolution in which the ancient view of an earth-centered universe was overthrown by the heliocentric (sun-centered) system of the sixteenth-century Polish astronomer Nicolaus Copernicus. A climax to the scientific revolution came with Sir Isaac Newton's *Principia (Mathematical Principles of Natural Philosophy, 1687)*, which set forth his theory of gravitation. Newton depicted a mechanistic universe moving in accordance with natural laws that could be grasped by human reason and explained by mathematics. He implied that natural laws govern all things—the orbits of the planets and the orbits of human relations: politics, economics, and society. Reason could make people aware, for instance, that the natural law of supply and demand governs economics or that the natural rights to life, liberty, and property determine the limits and functions of government.

Much of enlightened thought could be reconciled with established beliefs: the idea of natural law existed in Christian theology, and religious people could reason that the rational universe of Copernicus and Newton simply demonstrated the glory of God. Yet when people carried Newton's outlook to its ultimate logic, as the Deists did, the idea of natural law reduced God to a remote Creator—as the French philosophe Voltaire put it, the master clockmaker who planned the universe and set it in motion. Evil in the world, in this view, results not from original sin and innate depravity so much as from ignorance, an imperfect understanding of the laws of nature. Humanity, the English philosopher John Locke argued in his *Essay Concerning Human Understanding* (1690), is largely the product of the environment, the mind being a blank tablet on which experience is written. The way to improve both society and human nature was by the application and improvement of Reason—which was the highest Virtue (Enlightenment thinkers often capitalized both words).

THE ENLIGHTENMENT IN AMERICA However interpreted, such ideas profoundly affected the climate of thought in the eighteenth century.

The premises of Newtonian science and the Enlightenment, moreover, fitted the American experience, which placed a premium on observation, experiment, and the need to think anew. America was therefore especially receptive to the new science.

John Winthrop Jr.(1606–1676), three times governor of Connecticut, wanted to establish industries and mining in America. Those interests led to his work in chemistry and to his membership in the Royal Society of London. He owned probably the first telescope brought to the colonies. His relative, John Winthrop (1714–1779), was a professional scientist and Harvard professor who introduced to the colonies the study of calculus and ranged over the fields of astronomy, geology, chemistry, and electricity. David Rittenhouse of Philadelphia, a clock maker, became a self-taught scientist who was probably the first to build a telescope in America. John Bartram, also of Philadelphia, spent a lifetime traveling and studying American plant life and developed an extensive botanical garden.

FRANKLIN’S INFLUENCE Benjamin Franklin epitomized the Enlightenment in the eyes of both Americans and Europeans. Born in Boston in 1706, he was the son of a maker of candles and soap. Apprenticed to his older brother, a printer, Franklin left home at the age of seventeen, bound for Philadelphia. There, before he was twenty-four, he owned a print shop, where he edited and published the *Pennsylvania Gazette*. When he was twenty-six, he brought out *Poor Richard’s Almanack*, a collection of homely maxims on success and happiness. Before he retired from business, at the age of forty-two, Franklin, among other achievements, had founded a library, set up a fire company, helped start the academy that became the University of Pennsylvania, and organized a debating club that grew into the American Philosophical Society.

Science was Franklin’s passion. His *Experiments and Observations on Electricity* (1751) went through many editions in several languages and established his reputation as a leading thinker and experimenter. His

speculations extended widely, to the fields of medicine, meteorology, geology, astronomy, physics, and other areas of science. He invented the Franklin stove, the lightning rod, and a glass harmonica, for which Mozart and Beethoven wrote works. The triumph of this untutored genius confirmed the Enlightenment trust in the powers of Nature and Reason.

EDUCATION IN THE COLONIES For the colonists at large, education in the traditional ideas and manners of society—even literacy itself—remained primarily the responsibility of family and church. The modern conception of free public education was slow in coming and failed to win universal acceptance until the twentieth century. Yet colonists were concerned from the beginning that steps needed to be taken lest the children of settlers grow up untutored.

Conditions in New England proved most favorable for the establishment of schools. The Puritan emphasis on Scripture reading, which all Protestants shared to some degree, implied an obligation to ensure literacy. And the compact towns of that region made schools more feasible than they were among

the scattered settlers of the southern colonies. In 1647 the Massachusetts Bay Colony enacted the famous “ye olde deluder Satan” act (designed to thwart the evil one), which required every town of fifty or more families to set up a grammar school (a “Latin school” that could prepare a student for college). Although the act was widely evaded, it did signify a serious attempt to promote education.

The Dutch in New Netherland were as interested in education as the New England Puritans. In Pennsylvania the Quakers never heeded William Penn’s instructions to establish public schools, but they did finance a number of private schools, where practical as well as academic subjects were taught. In the southern colonies

efforts to establish schools were hampered by the more scattered population and in parts of the backcountry by indifference and neglect. Some of the wealthiest planters and merchants of the Tidewater sent their children to England or hired tutors. In some places wealthy patrons or the people collectively managed to raise some kind of support for “old field” schools (primitive one-room buildings usually made of logs) and academies at the secondary level.

THE GREAT AWAKENING

STIRRINGS During the early eighteenth century the currents of rationalism stimulated by the Enlightenment aroused concerns among orthodox believers in Calvinism. Many people seemed to be drifting away from the moorings of piety. Despite the belief that the Lord had allowed great Puritan and Quaker merchants of Boston and Philadelphia to prosper, there remained a haunting fear that the devil had lured them into the vain pursuit of worldly gain, Deism, and skepticism. And out along the fringes of settlement, many of the colonists were unchurched. On the frontier, people had no minister to preach or administer sacraments or perform marriages. According to some ministers, these pioneers had lapsed into a primitive and sinful life, little different from that of the “heathen” Indians. By the 1730s the sense of religious decline provoked a widespread revival of faith, known as the Great Awakening.

In 1734–1735 a remarkable spiritual revival occurred in the congregation of Jonathan Edwards, a Congregationalist minister in Northampton, in western Massachusetts. One of America’s most brilliant philosophers and theologians, Edwards had entered Yale in 1716, at age thirteen, and graduated as valedictorian four years later. In 1727 Edwards was called to serve the Congregational church in Northampton. There he found the town’s spirituality at a low ebb. More people frequented taverns than churches, and Christians, he believed, had become preoccupied with making and spending money. Religion had also become too intellectual, thereby losing its emotional force. “Our people,” he said, “do not so much need to have their heads stored [with new knowledge] as to have their hearts touched.” His own vivid descriptions of the torments of hell and the delights of heaven helped rekindle spiritual fervor among his congregants. By 1735 Edwards could report that “the town seemed to be full of the presence of God; it never was so full of love, nor of joy.” To judge the power of the Awakening, he thought, one need only observe that “it was no longer the Tavern” that drew local crowds, “but the Minister’s House.”

George Whitefield

The English minister's dramatic eloquence roused American congregants, inspiring many to experience a religious rebirth.

About the same time, William Tennent, an Irish-born Presbyterian revivalist, set up a “Log College” in Neshaminy, Pennsylvania, for the education of ministers to serve the Scotch-Irish Presbyterians living around Philadelphia. The true catalyst of the Great Awakening, however, was a young English minister, George Whitefield, whose reputation as a spellbinding evangelist preceded him to the colonies. Congregations were lifeless, he claimed, “because dead men preach to them.” Too many ministers were “slothful shepherds and dumb dogs.” His objective was to restore the fires of religious fervor to American congregations. In the autumn of 1739, Whitefield, then twenty-five, arrived in Philadelphia

and began preaching to huge crowds. After visiting Georgia, he made a triumphal procession northward to New England, drawing great crowds and releasing “Gales of Heavenly Wind” that blew gusts throughout the colonies.

Possessed of a golden voice, Whitefield enthralled audiences with his unparalleled eloquence. Even the skeptical Benjamin Franklin, who went to see Whitefield preach in Philadelphia, found himself so carried away that he emptied his pockets into the collection plate. Whitefield urged his listeners to experience a “new birth”—a sudden, emotional moment of conversion and salvation. By the end of his sermon, one listener reported, the entire congregation was “in utmost Confusion, some crying out, some laughing, and Bliss still roaring to them to come to Christ, as they answered, *I will, I will, I’m coming, I’m coming.*”

Jonathan Edwards took advantage of the commotion stirred up by Whitefield to spread his own revival gospel throughout New England. The Awakening reached its peak in 1741 when Edwards delivered his most famous sermon at Enfield, Massachusetts (in present-day Connecticut). Titled “Sinners in the Hands of an Angry God,” it represented a devout appeal to repentance. Edwards reminded the congregation that hell is real and that God’s vision is omnipotent, his judgment certain. He noted that God “holds you over the pit of hell, much as one holds a spider, or some loathsome insect, over the fire, abhors you, and is dreadfully provoked . . . he looks upon you

as worthy of nothing else, but to be cast into the fire.” When Edwards finished, he had to wait several minutes for the congregants to quiet down before leading them in a closing hymn.

Edwards and Whitefield inspired many imitators, some of whom carried evangelism to extremes. Once unleashed, spiritual enthusiasm is hard to control. In many ways the Awakening backfired on those who had intended it to bolster church discipline and social order. Some of the revivalists began to court those at the bottom of society—laborers, seamen, servants, and farm folk. The Reverend James Davenport, for instance, a fiery New England Congregationalist, set about shouting, raging, and stomping on the devil, beseeching his listeners to renounce the established clergy and become the agents of their own salvation. The churched and unchurched flocked to his theatrical sermons. Seized by terror and ecstasy, they groveled on the floor or lay unconscious on the benches, to the chagrin of more decorous churchgoers. One never knew, the more traditional clergymen warned, whence came these enthusiasms—perhaps they were devilish delusions intended to discredit the true faith.

PIETY AND REASON Everywhere the fragmenting force of the Awakening induced splits, especially in the more Calvinistic churches. Presbyterians divided into the “Old Side” and “New Side,” Congregationalists into “Old Lights” and “New Lights.” New England religious life would never be the same. The more traditional clergy were undermined as church members chose sides and either dismissed their ministers or deserted them. Many of the “New Lights” went over to the Baptists, and others flocked to Presbyterian or, later, Methodist groups, which in turn divided and subdivided into new sects.

New England Puritanism disintegrated amid the ecstatic revivals of the Great Awakening. The precarious balance in which the founders had held the elements of emotionalism and reason collapsed. Thereafter, New England attracted more and more Baptists, Presbyterians, Anglicans, and other denominations while the revival frenzy scored its most lasting victories along the frontiers of the middle and southern colonies. In the more sedate churches of Boston, moreover, the principle of rational religion gained the upper hand in a reaction against the excesses of revival emotion. Boston ministers such as Charles Chauncey and Jonathan Mayhew reexamined Calvinist theology and found too forbidding and irrational the concept that people could be forever damned by predestination.

In reaction to taunts that the “born-again” revivalist ministers lacked learning, the Awakening gave rise to the denominational colleges that became characteristic of American higher education. The three colleges already in existence had their origins in religious motives: Harvard College,

founded in 1636 because the Puritans dreaded “to leave an illiterate ministry to the church when our present ministers shall lie in the dust”; the College of William and Mary, created in 1693 to strengthen the Anglican ministry; and Yale College, set up in 1701 to educate the Puritans of Connecticut, who believed that Harvard was drifting from the strictest orthodoxy. The College of New Jersey, later Princeton University, was founded by Presbyterians in 1746. In close succession came King’s College (1754) in New York, later renamed Columbia University, an Anglican institution; the College of Rhode Island (1764), later called Brown University, which was Baptist; Queens College (1766), later known as Rutgers, which was Dutch Reformed; and Dartmouth College (1769), which was Congregationalist and the outgrowth of an earlier school for Indians. Among the colonial colleges, only the University of Pennsylvania, founded as the Academy of Philadelphia in 1751, arose from a secular impulse.

The Great Awakening, like the Enlightenment, set in motion powerful currents that still flow in American life. It implanted in American culture the evangelical crusade and the emotional appeal of revivalism. The movement weakened the status of the old-fashioned clergy, encouraged believers to exercise their own judgment, and thereby weakened habits of deference generally. By encouraging the proliferation of denominations, it heightened the need for toleration of dissent. But in some respects the counterpoint between the Awakening and the Enlightenment, between the principles of spirit and reason, led by different roads to similar ends. Both movements emphasized the power and right of individual decision making, and both aroused millennial hopes that America would become the promised land in which people might attain the perfection of piety or reason, if not both.

MAKING CONNECTIONS

- This chapter reveals tensions in colonial Virginia society; such tensions would periodically come to a head, as in Bacon’s Rebellion, discussed in Chapter 2.
- During the imperial crisis of the 1760s and 1770s, the ideas of the Great Awakening and especially the Enlightenment helped shape the American response to British actions and thereby contributed to a revolutionary mentality.

THE IMPERIAL PERSPECTIVE

FOCUS QUESTIONS

- How did England's policies change the political and economic administration of the colonies?
- How were colonial governments structured?
- What were relations like between the English colonists and their neighbors in North America: the French, the Spanish, and the Indians?

The English differed from the Spanish and the French in the degree of freedom they initially allowed their American colonies. Unlike New France and New Spain, New England was in effect a self-governing community. There was much less control by the mother country, in part because the English were unwilling to incur the expenses of a vast colonial bureaucracy. The constant struggle between Parliament and the Stuart kings prevented England from perfecting either a systematic colonial policy or effective agencies of imperial control. After the Restoration of Charles II and the Stuart monarchy in 1660, a more comprehensive plan of colonial administration slowly emerged, but even so it lacked coherence and efficiency.

As a result of inefficient—and often lax—colonial administration by the mother country, Americans grew accustomed to loose and often paradoxical imperial policies. For instance, the English government granted home rule to the settlements along the Atlantic coast and then sought to keep them from exercising it. It regarded the English colonists as citizens but refused to grant them the privileges of citizenship. It insisted that the settlers contribute to the expense of maintaining the colonies but refused to allow them a voice in the shaping of administrative policies. Such inconsistencies spawned tensions. By the mid-eighteenth century, when Britain tried to tighten control of its American colonies, it was too late. British Americans had developed a far more powerful sense of their rights than any other colonial people, and they resolved to assert and defend those rights.

ENGLISH ADMINISTRATION OF THE COLONIES

Throughout the colonial period the king was the source of legal authority in America, and land titles derived ultimately from royal grants to individuals and groups. All the colonies except Georgia received charters from the king before the Glorious Revolution of 1688, when the crown lost supremacy to Parliament. The colonies therefore continued to stand as “dependencies of the crown,” and the important colonial officials held office at its pleasure. The English Civil War, which lasted from 1642 to 1649, led to Oliver Cromwell’s Puritan Commonwealth and Protectorate, and both developments gave the colonies a respite from efforts at royal control.

THE MERCANTILE SYSTEM Oliver Cromwell showed little passion for regulating daily life in the American colonies, but he had a lively concern for colonial trade, which had fallen largely to Dutch shipping during the civil war. Therefore, in 1651 Parliament adopted the Navigation Act, requiring that all goods imported to England or the colonies be carried only on English ships and that the majority of each crew be English.

On economic policy if nothing else, Restoration England under Charles II followed the lead of Cromwell and all the other major European powers of the seventeenth and eighteenth centuries. The new Parliament adopted the mercantile system, or mercantilism, a nationalistic program that assumed that the total of the world’s gold and silver remained essentially fixed, with only a nation’s share in that wealth subject to change. Thus one nation could gain wealth only at the expense of another—by seizing its gold and silver and dominating its trade. To acquire gold and silver, a government had to control

all economic activities, limiting foreign imports and preserving a favorable balance of trade. This required a mercantilist government to encourage manufacturers, through subsidies and monopolies if need be. Mercantilism also required a nation to develop and protect its own shipping and to exploit colonies as sources of raw materials and markets for its finished goods.

The Navigation Act of 1660 gave Cromwell's act of 1651 a new twist: ships' crews had to be three-quarters, not just a majority, English, and specified goods were to be shipped only to England or other English colonies. The list of "enumerated" goods initially included tobacco, cotton, indigo, ginger, dyewoods, and sugar. Rice, hemp, masts, copper ore, and furs, among other items, were added later. Not only did England (and its colonies) become the sole outlet for those "enumerated" colonial exports, but the Navigation Act of 1663 required that *all* colonial imports from Europe to America stop first in England, be offloaded, and have duty paid on them before reshipment to the colonies. The Navigation Acts, also called the British Act of Trade, gave England a monopoly over the tobacco and sugar produced in the Chesapeake and the West Indies. The acts also increased customs revenues collected in England, channeled all colonial commerce through English merchants, and enriched English shipbuilders. Over time, these regulations meant that the commercial activities of the American colonies became ever more important to the strength of the British Empire.

ENFORCING THE NAVIGATION ACTS The Navigation Acts supplied a convenient rationale for a colonial system: to serve the economic needs of the mother country. Yet enforcement was spotty. During the reign of Charles I, a bureaucracy of colonial administrators began to emerge, but it took shape slowly and incompletely. In 1675 Charles II introduced some order into the chaos when he designated the Lords of Trade to make the colonies abide by the mercantile system and seek out ways to make them more profitable to England and the crown. To these ends the lords served as the clearinghouse for all colonial affairs, building up a bureaucracy of colonial experts. The Lords of Trade named governors, wrote or reviewed the governors' instructions, and handled all reports and correspondence dealing with colonial affairs.

During the 1670s collectors of customs duties appeared in all the colonies, and a surveyor general of customs in the American colonies was named. The most notorious of these, insofar as resentful colonists were concerned, was Edward Randolph, the first man to make a career in the colonial service and the nemesis of insubordinate colonials for a quarter century. Randolph arrived

Boston from the Southeast

This view of eighteenth-century Boston shows the importance of shipping and its regulation in the colonies, especially in Massachusetts Bay.

at Boston in 1676 and soon demanded that Massachusetts abide by the Navigation Acts. He set up shop as the king's collector of customs in Boston, and within months his efforts to tighten control over commercial activity excited massive resentment. In 1678 a defiant Massachusetts legislature declared that the Navigation Acts had no legal standing in the colony. Eventually, in 1684, the Lords of Trade won a court decision that annulled the charter of Massachusetts. The Puritan utopia was fast becoming a lost cause.

THE DOMINION OF NEW ENGLAND Temporarily the government of Massachusetts Bay was placed in the hands of a special royal commission. Then, in 1685, Charles II died, to be succeeded by his brother the duke of York, as James II, the first Catholic sovereign since the death of Queen Mary in 1558. James II asserted power more forcefully than his brother had. The new king readily approved a proposal to create a Dominion of New England that included all the colonies south through New Jersey.

The dominion was to have a government named by royal authority; a governor and council would rule without any assembly. The royal governor, Sir Edmund Andros, appeared in Boston in 1686 to establish his rule, which he soon extended over Connecticut and Rhode Island and, in 1688, over New York and East and West Jersey. Andros was a soldier, accustomed

to taking—and giving—orders. He seems to have been honest, efficient, and loyal to the crown but tactless in circumstances that called for the utmost diplomacy—the uprooting of long-established institutions in the face of popular hostility.

A rising resentment greeted Andros's measures, especially in Massachusetts. Taxation was now levied without the consent of the General Court, and when residents of one seaboard town protested taxation without representation, several of them were imprisoned or fined. Andros suppressed town governments, enforced the trade laws, and punished smugglers. Most ominous of all, Andros and his lieutenants took over a Puritan church in Boston for Anglican worship. Puritan leaders believed, with good reason, that he was conspiring to break their power and authority.

But the Dominion of New England was scarcely established before the Glorious Revolution of 1688 erupted in England. King James II, like Andros in New England, had aroused resentment by instituting arbitrary measures—and by openly parading his Catholic faith. The birth of a son, sure to be reared a Catholic, put the opposition on notice that James's system would survive him. The Catholic son, rather than the Protestant daughters, Mary and Anne, would be next in line for the throne. Parliamentary leaders, their patience exhausted, invited Protestant Mary Stuart and her husband, the Dutch leader William III of Orange, to assume the throne as joint monarchs. James, seeing his support dwindling, fled to France.

King James II

English monarch from 1685 to 1688.

THE GLORIOUS REVOLUTION IN AMERICA When news reached Boston that William had landed in England, the city staged its own Glorious Revolution. Andros and his councilors were arrested, and Massachusetts reverted to its former government. In rapid sequence the other colonies that had been absorbed into the dominion followed suit. All were permitted to retain their former status except Massachusetts Bay and Plymouth which after some delay were united under a new charter in 1691 as the royal colony of Massachusetts Bay.

In New York, however, events took a different course. There Andros's lieutenant governor was deposed by a German immigrant, Jacob Leisler,

who assumed the office of governor pending approval from England. For two years he kept the province under his control with the support of the militia. Finally, in 1691, the king appointed a new governor. When Leisler hesitated to turn over authority, he was charged with treason, and he and his son-in-law were hanged on May 16, 1691. Four years too late, in 1695, Parliament exonerated them of all charges. Leisler and anti-Leisler factions would poison the political atmosphere of New York for years to come.

The new British monarchs, William and Mary, made no effort to restore the Dominion of New England, but they brought more colonies under royal control through the appointment of governors in Massachusetts, New York, and Maryland. Maryland, however, reverted to proprietary status in 1715, after the fourth Lord Baltimore became Anglican. Pennsylvania had an even briefer career as a royal colony, from 1692 to 1694, before reverting to William Penn's proprietorship. New Jersey became a royal province in 1702, South Carolina in 1719, North Carolina in 1729, and Georgia in 1752.

The Glorious Revolution had significant long-term effects on American history in that the Bill of Rights and the Act of Toleration, passed in England in 1689, influenced attitudes and the course of events in the colonies. Even more significant, the overthrow of James II set a precedent for revolution against the monarch. In defense of that action, the English philosopher John Locke published his *Two Treatises on Government* (1690), which had an enormous impact on political thought in the colonies. The first treatise refuted theories of the divine right of kings. The more important second treatise set forth Locke's contract theory of government, which claimed that people were endowed with certain natural rights to life, liberty, and property. The need to protect such rights led people to establish governments. Kings were parties to such agreements and obligated to protect the property and lives of their subjects. When they failed to do so, the people had the right—in extreme cases—to overthrow the monarch and change their government.

The idea that governments emerged by contract out of a primitive state of nature is of course hypothetical, not an account of actual events. But in the American experience, governments had actually grown out of contractual arrangements such as those Locke described: the Mayflower Compact, the Cambridge Agreement, the Fundamental Orders of Connecticut. The royal charters themselves constituted a sort of contract between the crown and the settlers. John Locke's writings understandably appealed to colonial readers, and his philosophy probably had more influence in America than in England.

AN EMERGING COLONIAL SYSTEM The accession of William and Mary to the English throne led to a refinement of the existing Navigation

Acts. In 1696 two developments created at last the semblance and, to some degree, the reality of a coherent administrative system for the colonies. First, the Act to Prevent Frauds and Abuses of 1696 required colonial governors to enforce the trade laws, allowed customs officials to use “writs of assistance” (general search warrants that did not have to specify the place to be searched), and ordered that accused violators be tried in admiralty courts (because colonial juries habitually refused to convict their peers). Admiralty cases were decided by judges whom the royal governors appointed.

Second, also in 1696, William III created the Lords Commissioners of Trade and Plantations (the Board of Trade) to investigate the enforcement of the Navigation Acts and recommend ways to limit colonial manufactures and encourage the production of raw materials. At the board’s behest, Parliament enacted a bounty for the production of ship timber, masts, hemp, rice, indigo, and other commodities. The board examined all colonial laws and made recommendations for their disallowance by the crown. In all, 8,563 colonial laws were eventually examined, and 469 were eliminated.

SALUTARY NEGLECT From 1696 to 1725, the Board of Trade worked vigorously to subject the colonies to a more efficient royal control. After the death of Queen Anne, in 1714, however, its energies waned. The throne went in turn to the Hanoverian monarchs, George I (r. 1714–1727) and George II (r. 1727–1760), German princes who were next in the Protestant line of succession by virtue of descent from James I. Under these monarchs the cabinet (a kind of executive committee in the Privy Council) emerged as the central agency of administration. Robert Walpole, as first minister (1721–1742), deliberately followed a policy toward the colonies that the philosopher Edmund Burke later called “a wise and salutary neglect.” Walpole’s relaxed policy toward the colonies not only gave them greater freedom to pursue their economic interests; it unwittingly also enabled the Americans to pursue greater political independence.

THE HABIT OF SELF-GOVERNMENT

Government within the American colonies, like colonial policy, evolved without plan. In broad outline the governor, council, and assembly in each colony corresponded to the king, lords, and commons of the mother country. At the outset all the colonies except Georgia had begun as projects of trading companies or feudal proprietors holding charters from the crown, but eight colonies eventually relinquished or forfeited their charters and

became royal provinces. In these the crown named the governor. In Maryland, Pennsylvania, and Delaware the governor remained the choice of a proprietor, although each had an interim period of royal government. Connecticut and Rhode Island were the last of the corporate colonies; they elected their own governors to the end of the colonial period. In the corporate and proprietary colonies and in Massachusetts, the charter served as a rough equivalent to a written constitution. Over the years certain anomalies appeared as colonial governments diverged from that of England. On the one hand, the governors retained powers and prerogatives that the king had lost in the course of the seventeenth century. On the other hand, the assemblies acquired powers, particularly with respect to government appointments, that Parliament had yet to gain.

POWERS OF THE GOVERNORS The crown never vetoed acts of Parliament after 1707, but the colonial governors, most of whom were mediocre or incompetent, still held an absolute veto, and the crown could disallow (in effect, veto) colonial legislation on advice of the Board of Trade. With respect to the assembly, the governor still had the power to determine when and where it would meet, prorogue (adjourn or recess) legislative sessions, and dissolve the assembly for new elections or postpone elections indefinitely at his pleasure. The crown, however, had to summon Parliament every three years and call elections at least every seven and could not prorogue sessions. The royal or proprietary governor, moreover, nominated for life appointment the members of his council (except in Massachusetts, where they were chosen by the lower house), and the council functioned as both the upper house of the legislature and the highest court of appeal within the colony. With respect to the judiciary, in all but the charter colonies the governor held the prerogative of creating courts and naming and dismissing judges, powers explicitly denied the king in England. Over time, however, the colonial assemblies generally made good their claim that courts should be created only by legislative authority, although the crown repeatedly disallowed acts to grant judges life tenure in order to make them more independent.

As chief executive the governor could appoint and remove officials, command the militia and naval forces, and grant pardons. In these respects his authority resembled the crown's, for the king still exercised executive authority and had the power to name administrative officials. For the king those powers often strengthened an effective royal influence in Parliament, since the king could appoint members or their friends to lucrative offices. While the arrangement might seem a breeding ground for corruption or

The Boston Statehouse

Built in 1713.

tyranny, it was often viewed in the eighteenth century as a stabilizing influence, especially by the king's friends. But it was an influence less and less available to the governors. On the one hand, colonial assemblies nibbled away at their power of appointment; on the other hand, the authorities in England more and more drew the control of colonial patronage into their own hands.

POWERS OF THE ASSEMBLIES Unlike the governor and members of the council, who were appointed by an outside authority, either king or proprietor, the colonial assembly was elected. Whether called the House of Burgesses (Virginia), Delegates (Maryland), or Representatives (Massachusetts) or simply the assembly, the lower houses were chosen by popular vote in counties, towns, or, in South Carolina, parishes. Although the English Toleration Act of 1689 did not apply to the colonies, religious tests for voting tended to be abandoned thereafter (the Massachusetts charter of 1691 so specified), and the chief restriction remaining was a property qualification, based upon the notion that only men who held a "stake in society"

could vote responsibly. Yet the property qualifications generally set low hurdles in the way of potential voters. Property holding was widespread, and a greater proportion of the population could vote in the colonies than anywhere else in the world of the eighteenth century.

Women, children, Indians, and African Americans were excluded from the political process—as a matter of course—and continued to be excluded for the most part into the twentieth century, but the qualifications excluded few free white adult males. Virginia, which at one time permitted all freemen to vote, in the eighteenth century required the ownership of only 25 acres of improved land or 100 acres of wild land, the ownership of a “house” and part of a lot in town, or service in a five-year apprenticeship in Williamsburg or Norfolk. Qualifications for membership in the assembly ran somewhat higher, and officeholders tended to come from the more well to do—a phenomenon not unknown today—but there were exceptions. One unsympathetic colonist observed in 1744 that the New Jersey Assembly “was chiefly composed of mechanics and ignorant wretches; obstinate to the last degree.”

Colonial politics of the eighteenth century mirrored English politics of the seventeenth. In one case there had been a tug-of-war between king and Parliament, ending with the supremacy of Parliament and confirmed by the Glorious Revolution. In the other case, colonial governors were still trying to wield powers that the king had lost. The assemblies knew this; they also knew the arguments for the “rights” and “liberties” of the people and their legislative bodies and against the dangers of despotic power.

By the early eighteenth century the colonial assemblies, like Parliament, held two important strands of power—and they were perfectly aware of the parallel. First, they held the power of the purse strings in their right to vote on taxes and expenditures. Second, they held the power to initiate legislation and not merely, as in the early history of some colonies, the right to act on proposals from the governor and the council. Assemblies, because they controlled finance, demanded and often got the right to name tax collectors and treasurers. Then they stretched the claim to cover public printers, Indian agents, supervisors of public works and services, and other officers of the government.

All through the eighteenth century the assemblies expanded their power and influence, sometimes in conflict with the governors, sometimes in harmony with them, and often in the course of routine business, passing laws and setting precedents, the collective significance of which neither they nor the imperial authorities fully recognized. Once established, however, these laws and practices became fixed principles, part of the “constitution” of the colonies. Self-government became first a habit, then a “right.”

TROUBLED NEIGHBORS

SPANISH AMERICA IN DECLINE By the start of the eighteenth century, the Spanish were ruling over a huge colonial empire spanning North America. Yet their settlements in the borderlands north of Mexico were a colossal failure when compared with the colonies of the other European powers. In 1821, when Mexico declared its independence from Spain without firing a shot and the Spanish withdrew from North America, the most populated Hispanic settlement, Santa Fe, had only 6,000 residents. The next largest, San Antonio and St. Augustine, had only 1,500 each.

The Spanish failed to create thriving colonies in the American Southwest for several reasons. Perhaps the most obvious was that the region lacked the gold and silver, as well as the large native populations, that attracted Spanish priorities to Mexico and Peru. In addition, the Spanish were distracted by their need to control the perennial unrest in Mexico among the natives and the mestizos (people of mixed Indian and European ancestry). Moreover, those Spaniards who led the colonization effort in the borderlands were so preoccupied with military and religious exploitation that they neglected the factors necessary for producing viable settlements with self-sustaining economies. They never understood that the main factor in creating a successful community was a thriving market economy. Instead, they concentrated on building missions and forts and looking—in vain—for gold. Whereas the French and the English based their Indian policies on trade (that included providing Indians with firearms), Spain emphasized conversion to Catholicism, forbade manufacturing within the colonies, and strictly limited trade with the natives.

NEW FRANCE Permanent French settlements in the New World differed considerably from both the Spanish and the English models. The French settlers were predominantly male but much smaller in number than the English and Spanish settlers. About 40,000 French colonists came to the New World during the seventeenth and eighteenth centuries. The relatively small French population proved to be an advantage in forcing the French to develop cooperative relationships with the Indians. Unlike the English settlers the French established trading outposts rather than farms, mostly along the St. Lawrence River, on lands not claimed by Indians. They thus did not have to confront initial hostility. In addition, the French served as effective mediators between rival Great Lakes tribes. This diplomatic role gave them much more local authority and influence than their English counterparts, who disdained such mediation.

The heavily outnumbered and disproportionately male French settlers sought to integrate themselves with Indian culture rather than displace it. Many French traders married Indians, exchanging languages and customs in the process of raising families. The French also encouraged the Indians to embrace Catholicism and hate the English. This more fraternal bond between the French and the Indians proved to be a source of strength in the wars with the English, enabling New France to survive until 1760 despite the lopsided disparity in numbers between the two colonial powers.

French exploration began when the enterprising Samuel de Champlain landed on the shores of the St. Lawrence River in 1603 and, two years later, at Port Royal, Acadia (later Nova Scotia). Champlain led another expedition in 1608, during which he founded Quebec, a year after the Jamestown landing. While Acadia remained a remote outpost, New France expanded well beyond Quebec, from which Champlain pushed his explorations up the great river and into the Great Lakes as far as Lake Huron, and southward to the lake that still bears his name. There, in 1609, he joined a band of Huron and Algonquian allies in a fateful encounter, fired his musket into the ranks of their Iroquois foes, and kindled a hatred that pursued New France to the end. The Iroquois stood as a buffer against French designs to move toward the English of the middle colonies and as a constant menace on the flank of the French waterways to the interior. In fact, for over a century Indians determined the military balance

Champlain in New France

of power within North America. In 1711 the governor general of New France declared that “the Iroquois are more to be feared than the English colonies.”

Until his death, in 1635, Champlain governed New France under a trading company whose charter imposed a fatal weakness. The company won a profitable monopoly of the huge fur trade but had to limit the population to French Catholics. Neither the enterprising, seafaring Huguenots of coastal France nor foreigners of any faith were allowed to populate the country. Great land grants went to persons who promised to bring settlers to work the land under feudal tenure. The colony therefore remained a scattered patchwork of dependent peasants, Jesuit missionaries, priests, soldiers, officials, and *coureurs de bois* (literally, “runners of the woods”), who roamed the interior in quest of furs.

In 1663 King Louis XIV and his chief minister, Jean-Baptiste Colbert, changed New France into a royal colony and pursued a plan of consolidation and stabilization. Colbert dispatched new settlers, including shiploads of young women to lure disbanded soldiers and traders into settled matrimony. He sent out tools and animals for farmers and nets for fishermen and tried to make New France self-sufficient in foodstuffs. The population grew from about 4,000 in 1665 to about 15,000 in 1690.

FRENCH LOUISIANA From the Great Lakes, French explorers moved southward. In 1673 Louis Jolliet and Père Jacques Marquette, a Jesuit priest, ventured onto Lake Michigan, up the Fox River from Green Bay, then down the Wisconsin River to the Mississippi and on as far as the Arkansas River. Satisfied that the great Mississippi River flowed to the Gulf of Mexico, they turned back for fear of meeting with Spaniards. Nine years later René-Robert Cavelier, sieur de La Salle, went all the way to the Gulf of Mexico and named the country he explored Louisiana, after King Louis XIV of France.

Settlement of the Louisiana country finally began in 1699, when Pierre Le Moyne, sieur d’Iberville, established a colony near Biloxi, Mississippi. The main settlement then moved to Mobile Bay and, in 1710, to the present site of Mobile, Alabama. For nearly half a century the driving force in Louisiana was Jean-Baptiste Le Moyne, sieur de Bienville, a younger brother of Iberville. Bienville arrived with settlers in 1699, when he was only nineteen, and left the colony for the last time in 1743, when he was sixty-three. Sometimes called the Father of Louisiana, he served periodically as governor and always as adviser during those years. In 1718 he founded New Orleans, which shortly thereafter became the capital. Louisiana, first a royal colony, then a proprietary colony, and then a corporate colony, again became a royal province in 1731.

In contrast to the English colonies, French Louisiana grew haltingly in the first half of the eighteenth century. Its population in 1732 was only 2,000

Where were the largest French settlements in North America? How were they different from the Spanish and English colonies? Describe the French colonization of Louisiana.

whites and about 3,800 slaves. The sweltering climate and mosquito-infested environment enticed few settlers. Poorly administered, dependent on imports for its sustenance, and expensive to defend, it continued throughout the century to be a financial liability to the French government. It never became the thriving trade center with the Spanish that its founders had envisioned.

“France in America had two heads,” the historian Francis Parkman wrote, “one amid the snows of Canada, the other amid the canebrakes of Louisiana.” The French thus had one enormous advantage: access to the great inland water routes that led to the heartland of the continent. In the Illinois region scattered settlers began farming the fertile soil, and courageous priests established missions at places such as Terre Haute (High Land) and Des Moines (Some Monks). Because of geography as well as deliberate policy, however, French America remained largely a vast wilderness traversed by a mobile population of traders, trappers, missionaries—and, mainly, Indians. In 1750, when the English colonials numbered about 1.5 million, the total French population was no more than 80,000.

Yet in some ways the French had the edge on the British. They offered European goods to Indians in return for furs, encroached far less upon Indian lands, and so won Indian allies against the English who came to possess the

land. French governors could mobilize for action without any worry about quarreling assemblies or ethnic and religious diversity. The British may have had the greater population, but their separate colonies often worked at cross purposes. The middle colonies, for instance, protected by the Iroquois buffer, could afford to ignore the French threat—for a long time at least. Whenever conflict threatened, colonial assemblies extracted new concessions from their governors. Colonial merchants, who built up a trade supplying foodstuffs to the French, persisted in smuggling supplies even in wartime.

THE COLONIAL WARS

For most of the seventeenth century, the French and British empires in America developed in relative isolation from each other, and for most of that century the homelands remained at peace with each other. After the Restoration of 1660, Charles II and James II pursued a policy of friendship with the French king, Louis XIV. The Glorious Revolution of 1688, however, worked an

abrupt reversal in English diplomacy. William III, the new king, as leader of the Dutch republic, had engaged in a running conflict against the ambitions of Louis XIV. His ascent to the throne brought England almost immediately into a Grand Alliance against Louis in the War of the League of Augsburg, sometimes called the War of the Palatinate or the War of the Grand Alliance and known in the American colonies simply as King William's War (1689–1697).

This was the first of four great European and intercolonial wars that would be fought over the next seventy-four years, the others being the War of the Spanish Succession (Queen Anne's War, 1702–1713), the War of the Austrian Succession (King George's War, 1744–1748), and the Seven

Years' War (the French and Indian War, which lasted nine years in America, from 1754 to 1763). In all except the last, the battles in America were but a sideshow accompanying greater battles in Europe, where British policy pivoted on keeping a balance of power with the French. The alliances shifted from one fight to the next, but Britain and France were pitted against each other every time.

Thus for much of the eighteenth century, the colonies were embroiled in global wars and rumors of wars. The effect on much of the population was devastating. New England, especially Massachusetts, suffered probably more than the rest, for it was closest to the centers of French population. It is estimated that 900 Boston men (about 2.5 percent of the men eligible for service) died in the fighting. This meant that the city was faced with assisting a large population of widows and orphans. Even more important, these prolonged conflicts had profound consequences for Britain that later would reshape the contours of its relationship with America. The wars with France led the English government to incur an enormous debt, establish a huge navy and a standing army, and excite a militant sense of nationalism. During the early eighteenth century the changes in British financial policy and political culture led critics in Parliament to charge that traditional liberties were being usurped by a tyrannical central government. After the French and Indian War, American colonists began making the same point.

THE FRENCH AND INDIAN WAR Of the four major wars involving the European powers and their New World colonies, the climactic conflict between Britain and France in North America was the French and Indian War. It began in 1754, after enterprising Virginians during the early 1750s had crossed the Allegheny Mountains into the Ohio River valley in order to trade with Indians and survey some 200,000 acres granted them by the king. The incursion by the Virginians infuriated the French, and they established forts in what is now western Pennsylvania to defend their interests. When news of these developments reached Williamsburg, the Virginia governor sent out an emissary to warn off the French. An ambitious young Virginia militia officer, Major George Washington, whose older brothers owned part of the Ohio Company, a business venture to develop settlement and trade in western Pennsylvania, volunteered for the mission. With a few companions, Washington made his way to Fort Le Boeuf in late 1753 and returned with a polite but firm French refusal. The Virginia governor then sent a small force to erect a fort at the strategic fork where the Allegheny and Monongahela rivers meet to form the great Ohio. No sooner had the English started building than a larger French force appeared and ousted them.

Meanwhile, the twenty-two-year-old Washington, hungry for combat and yearning for military glory, had been organizing a regiment of Virginians. In the spring of 1754, the tall, muscular surveyor-turned-soldier led his 150 volunteers and Iroquois allies across the Alleghenies. Their mission was to build a fort at the convergence of the Allegheny, Monongahela, and Ohio rivers (where the city of Pittsburgh later developed). Along the way, Washington learned that French soldiers had beaten them to the strategic site and erected Fort Duquesne, named for the French governor of Canada. Washington decided to make camp about forty miles from the fort and await reinforcements. The next day the Virginians ambushed a French detachment. Ten French soldiers were killed, one escaped, and twenty-one were captured. The

Indians then scalped several of the wounded soldiers as a stunned Major Washington looked on. Washington was unaware that the French had been on a peaceful mission to discuss the disputed fort. The mutilated soldiers were the first fatalities in what would become the French and Indian War.

Washington and his troops retreated and hastily constructed a crude stockade at Great Meadows, dubbed Fort Necessity, which a large force of vengeful French soldiers attacked a month later, on July 3, 1754. After a day-long battle, George Washington surrendered, having seen all his horses and cattle killed and one third of his 300 men killed or wounded. The French permitted his surviving troops to withdraw after stripping them of their weapons. After the Virginia regiment limped home, Washington decided to resign rather than accept a demotion. His blundering expedition triggered a series of events that would ignite a protracted world war. As a prominent British politician exclaimed, “The volley fired by a young Virginian in the backwoods of America set the world on fire.”

Back in London the Board of Trade already had taken notice of the growing conflict in the backwoods of North America and had called commissioners from all the colonies as far south as Maryland to a meeting in Albany, New York, to confer on precautions. The Albany Congress (June 19–July 10, 1754), which was meeting when the first shots sounded at Great Meadows, ended with little having been accomplished. The delegates conferred with Iroquois chieftains and sent them away loaded with gifts in return for some

The First American Political Cartoon

Benjamin Franklin’s exhortation to the colonies to unite against the French in 1754 would become popular again twenty years later, when the colonies faced a different threat.

half-hearted promises of support. The congress is remembered mainly for the Plan of Union, worked out by a committee under Benjamin Franklin and adopted by a unanimous vote of the commissioners. The plan called for a chief executive, a kind of supreme governor, to be called the president general of the United Colonies, appointed and supported by the crown, and a supreme assembly, called the Grand Council, with forty-eight members chosen by the colonial assemblies. This federal body would oversee matters of defense, Indian relations, and trade and settlement in the West and would levy taxes to support its programs.

It must have been a good plan, Franklin reasoned, since the assemblies thought it gave too much power to the crown and the crown thought it gave too much to the colonies. At any rate the assemblies either rejected or ignored it. Only two substantive results came out of the congress. Its idea of a supreme commander of British forces in America was adopted, as was its advice that a New Yorker who was a friend of the Iroquois be made British superintendent of the northern Indians.

In London the government decided to force a showdown in America. In 1755 the British fleet captured Nova Scotia and expelled most of its French population. Some 5,000 to 7,000 Acadians who refused to take an oath of allegiance to the British crown were scattered through the colonies, from Maine to Georgia. Impoverished and homeless, many of them desperately found their way to French Louisiana, where they became the Cajuns (a corruption of *Acadians*), whose descendants still preserve elements of the French language along the remote bayous and in many urban centers.

The backwoods, however, became the scene of one British disaster after another over the next three years. In 1755 a new British commander in chief, General Edward Braddock, arrived in Virginia with two regiments of army regulars. Braddock was a seasoned, confident officer, but neither he nor his red-clad British troops had any experience fighting in the wilderness. Braddock viewed Indians with contempt, and his cocksure ignorance would prove fatal.

With the addition of some colonial troops, including a still-headstrong George Washington as a volunteer staff officer, Braddock hacked a 125-mile road through the mountain wilderness from the upper Potomac River in Maryland to the vicinity of Fort Duquesne. Hauling heavy artillery to surround the French fort, along with a lumbering wagon train of supplies, Braddock's force achieved a great feat of military logistics and was on the verge of success when, six miles from Fort Duquesne, the surrounding woods suddenly came alive with Ojibwa and French soldiers in Indian costume. Beset on three sides by concealed enemies, the British troops panicked

and retreated in disarray, abandoning most of their artillery and supplies. Brave General Braddock had several horses shot out from under him before he was mortally wounded. George Washington, his own coat riddled by bullets, helped other officers contain the rout and lead a hasty retreat. More than 900 British and Virginia soldiers were killed or wounded in one of the worst British defeats of the eighteenth century. Braddock died four days later. The overconfident general's last words were prophetic: "We shall know better how to deal with them another time." Twelve of the surviving British soldiers left behind on the battlefield were stripped, bound, and burned at the stake by Indians. A devastated George Washington wrote his brother that they had "been scandalously beaten by a trifling body of men." The vaunted red-coats "broke & run as sheep before Hounds," but the Virginians "behaved like Men and died like Soldiers." The French victory demonstrated that backwoods warfare depended on Indian allies and frontier tactics for success.

A WORLD WAR For two years, war raged along the American frontier without becoming a cause of war in Europe. In 1756, however, the colonial war became the Seven Years' War in Europe. In the final alignment of European powers, France, Austria, Russia, Saxony, Sweden, and Spain fought against Britain, Prussia, and Hanover. The onset of world war brought into office a new British government, with the eloquent William Pitt as head of the ministry. Pitt's ability and assurance ("I know that I can save England and no one else can") instilled confidence at home and abroad.

A brilliant visionary and a superb administrator, charismatic and supremely self-confident, Pitt decided that America should be the primary theater of conflict with France, and he sought to bludgeon the French with overwhelming force, on land and at sea. He eventually mobilized some 45,000 troops in North America, half of whom were British regulars and the other half American colonists. Pitt was able to garner such substantial colonial participation by reversing Britain's administrative policies. His predecessors had demanded that the colonial legislatures help fund the defense effort. Pitt decided to treat the colonies as allies rather than subordinate possessions, offering them subsidies for their participation in the war effort. The colonists readily embraced this invitation to become partners in an imperial crusade, and they contributed key resources and large numbers of men to the war effort.

Pitt's America-first policy had long-term consequences. The massive frontier war with the French and their Indian allies fostered a sense of nationalism among the colonists that would culminate in a war for independence from Britain. Pitt used the powerful British navy to cut off French reinforcements and supplies to the New World—and the goods with which they bought

Indian allies. Pitt improved the British forces, gave command to younger men of ability, and carried the battle to the enemy. In 1758 the tides began to turn when the English captured Fort Louisbourg in Canada. The Iroquois, sensing the turn of fortunes, pressed their dependents, the Delawares, to call off the frontier attacks on English settlements.

In 1759 the war reached its climax with a series of resounding British victories on land and at sea. Pitt ordered a three-pronged offensive against the French in Canada, along what had become the classic invasion routes: the Niagara River, Lake Champlain, and the St. Lawrence River. On the Niagara expedition the British were joined by a group of Iroquois, and they captured Fort Niagara, virtually cutting the French lifeline to the interior. On Lake Champlain, General Jeffrey Amherst took Forts George and Ticonderoga, then paused to await reinforcements for an advance northward.

Meanwhile, the most decisive battle was shaping up at Quebec, the gateway to Canada. There, British forces led by General James Wolfe waited out the advance of General Louis-Joseph de Montcalm and his French infantry until they were within close range, then loosed volleys that devastated the French ranks—and ended French power in North America for all time. News of the British victory reached London along with similar reports from India, where English forces had reduced French outposts one by one and established the base for expanded British control of India.

The war in North America dragged on until 1763, but the rest was a process of mopping up. In the South, where little significant action had occurred, belated hostility flared up between the settlers and the Cherokee Nation. A force of British regulars and colonial militia broke Cherokee resistance in 1761.

In 1760 King George II died, and the twenty-two-year-old grandson he despised ascended the throne as George III. The new king resolved to seek peace and forced William Pitt out of office. Pitt had wanted to declare war on Spain before the French could bring that other Bourbon monarchy into the conflict. He was forestalled, but Spain belatedly entered the war, in 1761, and during the next year met the same fate as the French: in 1762 British forces took Manila in the Philippines and Havana in Cuba. By 1763 the French and the Spanish were ready to negotiate a surrender. Britain ruled the world.

THE PEACE OF PARIS The Treaty of Paris of 1763 brought an end to the world war and to French power in North America. Victorious Britain took all French North American possessions east of the Mississippi River (except New Orleans) and all of Spanish Florida. The English invited the Spanish settlers to remain and practice their Catholic religion, but few

End of the War

With Quebec in the background, France kneels before a victorious Britain (1763).

accepted the offer. The Spanish king ordered them to evacuate the colony and provided free transportation to Spanish possessions in the Caribbean. Within a year most of the Spaniards sold their property at bargain prices to English speculators and began an exodus to Cuba and Mexico.

When the Indian tribes that had been allied with the French learned of the 1763 peace settlement, they were despondent. Their lands were being given over to the British without any consultation. The Shawnees, for instance, demanded to know “by what right the French could pretend” to transfer Indian territory to the British. The Indians also worried that a victorious Britain had “grown too powerful & seemed as if they would be too strong for God itself.” The Indians had hoped that the departure of the French from the Ohio Valley would mean that the area would revert to their control. Instead, the British cut off the trade and giftgiving practices that had bound the Indians to the French. General Jeffrey Amherst, the British military governor for the western region, demanded that the Indians learn to live without “charity.” British forces also moved into the French frontier forts. In a desperate effort to recover their autonomy, tribes struck back, in the spring of 1763, capturing most of the British forts around the Great Lakes and in the Ohio Valley. They also raided colonial settlements in Pennsylvania, Maryland, and Virginia, destroying hundreds of homesteads and killing several thousand people. In the midst of the Indian

What events led to the first clashes between the French and the British in the late seventeenth century? Why did New England suffer more than other regions of North America during the wars of the eighteenth century? What were the long-term financial, military, and political consequences of the wars between France and Britain?

attack on Fort Pitt (formerly Fort Duquesne), General Amherst approved the distribution of smallpox-infested blankets and handkerchiefs from the fort's hospital to the Indians besieging the garrison. His efforts at germ warfare were intended to "extirpate this Execrable race" of Indians.

Called Pontiac's Rebellion because of the prominent role played by the Ottawa chief, the far-flung Indian attacks on the frontier forts convinced most American colonists that all Indians must be removed. The British government,

How did the map of North America change between 1713 and 1763? How did Spain win Louisiana? What were the consequences of the British winning all the land east of the Mississippi?

meanwhile, negotiated an agreement with the Indians that allowed redcoats to reoccupy the frontier forts in exchange for a renewal of trade and gift giving. Still, as Pontiac stressed, the Indians asserted their independence and denied the legitimacy of the British claim to their territory under the terms of the Treaty of Paris. He told a British official that the “French never conquered us, neither did they purchase a foot of our Country, nor have they a right to give it to you.” The British may have won a global empire as a result of the Seven Years’ War, but their grip on the American colonies grew ever weaker.

In compensation for the loss of Florida, Spain received Louisiana (New Orleans and all French land west of the Mississippi River) from France. Unlike the Spanish in Florida, however, few of the French settlers left Louisiana after 1763. The French government encouraged them to work with their new Spanish governors to create a bulwark against further English expansion. Spain would hold title to Louisiana for nearly four decades but would never succeed in erasing the territory's French roots. The French-born settlers always outnumbered the Spanish. The loss of Louisiana left France with no territory on the continent of North America. In the West Indies, France gave up Tobago, Dominica, Grenada, and St. Vincent. British power reigned supreme over North America east of the Mississippi River.

But a fatal irony would pursue the British victory. In gaining Canada, the British government put in motion a train of events that would end twenty years later with the loss of the rest of British North America. Britain's success against France threatened the Indian tribes of the interior because they had long depended upon playing off one European power against the other. Now, with the British dominant on the continent, American settlers were emboldened to encroach even more upon Indian land. In addition, victory on the battlefields encouraged the British to tighten their imperial control over the American colonists and demand more financial contributions to pay for military defense. Meanwhile, a humiliated France thirsted for revenge. In London, Benjamin Franklin, agent for the colony of Pennsylvania (1764–1775), found the French minister inordinately curious about America and suspected him of wanting to ignite the coals of controversy. Less than three years after Franklin left London and only fifteen years after the conquest of New France, he would be in Paris arranging an alliance on behalf of Britain's rebellious colonists.

MAKING CONNECTIONS

- Although the British victory in the French and Indian War brought the colonies and England closer together in some ways, it was also an important factor in the approach of the American Revolution, as demonstrated in Chapter 5.
- One of the great struggles of the Revolution would be transforming the dependent British colonies, as described in this chapter, into independent American states, as described in Chapter 6.

FROM EMPIRE TO INDEPENDENCE

FOCUS QUESTIONS

- How did British colonial policy change after 1763?
- How did the Whig ideology shape the colonial response to changes in British policy?
- What was the role of Revolutionary leaders, including Samuel Adams, John Dickinson, Thomas Paine, and Thomas Jefferson?

Seldom if ever since the days of Queen Elizabeth had England thrilled with such pride as it did in the closing years of the Seven Years' War. In 1760 young George III, headstrong and obstinate, had ascended the throne. Three years later the Treaty of Paris confirmed a vast new British Empire spanning the globe. Most important, the Treaty of Paris effectively ended the French imperial domain in North America. This in turn influenced the development of the region between the Appalachian Mountains and the Mississippi River, from the Gulf of Mexico to Hudson Bay in Canada. The maturing mainland colonies began to experience a dynamic agricultural and commercial growth that enormously increased their importance to the British economy. Yet the colonies remained both extraordinarily diverse in composition and outlook and peculiarly averse to cooperative efforts. That they would manage to unify themselves and declare independence in 1775 was indeed surprising—even to them.

THE HERITAGE OF WAR

The triumph in what England called the Great War saw Americans celebrating as joyously as Londoners in 1763. Colonists were proud of their partnership in British liberty, a supportive Parliament, an ancient and revered constitution, and a prosperity fostered by wartime spending. Most Americans, as Benjamin Franklin explained, “submitted willingly to the government of the Crown.” He himself proudly proclaimed, “I am a BRITON.” But victory celebrations masked festering resentments and new problems that would be the heritage of the war. Underneath the pride in the British Empire, an American nationalism was maturing. Colonials were beginning to think and speak of themselves more as Americans than as English or British. With the French out of the way and vast new lands to exploit, they looked to the future with confidence.

Many Americans had a new sense of importance after fighting a major war with such success. Some harbored resentment, justified or not, at the haughty air of the British soldiers, and many in the early stages of the war had lost their awe of British troops, who were so inept at frontier fighting. At least one third of military-age New England men fought in the Seven Years’ War. For them army life was both a revelation and an opportunity. Although they admired the courage and discipline of British redcoats under fire, many New Englanders abhorred the carefree cursing, whoring, and Sabbath breaking they observed among the British troops. But most upsetting were the daily “shrieks and cries” resulting from the brutal punishments imposed by British officers on their wayward men. Minor offenses might earn hundreds of lashes. One American soldier recorded in his diary in 1759 that “there was a man whipped to death belonging to the Light Infantry. They say he had twenty-five lashes after he was dead.” The brutalities of British army life thus heightened the New Englanders’ sense of their separate identity and of their greater worthiness to be God’s chosen people. It also emboldened Americans to defy British rule, because the colonists no longer needed military protection from the French.

British forces nevertheless had borne the brunt of the war and had won it for the American colonists, who had supplied men and materials, sometimes reluctantly, and who persisted in trading with the enemy. Molasses in the French West Indies, for instance, continued to draw New England ships like flies. The trade was too important for the colonists to give up but was more than British authorities could tolerate. Along with naval patrols, one important means of disrupting this illegal trade was the use of writs of assistance, general search warrants that allowed officers to enter any place during daylight hours to seek evidence of illegal trade.

In 1760 Boston merchants hired the attorney James Otis to fight the writs in the courts. Otis lost the case but in the process advanced the provocative argument that any act of Parliament that authorized such “instruments of slavery” violated the British constitution and was therefore void. This was a radical idea for its time. Otis sought to overturn a major tenet of the English legal system, namely, that acts of Parliament were by their very nature constitutional.

The peace that secured an empire in 1763 also laid upon the British government new burdens. How should the British manage the defense and governance of their new global possessions? What should they do about the American lands inhabited by Indians but coveted by whites? How was the British government to pay for an unprecedented debt built up during the war and bear the new expenses of expanded colonial administration and defense? And—the thorniest problem of all, as it turned out—what role should the colonies play in all this? The problems were of a magnitude and complexity to challenge men of the greatest statemanship and vision, but those qualities were rare among the ministers of George III.

BRITISH POLITICS

In the English government during the late eighteenth century, nearly every politician was a Whig. *Whig* was the name given to those who had

George III

At age thirty-three, the young king of a victorious empire.

opposed James II, led the Glorious Revolution of 1688, and secured the Protestant Hanoverian succession in 1714. The Whigs were the champions of individual liberty and parliamentary supremacy, but with the passage of time Whiggism had drifted into complacency. The dominant group of landholding Whig families was concerned mostly with the pursuit of personal gain and local questions rather than great issues of statecraft. George III, a tall young man with full lips, bulging eyes, and an obstinate disposition, sought at first to eliminate the Whig influence on the monarchy. Whig politicians had dominated his grandfather, and the new king was determined

to rule in his own right. Thus he ousted the powerful William Pitt as prime minister and established his own inner circle of obedient advisers, known as the “king’s friends.” They exercised influence by controlling appointments to government offices; they retained their influential positions only by ensuring that they did not contradict the cocksure king.

Throughout the 1760s the king turned first to one and then to another mediocre leader, ineffective ministries came and went, and the government fell into instability just as the new problems of empire required creative solutions. Ministries rose and fell usually because somebody offended the king or somebody’s friend failed to get a government post. Colonial policy remained marginal to the chief concerns of British politics. The result was inconsistency and vacillation followed by stubborn inflexibility.

WESTERN LANDS

In America no sooner was peace formally arranged in 1763 than the problem of the western lands erupted in the form of Pontiac’s Rebellion. To keep the peace on the frontier and to keep earlier promises to the Delawares and Shawnees, officials in London postponed further colonial settlement along the frontier. The king also issued the Royal Proclamation of 1763. That order drew an imaginary line along the crest of the Appalachians, beyond which settlers were forbidden to go and colonial governors were forbidden to authorize surveys or issue land grants. It also established the new British colonies of Quebec and East and West Florida. Yet the proclamation line was ineffective. Hardy settlers defined the prohibitions against intrusions into Indian land and pushed across the Appalachian ridges.

GRENVILLE AND THE STAMP ACT

GRENVILLE’S COLONIAL POLICY Just as the Royal Proclamation of 1763 was being drafted, a new British ministry had begun to grapple with the problems of imperial finances. The new prime minister and first lord of the Treasury, George Grenville, was much like the king: industrious, honest, and hardheaded. He was a strong-willed accountant whose humorless self-assurance verged on pomposity. George III came to despise him, but the inexperienced king needed the dull but dogged prime minister because they agreed on basic policies: cutting government expenses, reducing the national debt, and generating more revenue from the colonies to pay for

their defense. As a colleague said of Grenville, he had “a rage for regulation and restriction.”

In developing new policies regulating the American colonies, Grenville took for granted the need for redcoats to defend the American frontier, although the colonies had been left mostly to their own devices before 1754. He also wanted to keep a large army (10,000 men) in America to avoid a rapid demobilization, which would retire a large number of influential officers, thereby provoking political criticism at home. But he faced sharply rising costs for American frontier defense, on top of an already staggering government debt. During the mid-1760s the interest payments on the government's debts consumed 60 percent of the annual budget.

Because there was a large tax burden at home and a much lighter one in the colonies, Grenville reasoned that the prosperous Americans should share the cost of their own defense. He also learned that the royal customs service in America was grossly inefficient. Evasion by American merchants and corruption among customs officers were rampant. Grenville issued stern orders to colonial officials to tighten enforcement and ordered the British navy to patrol the coast for smugglers. He also set up a new maritime, or vice-admiralty,

The Great Financier, or British Economy for the Years 1763, 1764, 1765

This cartoon, critical of Grenville's tax policies, shows America, depicted as an Indian (at left), groaning under the burden of new taxes.

court in Halifax (replacing the ineffectual admiralty courts established in 1696), granting it jurisdiction over all the colonies and ensuring that there would be no juries of colonists sympathetic to smugglers. Under Grenville the period of “salutary neglect” in the enforcement of the Navigation Acts was coming to an end, causing American shippers great annoyance.

Strict enforcement of the Molasses Act of 1733 posed a serious threat to New England’s prosperity. The tax on molasses had been set prohibitively high, not for the purpose of raising revenue but to prevent illegal trade with the French sugar islands. Yet the rum distilleries consumed more molasses than the British West Indies provided. Grenville recognized that the molasses tax, if enforced, would be ruinous to a major colonial enterprise. So he put through the Revenue Act of 1764, commonly known as the Sugar Act, which cut the duty in half. This, he believed, would reduce the temptation to smuggle or to bribe customs officers. In addition, the Sugar Act levied new duties on imports of foreign textiles, wine, coffee, indigo, and sugar. The Sugar Act, Grenville estimated, would help defray “the necessary expenses of defending, protecting, and securing, the said colonies and plantations.” For the first time, Parliament had adopted duties (taxes on imports or exports) frankly designed to raise revenues in the colonies and not merely intended to regulate trade.

Another of Grenville’s regulatory measures had an important impact on the colonies: the Currency Act of 1764. The colonies faced a chronic shortage of money, which kept going out to pay debts in England. To meet the shortage, they issued their own paper money. British creditors feared payment in such a depreciated currency, however. To alleviate their fears, Grenville prohibited the colonies from printing money. The result was a decline in the value of existing paper money, since nobody was obligated to accept it in payment of debts, even in the colonies. The deflationary impact of the Currency Act, combined with new duties on commodities and stricter enforcement, jolted a colonial economy already suffering a postwar decline.

THE STAMP ACT George Grenville had a knack for doing the wrong thing—repeatedly. The Sugar Act, for example, did not produce additional revenue. Its administrative costs were four times greater than the revenue it generated. Yet he compounded the problem by pushing through still another measure to raise money in America, a stamp tax. On February 13, 1765, Parliament created revenue stamps and required that they be purchased and fixed to printed matter and legal documents of all kinds: newspapers, pamphlets, broadsides, almanacs, bonds, leases, deeds, licenses, insurance policies, ship clearances, college diplomas, even playing cards. The requirement was to go into effect on November 1.

That same year, Grenville completed his new system of colonial regulations when he put through the Quartering Act. In effect it was yet another tax. The Quartering Act required the colonies to supply British troops with provisions and provide them with barracks or submit to their use of inns and vacant buildings. It applied to all colonies but affected mainly New York, headquarters of the British forces.

THE IDEOLOGICAL RESPONSE The cumulative effect of Grenville's measures raised colonial suspicions to a fever. Unwittingly this plodding minister of a plodding king stirred up a storm of protest and set in motion a profound exploration of English traditions and imperial relations. The radical ideas of the minority "Real Whigs" slowly began to take hold in the colonies. These ideas derived from various sources but above all from John Locke's justification of the Glorious Revolution, his *Two Treatises on Government*. Locke and other Real Whigs viewed English history as a struggle by Parliament to preserve life, liberty, and property against royal tyranny.

In 1764 and 1765 the colonists felt that Grenville and Parliament had loosed upon them the very engines of tyranny from which Parliament had rescued England in the seventeenth century. A standing army was the historic ally of despots, and now with the French gone and Chief Pontiac subdued, thousands of British soldiers remained in the colonies. For what purpose—to protect the colonists or to subdue them? It was beginning to seem clear that it was the latter. Among the fundamental rights of English people were trial by jury and the presumption of innocence, but the new vice-admiralty courts excluded juries and put the burden of proof on the defendant. Most important, English citizens had the right to be taxed only by their elected representatives. Parliament claimed that privilege in England, and the colonial assemblies had long exercised it as their most cherished principle in America. Now, however, Parliament was usurping the assemblies' power of the purse strings. This could only lead to tyranny and enslavement. Sir Francis Bernard, the royal governor of Massachusetts, correctly predicted that the new stamp tax "would cause a great Alarm & meet much Opposition" in the colonies. Indeed, the seed of American independence was planted by the debates over the stamp tax.

PROTEST IN THE COLONIES In a flood of colonial pamphlets, speeches, and resolutions, critics of the Stamp Act repeated a slogan familiar to all Americans: "No taxation without representation." The Stamp Act became the chief target of colonial outrage at British greed and arrogance. Unlike the Sugar Act, which affected mainly New England, the Stamp Act burdened all

colonists who did any kind of business. And it affected most of all the articulate elements in the community: merchants, planters, lawyers, printer-editors—all strategically placed to influence public opinion. Through the spring and summer of 1765, colonial resentment boiled over in meetings, parades, bonfires, and other demonstrations. The militants began to call themselves Sons of Liberty. They met underneath “liberty trees”—in Boston a great elm on Hanover Square, in Charleston a live oak.

One day in mid-August 1765, nearly three months before the effective date of the Stamp Act, an effigy of Boston’s stamp agent swung from the city’s liberty tree. In the evening a mob carried it through the streets, destroyed the stamp office, and used the wood to burn the effigy. Somewhat later another mob sacked the homes of Lieutenant Governor Thomas Hutchinson and the local customs officer. Thoroughly shaken, the Boston stamp agent resigned his commission, and stamp agents throughout the colonies were hounded out of office. Loyalists, those colonists supportive of British policies, deplored the riotous violence, arguing that the American rebels were behaving more tyrannically than the British.

By November 1, its effective date, the Stamp Act was a dead letter. Business went on without the stamps. Newspapers appeared with a skull and crossbones where the stamp belonged. After passage of the Sugar Act, a movement had begun to boycott British goods rather than pay the import duties. Now colonists adopted nonimportation agreements to exert pressure on British merchants. Americans knew that they had become a major market for British products. By shutting off imports, they could exercise real leverage. Homegrown sage and sassafras took the place of British tea. Homespun garments became the fashion as a symbol of colonial defiance.

The widespread protests involved women as well as men, and the boycotts of British goods encouraged colonial unity as Americans discovered that they had more in common with each other than with London. The Virginia House of Burgesses struck the first blow against the Stamp Act with the Virginia Resolves, a series of resolutions inspired by the fiery young Patrick Henry. Virginians, the burgesses declared, were entitled to the rights of Englishmen, and Englishmen could be taxed only by their own representatives. Virginians, moreover, had always been governed by laws passed with their own consent. Newspapers spread the Virginia Resolves throughout the colonies, and other assemblies hastened to copy Virginia’s example.

In 1765 the Massachusetts House of Representatives issued a circular letter inviting the various assemblies to send delegates to confer in New York on appeals for relief from the king and Parliament. Nine responded, and from October 7 to 25, 1765, the Stamp Act Congress, with twenty-seven

delegates, issued expressions of colonial sentiment: a Declaration of the Rights and Grievances of the Colonies, a petition to the king for relief, and a petition to Parliament for repeal of the Stamp Act. The delegates acknowledged that the colonies owed a “due subordination” to Parliament and recognized its right to regulate colonial trade, but they questioned Parliament’s right to levy taxes, which were a free gift granted by the people through their representatives. “The boldness of the minister [Grenville] amazes our people,” wrote a New Yorker. “This single stroke has lost Great Britain the affection of all of her Colonies.” Grenville responded by denouncing the colonists as “ungrateful.”

REPEAL OF THE ACT The storm had scarcely broken before Grenville’s ministry was out of office, dismissed not because of the colonial turmoil but because Grenville had fallen out with the king over the appointment of government officials. The king installed a new minister, the marquis of Rockingham, Charles Watson-Wentworth, leader of the “Rockingham Whigs,” the “Old Whig” faction, which included Britons who sympathized with the colonies. Pressure from British merchants who feared the economic consequences of the

The Repeal, or the Funeral Procession of Miss America-Stamp

This 1766 cartoon shows Grenville carrying the dead Stamp Act in its coffin. In the background, trade with America starts up again.

nonimportation movement bolstered Rockingham's resolve to repeal the act. When Parliament assembled early in 1766, William Pitt demanded that the Stamp Act be repealed "absolutely, totally, and immediately" but urged that Britain's authority over the colonies "be asserted in as strong terms as possible," except on the point of taxation.

In 1766 Parliament repealed the Stamp Tax but at the same time passed the Declaratory Act, which asserted the full power of Parliament to make laws binding the colonies "in all cases whatsoever." It was a cunning evasion that made no concession with regard to taxes but made no mention of them either. It reinforced a distinction between "external" taxes on trade and "internal" taxes within the colonies, a distinction that would have fateful consequences. For the moment, however, the Declaratory Act was a face-saving gesture. News of the repeal of the Stamp Act set off excited demonstrations throughout the colonies. In mid-May 1766 Boston church bells signaled the news of Parliament's favorable vote. Grateful New Yorkers commissioned statues to honor George III and William Pitt. Amid the rejoicing and relief

on both sides of the Atlantic, few expected that the quarrel between Britain and its American colonies would be reopened within a year. To be sure, the Sugar Act remained on the books, but Rockingham reduced the molasses tax from threepence a gallon to a penny.

FANNING THE FLAMES

Meanwhile, the king continued to play musical chairs with his ministers. Rockingham soon lost the confidence of the king. William Pitt then formed a ministry that included the major factions of Parliament. The ill-matched combination would have been hard to manage even if Pitt had remained in charge, but the old warlord began to slip over the fine line between genius and madness. For a time in 1767, the guiding force in the ministry was the witty and reckless Charles Townshend, chancellor of the Exchequer (Treasury), whose “abilities were superior to those of all men,” according to Horace Walpole, “and his judgement below that of any man.” Like George Grenville before him, Townshend held the “factious and turbulent” Americans in contempt and was determined to force their obedience. The erratic Townshend took advantage of Pitt’s mental confusion to reopen the question of colonial taxation. He asserted that “external” taxes were tolerable to the colonies—not that he believed it for a moment.

THE TOWNSHEND ACTS In 1767 Townshend put his ill-fated revenue plan through the House of Commons, and a few months later he died, at age forty-two, leaving behind a bitter legacy: the Townshend Acts. With this legislation, Townshend had sought first to bring the New York assembly to its senses. That body had defied the Quartering Act and refused to provide beds or supplies for the king’s troops. Parliament, at Townshend’s behest, had suspended all acts of New York’s colonial assembly until it would yield. New York protested but finally caved in, inadvertently confirming the British suspicion that too much indulgence had encouraged colonial bad manners. Townshend had followed up with the Revenue Act of 1767, which levied duties (“external taxes”) on colonial imports of glass, lead, paint, paper, and tea. Third, he had set up a Board of Customs Commissioners at Boston, the colonial headquarters of smuggling. Finally, he had reorganized the vice-admiralty courts, providing four in the continental colonies: at Halifax, Boston, Philadelphia, and Charleston.

The Townshend duties increased government revenues, but the intangible costs were greater. The duties taxed goods exported from England, indirectly

hurting British manufacturers, and had to be collected in colonial ports, increasing collection costs. But the highest cost was a new drift into ever-greater conflict with the colonists. The Revenue Act of 1767 posed a more severe threat to colonial assemblies than Grenville's taxes had, for Townshend proposed to apply these revenues to pay governors and other officers and thereby release them from financial dependence on the colonial assemblies.

DICKINSON'S "LETTERS" The Townshend Acts surprised the colonists, but this time the storm gathered more slowly than it had two years before. Once again citizens resolved to resist, to boycott British goods, to develop their own manufactures. Once again the colonial press spewed out expressions of protest, most notably the essays of John Dickinson. The son of a Maryland planter, Dickinson was a prosperous Philadelphia lawyer who hoped to resolve the latest dispute by persuasion. Late in 1767 his twelve "Letters from a Farmer in Pennsylvania" (as he chose to style himself) began to appear in the *Pennsylvania Chronicle*, from which they were copied in other papers and in pamphlet form. His argument repeated in greater detail and more elegance what the Stamp Act Congress had already said. The colonists held that Parliament might regulate commerce and collect duties incidental to that purpose, but it had no right to levy taxes for *revenue*, whether they were internal or external. Dickinson used moderate language. "The cause of Liberty is a cause of too much dignity to be sullied by turbulence and tumult," he argued. "Anger produces anger," he warned. The colonial complaints should "speak at the same time the language of affliction and veneration" so as to avoid "an incurable rage."

SAMUEL ADAMS AND THE SONS OF LIBERTY But the outraged affliction grew, and the veneration waned. British officials could neither conciliate moderates like Dickinson nor cope with firebrands like Samuel Adams of Boston, who was emerging as the supreme genius of revolutionary agitation. Born in 1722, Adams graduated from Harvard and soon thereafter inherited the family brewery, which he quickly ran into bankruptcy. Politics, not profit, was his abiding passion, and he spent most of his time debating political issues with sailors, roustabouts, and stevedores at local taverns. Adams insisted that Parliament had no right to legislate at all for the colonies, that Massachusetts must return to the spirit of its Puritan founders and defend itself from a new conspiracy against its liberties.

While other men tended their private affairs, Sam Adams was whipping up the Sons of Liberty and organizing protests at the Boston town meeting and in the provincial assembly. Early in 1768 he and James Otis formulated a

Samuel Adams

Adams was an organizer of the Sons of Liberty.

Massachusetts circular letter, which the assembly dispatched to the other colonies. The letter's tone was polite and logical: it restated the illegality of taxation by Parliament without colonial representation in Parliament and invited the support of other colonies. In London the earl of Hillsborough, just appointed to the new office of secretary of state for the colonies, only made matters worse. He ordered the Massachusetts assembly to withdraw the Adams-Otis letter. The assembly refused and was dissolved.

In 1769 the Virginia assembly reasserted its exclusive right to tax Virginians and called upon the colonies to unite in the cause. Virginia's royal

governor promptly dissolved the assembly, but the members met independently, dubbed themselves a convention after Boston's example, and adopted a new set of nonimportation agreements.

In London, events across the Atlantic still aroused only marginal interest. The king's long effort to reorder British politics to his liking was coming to fulfillment, and that was the big news. In 1769 new elections for Parliament finally produced a majority of the "King's Friends." And George III found a minister to his taste in Frederick, Lord North, who had replaced Townshend as chancellor of the Exchequer. In 1770 the king installed a cabinet of the King's Friends, with North as first minister. North, who venerated the traditions of Parliament, was no stooge for the king, but the two worked in harmony.

THE BOSTON MASSACRE By 1770 the nonimportation agreements in the American colonies were strangling British trade and causing unemployment in England. The impact of colonial boycotts on English commerce had persuaded Lord North to modify the Townshend Acts—just in time to halt a perilous escalation of tensions. The presence of British soldiers in Boston had been a constant provocation. Crowds heckled and ridiculed the red-coated soldiers, many of whom earned the abuse by harassing and intimidating colonists.

On March 5, 1770, in the square before the custom house, a group of rowdies began taunting and hurling icicles at the British sentry on duty. His call

The Bloody Massacre

Paul Revere's partisan engraving of the Boston Massacre.

for help brought reinforcements. Then somebody rang the town fire bell, drawing a larger crowd to the scene. At their head, or so the story goes, was Crispus Attucks, a runaway mulatto slave who had worked for some years on ships out of Boston. Attucks and others continued to bait the British troops. Finally a soldier was knocked down, rose to his feet, and fired into the crowd. When the smoke cleared, five people lay on the ground dead or dying, and eight more were wounded. The cause of colonial resistance now had its first martyrs, and the first to die was Crispus Attucks. Those involved in the “massacre” were indicted for murder, but they were defended by John Adams, Sam’s cousin, who thought they were the victims of circumstance, provoked, he said, by a “motley rabble of saucy boys, negroes and mulattoes, Irish teagues and outlandish Jack tars.” All of the British soldiers were acquitted except two, who were convicted of manslaughter and branded on their thumbs.

The so-called Boston Massacre sent shock waves through the colonies—and to London. Late in April 1770 Parliament repealed all the Townshend

duties save one. The cabinet, by a fateful vote of five to four, had advised keeping the tea tax as a token of parliamentary authority. Colonial die-hards insisted that pressure should be kept on British merchants until Parliament gave in altogether, but the nonimportation movement soon faded. Parliament, after all, had given up the substance of the taxes, with one exception, and much of the colonists' tea was smuggled in from Holland anyway.

For two years thereafter colonial discontent simmered down. The Stamp Act was gone, as were all the Townshend duties except that on tea. But most of the Grenville-Townshend innovations remained in effect: the Sugar Act, the Currency Act, the Quartering Act, the vice-admiralty courts, the Board of Customs Commissioners. The redcoats had left Boston, but they remained nearby, and the British navy still patrolled the coast. Each remained a source of irritation and the cause of occasional incidents. There was still tinder awaiting a spark, and the most rebellious among the colonists were eager to provide the flame. As Sam Adams stressed, "Where there is a spark of patriotick fire, we will enkindle it."

DISCONTENT ON THE FRONTIER

Many American colonists had no interest in the disputes over British regulatory policy raging along the seaboard. Parts of the backcountry stirred with quarrels that had nothing to do with the Stamp and Townshend Acts. Rival land claims to the east of Lake Champlain pitted New York against New Hampshire and the Green Mountain Boys, led by Ethan Allen, against both. Eventually the denizens of the area would set up shop on their own as the state of Vermont, created in 1777 although not recognized as a member of the Union until 1791. In Pennsylvania sporadic quarrels broke out among land claimants who held grants from Virginia and Connecticut, whose boundaries under their charters overlapped those granted to William Penn, or so they believed.

A more dangerous division in Pennsylvania had arisen in 1763 when a group of frontier ruffians took the law into their own hands. Outraged at the lack of frontier protection during Pontiac's Rebellion, a consequence of pacifist Quaker influence in the Pennsylvania assembly, a group from Paxton, near Harrisburg, called the Paxton Boys, took revenge by massacring peaceful Susquehannock Indians in Lancaster County; then they threatened the so-called Moravian Indians, a group of Christian converts near Bethlehem. When the Indians took refuge in Philadelphia, some 1,500 angry Paxton Boys marched on the capital, where Benjamin Franklin talked the vengeful

frontiersmen into returning home by enabling them to present their demands to the governor and the assembly.

Farther south frontier folk of South Carolina also had complaints about the lack of protection—from horse thieves, cattle rustlers, and Indians. Backcountry residents organized societies, called Regulators, to administer vigilante justice in the region and refused to pay taxes until they gained effective government. In 1769 the assembly finally set up six new circuit courts in the region but still did not respond to the backcountry's demand for representation.

In North Carolina the protest was less over the lack of government than over the abuses and extortion by appointees from the eastern part of the colony. Farmers felt especially oppressed by the government's refusal to either issue paper money or accept produce in payment of taxes, and in 1766 they organized to resist. Efforts of these Regulators to stop seizures of property and other court proceedings led to more disorders and the enactment of a bill that made the rioters guilty of treason. In the spring of 1771, Governor William Tryon led 1,200 militiamen into the Piedmont center of Regulator activity. There his forces defeated some 2,000 ill-organized Regulators in the Battle of Alamance, in which eight were killed on each side. Tryon's men then ranged through the backcountry, forcing some 6,500 Piedmont settlers to sign an oath of allegiance to the king.

These disputes and revolts within the colonies illustrate the fractious diversity of opinion and outlook evident among Americans on the eve of the Revolution. Colonists were of many minds about many things, including British rule. The disputatious frontier in colonial America also helped convince British authorities that the colonies were inherently unstable and that they required firmer oversight, including the use of military force to ensure civil stability.

A WORSENING CRISIS

Two events in 1772 further eroded the colonies' fragile relationship with the mother country. Near Providence, Rhode Island, a British schooner, the *Gaspee*, patrolling for smugglers, accidentally ran aground, and its crew proceeded to commandeer local sheep, hogs, and poultry. An angry crowd from the town boarded the ship, removed the crew, and set fire to the vessel. A commission of inquiry was formed with authority to hold suspects, but no witnesses could be found. Three days after the burning, on June 13, 1772, Governor Thomas Hutchinson told the Massachusetts assembly that his salary thenceforth would come out of customs revenues. Then word came that judges of the Massachusetts Superior Court would be paid from the same source and would

no longer be dependent on the assembly for their income. The assembly expressed a fear that this portended “a despotic administration of government.”

The existence of the *Gaspee* investigative commission, which bypassed the courts of Rhode Island, and the independent salaries for royal officials in Massachusetts suggested to the residents of other colonies that similar events might be in store for them. The discussion of colonial rights and parliamentary encroachments regained momentum. Ever the agitator, Sam Adams convinced the Boston town meeting to form the Committee of Correspondence, which issued a statement of rights and grievances and invited other towns to do the same. Committees of Correspondence sprang up across Massachusetts and in other colonies. In 1773 the Virginia assembly proposed the formation of such committees on an intercolonial basis, and a network of them spread across the colonies, mobilizing public opinion and keeping colonial resentments at a simmer. In unwitting tribute to their effectiveness, a Massachusetts Loyalist called the committees “the foulest, subtlest, and most venomous serpent ever issued from the egg of sedition.”

THE BOSTON TEA PARTY Lord North soon provided the colonists with the occasion to bring resentment from a simmer to a boil. In 1773 he undertook to help some friends bail out the East India Company, which had

The Able Doctor, or America Swallowing the Bitter Draught

This 1774 engraving shows Lord North, the Boston Port Act in his pocket, pouring tea down America’s throat and America spitting it back.

in its British warehouses some 17 million pounds of tea. Under the Tea Act of 1773, the government would allow the grossly mismanaged company to send its south Asian tea directly to America without paying any duties. British tea merchants could thereby undercut their colonial competitors, most of whom were smugglers who bought tea from the Dutch. At the same time, Lord North ordered British authorities in New England to clamp down on American smuggling.

The Committees of Correspondence, backed by colonial merchants, alerted colonists to the new danger. The British government, they said, was trying to purchase colonial acquiescence with cheap tea. Before the end of the year, large shipments of tea had gone out to major colonial ports. In Boston several thousand irate colonists decided that their passion for liberty outweighed their love for tea. On December 16, 1773, a group of sixteen men, disguised as Mohawk Indians, boarded three ships and threw the 342 chests of East India Company tea overboard—cheered on by a crowd along the shore. Like those who had burned the *Gaspee*, they remained parties unknown—except to hundreds of Bostonians. John Adams relished the vigilante action. The destruction of the disputed tea, he said, was “so bold, so daring, so firm, intrepid and inflexible” that it would have “important consequences.”

Yet given a more tactful response from London, the Boston Tea Party might easily have undermined the radicals’ credibility. Many Americans, especially merchants, were aghast at the wanton destruction of property. Benjamin Franklin, an American agent in London trying to improve relations with Britain, declared that the destruction of the tea was a violent injustice. He urged his native city of Boston to reimburse the shipowners for their ruined cargo. Sam Adams dismissed Franklin’s reservations. “Franklin may be a good philosopher,” Adams said, “but he is a bungling politician.”

The Boston Tea Party had pushed British officials to the breaking point. They were now convinced that the very existence of the empire was at stake. The rebels in Boston had instigated what could become a widespread effort to evade royal authority and imperial regulations. A firm response was required. “The colonists must either submit or triumph,” a furious George III wrote to Lord North, and North strove to make an example of Boston. In the end, however, he helped make a revolution.

THE COERCIVE ACTS In 1774 Parliament enacted four harsh measures designed by Lord North to discipline Boston. The Boston Port Act closed the harbor from June 1, 1774, until the city had paid for the lost tea. An Act for the Impartial Administration of Justice let the governor transfer

to England the trial of any official accused of committing an offense in the line of duty—no more redcoats would be tried on technicalities. A new Quartering Act directed local authorities to provide lodging for British soldiers, in private homes if necessary. Finally, the Massachusetts Government Act made the colony's council and law-enforcement officers all appointive rather than elective, declared that sheriffs would select jurors, and stipulated that no town meeting could be held without the governor's consent, except for the annual election of town officers. In May, General Thomas Gage replaced Hutchinson as governor and assumed command of the 4,000 British soldiers in Boston. Massachusetts now had a military governor.

These Coercive Acts were designed to isolate Boston and make an example of the colony. Instead, they galvanized colonial resistance. At last, it seemed to the colonists, their worst fears were being confirmed. If these "Intolerable Acts," as the colonists labeled the Coercive Acts, were not resisted, they would eventually be applied to the other colonies.

Further confirmation of British "tyranny" came with news of the Quebec Act, passed in June. That act provided that the government in Canada would

not have a representative assembly and would instead be led by an appointed governor and council. It also gave a privileged position to the Catholic Church. The measure seemed merely another indicator of British authoritarianism. In addition, colonists pointed out that they had lost many lives in an effort to liberate the trans-Appalachian West from the control of French Catholics. Now the British seemed to be protecting papists at the expense of their own colonists. What was more, the act placed within the boundaries of Quebec the western lands north of the Ohio River, lands that Pennsylvania, Virginia, and Connecticut claimed.

Meanwhile, colonists rallied to the cause of besieged Boston, raising money, sending provisions,

The State Blacksmiths Forging Fetters for the Americans

A British cartoon attacking Parliament's anti-colonial measures of 1775 and 1776.

and boycotting, as well as burning, tea. In Williamsburg, when the Virginia assembly met in May, a young member of the Committee of Correspondence, Thomas Jefferson, proposed to set aside June 1, the effective date of the Boston Port Act, as a day of fasting and prayer in Virginia. The governor immediately dissolved the assembly, whose members then retired to the Raleigh Tavern and resolved to form a Continental Congress to represent all the colonies. Similar calls were coming from Providence, New York, Philadelphia, and elsewhere, and in June the Massachusetts assembly suggested a meeting in Philadelphia in September. Shortly before George Washington left to represent Virginia at the gathering, he wrote to a friend, "The crisis is arrived when we must assert our rights." Otherwise, he warned, British tyranny "shall make us as tame and abject slaves, as the blacks we rule over with such arbitrary sway."

THE CONTINENTAL CONGRESS On September 5, 1774, the First Continental Congress assembled in Philadelphia. There were fifty-five members representing twelve continental colonies, all but Georgia, Quebec, Nova Scotia, and the Floridas. Peyton Randolph of Virginia was elected president, and Charles Thomson, "the Sam Adams of Philadelphia," became secretary. The Congress agreed to vote by colonies, although Patrick Henry urged the members to vote as individuals on the grounds that they were not Virginians or New Yorkers or whatever but Americans.

The Congress endorsed the Suffolk Resolves, which declared the Intolerable Acts null and void, urged Massachusetts to arm for defense, and called for economic sanctions against British commerce. The Congress then adopted a Declaration of American Rights, which conceded only Parliament's right to regulate commerce and those matters that were strictly imperial affairs. It proclaimed once again the rights of Americans as English citizens, denied Parliament's authority with respect to internal colonial affairs, and proclaimed the right of each colonial assembly to determine the need for British troops within its own province.

Finally the Continental Congress adopted the Continental Association of 1774, which recommended that every county, town, and city form committees to enforce a boycott of all British goods. These elected committees of virtuous citizens would monitor the economic activities of their neighbors to ensure compliance with the boycott. The local committees became in effect the organizational and communications network for the Revolutionary movement, connecting every locality to the leadership and enforcing public behavior. The Continental Association also included provisions for the non-importation of British goods (implemented in 1774) and the nonexportation

of American goods to Britain (to be implemented in 1775 unless colonial grievances were addressed).

Seven thousand men across the colonies served on the committees of the Continental Association. They developed an effective form of political protest using an economic weapon available to all colonists: refusal to purchase British products and sell American goods to Britain. Such economic leverage, it was hoped, would pressure the British government to repeal its hated taxes on Americans. The committees often required colonists to sign an oath to join the boycotts. Those who refused to sign and to abide by the agreements were ostracized and intimidated; some were tarred and feathered.

Such efforts to gain economic self-sufficiency helped bind the diverse colonies by ropes of resistance. In this sense the emerging colonial desire for greater political independence involved concrete economic objectives. Gaining economic independence from Britain required not only decreasing imports but also increasing American production. Many colonial artisans, mechanics, and manufacturers recognized the benefits of the boycott movement. By cutting off British imports, they could earn greater freedom and long-term prosperity and security. As David Ramsay, a South Carolina physician, remembered, colonists rebelled against Britain's efforts to make Americans captive consumers in the hope of "*increasing the sale of her manufactures, and of perpetuating our subordination.*"

Thousands of ordinary men and women participated in the boycott of British goods, and their sacrifices on behalf of colonial liberties provided the momentum leading to revolution. As the *Boston Gazette* observed, "However meanly some people may think about the populace or mob of a country, it is certain that the power or strength of every FREE country depends entirely on the populace." It was common folk who implemented and enforced the boycott, volunteered in local militia units, attended town meetings, and increasingly exerted pressure on royal officials in the colonies. In 1774 over 4,600 militiamen from Massachusetts lined the streets of Worcester and forced royal officials, hats in hands, to walk a gauntlet while recanting their support for imperial policies. The Founding Fathers could not have led the Revolutionary movement without such widespread popular support. As the people of Pittsfield, Massachusetts, declared in a petition, "We have always believed that the people are the fountain of power."

In London the king fumed. He wrote his prime minister that the "New England colonies are in a state of rebellion," and "blows must decide whether they are to be subject to this country or independent." British critics of the American actions reminded the colonists that Parliament had absolute sov-

ereignty. Power could not be shared. Parliament could not abandon its claim to authority in part without abandoning it altogether. King and Parliament insisted that there would be no negotiation with the rebellious colonies. Force was the only option.

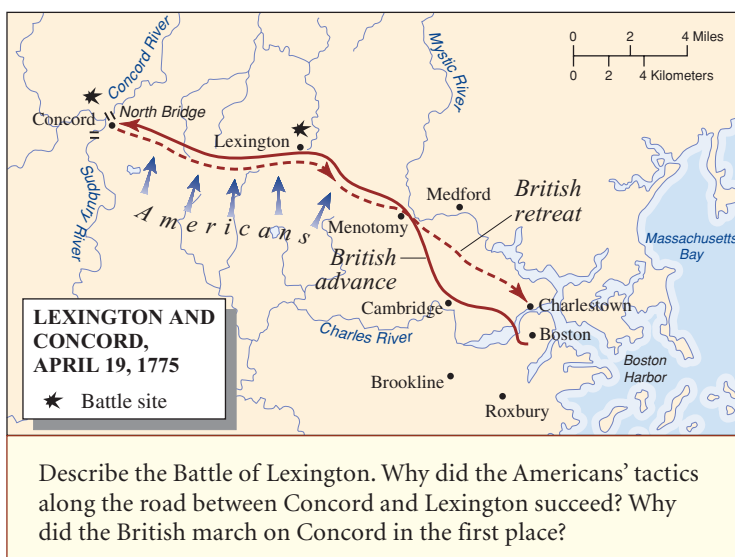

Parliament declared Massachusetts in rebellion and prohibited the New England colonies from trading with any nation outside the empire. Lord North's Conciliatory Resolution, adopted on February 27, 1775, was as far as the British would go. Under its terms, Parliament would refrain from using any measures but taxes to regulate trade and would grant to each colony the duties collected within its boundaries, provided the colonies would contribute voluntarily to a quota for defense of the empire. It was a formula, said one English skeptic, not for peace but for new quarrels. In Virginia in March 1775, the colony's leaders met to discuss what had occurred at the Continental Congress in Philadelphia. While most of the participants believed that Britain would relent in the face of united colonial resistance, Patrick Henry was convinced that war was imminent. He urged that the militia begin preparing for combat. Henry claimed that the colonies "have done everything that could be done to avert the storm which is now coming on. We have petitioned; we have remonstrated; we have supplicated; we have prostrated ourselves before the throne," yet such efforts had been met only by "violence and insult." By this point, Henry had whipped himself into a fury. Freedom, he shouted, could be bought only with blood. While staring at his reluctant comrades, he refused to predict what they might do for the cause of liberty. "But as for me," he declared through clenched teeth, "give me liberty—" He paused dramatically, clenched his fist as if it held a dagger, then plunged it as if into his heart—"or give me death."

SHIFTING AUTHORITY

As Patrick Henry had predicted, events moved beyond conciliation. The king and Parliament had lost control of their colonies; they could neither persuade nor coerce them to accept new regulations and revenue measures. Colonial resistance had become open rebellion. All through late 1774 and early 1775 the defenders of American rights were seizing the initiative. The unorganized Loyalists, if they did not submit to nonimportation agreements, found themselves confronted with persuasive committees of "Whigs," with tar and feathers at the ready. The Continental Congress urged each colony to mobilize its militia units. The militia, as much a social as a military organization in the past, now began serious training in formations,

tactics, and marksmanship. Royal and proprietary officials were losing control as provincial congresses assumed authority and colonial militias organized, raided military stores, and gathered arms and gunpowder. But British military officials remained smugly confident. Major John Pitcairn wrote home from Boston in 1775, “I am satisfied that one active campaign, a smart action, and burning two or three of their towns, will set everything to rights.”

LEXINGTON AND CONCORD Pitcairn soon had his chance to suppress the rebellion. On April 14, 1775, the besieged military commander and new royal governor of Massachusetts, General Thomas Gage, received secret orders to stop the “open rebellion” in Massachusetts. He decided to capture and arrest leaders of the Provincial Congress and seize the militia’s supply depot at Concord, about twenty miles outside Boston. On the night of April 18, Lieutenant Colonel Francis Smith and Major Pitcairn gathered 700 redcoats on Boston Common and set out by way of Lexington. When local Patriots got wind of the plan, Boston’s Committee of Safety sent Paul Revere and William Dawes by separate routes on their famous ride to spread the alarm. Revere reached Lexington about midnight and alerted John Hancock and Sam Adams, who were hiding there. Joined by Dawes and Samuel Prescott, Revere rode on toward Concord. A British patrol intercepted the trio, but Prescott slipped through and delivered the warning.

At dawn on April 19, the British advance guard of 238 redcoats found Captain John Parker and about seventy “Minutemen”—mostly dairy farmers and artisans—lined up on the dewy Lexington green. Parker apparently intended only a silent protest, but Major Pitcairn rode onto the green, swung his sword, and yelled, “Disperse, you damned rebels! You dogs, run!” The Americans had already begun quietly backing away when someone fired a shot, whereupon the British soldiers loosed a volley into the Minutemen, then charged them with bayonets, leaving eight dead and ten wounded.

The British officers hastily brought their men under control and led them to Concord. There the Americans had already carried off most of their munitions, but the British destroyed what they could. At Concord’s North Bridge the growing American militia inflicted fourteen casualties on a British platoon, and by about noon the British had begun marching back to Boston. By then, however, the narrow road back to Boston had turned into a gauntlet of death as rebels from “every Middlesex village and farm” sniped from behind stone walls, trees, barns, houses—all the way back to the Charlestown peninsula. Among the Americans were Captain Parker and the reassembled Lexington militia. By nightfall the redcoat survivors were safe under the protection of the fleet and army at Boston, having suffered three times as many casualties as the Americans. A British general reported to London that the Americans had earned his respect: “Whoever looks upon them as an irregular

The Battle of Lexington

Amos Doolittle’s impression of the Battle of Lexington as combat begins.

mob will find himself much mistaken.” During the fighting along the road leading to Lexington from Concord, a British soldier was searching a house for rebel snipers when he ran into James Hayward of the Acton militia. The redcoat pointed his musket at the American and said, “You’re a dead man.” Hayward raised his weapon and answered, “So are you.” They fired simultaneously.

THE SPREADING CONFLICT The Revolutionary War had begun. When the Second Continental Congress convened at Philadelphia on May 10, 1775, British-held Boston was under siege by Massachusetts militia units. On the very day that Congress met, Fort Ticonderoga, in northern New York, fell to a force of Green Mountain Boys under the hotheaded Ethan Allen of Vermont and Massachusetts volunteers under Benedict Arnold of Connecticut. Two days later the colonial force took Crown Point, north of Ticonderoga.

The Continental Congress, with no legal authority and no resources, met amid reports of spreading warfare. On June 15 it named George Washington commander in chief of a Continental army. Washington accepted on the condition that he receive no pay. The Congress fastened on the charismatic Washington because his service in the French and Indian War had made him one of the most experienced officers in America. The fact that he was from influential Virginia, the wealthiest and most populous province, added to his attractiveness. And as many people commented then and later, Washington looked like a leader. He was tall and strong, a superb horseman, and a fearless fighter. As a Philadelphian explained, Washington “had so much martial dignity in his deportment that you would distinguish him as a general and a soldier from among ten thousand people.”

On June 17, the very day that George Washington was commissioned, the colonials and British forces engaged in their first major fight, the Battle of Bunker Hill. While the Continental Congress deliberated, American and British forces in and around Boston had increased. Militiamen from Rhode Island, Connecticut, and New Hampshire joined in the siege, as did several freed slaves. British reinforcements included three major generals: William Howe, Sir Henry Clinton, and John Burgoyne. On the day before the battle, American forces fortified the high ground overlooking Boston. Breed’s Hill was the battle location, nearer to Boston than Bunker Hill, the site first chosen (and the source of the battle’s erroneous name).

The rebels were spoiling for a fight. As Joseph Warren, a dapper Boston physician, put it, “The British say we won’t fight; by heavens, I hope I shall die up to my knees in blood!” He soon got his wish. With civilians looking on from rooftops and church steeples, the British attacked in the blistering heat,

View of the Attack on Bunker's Hill

The Battle of Bunker Hill and the burning of Charlestown peninsula.

with 2,400 troops moving in tight formation through tall grass. The Americans, pounded by naval guns, watched from behind their earthworks as the waves of British troops in their beautiful but impractical uniforms advanced up the hill. The militiamen waited until the attackers had come within fifteen to twenty paces, then loosed a shattering volley. The Americans cheered as they watched the greatest soldiers in the world retreating in panic.

The British re-formed their lines and attacked again. Another sheet of flames and lead greeted them, and the vaunted redcoats retreated a second time. Still, the proud British generals, led by William Howe, were determined not to let the ragtag rustics humiliate them. On the third attempt, when the colonials began to run out of gunpowder and were forced to throw stones, a bayonet charge ousted them. The British took the high ground, but at the cost of 1,054 casualties. Colonial losses were about 400. Every one of General Howe's aides had been killed or wounded. "A dear bought victory," recorded General Clinton, "another such would have ruined us."

The Battle of Bunker Hill had two profound effects. First, the high number of British casualties made the English generals more cautious in subsequent encounters with the Continental army. Second, Congress recommended that all able-bodied men enlist in a militia. This tended to divide the

male population into Patriot and Loyalist camps. A middle ground was no longer tenable.

In early March 1776 American forces occupied Dorchester Heights, to the south of Boston, and brought the city under threat of bombardment with cannons and mortars. General Howe retreated by water to Halifax. The last British forces, along with fearful American Loyalists, embarked on March 17, 1776. By that time the British forces were facing not the suppression of a rebellion but the reconquest of a continent.

While American forces held Boston under siege, the Continental Congress pursued the dimming hope of a compromise settlement. On July 5 and 6, 1775, the delegates issued two major documents: an appeal to the king known as the Olive Branch Petition and a Declaration of the Causes and Necessity of Taking Up Arms. The Olive Branch Petition, written by Pennsylvanian John Dickinson, professed continued loyalty to George III and begged the king to restrain further hostilities pending a reconciliation. The declaration, also largely Dickinson's work, traced the history of the controversy, denounced the British for the unprovoked assault at Lexington, and rejected independence but affirmed the colonists' purpose to fight for their rights rather than submit to slavery. When the Olive Branch Petition reached London, George III refused even to look at it. On August 22 he declared the American colonists "open and avowed enemies." The next day he issued a proclamation of rebellion.

Before the end of July 1775, the Congress had authorized an ill-fated attack on British troops in the walled city of Quebec, in the vain hope of rallying support from the French inhabitants of Canada. One force, under Richard Montgomery, advanced toward Quebec by way of Lake Champlain; another, under Benedict Arnold, struggled through the Maine woods. The American units arrived outside Quebec in September, exhausted and hungry. Then they were ambushed by a silent killer: smallpox. "The small pox [is] very much among us," wrote one soldier. As the deadly virus raced through the American camp, General Montgomery faced a brutal dilemma. Most of his soldiers had signed up for short tours of duty, many of which were scheduled to expire at the end of the year. He could not afford to wait until spring for the smallpox to subside. Seeing little choice but to fight, Montgomery ordered a desperate attack on the British forces at Quebec during a blizzard, on December 31, 1775. The assault was a disaster. Montgomery was killed early in the battle and Benedict Arnold wounded. Over 400 Americans were taken prisoner. The rest of the Patriot force retreated to its camp outside the walled city and appealed to the Continental Congress for reinforcements.

The smallpox virus continued attacking both the Americans in the camp and their comrades taken captive by the British. As fresh troops arrived, they, too, fell victim to the deadly virus. Benedict Arnold warned George Washington in February 1776 that the runaway disease would soon lead to “the entire ruin of the Army.” By May there were only 1,900 American soldiers left outside Quebec, and 900 of them were infected with smallpox. Sensing the weakness of the American force, the British attacked and sent the ragtag Patriots on a frantic retreat up the St. Lawrence River to the American-held city of Montreal and eventually back to New York and New England. The sick were left behind, but the smallpox virus traveled with the fleeing soldiers. Major General Horatio Gates later remarked that “every thing about this Army is infected with the Pestilence; The Clothes, The Blankets, the Air & the Ground they Walk on.”

Quebec was the first military setback for the Revolutionaries. It would not be the last. And smallpox would continue to bedevil the American war effort. The veterans of the failed Canadian campaign brought home both smallpox and demoralizing stories about the disease, thus spreading the epidemic to civilians and making the recruitment of new soldiers more difficult. Men who might risk British gunfire balked at the more terrifying thought of contracting smallpox in a military camp.

In the South, Virginia’s royal governor raised a Loyalist force, including slaves recruited with the promise of freedom, but met defeat in December 1775. In North Carolina, Loyalist Highland Scots, joined by some former Regulators, lost a battle with a Patriot force at Moores Creek Bridge. The Loyalists had set out for Wilmington to join a British expeditionary force under Lord Cornwallis and Sir Henry Clinton. That plan frustrated, the British commanders decided to attack Charleston instead. The Patriot militia there had partially finished a palmetto-log fort on Sullivan’s Island (later named in honor of its commander, Colonel William Moultrie), and when the British fleet attacked, on June 28, 1776, the spongy palmetto logs absorbed the naval fire, and Fort Moultrie’s cannon returned it with devastating effect. The fleet, with over 200 casualties and every ship damaged, was forced to retire. South Carolina would honor the palmetto tree by putting it on its state flag.

As the fighting spread north into Canada and south into Virginia and the Carolinas, the Continental Congress appointed commissioners to negotiate treaties of peace with Indian tribes, organized a Post Office Department, with Benjamin Franklin as postmaster general, and authorized the formation of a navy and a marine corps.

The delegates continued to hold back from declaring independence. Yet through late 1775 and early 1776 word came of one British action after

another that proclaimed rebellion and war. In December 1775 a Prohibitory Act declared the colonies closed to all commerce. The king and cabinet also recruited mercenaries in Europe. Eventually almost 30,000 Germans served, about 17,000 of them from the principality of Hesse-Cassel—thus *Hessian* became the name applied to all of them. Parliament remained deaf to members who warned that the reconquest of America would not only be costly in itself but also might lead to another great war with France and Spain.

COMMON SENSE In 1776 Thomas Paine's pamphlet *Common Sense* was published anonymously in Philadelphia. Paine had arrived there from England thirteen months before. Coming from a humble Quaker background, Paine had distinguished himself chiefly as a drifter, a failure in marriage and business. At age thirty-seven he had set sail for America with a letter of introduction from Benjamin Franklin and the purpose of setting up a school for young ladies. When the school did not work out, he moved into the political controversy as a freelance writer and with *Common Sense* proved himself the consummate Revolutionary rhetorician. Until his pamphlet appeared, the squabble had been mainly with Parliament; few colonists considered independence an option. Paine, however, directly attacked allegiance to the monarchy, which had remained the last frayed connection to Britain, and he refocused the hostility previously vented on Parliament. The common sense of the matter, it seemed, was that King George III bore the responsibility for the malevolence toward the colonies. Americans should consult their own interests, abandon George III, and declare their independence: "The blood of the slain, the weeping voice of nature cries, 'TIS TIME TO PART."

INDEPENDENCE

Within three months more than 150,000 copies of Thomas Paine's pamphlet were in circulation, an enormous number for the time. "*Common Sense* is working a powerful change in the minds of men," George Washington said. A visitor to North Carolina's Provincial Congress could "hear nothing praised but *Common Sense* and independence." One by one the provincial governments authorized their delegates in the Continental Congress to take the final step. On June 7 Richard Henry Lee of Virginia moved "that these United Colonies are, and of right ought to be, free and independent states." Lee's resolution passed on July 2, a date that

The Coming Revolution

The Continental Congress votes for independence, July 2, 1776.

“will be the most memorable epoch in the history of America,” John Adams wrote to his wife, Abigail. The memorable date, however, became July 4, 1776, when the Congress adopted the Declaration of Independence, a statement of political philosophy that still retains its dynamic force.

JEFFERSON’S DECLARATION Although Thomas Jefferson is often called the author of the Declaration of Independence, he is more accurately termed its draftsman. In June 1776 the Continental Congress appointed a committee of five men—Jefferson, Benjamin Franklin, John Adams, Robert Livingston of New York, and Roger Sherman of Connecticut—to develop a public explanation of the reasons for colonial discontent and to provide a rationale for independence. John Adams convened the committee on June 11. The group asked Adams and Jefferson to produce a first draft, whereupon Adams deferred to Jefferson because of the thirty-three-year-old Virginian’s reputation as an eloquent writer.

During two days in mid-June 1776, in his rented lodgings in Philadelphia, Jefferson wrote the first statement of American grievances and principles. He later explained that his purpose was “not to find out new principles, or new arguments, never before thought of, not merely to say things which had never been said before; but to place before mankind the common sense of the subject, in terms so plain and firm as to command their assent.” He intended his words to serve as “an expression of the American mind, and to give to that expression the proper tone and spirit called for by the occasion.”

Jefferson drew primarily upon two sources: his own draft preamble to the Virginia Constitution, written a few weeks earlier, and George Mason's draft of Virginia's Declaration of Rights, which had appeared in Philadelphia newspapers in mid-June. It was Mason's text that stimulated many of Jefferson's most famous phrases. Mason, for example, had written that "all men are born equally free and independent, and have certain inherent natural Rights, . . . among which are the Enjoyment of Life and Liberty, with the Means of acquiring and possessing Property, and pursuing and obtaining Happiness and Safety."

Jefferson shared his draft with the committee members, and they made several minor revisions before submitting the document to the Congress. The legislators made eighty-six changes in Jefferson's declaration, including the insertion of two references to God and deleting a section blaming the English monarch for imposing African slavery on the colonies (delegates from Georgia and South Carolina had protested that it smacked of abolitionism).

The resulting Declaration of Independence constitutes a compelling restatement of John Locke's contract theory of government—the theory, in Jefferson's words, that governments derived "their just Powers from the consent of the people," who were entitled to "alter or abolish" those that denied their "unalienable rights" to "life, Liberty, and the pursuit of Happiness." The appeal was no longer simply to "the rights of Englishmen" but to the broader "laws of Nature and Nature's God." Parliament, which had no proper authority over the colonies, was never mentioned by name. The enemy was a king who had tried to establish "an absolute Tyranny over these States." The "Representatives of the United States of America," therefore, declared the thirteen "United Colonies" to be "Free and Independent States." General George Washington ordered the Declaration read to every brigade in the Continental army in New York. He prayed that the muscular statement of colonial principles would "serve as a fresh incentive to every officer, and soldier, to act with Fidelity and Courage." An equally excited but sober John Adams recognized that "the Toil and Blood and Treasure, that it will cost Us to maintain this Declaration" would be immense. Benjamin Franklin acknowledged how high the stakes were: "Well, Gentlemen," he told the Congress, "we must now hang together, or we shall most assuredly hang separately."

"WE ALWAYS HAD GOVERNED OURSELVES" So it had come to this, thirteen years after Britain acquired domination of North America with the Treaty of Paris. In explaining the causes of the Revolution, historians have advanced many theories and explanations: the excessive regulation of

trade, the restrictions on settling western lands, the tax burden, the mounting debts to British merchants, the growth of a national consciousness, the lack of representation in Parliament, ideologies of Whiggery and the Enlightenment, the abrupt shift from a mercantile to an “imperial” policy after 1763, class conflict, and revolutionary conspiracy.

Each factor contributed something to the collective grievances that rose to a climax in a gigantic failure of British statesmanship. A conflict between British sovereignty and American rights had come to a point of confrontation that adroit statesmanship might have avoided, sidestepped, or outflanked. Irresolution and vacillation in the British ministry finally gave way to the stubborn determination to force an issue long permitted to drift. The colonists, conditioned by the Whig interpretation of history, saw these developments as the conspiracy of a corrupted oligarchy—and finally, they decided, of a despotic king—to impose an “absolute Tyranny.”

The individual motives of the Revolutionaries varied considerably. The most frequent explanation for rebelling against British authority was the necessity of preserving rights and freedoms. George Washington, for example, saw in British policies a conspiracy to “fix the Shackles of Slavery upon us.” Yet colonists sought liberty from British tyranny for many reasons, not all of which were selfless or noble. The Boston merchant John Hancock, for example, embraced the Patriot cause in part because he was the region’s foremost smuggler. Paying British taxes would have cost him a fortune. Likewise, South Carolina’s Henry Laurens and Virginia’s Landon Carter, wealthy planters, were concerned about the future of slavery under British control. The seeming contradiction between American slaveholders demanding liberty from British oppression was not lost on observers at the time. John Fletcher, a leading Methodist in Britain, wrote in 1776 that the Americans were “hypocritical friends of liberty who buy and sell and whip their fellow men as if they were brutes, and absurdly complain that they are enslaved.” Even George Washington was not devoid of self-interest in his opposition to British policies. He owned 60,000 acres of land west of the Appalachians and very much resented British efforts to restrict white settlement on the frontier.

Perhaps the last word on the complex causes of the Revolution should belong to an obscure participant, Levi Preston, a Minuteman from Danvers, Massachusetts. Asked sixty-seven years after Lexington and Concord about British oppressions, the ninety-one-year-old veteran responded, as his young interviewer reported later:

“What were they? Oppressions? I didn’t feel them.” “What, were you not oppressed by the Stamp Act?” “I never saw one of those stamps. . . . I am

certain I never paid a penny for one of them.” “Well, what then about the tea-tax?” “Tea-tax! I never drank a drop of the stuff; the boys threw it all overboard.” “Well, then, what was the matter? and what did you mean in going to the fight?” “Young man, what we meant in going for those redcoats was this: we always had governed ourselves, and we always meant to. They didn’t mean we should.”

MAKING CONNECTIONS

- Revolutionary rhetoric was important not only for fighting the American Revolution; it also provided the framework for the creation of state and national governments after independence was won. This framework will be discussed in the next two chapters.
- The section titled “Discontent on the Frontier” showed the tension between colonists in the more urban eastern areas of several states and those on the western frontier. These tensions will reappear in several chapters—for example, in the Federalist–anti-Federalist debate over ratification of the Constitution (in Chapter 7).

For a narrative survey of the events leading to the Revolution, see Edward Countryman’s *The American Revolution*, rev. ed. (2003). For Great Britain’s perspective on the imperial conflict, see Ian R. Christie’s *Crisis of Empire* (1966).

The intellectual foundations of revolt are traced in Bernard Bailyn’s *The Ideological Origins of the American Revolution*, enlarged ed. (1992). To understand how these views were connected to organized protest, see Pauline Maier’s *From Resistance to Revolution: Colonial Radicals and the Development of American Opposition to Britain, 1765–1776* (1972) and Jon Butler’s *Becoming America: The Revolution before 1776* (2000).

Several books deal with specific events in the crisis. Oliver M. Dickerson’s *The Navigation Acts and the American Revolution* (1951) stresses the change from trade regulation to taxation in 1764. Edmund S. Morgan and Helen M.

Morgan's *The Stamp Act Crisis: Prologue to Revolution*, rev. ed. (1962) gives the colonial perspective on that crucial event. Also valuable are Hiller B. Zobel's *The Boston Massacre* (1970), Benjamin Woods Labaree's *The Boston Tea Party, 1773: Catalyst for Revolution* (1964), and David Ammerman's *In the Common Cause: American Response to the Coercive Acts of 1774* (1974). On the efforts of colonists to boycott the purchase of British goods, see T. H. Breen's *The Marketplace of Revolution: How Consumer Politics Shaped American Independence* (2004). An excellent overview of the political turmoil leading to war is John Ferling's *A Leap in the Dark: The Struggle to Create the American Republic* (2003). A fascinating analysis of the smallpox epidemic during the Revolutionary War is Elizabeth A. Fenn's *Pox Americana: The Great Smallpox Epidemic of 1775–82* (2001).

Pauline Maier's *American Scripture: Making the Declaration of Independence* (1997) is the best analysis of the framing of that document. For accounts of how the imperial controversy affected individual colonies, see Edward Countryman's *A People in Revolution: The American Revolution and Political Society in New York, 1760–1790* (1981), Richard L. Bushman's *King and People in Provincial Massachusetts* (1985), James H. Hutson's *Pennsylvania Politics, 1746–1770: The Movement for Royal Government and Its Consequences* (1972), Rhys Isaac's *The Transformation of Virginia, 1740–1790* (1982), and A. Roger Ekirch's "Poor Carolina": *Politics and Society in Colonial North Carolina, 1729–1776* (1981).

Events west of the Appalachians are chronicled concisely by Jack M. Sosin in *The Revolutionary Frontier, 1763–1783* (1967). Military affairs in the early phases of the war are handled in John W. Shy's *Toward Lexington: The Role of the British Army in the Coming of the American Revolution* (1965) and in works listed in Chapter 6.

Part Two

BUILDING
A
NATION

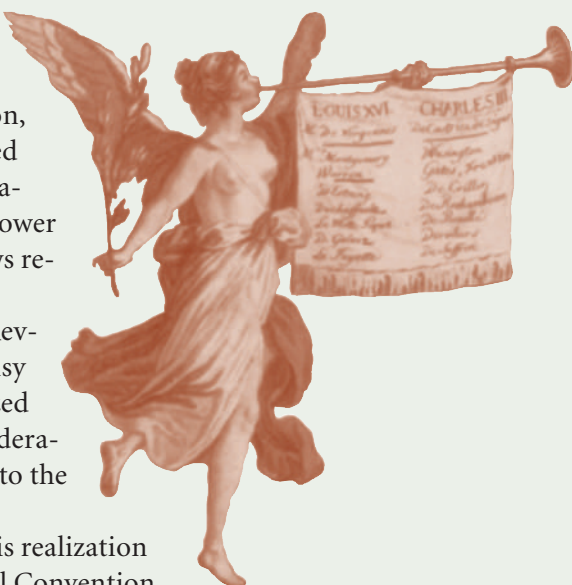

The signing of the Declaration of Independence generated great excitement among the rebellious colonists. Yet while it was one thing for Patriot leaders to declare American independence from British authority, it was quite another to win it on the battlefield. The odds favored the British: barely one third of the colonists actively supported the Revolution, the political stability of the new nation was uncertain, and George Washington found himself in command of a poorly supplied, inexperienced army.

Yet the Revolutionary movement would persevere and prevail. The skill and fortitude of Washington and his lieutenants enabled the American forces to exploit their geographic advantages. Equally important was the intervention of the French on behalf of the Revolutionary cause. The Franco-American alliance proved decisive. In 1783, after eight years of sporadic fighting and heavy human and financial losses, the British gave up the fight and their American colonies.

Amid the Revolutionary turmoil the Patriots faced the daunting task of forming new governments for themselves. Their deeply engrained resentment of British imperial rule led them to decentralize political power and grant substantial sovereignty to the individual states. As Thomas Jefferson declared, “Virginia, Sir, is my country.” Such powerful local ties help explain why the colonists focused their attention on creating new state constitutions rather than a national government. The Articles of Confederation, ratified in 1781, provided only the semblance of national authority. Final power to make and execute laws remained with the states.

After the end of the Revolutionary War, the flimsy political bonds authorized by the Articles of Confederation proved inadequate to the needs of the new—and expanding—nation. This realization led to the Constitutional Convention

in 1787. The process of drafting and ratifying the new constitution prompted a debate on the relative significance of national power, local control, and individual freedom that has provided the central theme of American political thought ever since.

The Revolution involved much more than the apportionment of political power, however. It also unleashed social forces and posed social questions that would help reshape the very fabric of American culture. What would be the role of women, African Americans, and Native Americans in the new republic? How would the quite different economies of the various regions of the new United States be developed? Who would control and facilitate access to the vast territories to the west of the original thirteen states? How would the new republic relate to the other nations of the world?

These controversial questions helped foster the first national political parties in the United States. During the 1790s Federalists, led by Alexander Hamilton, and Republicans, led by Thomas Jefferson and James Madison, furiously debated the political and economic future of the new nation. With Jefferson's election as president in 1800, the Republicans gained the upper hand in national politics for the next quarter century. In the process they presided over a maturing society that aggressively expanded westward at the expense of the Native Americans, ambivalently embraced industrial development, fitfully engaged in a second war with Great Britain, and ominously witnessed a growing sectional controversy over slavery.

THE AMERICAN REVOLUTION

FOCUS QUESTIONS

- What were the American and British military strategies and the Revolutionary War's major turning points?
- How did the war affect the home front?
- How was the American Revolution a “social revolution” in matters of social equality, slavery, the rights of women, and religious freedom?
- What factors led to the emergence of a distinctive American culture?

Few foreign observers thought that the upstart Revolutionaries could win a war against the world's greatest empire—and the Americans did lose most of the battles of the Revolution. But they eventually forced the British to sue for peace and grant their independence, a stunning result that reflects the tenacity of the Patriots as well as the peculiar difficulties facing the British as they tried to conduct a far-flung campaign thousands of miles from home. The British Empire dispatched two thirds of its entire army and one half of its formidable navy to suppress the American revolt. The costly military commitments the British maintained elsewhere around the globe further complicated their war effort.

Fighting in the New World was not an easy task for either side, however. The Americans had to create a military force capable of opposing the foremost army in the world. Recruiting, supplying, equipping, training, and paying soldiers were monumental challenges, especially for a fledgling nation in the midst of forming its first governments. The Patriot army encircling Boston in 1775 was little more than a rustic militia made up of volunteers who had enlisted for six months. The citizen-soldiers lacked training and discipline. They came and went as they pleased, did not salute officers, gambled frequently, and drank liquor freely. General George Washington recognized immediately that the foremost needs of the new army were capable officers, intensive training, strict discipline, and longer enlistment contracts. He soon began whipping his army into shape. Recruits who violated army rules were placed in the stockade, flogged, or sent packing. Yet the tenacity of Washington and the Revolutionaries bore fruit as war-weariness and political dissension in London hampered British efforts to suppress the rebel forces.

Like all major military events the Revolution had unexpected consequences affecting political, economic, and social life. It not only secured American independence, generated a new sense of nationalism, and created a unique system of self-governance; it also began a process of societal definition and change that has yet to run its course. The turmoil of revolution upset traditional class and social relationships and helped transform the lives of people who had long been relegated to the periphery of historical concern—African Americans, women, and Indians. In important ways, then, the Revolution was much more than simply a war for independence. It was an engine for political experimentation and social change.

1776: WASHINGTON'S NARROW ESCAPE

On July 2, 1776, the day that Congress voted for independence, British redcoats landed on undefended Staten Island, across New York Harbor from Manhattan. They were the vanguard of a gigantic effort to reconquer America and the first elements of an enormous force that gathered around New York Harbor over the next month. By mid-August, Major General William Howe, with the support of a fleet under his older brother, Admiral Richard, Lord Howe, had some 32,000 men at his disposal, the largest single force mustered by the British in the eighteenth century. George Washington transferred most of his troops to New York from Boston, but he could gather only about 19,000 poorly trained militiamen and members of the Continental army—much too small a force to defend New York, but Congress wanted it held. This meant Washington had to expose his men to entrapments from

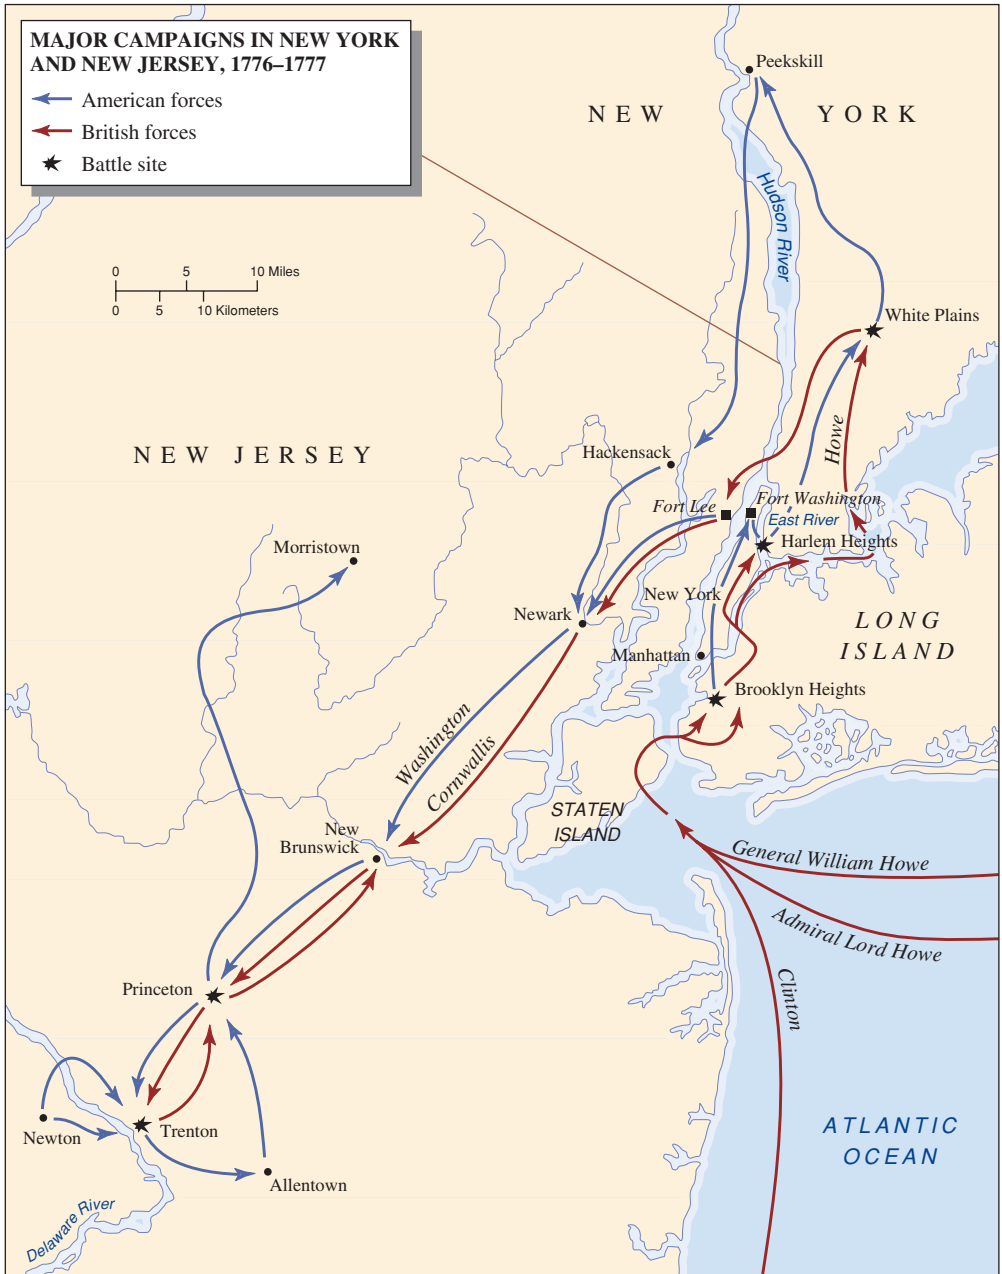

which they escaped more by luck and Howe's caution than by any strategic genius of the American commander. Although a veteran of frontier fighting, Washington had never commanded a unit larger than a regiment. In 1776 he was still learning the art of generalship, and the New York campaign afforded some expensive lessons.

FIGHTING IN NEW YORK AND NEW JERSEY By invading and occupying New York, the British hoped to sever New England from the rest of the rebellious colonies. They enjoyed complete naval superiority as well as overwhelming advantages in men and weaponry. In late August 1776 the massive British armada of 427 battleships and transports began landing troops on Long Island. Although short of munitions, greatly outnumbered, and leading a force in which one quarter of the men were affected by an epidemic of smallpox, Washington was determined to defend New York. It was a colossal mistake. The new American army suffered a humiliating defeat at the Battle of Long Island. British invaders caught Washington's forces by surprise. The American commander knew early on that his defenses could not hold. "Good God!" he exclaimed. "What brave fellows I must lose this day!" Only a timely rainstorm with strong winds, high tides, and fog enabled the retreating Americans to cross the harbor from Brooklyn to Manhattan under cover of darkness.

Had Howe moved quickly, he could have trapped Washington's army in lower Manhattan. The main American force, however, withdrew northward to the mainland of New York, crossed the Hudson River, and retreated slowly across New Jersey and over the Delaware River into Pennsylvania. As the ragged remnants of the American army fled across New Jersey, the British buglers giving chase mocked them by trumpeting fox-hunting calls.

At the end of August 1776, General Washington had more than 28,000 men under his command. By December he had only 3,000. The supreme commander was disconsolate; the American war effort was in desperate straits. Thousands of militiamen had simply gone home. Unless a new army could be raised quickly, Washington warned, "I think the game is pretty near up." But it wasn't. In the August retreat marched a British volunteer, Thomas Paine. Having opened an eventful year with his inspiring pamphlet *Common Sense*, Paine now composed *The American Crisis*, in which he penned this immortal line:

These are the times that try men's souls: The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country; but he that stands it NOW deserves the love and thanks of man and woman. Tyranny, like Hell, is not easily conquered. Yet we have this consolation with us, that the harder the conflict, the more glorious the triumph.

Why did Washington lead his army from Brooklyn Heights to Manhattan and from there to New Jersey? How could General Howe have ended the rebellion in New York? What is the significance of the battle at Trenton?

The pamphlet, ordered read in the American army camps, bolstered the shaken morale of the Patriots—as events would soon do more decisively.

General Howe, firmly—and luxuriously—based in New York (which the British held throughout the war), settled down with his mistress to wait out the winter. Washington, however, was not yet ready to hibernate. He knew that the morale of his men and the hopes of a new nation required “some stroke” of good news in the face of their devastating losses in New York. So he seized the initiative with a desperate gamble to achieve a victory before more of his soldiers returned home once their enlistment contracts expired. On Christmas night 1776 he led some 2,400 men across the icy

Delaware River. Near dawn at Trenton, New Jersey, the Americans surprised a garrison of 1,500 sleeping Hessians (German mercenaries). It was a total rout, from which only 500 Hessians escaped death or capture. Only six of Washington's men were wounded, one of whom was Lieutenant James Monroe, the future president. A week later, at nearby Princeton, the Americans repelled three regiments of British redcoats before taking refuge in winter quarters at Morristown, in the hills of northern New Jersey. The campaigns of 1776 had ended, after repeated defeats, with two minor victories that bolstered the Patriot cause. The unexpected victories at Princeton and Trenton may well have saved the cause of independence. Having learned of the American triumphs in New Jersey, a Virginia Tory glumly reported that a few days before, the Revolutionaries “had given up the cause for lost. Their late successes have turned the scale and now they are all liberty mad again.” General Howe had missed his great chance—indeed, several chances—to bring the rebellion to a speedy end. Grumbled one British officer, the Americans had “become a formidable enemy” even though they had yet to win a full-scale conventional battle.

In fact, George Washington had come to realize that the only way to defeat the British was to wear them down in a long war of attrition and exhaustion. As the combat in New York had shown, he could not best the British army in a conventional battle. The only hope of winning the war was not to lose it.

Time became his greatest weapon. Over the next eight years he and his troops would outlast the invaders.

AMERICAN SOCIETY AT WAR

CHOOSING SIDES The American Revolution was as much a civil war as it was a struggle against a foreign nation. The act of choosing sides divided families and friends, towns and cities. Benjamin Franklin's illegitimate son William, for example, was the royal governor of New Jersey. He sided with Great Britain during the Revolution, and his father later removed him from his will. The passions unleashed by the Revolution erupted in brutalities on both sides. Mobs of Patriots executed Tories (or Loyalists, as the British sympathizers were sometimes known), and state governments confiscated their homes and property. One Loyalist, John Stevens, testified that he "was dragged by a rope fixed about his neck" across the Susquehanna River because he refused to sign an oath supporting the rebellion. In Virginia the planter Charles Lynch set up vigilante courts to punish Tories by "lynching" them—which in this case meant having them whipped.

Opinion among the colonists concerning the war divided in three ways: Patriots, or Whigs (as the Revolutionaries called themselves); Tories; and an indifferent middle group swayed mostly by the better organized and more energetic radicals. That the Loyalists were numerous is evident from the departure, during and after the war, of roughly 100,000 of them, more than 3 percent of the total population. But the Patriots were probably the largest of the three groups. There was a like division in British opinion. The aversion of so many English to the war was one reason for the government's hiring German mercenaries to fight with the British army.

Estimating how many Americans remained loyal to Britain was a central concern of English military planners, for they based many of their decisions on such figures. Through most of the war, the British sought to align themselves with an elusive Tory majority that the Loyalists kept telling them was waiting only for British regulars to show the flag. Often they miscalculated. Generally Tories were concentrated in the seaport cities, but they came from all walks of life. Governors, judges, and other royal officials were almost all Loyalists; most Anglican ministers also preferred the mother country; colonial merchants might be tugged one way or the other, depending upon how much they had benefited or suffered from mercantilist regulation; the wealthy southern planters were swayed one way by dependence upon British bounties, another by their debts to British merchants. In the backcountry of New York and the Carolinas, many humble folk rallied to

the crown. Where planter aristocrats tended to be Whig, as in North Carolina, backcountry farmers (many of them recently Regulators) leaned to the Tories.

In few places, however, were there enough Tories to assume control without the presence of British troops, and nowhere for very long. Repeatedly the British forces were frustrated by both the failure of Loyalists to materialize in strength and the collapse of Loyalist militia units once regular detachments pulled out. Even more disheartening was what one British officer called “the licentiousness of the [Loyalist] troops, who committed every species of rapine and plunder,” and thereby converted potential friends to enemies. British and Hessian regulars, brought up in a hard school of warfare, tended to treat all civilians as hostile.

The inability of the British to use Loyalists effectively as pacification troops led them to abandon areas once they had conquered them. Because Patriot militias quickly returned whenever the British left an area, any Loyalists in the region faced a difficult choice: either accompany the British and leave behind their property or stay and face the wrath of the Patriots. In addition, the British policy of offering slaves their freedom in exchange for their loyalty and service alienated large numbers of neutral or even Tory planters.

The Patriot militia sprang to life whenever redcoats appeared nearby, and all adult white males, with few exceptions, were obligated under state law to serve when called. With time even the most apathetic would be pressed to a commitment, if only to turn out for drill. And sooner or later nearly every colonial county experienced military action that called for armed resistance. The war itself, then, whether through British and Loyalist behavior or the call of the militia, mobilized the apathetic to make at least an appearance of support for the American cause. Once made, this commitment was seldom reversed.

MILITIA AND ARMY American militiamen served two purposes: they constituted a home guard, defending their communities, and they helped augment the Continental army. Dressed in hunting shirts and armed with muskets, they preferred to ambush their opponents or engage them in hand-to-hand combat rather than fight in traditional formations. They also tended to kill unnecessarily and to torture prisoners. To repel an attack, the militia somehow materialized; the danger past, it evaporated, for there were chores to do at home. They “come in, you cannot tell how,” George Washington said in exasperation, “go, you cannot tell when, and act you cannot tell where, consume your provisions, exhaust your stores, and leave you at last at a critical moment.”

The Continental army, by contrast, was on the whole well trained. Unlike the professional soldiers in the British army, Washington’s troops were citizen-

This sketch of the militiamen by a French soldier at Yorktown shows “one of those ubiquitous American frontiersman-turned-soldiers” (second from right).

soldiers, mostly poor native-born Americans or immigrants who had been indentured servants or convicts. Many found camp life debilitating and combat horrifying. As General Nathanael Greene, Washington’s ablest commander, pointed out, few of the Patriots had ever engaged in mortal combat, and they were hard pressed to “stand the shocking scenes of war, to march over dead men, to hear without concern the groans of the wounded.” Desertions grew as the war dragged on. At times, General Washington could put only 2,000 to 3,000 men in the field. Regiments were organized state by state, and the states were supposed to keep them filled with volunteers or with conscripts if need be, but Washington could never be sure that his requisitions would be met.

PROBLEMS OF FINANCE AND SUPPLY Congress found it difficult to supply the army. None of the states provided more than a part of its share, and Congress reluctantly let army agents take supplies directly from farmers in return for certificates promising future payment. Many of the states found a ready source of revenue in the sale of abandoned Loyalist estates. Nevertheless, Congress and the states fell short of funding the war’s cost and resorted to printing paper money.

Congress did better at providing munitions than at providing other supplies. In 1777 it established a government arsenal at Springfield, Massachusetts, and during the war, states offered bounties for the manufacture of guns

and powder. Still, most munitions were supplied either by wartime captures or by importation from France, whose government was all too glad to help the rebels fight its archenemy.

During the harsh winter at Morristown (1776–1777), George Washington's army nearly disintegrated as enlistments expired and deserters fled the hardships of brutally cold weather, inadequate food, and widespread disease. Smallpox continued to wreak havoc among the American armies. "The small Pox! The small Pox!" John Adams wrote to his wife, Abigail. "What shall We do with it?" By 1777 George Washington had come to view the virus with greater dread than "the Sword of the Enemy." On any given day, one fourth of the American troops were deemed unfit for duty, usually because of smallpox. Some Americans suspected that the British were practicing biological warfare by sending infected civilians and clothing behind the American lines.

The threat of smallpox to the war effort was so great that in early 1777 Washington ordered a mass inoculation, which he managed to keep secret from the British. Inoculating an entire army was an enormous and risky undertaking. Each soldier had to be interviewed to determine whether he had ever had smallpox. Then those who believed they had never been infected were inoculated. The virus was implanted in an incision, usually on the arm or hand. For unknown reasons the resulting smallpox produced less severe symptoms than natural infections—fewer pustules, less scarring, and far fewer deaths. Inoculated soldiers had to be quarantined while the virus ran its course, but the infected soldiers were thereafter immune to the disease. Washington's daring gamble paid off. One of the 400 Connecticut soldiers who was inoculated in the summer of 1777 reported its success: "We lost none. I had the smallpox favorably as did the rest." The successful inoculation of the American army marks one of Washington's greatest strategic accomplishments of the war.

Only about 1,000 Continentals and a few militiamen stuck out the Morristown winter. With the spring thaw, however, recruits began arriving to claim the bounty of \$20 and 100 acres of land offered by Congress to those who would enlist for three years or for the duration of the conflict, if less. With some 9,000 regulars, Washington began sparring and feinting with Howe in northern New Jersey. Howe had been making other plans, however, and so had other British officers.

1777: SETBACKS FOR THE BRITISH

Divided counsels, overconfidence, poor communications, and indecision plagued British military planning in the campaigns of 1777. After the

What were the consequences of Burgoyne's strategy of dividing the colonies with two British forces? How did life in Washington's camp at Valley Forge transform the American army? Why was Saratoga a turning point in the American Revolution?

removal of General Gage during the siege of Boston, “Gentleman Johnny” Burgoyne took command of the northern British armies. He proposed to bisect the colonies. His men would advance southward from Canada to the Hudson River while another force moved eastward from Oswego, in western New York, down the Mohawk River valley. General Howe, meanwhile, would lead a third force up the Hudson from New York City. Howe in fact had proposed a similar plan, combined with an attack on New England. Had he stuck to it, he might have cut the colonies in two and delivered them a disheartening blow. But he changed his mind and decided to move against the Patriot capital, Philadelphia, expecting that the Pennsylvania Tories would rally to the crown and secure the colony.

Washington, sensing Howe’s purpose, withdrew most of his men from New Jersey to meet the new threat. At Brandywine Creek, south of Philadelphia, Howe outmaneuvered and routed Washington’s forces on September 11, and fifteen days later the British occupied Philadelphia. Washington counterattacked in a dense fog at Germantown on October 4, but British reinforcements from Philadelphia under General Charles Cornwallis arrived in time to repulse the Americans. Washington retired with his army to winter quarters at Valley Forge, Pennsylvania, while Howe and his men remained for the winter in the relative comfort of Philadelphia, twenty miles away. Howe’s plan had succeeded, up to a point. He had taken Philadelphia—or as Benjamin Franklin put it, Philadelphia had taken him. But the Tories there proved fewer than Howe had expected, and his decision to move on Philadelphia from the south, by way of Chesapeake Bay, put his forces even farther from Burgoyne’s army. Meanwhile, Burgoyne was stumbling into disaster in the north.

SARATOGA General Burgoyne moved south from Canada toward Lake Champlain in 1777 with about 7,000 men, his mistress, and a baggage train that included some thirty carts carrying his personal belongings and a large supply of champagne. Such heavily laden forces struggled to cross the wooded and marshy terrain. Burgoyne

General John Burgoyne

Commander of England’s northern forces. Burgoyne and most of his British troops surrendered to the Americans at Saratoga on October 17, 1777.

sent part of his forces down the St. Lawrence River with Lieutenant Colonel Barry St. Leger, and at Oswego they were joined by a force of Iroquois allies. The combined force headed east toward Albany.

The American army in the north had dwindled during the winter. When Burgoyne brought his cannon to bear on Fort Ticonderoga, the Continentals prudently abandoned the fort, with a substantial loss of gunpowder and supplies. An angry Congress thereupon fired the American commander and replaced him with Horatio Gates, a favorite of the New Englanders. Fortunately for the American forces, Burgoyne delayed at Ticonderoga, enabling American reinforcements to arrive from the south and New England.

The more mobile Patriots inflicted two serious reversals on the British forces. At Oriskany, New York, on August 6, 1777, a band of militiamen repulsed an ambush by Tories and Indians under St. Leger and gained time for General Benedict Arnold to bring 1,000 Continentals to the relief of Fort Stanwix. Convinced they faced an even greater force than they actually did, the Indians deserted, and the Mohawk Valley was secured for the Patriot forces. To the east, at Bennington, Vermont, on August 16, New England militiamen, led by Colonel John Stark, decimated a British foraging party. Stark had pledged that morning, "We'll beat them before night, or Molly Stark will be a widow." As American reinforcements continued to gather and after two other defeats by the Americans, Burgoyne pulled back to Saratoga, where General Horatio Gates's forces surrounded him.

On October 17, 1777, Burgoyne, resplendent in his scarlet, gold, and white uniform, surrendered to the plain, blue-coated Gates, and most of his 5,700 soldiers were imprisoned in Virginia. Gates allowed Burgoyne himself to go home, where he received an icy reception. Gates was ecstatic. He wrote his wife, "If old England is not by this lesson taught humility, then she is an obstinate old slut, bent upon her ruin."

ALLIANCE WITH FRANCE In early December 1777 news of the surprising American triumph at Saratoga reached Paris, where it was celebrated almost as if it were a French victory. In 1776 the French had taken their first step toward aiding the colonists, sending fourteen ships with crucial military supplies to America; most of the Continental army's gunpowder in the first years of the war came from that source. The Spanish government added a donation and soon established its own supply company.

Word of the American victory at Saratoga led in early 1778 to the signing of two treaties: the Treaty of Amity and Commerce, in which France recognized the new United States and offered trade concessions, including important privileges to American shipping, and the Treaty of Alliance. Under the

latter both parties agreed, first, that if France entered the war, both countries would fight until American independence was won; second, that neither would conclude a “truce or peace” without “the formal consent of the other first obtained”; and third, that each guaranteed the other’s possessions in America “from the present time and forever against all other powers.” France further bound itself to seek neither Canada nor other British possessions on the mainland of North America.

By June 1778 British vessels had fired on French ships, and the two nations were at war. In 1779, after extracting French promises to help it regain territories taken by the British in previous wars, Spain entered the war as an ally of France but not of the United States. In 1780 Britain declared war on the Dutch, who persisted in a profitable trade with the French and the Americans. The rebellious farmers at Lexington and Concord had indeed fired a shot “heard round the world.” Like Washington’s encounter with the French in 1754, it was the start of another world war, and the fighting now spread to the Mediterranean, Africa, India, the West Indies, and the high seas.

1778: BOTH SIDES REGROUP

After the British defeat at Saratoga, Lord North knew that the war was unwinnable, but the king refused to let him either resign or make peace. On March 16, 1778, the House of Commons in effect granted all the American demands prior to independence. Parliament repealed the Townshend tea duty, the Massachusetts Government Act, and the Prohibitory Act, which had closed the colonies to commerce, and sent peace commissioners to Philadelphia to negotiate an end to hostilities. But Congress refused to begin any negotiations until Britain recognized American independence or withdrew its forces.

Unbeknownst to the British peace commissioners, the crown had already authorized the evacuation of British troops from Philadelphia, a withdrawal that further weakened what little bargaining power they had. After Saratoga, General Howe had resigned his command, and Sir Henry Clinton had replaced him, with orders to pull out of Philadelphia and, if necessary, New York but to keep Newport, Rhode Island. He was to supply troops for an expedition in the South, where the government believed a latent Tory sentiment in the backcountry needed only a British presence for its release. The ministry was right, up to a point, but the Loyalist sentiment turned out once again, as in other theaters of war, to be weaker than it had seemed.

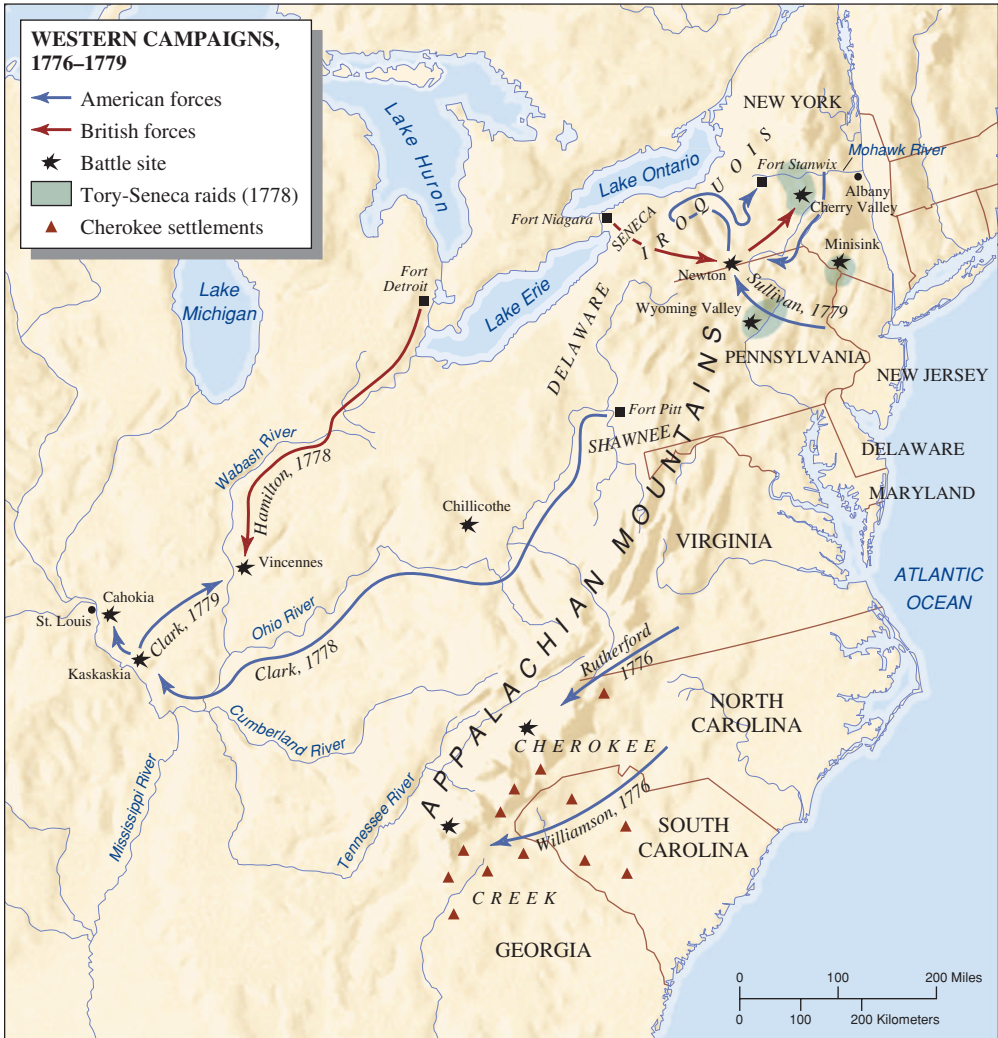

For Washington’s army at Valley Forge, the winter of 1777–1778 was a season of intense suffering. The American force, encamped near Philadelphia,

endured unrelenting cold, hunger, and disease. Some troops lacked shoes and blankets. Their makeshift log-and-mud huts offered little protection from the howling winds and bitter cold. Most of the army's horses died of exposure or starvation. By February 7,000 troops were too ill for duty. More than 2,500 soldiers died at Valley Forge; another 1,000 deserted. Fifty officers resigned on one December day. Several hundred more left before winter's end.

Desperate for relief, Washington sent troops on foraging expeditions into New Jersey, Delaware, and the Eastern Shore of Maryland, confiscating horses, cattle, and hogs in exchange for "receipts" to be honored by the Continental Congress. By March 1778 the once-gaunt troops at Valley Forge saw their strength restored. Their improved health enabled Washington to begin a rigorous training program designed to bring unity to his motley array of forces. Because few of the regimental commanders had any formal military training, their troops lacked leadership, discipline, and skill. To remedy this defect, Washington turned to an energetic Prussian soldier of fortune, Friedrich Wilhelm, baron von Steuben. Steuben used an interpreter and frequent profanity to instruct the troops, teaching them the fundamentals of close-order drill: how to march in formation and how to handle their weapons. By the end of the winter, the ragtag soldiers were beginning to resemble a professional army. The army's morale stiffened when Congress promised extra pay and bonuses after the war. The good news from France about the formal military alliance helped as well.

As General Clinton's British forces withdrew eastward toward New York, Washington pursued them across New Jersey. On June 28 he engaged the British in an indecisive battle at Monmouth Court House. But the battle was significant for revealing Washington's temper and leadership qualities. In the midst of the fighting, he discovered that his potbellied subordinate, General Charles Lee, was retreating rather than attacking. Infuriated, Washington swore at Lee "till the leaves shook the trees." Then Washington rallied the troops just in time to stave off defeat. Clinton slipped away to New York while Washington took up a position at White Plains, north of the city. From that time on, the northern theater, scene of the major campaigns and battles in the first years of the war, settled into a long stalemate, interrupted by minor and mostly inconclusive engagements.

ACTIONS ON THE FRONTIER The one major American success of 1778 occurred far from the New Jersey battlefields. Out to the west the British, under Colonel William Hamilton at Forts Niagara and Detroit, had incited frontier Tories and Indians to raid western settlements and offered to pay bounties for American scalps. To end the attacks, young George Rogers Clark took 175 frontiersmen on flatboats down the Ohio River early in 1778, marched

How did George Rogers Clark secure Cahokia and Vincennes? Why did the American army destroy Iroquois villages in 1779? Why were the skirmishes between settlers and Indian tribes significant for the future of the trans-Appalachian frontier?

through the woods, and on the evening of July 4 took Kaskaskia (in present-day Illinois) by surprise. The French inhabitants, terrified at first, “fell into transports of joy” at news of the French alliance with the Americans. Then, without bloodshed, Clark took Cahokia (opposite St. Louis) and Vincennes (in present-day Indiana). After the British retook Vincennes, Clark marched

**Thayendanegea (Joseph Brant)**

This 1786 portrait by Gilbert Stuart features the Mohawk leader who fought against the Americans in the Revolution.

his men (almost half of them French volunteers) through icy rivers and flooded prairies, sometimes in water neck deep, and laid siege to the astonished British garrison. Clark, the hardened woodsman, tomahawked Indian captives in sight of the fort to show that the British afforded them no protection. He spared the British captives when they surrendered, however.

While Clark's captives traveled eastward, a much larger American expedition moved through western Pennsylvania to attack Iroquois strongholds in western New York. There the Tories and Indians had terrorized frontier settlements throughout the summer of 1778. Led by the charismatic Mohawk Joseph Brant, the Iroquois had killed hundreds of militiamen along the

Pennsylvania frontier. In response, Washington dispatched an expedition of 4,000 men under General John Sullivan. At Newton (near Elmira), New York, on August 29, 1779, Sullivan defeated the only serious opposition and proceeded to carry out Washington's instruction that the Iroquois country be not "merely overrun but destroyed." The American force burned about forty Seneca and Cayuga villages, together with their orchards and food supplies, leaving many of the Indians homeless and without enough provisions to survive. The action broke the power of the Iroquois federation for all time, but it did not completely pacify the frontier. Sporadic encounters with various tribes continued to the end of the war.

In the Kentucky territory, Daniel Boone and his small band of settlers risked constant attack from the Shawnees and their British and Tory allies. During the Revolution they survived frequent ambushes, at least seven skirmishes, and three pitched battles. In 1778 Boone and some thirty men, aided by their wives and children, held off an assault by more than 400 Indians at Boonesborough (now Boonesboro). Thereafter, Boone himself was twice shot and twice captured. Indians killed two of his sons, a brother, and two brothers-in-law. His daughter was captured, and another brother was wounded four times. Despite such ferocious fighting and dangerous circumstances, the white settlers refused to leave Kentucky.

In early 1776 a delegation of northern Indians—Shawnees, Delawares, and Mohawks—had talked the Cherokees into striking at frontier settlements in Virginia and the Carolinas. Swift retaliation had followed as Carolina forces burned Cherokee towns and destroyed corn. By weakening the major Indian tribes along the frontier, the American Revolution cleared the way for rapid settlement of the trans-Appalachian West after the war.

THE WAR IN THE SOUTH

At the end of 1778, the focus of the British military efforts shifted suddenly to the South. The whole region from Virginia southward had been free from major action since 1776. Now the British would test King George's belief that a sleeping Tory power in the South needed only the presence of a few redcoats to be awakened. General Clinton decided to take Savannah, on the Georgia coast, and roll northeast, gathering momentum from the Loyalist countryside. For a while the idea seemed to work, but it ran afoul of two developments: first, the Loyalist strength was less than estimated, and second, the British forces behaved so harshly that they drove even Loyalists into rebellion.

SAVANNAH AND CHARLESTON In November 1778 a British force attacked Savannah. The invaders quickly overwhelmed the Patriots, took the town, and hurried toward Charleston, plundering plantation houses along the way. The seesaw campaign took a major turn when General Clinton, accompanied by General Charles Cornwallis, brought new naval and land forces southward to join a massive amphibious attack that bottled up an American force led by General Benjamin Lincoln on the Charleston peninsula. On May 12, 1780, Lincoln surrendered the city and its 5,500 defenders, the greatest single American loss of the war. At that point, Congress, against Washington's advice, turned to the victor of Saratoga, Horatio Gates, to take command and sent him south. General Cornwallis, in charge of the British troops in the South, subdued the Carolina interior and surprised Gates's force at Camden, South Carolina, routing his new army, which retreated all the way to Hillsborough, North Carolina, 160 miles away.

THE CAROLINAS From the point of view of British imperial goals, the southern colonies were ultimately more important than the northern ones because they produced valuable staple crops such as tobacco, indigo, and naval stores (tar, pitch, and turpentine). Eventually the war in the Carolinas

not only involved opposing British and American armies but also degenerated into brutal guerrilla-style civil conflicts between local Loyalists and local Patriots.

Cornwallis had South Carolina just about under control, but two subordinates, Sir Banastre Tarleton and Patrick Ferguson, who mobilized Tory militiamen, overreached themselves in their effort to subdue the Whigs. "Tarleton's quarter" became an epithet for savagery because "Bloody Tarleton" gave little quarter to vanquished foes. Ferguson sealed his own doom when he threatened to march over the mountains and hang the backcountry leaders. Instead, the feisty "overmountain men" went after Ferguson. They caught him and his Tories on Kings Mountain, just inside South Carolina. There, on October 7, 1780, they routed his force. By then feelings were so strong that American militiamen continued firing on Tories trying to surrender and later indiscriminately slaughtered Tory prisoners. Kings Mountain was the turning point of the war in the South. By proving that the British were not invincible, it emboldened small farmers to join guerrilla bands under such partisan leaders as Francis Marion, "the Swamp Fox," and Thomas Sumter, "the Carolina Gamecock."

While the overmountain men were closing in on Ferguson, Congress chose a new commander for the southern theater, General Nathanael Greene, "the fighting Quaker" of Rhode Island. A man of infinite patience, skilled at managing men and saving supplies, careful to avoid needless risks, he was suited to a war of attrition against the British forces. From Charlotte, North Carolina, where he arrived in December 1780, Greene moved his army eastward and sent General Daniel Morgan with about 700 men on a sweep to the west of Cornwallis's headquarters at Winnsboro, South Carolina.

Taking a position near Cowpens, a cow-grazing area in northern South Carolina, Morgan's force engaged Tarleton's army on January 17, 1781. Once the battle was joined, Tarleton mistook a readjustment in the American line for a militia panic and rushed his men forward, only to be ambushed by Morgan's cavalry. Tarleton escaped, but more than 100 of his men were killed and more than 700 were taken prisoner.

Morgan then fell back into North Carolina and linked up with General Greene's main force at Guilford Courthouse (near what became Greensboro). Greene lured Cornwallis's army north, stretching the British supply lines to the breaking point. The Americans attacked the redcoats at Guilford Courthouse on March 15, 1781, inflicted heavy losses, and then withdrew. Cornwallis marched off toward Wilmington, on the North Carolina coast, to lick his wounds and take on supplies. Greene then resolved to go back into

Why did the British suddenly shift their campaign to the south? Why were the battles at Savannah and Charleston major victories for the British? How did Nathaniel Greene undermine British control of the Deep South? Why did Cornwallis march to Virginia and camp at Yorktown? How was the French navy crucial to the American victory? Why was Cornwallis forced to surrender?

South Carolina in the hope of drawing Cornwallis after him or forcing the British to give up the state. There he joined forces with the local guerrillas and in a series of brilliant actions kept losing battles while winning the war. “We fight, get beat, rise, and fight again,” he said. By September 1781 he had narrowed British control in the Deep South to Charleston and Savannah, although for more than a year longer Whigs and Tories slashed at each other “with savage fury” in the backcountry, where there was “nothing but murder and devastation in every quarter,” Greene said.

Meanwhile, Cornwallis had headed north, away from Greene, reasoning that Virginia must be eliminated as a source of reinforcement before the Carolinas could be subdued. In May 1781 the British force marched north into Virginia. There, since December 1780, Benedict Arnold, now a *British* general, had been engaged in a war of maneuver against the American forces. Arnold, until September 1780, had been the American commander at West Point, New York. Overweening in ambition, lacking in moral scruples, and a reckless spender on his fashionable wife, Arnold had nursed a grudge against Washington over an official reprimand for his extravagances as commander of reoccupied Philadelphia. Traitors have a price, and Arnold had found his: he had crassly plotted to sell out the American garrison at West Point to the British, and he even suggested how they might seize George Washington himself. Only the fortuitous capture of the British go-between, Major John André, had ended Arnold’s plot. Forewarned that his plan had been discovered, Arnold had joined the British in New York while André was hanged by the Americans as a spy.

YORKTOWN When Cornwallis linked up with Arnold at Petersburg, Virginia, their combined British forces totaled 7,200 men, far more than the small American army in the South. The arrival of American reinforcements led Cornwallis to pick Yorktown, Virginia, on Chesapeake Bay, as a defensible site. There appeared to be little reason to worry about a siege, since Washington’s main land force seemed preoccupied with attacking New York, and the British navy controlled American waters.

To be sure, there was a small American navy, but it was no match for the British fleet. Yet American privateers distracted and wounded the British fleet. Most celebrated were the exploits of Captain John Paul Jones. Off England’s coast on September 23, 1779, Jones and his crew won a desperate battle with a British frigate, which the Americans captured and occupied before their own ship sank. This was the occasion for Jones’s stirring and oft-repeated response to a British demand for surrender: “I have not yet begun to fight.”

Still, such heroics were little more than nuisances to the British. But at a critical point, thanks to the French navy, the British lost control of Chesapeake Bay. Indeed, it is impossible to imagine an American victory in the Revolution without the assistance of the French. As long as the British navy maintained supremacy at sea, the Americans could not hope to force a settlement to their advantage. For three years, Washington had waited to get some strategic military benefit from the French alliance. In July 1780 the French had finally landed a force of about 6,000 at Newport, Rhode Island, which the British had given up to concentrate on the South, but the French force had sat there for a year, blockaded by the British fleet.

Then, in 1781, the elements for a combined action suddenly fell into place. In May, as Cornwallis moved into Virginia, George Washington persuaded the commander of the French army to join forces for an attack on New York. The two armies linked up in July, but before they could strike at New York, word came from the West Indies that Admiral de Grasse was bound for the Chesapeake with his entire French fleet and some 3,000 soldiers. Washington immediately began moving his army south toward Yorktown. Meanwhile, French ships slipped out of the British blockade at Newport and also headed toward Chesapeake Bay.

On August 30 de Grasse's fleet reached Yorktown, and the admiral landed his French troops to join the American force already watching Cornwallis. On September 6, the day after a British fleet appeared, de Grasse gave battle and forced the British to give up the effort to relieve Cornwallis, whose fate was quickly sealed. De Grasse then sent ships up the Chesapeake to ferry down the allied armies, bringing the total American and French forces to more than 16,000, or better than double the size of Cornwallis's army.

The siege of Yorktown began on September 28. On October 14 two major redoubts guarding the left of the British line fell to French and American attackers, the latter led by Washington's aide, Alexander Hamilton. A British counterattack failed to retake them. Later that day a squall forced Cornwallis to abandon a desperate plan to escape across the York River. On October 17, 1781, four years to the day after Saratoga, Cornwallis sued for peace, and on October 19, their colors cased (that is, their flag lowered, a sign of surrender), the British force of more than 7,000 marched out as its band played somber tunes along with the English nursery rhyme "The World Turned Upside Down." Cornwallis himself claimed to be too "ill" to appear. His dispatch to his superior was telling: "I have the mortification to inform your Excellency that I have been forced to . . . surrender the troops under my command."

Surrender of Lord Cornwallis

By John Trumbull. The artist completed his painting of the pivotal British surrender at Yorktown in 1794.

NEGOTIATIONS

Whatever lingering hopes of victory the British may have harbored vanished at Yorktown. “Oh God, it’s all over,” Lord North groaned at news of the surrender. On February 27, 1782, the House of Commons voted against continuing the war and on March 20 Lord North resigned. The Continental Congress named a five-man commission to negotiate a peace treaty. Only three of its members were active, however: John Adams, who was on state business in the Netherlands; John Jay, minister to Spain; and Benjamin Franklin, already in Paris. Franklin and Jay did most of the work.

The French commitment to Spain complicated matters. Spain and the United States were allied with France but not with each other. America was bound by its alliance to fight on until the French made peace, and the French were bound to help the Spanish recover Gibraltar from England. Unable to deliver Gibraltar, or so the tough-minded Jay reasoned, the French might try to bargain off American land west of the Appalachians in its place. Fearful that the French were angling for a separate peace with the British, Jay persuaded Franklin to play the same game. Ignoring their instructions to consult fully

with the French, they agreed to further talks with the British. On November 30, 1782, the talks produced a preliminary treaty with Great Britain. If it violated the spirit of the alliance with France, it did not violate the strict letter of the treaty, for the French minister was notified the day before it was signed, and final agreement still depended on a Franco-British settlement.

American Commissioners of the Preliminary Peace Negotiations with Great Britain

An unfinished painting from 1782 by Benjamin West. From left, John Jay, John Adams, Benjamin Franklin, Henry Laurens, and Franklin's grandson William Temple Franklin.

THE TREATY OF PARIS Early in 1783 France and Spain gave up on Gibraltar and reached an armistice with Britain. The final signing of the Treaty of Paris came on September 3, 1783. In accord with the bargain already struck, Great Britain recognized the independence of the United

States and agreed to a Mississippi River boundary to the west. Both the northern and the southern borders left ambiguities that would require further definition. Florida, as it turned out, passed back to Spain. The British further granted the Americans the “liberty” of fishing off Newfoundland and in the Gulf of St. Lawrence and the right to dry their catch on the unsettled Atlantic coast of Canada. On the matter of prewar debts, the best the British could get was a promise that their merchants should “meet with no legal impediment” in seeking to collect money owed them by Americans. And on the tender point of Loyalists whose estates had been confiscated, the negotiators agreed that Congress would “earnestly recommend” to the states the restoration of confiscated property. Each of the last two points was little more than a face-saving gesture to the British.

THE POLITICAL REVOLUTION

REPUBLICAN IDEOLOGY The Americans had won their War of Independence. Had they undergone a political revolution as well? Years later

How did France's treaties with Spain complicate the peace-treaty negotiations with the British? What were the terms of the Treaty of Paris? Why might the ambiguities in the treaty have led to conflicts among the Americans, the Spanish, and the English?

John Adams offered an answer: "The Revolution was effected before the war commenced. The Revolution was in the minds and hearts of the people. . . . This radical change in the principles, opinions, sentiments, and affections of the people, was the real American Revolution." Yet Adams's observation ignores the fact that the Revolutionary War itself served as the catalyst for a prolonged internal debate about what new forms of government would best

serve an independent republic. The conventional British model of mixed government sought to balance monarchy, aristocracy, and the common people and thereby protect individual liberty. Because of the more democratic nature of their society, however, Americans knew that they must devise new political assumptions and institutions. They had no monarchy or aristocracy. Yet how could sovereignty reside in the common people? How could Americans ensure the survival of a republican form of government, long assumed to be the most fragile? The war thus provoked a spate of state constitution making that remains unique in history.

A struggle for the rights of English citizens in the colonies became a fight for independence in which those rights found expression in governments that were new yet deeply rooted in the colonial experience and the prevailing viewpoints of Whiggery and the Enlightenment. With the Loyalists displaced or dispersed, such ideas as the contract theory of government, the sovereignty of the people, the separation of powers, and natural rights found their way into the new state government constitutions that were devised while the fight went on—amid other urgent business.

The very idea of republican government was a radical departure in that day. A republic, it was presumed, would endure only as long as the majority of the people were virtuous and willingly placed the good of society above the self-interest of individuals. Herein lay the hope and the danger of the new American experiment in popular government: even as leaders enthusiastically fashioned new state constitutions, they feared that their experiments in republicanism would fail because of a lack of civic virtue among the people.

STATE CONSTITUTIONS Most of the political experimentation between 1776 and 1787 occurred at the state level in the form of written constitutions in which the people were sovereign and delegated limited authority to the government. In addition, the states initiated bills of rights guaranteeing particular individual freedoms and fashioned procedures for constitutional conventions that have also remained an essential part of the American political system. In sum, the innovations at the state level during the Revolution created a reservoir of ideas and experience that formed the basis for the creation of the federal constitution in 1787.

The first state constitutions varied mainly in detail. They formed governments much like the colonial governments, but with elected governors and senates instead of appointed governors and councils. Generally they embodied a separation of powers (legislative, executive, and judicial) as a safeguard against abuses. Most of them also included a bill of rights that protected the

time-honored rights of petition, freedom of speech, trial by jury, freedom from self-incrimination, and the like. Most tended to limit the powers of governors and increase the powers of the legislatures, which had led the people in their quarrels with the colonial governors.

THE ARTICLES OF CONFEDERATION The central American government, the Continental Congress, exercised government powers without any constitutional sanction before March 1781. Plans for a permanent frame of government emerged very early, however. Richard Henry Lee's motion for independence included a call for a plan of confederation. As early as July 1776, a committee headed by John Dickinson had produced a draft constitution, the Articles of Confederation and Perpetual Union. For more than a year, Congress had debated the articles in between more urgent matters and had finally adopted them in November 1777. All states ratified them promptly except Maryland, which insisted that the seven states claiming western lands should cede them to the authority of Congress. Maryland did not relent until early 1781, when Virginia gave up its claims, under the old colonial charter, to the vast region north of the Ohio River. New York had already relinquished a dubious claim based upon its "jurisdiction" over the Iroquois, and the other states eventually abandoned their charter claims as well.

When the Articles of Confederation became effective, in March 1781, they did little more than legalize the status quo. "The United States of America in Congress Assembled" had a multitude of responsibilities but little authority to carry them out. Congress was intended not as a legislature, nor as a sovereign entity unto itself, but as a collective substitute for the monarch. In essence it was to be a plural executive rather than a parliamentary body. It had full power over foreign affairs and questions of war and peace; it could decide disputes between the states; it had authority over coinage, the postal service, and Indian affairs and responsibility for the government of the western territories. But it had no courts and no power to enforce its resolutions and ordinances at either the state or individual level. It also had no power to levy taxes and had to rely on requisitions, which state legislatures could ignore.

The states, after their battles with Parliament, were in no mood for a strong central government. Congress in fact had less power than the colonists had once accepted in Parliament, since it could not regulate interstate and foreign commerce. For certain important acts, moreover, a "special majority" was required. Nine states had to approve measures dealing with war, treaties, coinage, finances, and the army and navy. Unanimous approval of the

states was needed to levy tariffs (often called duties) on imports. Amendments to the Articles also required unanimous ratification by all the states. The Confederation had neither an executive nor a judicial branch; there was no administrative head of government (only the president of Congress, chosen annually) and no federal courts.

For all its weaknesses, however, the Confederation government represented the most pragmatic structure for the new nation. After all, the Revolution on the battlefields had yet to be won, and America's statesmen could not risk the prolonged and divisive debates over the distribution of power that other forms of government would have provoked.

THE SOCIAL REVOLUTION

Political revolutions and the chaos of war often spawn social revolutions. The turmoil of the American Revolution allowed long-pent-up frustrations among the lower ranks to find expression. What did the Revolution mean to those workers, servants, farmers, and freed slaves who participated in the Stamp Act demonstrations, supported the boycotts, idolized Tom Paine, and fought with Washington and Greene? Many laboring folk hoped that the Revolution would remove, not reinforce, the elite's traditional political and social advantages. The more conservative Patriots would have been content to replace royal officials with the rich, the well born, and the able and let it go at that. But more radical revolutionaries raised the question not only of home rule but also of who should rule at home.

EQUALITY AND ITS LIMITS This spirit of equality found outlet in several directions, one of which was simply a weakening of old habits of deference. A Virginia gentleman remembered being in a tavern when a group of farmers came in, spitting and pulling off their muddy boots without regard for the sensibilities of the gentlemen present: "The spirit of independence was converted into equality," he wrote, "and every one who bore arms, esteems himself upon a footing with his neighbors. . . . No doubt each of these men considers himself, in every respect, my equal." No doubt each did.

Participation in the army or militia excited men who had taken little interest in politics before. The new political opportunities afforded by the creation of state governments led more ordinary citizens to participate than ever before. The social base of the new legislatures was thus much broader than that of the old assemblies. Men fighting for their liberty found it difficult to justify denying other white men the rights of suffrage and representation.

Social Democracy

In this watercolor by Benjamin Latrobe, a gentleman plays billiards with artisans, suggesting that “the spirit of independence was converted into equality.”

The property qualifications for voting, which already admitted an overwhelming majority of white men, were lowered still further. In Pennsylvania, Delaware, North Carolina, and Georgia, any male taxpayer could vote, although officeholders usually had to meet more stringent property requirements. Men who had argued against taxation without representation now questioned the denial of proportional representation for the backcountry, which generally enlarged its presence in the legislatures. More often than not, the political newcomers were men with less property and little formal education. All states concentrated power in a legislature chosen by a wide suffrage, but not even Pennsylvania, which adopted the most radical of the state constitutions, went quite so far as to grant universal male suffrage.

New developments in land tenure that grew out of the Revolution extended the democratic trends of suffrage requirements. All state legislatures seized Tory estates. These properties were of small consequence, however, in contrast to the unsettled areas formerly at the disposal of the crown and proprietors but now in the hands of popular assemblies. Much of that land was now used for bonuses to veterans of the war. Moreover, western lands, formerly closed by the Royal Proclamation of 1763 and the Quebec Act of 1774, were soon thrown open to settlers.

THE PARADOX OF SLAVERY The Revolutionary generation of leaders was the first to confront slavery and consider abolishing it. The principles of liberty and equality invoked in debates over British policies had clear

implications for enslaved blacks. Before the Revolution only Rhode Island, Connecticut, and Pennsylvania had halted the importation of slaves. After independence all the states except Georgia stopped the traffic, although South Carolina later reopened it.

African-American soldiers or sailors were present at most major battles from Lexington to Yorktown, most on the Loyalist side. When the Revolution began, the British had promised freedom to slaves, as well as to indentured servants, who would bear arms for the Loyalist cause. In December 1775 Lord Dunmore, the royal governor of Virginia, issued such an offer and within a month had attracted 300 former servants and slaves to the British army. Within a year the number had grown to almost 1,000. One of the deserters was a white servant of George Washington. The overseer of Mount Vernon reported to General Washington that the rest of his slaves and servants would also leave if they got the chance. "Liberty is sweet," he explained. Dunmore's effort to recruit slaves and servants infuriated Washington and other Virginia planters. Washington predicted that if Dunmore were "not crushed" soon, the number of slaves joining him would "increase as a Snow ball by Rolling."

In December 1775 a Patriot militia defeated Lord Dunmore and the Ethiopian Regiment and forced the British units to flee Norfolk, Virginia, and board ships in the Chesapeake Bay. No sooner had the former slaves crowded onto the British ships than they contracted smallpox. The epidemic raced through the fleet, eventually forcing the Loyalist forces to disembark on an offshore island. During the winter and spring of 1776, disease devastated the primitive camp. "Dozens died daily from Small Pox and rotten Fevers by which diseases they are infected," wrote a visitor. Before the Loyalists fled the island in the summer of 1776, over half of the troops, most of them former slaves, had died.

In response to the British recruitment of American slaves, General Washington, at the end of 1775, reversed the policy of excluding blacks from the American forces—except the few already in militia companies—and Congress quickly approved the new policy. Only two states, South Carolina and Georgia, refused to allow blacks to serve in the military. No more than about 5,000 African Americans were admitted to the total American forces of about 300,000, and most were free blacks from northern states. They served mainly in white units, although Massachusetts did organize two all-black companies, and Rhode Island organized one.

Slaves who served in the cause of independence won their freedom and, in some cases, land bounties. But the British army, which liberated tens of thousands of slaves during the war, was a greater instrument of emancipation than

Elizabeth Freeman

Also known as Mum Bett, Freeman was born around 1742 and sold as a slave to a Massachusetts family. She won her freedom by claiming in court that the Bill of Rights and the new state constitution gave liberty to all, and her case contributed to the eventual abolition of slavery in Massachusetts. One of Freeman's great-grandchildren was scholar and civil rights leader W.E.B. Du Bois.

Rhode Island provided freedom to all children of slaves born thereafter, at age twenty-one for males, eighteen for females. New York lagged until 1799 in granting freedom to mature slaves born after enactment of its constitution, but an act of 1817 set July 4, 1827, as the date for emancipation of all remaining slaves.

In the states south of Pennsylvania, emancipation was less popular. Yet even there, slaveholders expressed moral qualms. Thomas Jefferson wrote in his *Notes on the State of Virginia* (1785): "Indeed I tremble for my country when I reflect that God is just; that his justice cannot sleep forever." But he, like many other white southerners, could not bring himself to free his slaves. In the southern states anti-slavery sentiment went no further than a relaxation of the manumission laws, under which owners might free their slaves through individual acts. Some 10,000 enslaved Virginians were manumitted during the 1780s. A much smaller number would be shipped back to Africa

the American forces. Most of the newly freed blacks found their way to Canada or to British colonies in the Caribbean. American Whigs showed no mercy to blacks caught aiding or abetting the British cause. A Charleston mob hanged and then burned Thomas Jeremiah, a free black who was convicted of telling slaves that the British "were come to help the poor Negroes." White Loyalists who were caught encouraging slave militancy were tarred and feathered.

In the northern states, which had fewer slaves than the southern states, the doctrines of liberty led swiftly to emancipation for all, either during the fighting or shortly afterward. The Vermont Constitution of 1777 specifically forbade slavery. The Massachusetts Constitution of 1780 proclaimed the "inherent liberty" of all. In 1780 Pennsylvania declared that all children born thereafter to slave mothers would become free at age twenty-eight, after enabling their owners to recover their initial cost. In 1784

during the early nineteenth century. By the outbreak of the Civil War, in 1861, approximately half the blacks living in Maryland were free.

Manumission freed slaves by the action of a white owner. But slaves, especially in the upper South, also earned freedom through their own actions during the Revolutionary era, frequently by running away. They often gravitated to the growing number of African-American communities in the North. Because of emancipation laws in the northern states, and with the formation of free black neighborhoods in the North and in several southern cities, runaways found refuge and the opportunities for new lives. It is estimated that 55,000 slaves fled to freedom during the Revolution.

THE STATUS OF WOMEN The logic of liberty spawned by the Revolution applied to the status of women as much as to that of African Americans. Women in the colonies had remained essentially confined to the domestic sphere during the eighteenth century. They could not vote or preach or hold office. Few had access to formal education. Although women could usually own property and execute contracts, in several colonies married women could not legally own property—even their own clothes—and they had no legal rights over their children. Divorces were extremely difficult to obtain.

Yet the Revolution offered women new opportunities and engendered in many a new outlook. The war drew women at least temporarily into new pursuits. Women supported the armies in various roles—by handling supplies, serving as couriers, and working as camp followers—cooking, cleaning, and nursing the soldiers. Wives often followed their husbands to camp and on occasion took their place in the line, as Margaret Corbin did at Fort Mifflin when her husband fell at his artillery post and as Mary Ludwig Hays (better known as Molly Pitcher) did when her husband collapsed of heat exhaustion. An exceptional case was Deborah Sampson, who joined a Massachusetts regiment as Robert Shurtleff and served from 1781 to 1783 by the “artful concealment” of her sex.

To be sure, most women retained the domestic outlook that had long been imposed on them by society. But a few free-spirited reformers demanded equal treatment. In an essay titled “On the Equality of the Sexes,” written in 1779 and published in 1790, Judith Sargent Murray of Gloucester, Massachusetts, stressed that women were perfectly capable of excelling outside the domestic sphere.

Early in the Revolutionary struggle, Abigail Adams, one of the most learned, spirited, and independent women of the time, wrote to her husband, John: “In the new Code of Laws which I suppose it will be necessary

Frontispiece from *Lady's Magazine* (1792)

"The Genius of the Ladies Magazine, accompanied by the Genius of Emulation, who carries in her hand a laurel crown, approaches Liberty, and kneeling, presents her with a copy of *The Rights of Woman*." The *Lady's Magazine* reprinted extensive extracts from Mary Wollstonecraft's *A Vindication of the Rights of Woman* (1792).

women in most states still forfeited control of their own property to their husbands, and women gained no permanent political rights. Under the 1776 New Jersey Constitution, which neglected to specify an exclusively male franchise because the delegates apparently took the distinction for granted, women who met the property qualifications for voting exercised the right until they were denied access early in the nineteenth century.

for you to make I desire you would remember the Ladies. . . . Do not put such unlimited power into the hands of the Husbands." Since men were "Naturally Tyrannical," she wrote, "why then, not put it out of the power of the vicious and the Lawless to use us with cruelty and indignity with impunity." Otherwise, "if particular care and attention is not paid to the Ladies we are determined to foment a Rebellion, and will not hold ourselves bound by any Laws in which we have no voice, or Representation." Husband John expressed surprise that women might be discontented, but he clearly knew the privileges enjoyed by males and was determined to retain them: "Depend upon it, we know better than to repeal our Masculine systems." Thomas Jefferson was of one mind with Adams on the matter. When asked about women's voting rights, he replied that "the tender breasts of ladies were not formed for political convulsion."

The legal status of women did not improve dramatically as a result of the Revolutionary ferment. Married

FREEDOM OF RELIGION The Revolution also set in motion a transition from the toleration of religious dissent to a complete freedom of religion in the separation of church and state. The Anglican Church,

established as the official religion in five colonies and parts of two others, was especially vulnerable because of its association with the crown and because dissenters outnumbered Anglicans in all states except Virginia. And all but Virginia eliminated tax support for the church before the fighting was over. In 1776 the Virginia Declaration of Rights guaranteed the free exercise of religion, and in 1786 the Virginia Statute of Religious Freedom (written by Thomas Jefferson) declared that “no man shall be compelled to frequent or support any religious worship, place or ministry whatsoever” and “that all men shall be free to profess, and by argument to maintain, their opinions in matters of religion.” These statutes and the Revolutionary ideology that justified them helped shape the course that religion would take in the new United States: pluralistic and voluntary rather than state supported and monolithic.

In churches as in government, the Revolution set off a period of constitution making as some of the first national church bodies emerged. In 1784 the Methodists, who at first were an offshoot of the Anglicans, came together in a general conference at Baltimore under Bishop Francis Asbury. The Anglican Church, rechristened Episcopal, gathered in a series of meetings that by 1789 had united the various dioceses in a federal union; in 1789 the

Religious Development

The Congregational Church developed a national presence in the early nineteenth century, and Lemuel Haynes, depicted here, was its first African-American preacher.

Presbyterians also held their first general assembly, in Philadelphia. That same year the Catholic Church got its first higher official in the United States when John Carroll was named bishop of Baltimore.

THE EMERGENCE OF AN AMERICAN CULTURE

The Revolution helped generate among some Americans a sense of common nationality. One of the first ways in which to forge a national consciousness was through the annual celebration of the new nation's independence from Great Britain. On July 2, 1776, when the Second Continental Congress had resolved "that these United Colonies are, and of right ought to be, free and independent states," John Adams had written his wife, Abigail, that future generations would remember that date as their "day of deliverance." People, he predicted, would celebrate the occasion with "solemn acts of devotion to God Almighty" and with "pomp and parade, with shows, games, sports, guns, bells, bonfires and illuminations [fireworks] from one end of this continent to the other, from this time forward, forever more."

Adams got everything right but the date. Americans fastened not upon July 2 but upon July 4 as their Independence Day. To be sure, it was on the Fourth that Congress formally adopted the Declaration of Independence and ordered it to be printed and distributed throughout the states, but America by then had been officially independent for two days. As luck would have it, July 4 became Independence Day by accident. In 1777 Congress forgot about any acknowledgment of the first anniversary of independence until July 3, when it was too late to honor July 2. As a consequence, the Fourth won by default.

Independence Day quickly became the most popular and most important public ritual in the United States. Huge numbers of people from all walks of life suspended their normal routine in order to devote a day to parades, formal orations, and fireworks displays. In the process the infant republic began to create its own myth of national identity that transcended local or regional concerns. "What a day!" exclaimed the editor of the *Southern Patriot* in 1815. "What happiness, what emotion, what virtuous triumph must fill the bosoms of Americans!"

AMERICA'S "DESTINY" American nationalism embodied a stirring idea. This first new nation, unlike the Old World nations of Europe, was not rooted in antiquity. Its people, except for the Indians, had not inhabited it

over the centuries, nor was there any notion of a common ethnic descent. “The American national consciousness,” one observer wrote, “is not a voice crying out of the depth of the dark past, but is proudly a product of the enlightened present, setting its face resolutely toward the future.”

Many people, at least since the time of the Pilgrims, had thought of America as singled out for a special identity, a special mission. Jonathan Edwards said God had chosen America as “the glorious renovator of the world,” and later John Adams proclaimed the opening of America “a grand scheme and design in Providence for the illumination and the emancipation of the slavish part of mankind all over the earth.” This sense of mission was neither limited to New England nor rooted solely in Calvinism. From the democratic rhetoric of Thomas Jefferson to the pragmatism of George Washington to heady toasts bellowed in South Carolina taverns, patriots everywhere articulated a special role for American leadership in history. The mission was now a call to lead the world toward greater liberty and equality. Meanwhile, however, Americans had to address more immediate problems created by their new nationhood. The Philadelphia doctor and scientist Benjamin Rush issued a prophetic statement in 1787: “The American war is over: but this is far from being the case with the American Revolution. On the contrary, but the first act of the great drama is closed.”

MAKING CONNECTIONS

- The American Revolution was the starting point for the foreign policy of the United States. Many of the specific foreign concerns that will be discussed in Chapters 8 and 9 sprang from issues directly relating to the Revolution.
- Much of what became Jacksonian democracy (introduced in Chapter 10) can be traced to social and political movements associated with the American Revolution.
- The Articles of Confederation, the document that established the first national government for the United States, saw the new nation through the Revolution, but within a few years the Articles were discarded in favor of a new government, set forth in the Constitution.

The Revolutionary War is the subject of Colin Bonwick's *The American Revolution* (1991), Gordon S. Wood's *The Radicalism of the American Revolution* (1991), and Jeremy Black's *War for America: The Fight for Independence, 1775–1783* (1991). John Ferling's *Setting the World Ablaze: Washington, Adams, Jefferson, and the American Revolution* (2000) highlights the role played by key leaders.

On the social history of the Revolutionary War, see John W. Shy's *A People Numerous and Armed: Reflections on the Military Struggle for American Independence*, rev. ed. (1990), Charles Royster's *A Revolutionary People at War: The Continental Army and American Character, 1775–1783* (1979), and E. Wayne Carp's *To Starve the Army at Pleasure: Continental Army Administration and American Political Culture, 1775–1783* (1984). Colin G. Calloway tells the neglected story of the Indian experiences in the Revolution in *The American Revolution in Indian Country: Crisis and Diversity in Native American Communities* (1995). The imperial, aristocratic, and racist aspects of the Revolution are detailed in Francis Jennings's *The Creation of America: Through Revolution to Empire* (2000).

Why some Americans remained loyal to the crown is the subject of Robert M. Calhoun's *The Loyalists in Revolutionary America, 1760–1781* (1973) and Mary Beth Norton's *The British-Americans: The Loyalist Exiles in England, 1774–1789* (1972).

The definitive study of African Americans during the Revolutionary era remains Benjamin Quarles's *The Negro in the American Revolution* (1961). Mary Beth Norton's *Liberty's Daughters: The Revolutionary Experience of American Women, 1750–1800*, new ed. (1996) and Linda K. Kerber's *Women of the Republic: Intellect and Ideology in Revolutionary America* (1980) document the role women played in securing independence. Joy Day Buel and Richard Buel Jr.'s *The Way of Duty: A Woman and Her Family in Revolutionary America* (1984) shows the impact of the Revolution on one New England family.

The standard introduction to the diplomacy of the Revolutionary era is Jonathan R. Dull's *A Diplomatic History of the American Revolution* (1985).

The background of the page features a light blue, sketch-like illustration. In the upper half, a large sailing ship with multiple masts and flags is depicted. Below the ship, a crowd of people in 18th-century attire is visible, including a man in a top hat and a woman in a bonnet. The overall style is that of a historical engraving or sketch.

SHAPING A FEDERAL UNION

FOCUS QUESTIONS

- What were the achievements and weaknesses of the Confederation government?
- What were the issues involved in writing the Constitution?
- What issues framed the debate over ratifying the Constitution?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

In an address to fellow graduates at the Harvard commencement ceremony in 1787, young John Quincy Adams lamented “this critical period” when the country was “groaning under the intolerable burden of . . . accumulated evils.” The same phrase, “critical period,” has often been used to label the history of the United States under the Articles of Confederation. Fear of a central government dominated the period, and the result was fragmentation and stagnation. Yet while there were weaknesses of the Confederation, there were also major achievements. Moreover, lessons learned under the Confederation would serve well in the formulation of a new constitution and in the balancing of central and local authority under that constitution.

THE CONFEDERATION

The Congress of the Confederation had little government authority. “It could ask for money but not compel payment,” as one historian wrote; “it could enter into treaties but not enforce their stipulations; it could provide for raising of armies but not fill the ranks; it could borrow money but take no proper measures for repayment; it could advise and recommend but not command.” Congress was virtually helpless to cope with foreign relations and a postwar economic depression that would have challenged the resources of a much stronger government. It was not easy to find men of stature to serve in such a body, and it was often hard to gather a quorum of those who did. Yet in spite of its handicaps, the Confederation Congress somehow managed to survive and to lay important foundations. It concluded the Treaty of Paris in 1783. It created the first executive departments. And it formulated principles of land distribution and territorial government that guided westward expansion all the way to the Pacific coast.

Throughout most of the War of Independence, Congress distrusted and limited executive power. It assigned administrative duties to its committees and thereby imposed a painful burden on conscientious members. John Adams, for instance, served on some eighty committees at one time or another. In 1781, however, Congress began to set up three departments: Foreign Affairs, Finance, and War, each with a single head responsible to Congress.

FINANCE The closest thing to an executive head of the Confederation was Robert Morris, who as superintendent of finance in the final years of the war became the most influential figure in the government. Morris wanted to make both himself and the Confederation government more powerful. He envisioned a coherent program of taxation and debt management to make the government financially stable; “a public debt supported by public revenue will prove the strongest cement to keep our confederacy together,” he confided to a friend. It would wed to the support of the federal government the powerful influence of the public creditors who had provided wartime supplies. Morris therefore welcomed the chance to enlarge the debt by issuing new government bonds that would help pay off wartime debts. Because of the government’s precarious finances, these bonds brought only 10¢ to 15¢ on the dollar, but with a sounder Treasury—certainly one with the power to raise taxes—the bonds could be expected to rise in value, creating new capital with which to finance banks and economic development.

In 1781, as part of his plan, Morris secured a congressional charter for the Bank of North America, which would hold government cash, lend money to

the government, and issue currency. Though a national bank, it was in part privately owned and was expected to turn a profit for Morris and other shareholders, in addition to performing a crucial public service. But Morris's program depended ultimately upon a secure income for the government, and it foundered on the requirement of unanimous state approval for amendments to the Articles of Confederation. Local interests and the fear of a central authority—a fear strengthened by the recent quarrels with king and Parliament—hobbled action.

To carry their point, Morris and his nationalist friends in 1783 risked a dangerous gamble. George Washington's army, encamped at Newburgh, New York, on the Hudson River, had grown restless in the final winter of the war. The soldiers' pay was late as usual, and experience had given them reason to fear that promised land bounties and life pensions for officers might never be honored once their service was no longer needed. A delegation of concerned officers traveled to Philadelphia with a petition for redress. Soon they found themselves drawn into a scheme to line up the army and public creditors with nationalists in Congress and confront the states with the threat of a coup d'état unless they yielded more power to Congress. Alexander Hamilton, congressman from New York and former aide-de-camp to General Washington, sought to bring his old commander into the plan.

Washington sympathized with the general purpose of Hamilton's scheme. If congressional powers were not enlarged, he had told a friend, "the band which at present holds us together, by a very feeble thread, will soon be broken, when anarchy and confusion must ensue." But Washington was just as deeply convinced that a military coup would be both dishonorable and dangerous. In March 1783, when he learned that some of the plotters had planned an unauthorized meeting of officers, he confronted the conspirators. He told them that any effort by officers to intimidate the government by threatening a mutinous coup violated the very purposes for which the war was being fought and directly challenged his own integrity. While agreeing that the officers had been poorly treated by the government and deserved their long-overdue back pay and future pensions, he expressed his "horror and detestation" of any effort by the military to assume dictatorial powers. A military revolt would open "the flood-gates of civil discord" and "deluge our rising empire in blood." Before closing his remarks, Washington paused dramatically as he produced a pair of eyeglasses. "Gentlemen," he apologized, "you will permit me to put on my spectacles, for I have not only grown gray but blind in the service of my country." He then read a letter from a congressman that explained the nation's financial plight. It was a virtuoso performance. When he had finished, his officers, many of them fighting back tears,

unanimously adopted resolutions denouncing the recent “infamous propositions,” and the so-called Newburgh Conspiracy came to a sudden end.

The Confederation never did put its finances in order. The Continental currency had long since become a byword for worthlessness. It was never redeemed. The debt, domestic and foreign, grew from \$11 million to \$28 million as Congress paid off citizens’ and soldiers’ claims. Each year, Congress ran a deficit in its operating expenses.

LAND POLICY Congress might ultimately have hoped to draw an independent income from the sale of western lands. Thinly populated by Indians, French settlers, and a growing number of American squatters, the region north of the Ohio River and west of the Appalachian Mountains had long been the site of overlapping claims by colonies and speculators. Under the Articles of Confederation, land not included within the boundaries of the thirteen original states became public domain, owned and administered by the national government.

As early as 1779, Congress had declared that it would not treat the western lands as colonies. The delegates resolved instead that western lands “shall be . . . formed into distinct Republican states,” equal in all respects to other states. Between 1784 and 1787 policies for the development of the West emerged in three major ordinances of the Confederation Congress. These documents, which rank among its greatest achievements—and among the most important in American history—set precedents that the United States would follow in its expansion all the way to the Pacific. Thomas Jefferson in fact was prepared to grant self-government to western states at an early stage, allowing settlers to meet and choose their own officials. Under the land ordinance that Jefferson wrote in 1784, when the population equaled that of the smallest existing state, the territory would achieve full statehood.

In the Land Ordinance of 1785, the delegates outlined a plan of land surveys and sales that would eventually stamp a rectangular pattern on much of the nation’s surface, a rectilinear grid pattern that is visible from the air in many parts of the country today because of the layout of roads and fields. Wherever Indian titles had been extinguished, the Northwest was to be surveyed and six-mile-square townships established along east-west and north-south lines. Each township was in turn divided into thirty-six lots (or sections) one mile square (or 640 acres). The 640-acre sections were to be sold at auction for no less than \$1 per acre, or \$640 total. Such terms favored land speculators, of course, since few common folk had that much money or were able to work that much land. In later years new land laws would make smaller plots available at lower prices, but in 1785 Congress was faced with

Why were there so many overlapping claims to the western lands? What were the terms of the Land Ordinance of 1785? How did it arrange for future states to enter the Union?

an empty Treasury, and delegates believed this system would raise the needed funds most effectively. In each township, however, Congress did reserve the income from the sixteenth section for the support of schools—a significant departure at a time when public schools were rare.

THE NORTHWEST ORDINANCE Spurred by the plans for land sales and settlement, Congress drafted a more specific frame of territorial government to replace Jefferson’s ordinance of 1784. The new plan backed off from Jefferson’s recommendation of early self-government. Because of the trouble that might be expected from squatters who were clamoring for free land, the

How did the Northwest Ordinance of 1787 revise Jefferson’s plan for territorial government? How were settlement patterns in the Northwest territories different from those on the frontier in the South? How did the United States treat Indian claims to territory in the West?

Northwest Ordinance of 1787 required a period of colonial tutelage. At first the territory fell subject to a governor, a secretary, and three judges, all chosen by Congress. Eventually there would be three to five territories in the region, and when any one had a population of 5,000 free male adults, it could choose an assembly. Congress then would name a council of five from ten names proposed by the assembly. The governor would have a veto over actions by the territorial assembly, and so would Congress.

The resemblance to the old royal colonies is clear, but there were two significant differences. For one, the ordinance anticipated statehood when any territory's population reached a population of 60,000 "free inhabitants." At that point a convention could be called to draft a state constitution and apply to Congress for statehood. For another, it included a bill of rights that guaranteed religious freedom, legislative representation in proportion to the population, trial by jury, habeas corpus, and the application of common law. Finally, the ordinance excluded slavery permanently from the Northwest—a proviso Jefferson had failed to get accepted in his ordinance of 1784. This proved a fateful decision. As the progress of emancipation in the existing states gradually freed all slaves above the Mason-Dixon line, the Ohio River boundary of the Old Northwest extended the line between freedom and slavery all the way to the Mississippi River, encompassing what would become the states of Ohio, Indiana, Illinois, Michigan, and Wisconsin.

The Northwest Ordinance had a larger importance, beyond establishing a formal procedure for transforming territories into states. It represented a sharp break with the imperialistic assumption behind European expansion into the Western Hemisphere. The new states were to be admitted to the American republic as equals.

In seven mountain ranges to the west of the Ohio River, an area in which recent treaties had voided Indian titles, surveying began in the mid-1780s. But before any land sales occurred, a group of speculators from New England presented cash-poor Congress with a seductive offer. Organized in Boston, the group of former army officers took the name of the Ohio Company of Associates and sent the Reverend Manasseh Cutler to present its plan. Cutler, a former chaplain in the Continental army and a co-author of the Northwest Ordinance, proved a persuasive lobbyist, and in 1787 Congress voted a grant of 1.5 million acres for about \$1 million in certificates of indebtedness to Revolutionary War veterans. The arrangement had the dual merit, Cutler argued, of reducing the debt and encouraging new settlement and sales of federal land.

The lands south of the Ohio River followed a different line of development. Title to the western lands remained with Georgia, North Carolina, and Virginia for the time being, but settlement proceeded at a far more rapid

pace during and after the Revolution, despite the Indians' fierce resentment of encroachments upon their hunting grounds. Substantial centers of population grew up around Harrodsburg and Boonesborough in Kentucky and along the Watauga, Holston, and Cumberland Rivers as far west as Nashborough (Nashville). In the Old Southwest active movements for statehood arose early. North Carolina tentatively ceded its western claims in 1784, whereupon the Holston settlers formed the short-lived state of Franklin, which became little more than a bone of contention among rival speculators until North Carolina reasserted control in 1789, shortly before the cession of its western lands became final.

Indian land claims, too, were being extinguished. The Iroquois and Cherokees, badly battered during the Revolution, were in no position to resist encroachments by American settlers. By the Treaty of Fort Stanwix (1784), the Iroquois were forced to cede land in western New York and Pennsylvania. With the Treaty of Hopewell (1785), the Cherokees gave up all claims in South Carolina, much of western North Carolina, and large portions of present-day Kentucky and Tennessee. Also in 1785 the major Ohio tribes dropped their claim to most of Ohio, except for a chunk bordering the western part of Lake Erie. The Creeks, pressed by the state of Georgia to cede portions of their lands in 1784–1785, went to war in the summer of 1786 with covert aid from Spanish Florida. When Spanish aid diminished, however, the Creek chief traveled to New York and in 1791 finally struck a bargain that gave the Creeks favorable trade arrangements with the United States but did not restore the lost land.

TRADE AND THE ECONOMY In its economic life, as in planning westward expansion, the young nation dealt vigorously with difficult problems. Congress had little to do with achievements in the economy, but neither could it bear the blame for an acute economic contraction that occurred between 1770 and 1790, the result primarily of the war and separation from the British Empire. Although farmers enmeshed in local markets maintained their livelihood during the Revolutionary era, commercial agriculture dependent upon trade with foreign markets suffered a severe downturn. The Tidewater region saw many enslaved people carried off by the British. Chesapeake planters also lost their lucrative foreign markets. Tobacco was especially hard hit. The British decision to close its West Indian colonies to American trade devastated what had been a thriving commerce in timber, wheat, and other foodstuffs.

Merchants suffered even more wrenching adjustments than the farmers. Cut out of the British mercantile system, they had to find new outlets.

Merchants' Counting House

Americans involved in overseas trade, such as the merchants depicted here, had been sharply affected by the dislocations of war.

Circumstances that impoverished some enriched those who financed privateers, supplied the armies on both sides, and hoarded precious goods while demand and prices soared. By the end of the war, a strong sentiment for free trade had developed in both Britain and America. In the memorable year 1776 the Scottish economist Adam Smith published *Inquiry into the Nature and Causes of the Wealth of Nations*, a classic manifesto against mercantilism. Some British statesmen embraced the new gospel of free trade, but the public and Parliament would cling to the conventions of mercantilism for many years to come.

After the war British trade with America did resume, and American ships were allowed to deliver American products and return to the United States with British goods. American ships could not carry British goods anywhere else, however. The pent-up demand for familiar goods created a vigorous market in postwar exports to America, fueled by British credit and the hard money that had come into America with foreign aid, the expenditures of foreign armies, and wartime trade and privateering. The result was a quick cycle of postwar boom and bust, a buying spree followed by a money shortage and economic troubles that lasted several years.

In colonial days the chronic trade deficit with Britain had been offset by the influx of coins from trade with the West Indies. Now American ships

found themselves excluded altogether from the British West Indies. The islands, however, still demanded wheat, fish, lumber, and other products from the mainland, and American shippers had not lost their talent for smuggling. Already American shippers had begun exploring new outlets, and by 1787 their seaports were flourishing more than ever. Freed from colonial restraints, American merchants now had the run of the seas. Trade treaties opened new markets with the Dutch (1782), the Swedes (1783), the Prussians (1785), and the Moroccans (1787), and American shippers found new outlets on their own in Europe, Africa, and Asia. The most spectacular new development, if not the largest, was trade with China. It began in 1784–1785, when the *Empress of China* sailed from New York to Canton (present-day Guangzhou) and back, around the tip of South America. Profits from its cargo of silks and tea encouraged the outfitting of other ships, which carried ginseng root and other American goods to exchange for the luxury goods of east Asia.

By 1790 the dollar value of American commerce and exports had far out-run the trade of the colonies. Merchants had more ships than they had had before the war. Farm exports were twice what they had been. Although most of the exports were the products of forests, fields, and fisheries, during and after the war more Americans had turned to small-scale manufacturing, mainly for domestic markets.

DIPLOMACY The shortcomings and failures of the Articles of Confederation prompted a growing chorus of complaints. In diplomacy there remained the nagging problems of relations with Great Britain and Spain, both of which still kept military posts on American soil and conspired with Indians and white settlers in the West. The British, despite the peace treaty of 1783, held on to a string of forts along the Canadian border. From these they kept a hand in the lucrative fur trade and a degree of influence with the Indian tribes, whom they were suspected of stirring up to make sporadic attacks on American settlements along the frontier. They gave as a reason for their continued occupation the failure of Americans to pay their prewar debts to British creditors. According to one Virginian, a common question in his state was “If we are now to pay the debts due to British merchants, what have we been fighting for all this while?”

Another major irritant to U.S.-British relations was the American confiscation of Loyalist property. The Treaty of Paris had encouraged Congress to stop confiscations of Tory property, to guarantee immunity to Loyalists for twelve months, during which they could return and wind up their affairs, and to recommend that the states give back confiscated property. Persecutions,

even lynchings, of Loyalists occurred even after the end of the war. Some Loyalists who had fled to Canada or Britain returned unmolested, however, and resumed their lives in their former homes. By the end of 1787, moreover, at the request of Congress, all the states had rescinded the laws that were in conflict with the peace treaty.

With Spain the chief issues were the southern boundary of the United States and the right to navigate the Mississippi River. According to the preliminary treaty with Britain, the United States claimed a line as far south as the 31st parallel; Spain held out for the line running eastward from the mouth of the Yazoo River (at 32°28'N), which it claimed as the traditional boundary. The Treaty of Paris had also given the Americans the right to navigate the Mississippi River to its mouth. Still, the international boundary ran down the middle of the river for most of its length, and the Mississippi was entirely within Spanish Louisiana in its lower reaches. The right to navigation was crucial to the growing American settlements in Kentucky and Tennessee, but in 1784 Louisiana's Spanish governor closed the river to American commerce and began to intrigue with Indians against the American settlers and with settlers against the United States.

THE CONFEDERATION'S PROBLEMS The problems of trans-Appalachian settlers with the British and the Spanish seemed remote from the everyday concerns of most Americans, however. What touched most Americans more were economic troubles and the acute currency shortage after the war. Merchants who found themselves excluded from old channels of imperial trade began to agitate for reprisals. State governments, in response, laid special tonnage duties on British vessels and special tariffs on the goods they brought to the United States. State action alone, however, failed to work because of a lack of uniformity among the states. British ships could be diverted to states whose duties were less restrictive. The other states tried to meet this problem by taxing British goods that flowed across state lines, creating the impression that states were involved in commercial war with each other. Although these duties seldom affected American goods, there was a clear need—it seemed to commercial interests—for a central power to regulate trade.

Mechanics (skilled workers who made, used, or repaired tools and machines) and artisans (skilled workers who made products) were developing an infant industry. Their products ranged from crude iron nails to the fine silver bowls of such smiths as Paul Revere. These skilled workers wanted reprisals against British goods as well as British ships. They sought, and to various degrees obtained from the states, tariffs (taxes) on foreign goods that

Domestic Industry

American craftsmen, such as this cabinetmaker, favored tariffs against foreign goods that competed with theirs.

competed with theirs. The country would be on its way to economic independence, they argued, if only the money that flowed into the country were invested in domestic manufactures instead of being paid out for foreign goods. Nearly all the states gave some preference to American goods, but again the lack of uniformity in their laws put them at cross-purposes, and so urban mechanics along with merchants were drawn into the movement calling for a stronger central government in the interest of uniform regulation.

The shortage of cash and other economic difficulties gave

rise to more immediate demands for paper currency as legal tender, for postponement of tax and debt payments, and for laws to “stay” the foreclosure of mortgages. Farmers who had profited during the war found themselves squeezed afterward by depressed crop prices and mounting debts while merchants opened up new trade routes. Creditors demanded hard money, but it was in short supply—and paper money was almost nonexistent after the depreciation of the Continental currency. The result was an outcry for relief, and around 1785 the demand for new paper money became the most divisive issue in state politics. Debtors demanded the addition of paper money as a means of easing repayment, and farmers saw paper money as an inflationary way to raise commodity prices.

In 1785–1786 seven states (Pennsylvania, New York, New Jersey, South Carolina, Rhode Island, Georgia, and North Carolina) began issuing paper money. It served in five of those states—Pennsylvania, New York, New Jersey, South Carolina, and Rhode Island—as a means of extending credit to hard-pressed farmers through state loans on farm mortgages. It was variously used to fund state debts and to pay off the claims of veterans. In spite of the cries of calamity at the time, the money never seriously depreciated in Pennsylvania, New York, and South Carolina. In Rhode Island, however, the debtor party ran wild. In 1786 the Rhode Island legislature issued more paper money than any other state in proportion to its population and declared

it legal tender in payment of all debts. Creditors fled the state to avoid being paid in worthless paper.

SHAYS'S REBELLION Newspapers throughout the country followed the chaotic developments in Rhode Island. The little commonwealth, stubbornly independent since the days of Roger Williams, became the prime example of democracy run riot—until its riotous neighbor, Massachusetts, provided the final proof (some said) that the new country was poised on the brink of anarchy: Shays's Rebellion. There the trouble was not too much paper money but too little, as well as too much taxation.

After 1780 Massachusetts had remained in the grip of a rigidly conservative regime, which levied ever-higher poll and land taxes to pay off a heavy war debt, held mainly by wealthy creditors in Boston. The taxes fell most heavily upon beleaguered farmers and the poor in general. When the Massachusetts legislature adjourned in 1786 without providing either paper money or any other relief from taxes and debts, three western counties erupted in revolt.

Armed bands closed the courts and prevented foreclosures. A ragtag "army" of some 1,200 disgruntled farmers led by Daniel Shays, a destitute war veteran, advanced upon the federal arsenal at Springfield in 1787. Shays and his followers sought a more flexible monetary policy, laws allowing them to use corn and wheat as money, and the right to postpone paying taxes until the depression lifted.

The state responded by sending 4,400 militiamen armed with cannon. The soldiers scattered the debtor army with a single volley that left four farmers dead. The rebel farmers nevertheless had a victory of sorts. The new state legislature included members sympathetic to the agricultural crisis. The legislature omitted direct taxes the following year, lowered court fees, and exempted clothing, household goods, and tools from the debt process. But a more important consequence was the impetus the rebellion gave to conservatism and nationalism.

Rumors, at times deliberately inflated, greatly exaggerated the extent of this pathetic rebellion of desperate men. The Shaysites were linked to the conniving British and accused of seeking to pillage the wealthy. Panic set in among the republic's elite. "Good God!" George Washington exclaimed when he heard of the incident. Although the rebellion had been suppressed, he worried that it might tempt other disgruntled groups around the country to adopt similar measures. In a letter to Thomas Jefferson, Abigail Adams tarred the Shaysites as "ignorant, restless desperadoes, without conscience or principles, . . . mobbish insurgents [who] are for sapping the foundation" of

the struggling young government. Jefferson disagreed. If Abigail Adams and others were overly critical of Shays's Rebellion, Jefferson was, if anything, too complacent. From his post in Paris, he wrote to a friend back home, "The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants." Abigail Adams was so infuriated by Jefferson's position that she would not correspond with him for months.

CALLS FOR A STRONGER GOVERNMENT Well before the outbreaks in New England, the advocates of a stronger central authority had been calling for a convention to revise the Articles of Confederation. Self-interest led bankers, merchants, and mechanics to promote a stronger central government as the only alternative to anarchy. Gradually Americans were losing the fear of a strong central government as they saw evidence that tyranny might come from other quarters, including the common people themselves.

Such developments led many of the Revolutionary leaders to revise their assessment of the American character. "We have, probably," concluded George Washington in 1786, "had too good an opinion of human nature in forming our confederation." Washington and others decided that at any given time only a distinct minority of citizens could be relied upon to set aside their private interests in favor of the common good. Madison and other so-called Federalists concluded that the new republic must now depend for its success upon the constant virtue of the few rather than the public-spiritedness of the many.

In 1785 commissioners from Virginia and Maryland had met at Mount Vernon, at George Washington's invitation, to promote commerce and economic development and to settle outstanding questions about the navigation of the Potomac River and the Chesapeake Bay. Washington had a personal interest in the river flowing by his door: it was a potential route to the West, with its upper reaches close to the upper reaches of the Ohio, where his military career had begun thirty years before and where he owned substantial property. The delegates agreed on interstate cooperation, and Maryland suggested a further pact with Pennsylvania and Delaware to encourage water transportation between the Chesapeake Bay and the Ohio River; the Virginia legislature agreed and, at Madison's suggestion, invited all thirteen states to a general discussion of commercial problems. Nine states named representatives, but those from only five appeared at the Annapolis Convention in 1786—neither the New England states nor the Carolinas and Georgia were represented. Apparent failure soon turned into success, however, when the alert Alexander Hamilton, representing New York, presented a resolution for

still another convention, in Philadelphia, to consider all measures necessary “to render the constitution of the Federal Government adequate to the exigencies of the Union.”

ADOPTING THE CONSTITUTION

THE CONSTITUTIONAL CONVENTION After stalling for several months, Congress fell in line in 1787 with a resolution endorsing a convention “for the sole and express purpose of revising the Articles of Confederation.” By then five states had already named delegates; before the meeting, called to begin on May 14, 1787, six more states had acted. New Hampshire delayed until June, and its delegates arrived in July. Fearful of consolidated power, tiny Rhode Island kept aloof throughout. (Critics labeled the fractious little state Rogue Island.) Virginia’s Patrick Henry, an implacable foe of centralized government, claimed to “smell a rat” and refused to represent his state. Twenty-nine delegates from nine states began work on May 25. Altogether, the state legislatures had elected seventy-three men. Fifty-five attended at one time or another, and after four months of deliberations in stifling summer heat, thirty-nine signed the constitution they drafted.

The durability and flexibility of that document testify to the remarkable quality of the men who made it. The delegates were surprisingly young:

Drafting the Constitution

George Washington presides over a session of the Constitutional Convention.

forty-two was the average age. They were farmers, merchants, lawyers, and bankers, many of them widely read in history, law, and political philosophy, yet they were also practical men of experience, tested in the fires of the Revolution. Twenty-one had served in the conflict, seven had been state governors, most had been members of the Continental Congress, and eight had signed the Declaration of Independence.

The magisterial George Washington served as presiding officer but participated little in the debates. Eighty-one-year-old Benjamin Franklin, the oldest delegate, also said little from the floor but provided a wealth of experience, wit, and common sense behind the scenes. More active in the debates were James Madison, the ablest political philosopher in the group; Massachusetts's dapper Elbridge Gerry, a Harvard graduate who earned the nickname Old Grumbletonian because, as John Adams once said, he "opposed everything he did not propose"; George Mason, the irritable author of the Virginia Declaration of Rights and a slaveholding planter with a deep-rooted suspicion of all government; the eloquent, arrogant New York aristocrat Gouverneur Morris, who harbored a venomous contempt for the masses; Scottish-born James Wilson of Pennsylvania, one of the ablest lawyers in the new nation and next in importance at the convention only to Washington and Madison; and Roger Sherman of Connecticut, a self-trained lawyer adept at negotiating compromises.

John Adams, like Jefferson, was serving abroad on diplomatic missions. Also conspicuously absent during most of the convention was Alexander Hamilton, the staunch nationalist who regretfully went home when the other two New York delegates walked out to protest what they saw as the loss of states' rights.

Madison emerged as the central figure at the convention. Small of stature—barely over five feet tall—and frail in health, the thirty-six-year-old bookish bachelor was descended from wealthy slaveholding Virginia planters. He suffered from chronic headaches and was painfully shy. Crowds made him nervous, and he hated to use his high-pitched voice in public, much less in open

James Madison

Madison was only thirty-six when he assumed a major role in the drafting of the Constitution. This miniature (ca. 1783) is by Charles Willson Peale.

debate. But the Princeton graduate possessed a keen, agile mind and had a voracious appetite for learning, and the convincing eloquence of his arguments proved decisive. “Every person seems to acknowledge his greatness,” wrote one delegate. Another said that Madison “blends together the profound politician with the scholar . . . [and] always comes forward as the best informed man of any point in the debate.” Madison had arrived in Philadelphia with trunks full of books and a head full of ideas. He had been preparing for the convention for months and probably knew more about historic forms of government than any other delegate.

For the most part the delegates’ differences on political philosophy fell within a narrow range. On certain fundamentals they generally agreed: that government derived its just powers from the consent of the people but that society must be protected from the tyranny of the majority; that the people at large must have a voice in their government but that any one group must be kept from abusing power; that a stronger central authority was essential but that all power was subject to abuse. They assumed with Madison that even the best people were naturally selfish, and government, therefore, could not be founded altogether upon a trust in goodwill and virtue. Yet by a careful arrangement of checks and balances, by checking power with countervailing power, the Founding Fathers hoped to devise institutions that could constrain individual sinfulness and channel self-interest to benefit the public good.

THE VIRGINIA AND NEW JERSEY PLANS At the outset the delegates unanimously elected George Washington president of the convention. One of the first decisions was to meet behind closed doors in order to discourage outside pressures and theatrical speeches to the galleries. The secrecy of the proceedings was remarkably well kept, and knowledge of the debates comes mainly from Madison’s extensive notes.

It was Madison, too, who drafted the proposals that set the framework of the discussions. These proposals, which came to be called the Virginia Plan, embodied a revolutionary idea: that the delegates scrap their instructions to revise the Articles of Confederation and submit an entirely new document to the states. The plan proposed separate legislative, executive, and judicial branches and a truly national government to make laws binding upon individual citizens as well as states. Congress would be divided into two houses: a lower house chosen by popular vote and an upper house of senators elected by the state legislatures. Congress could disallow state laws under the plan and would itself define the extent of its and the states’ authority.

On June 15 delegates submitted the “New Jersey Plan,” which proposed to keep the existing structure of equal representation of the states in a

unicameral Congress but to give Congress the power to levy taxes and regulate commerce and the authority to name a plural executive (with no veto) and a supreme court.

The plans presented the convention with two major issues: whether to amend the Articles of Confederation or draft a new document and whether to determine congressional representation by state or by population. On the first point the convention voted to work toward establishing a national government as envisioned by the Virginians. Regarding the powers of this government, there was little disagreement except in the details. Experience with the Articles had persuaded the delegates that an effective central government, as distinguished from a confederation, needed the power to levy taxes, regulate commerce, raise an army and navy, and make laws binding upon individual citizens. The lessons of the 1780s suggested to them, moreover, that in the interest of order and uniformity the states must be denied certain powers: to issue money, abrogate contracts, make treaties, wage war, and levy tariffs.

But furious disagreements arose. The first clash in the convention involved the issue of congressional representation, and it was resolved by the Great Compromise (sometimes called the Connecticut Compromise, as it was proposed by Roger Sherman), which gave both groups their way. The more populous states won apportionment by population in the House of Representatives; the states that sought to protect states' power won equality in the Senate, with the vote by individuals, not by states.

An equally contentious struggle ensued between northern and southern delegates over slavery and the regulation of trade, an omen of sectional controversies to come. A South Carolinian stressed that his delegation and the Georgians would oppose any constitution that failed to protect slavery. Few if any of the framers of the Constitution even considered the notion of abolition, and they carefully avoided using the term *slavery* in the final document. In this they reflected the prevailing attitudes among white Americans. Most agreed with South Carolina's John Rutledge when he asserted, "Religion and humanity [have] nothing to do with this [slavery] question. Interest alone is the governing principle of nations."

The "interest" of southern delegates, with enslaved African Americans so numerous in their states, dictated that slaves be counted as part of the population in determining the number of a state's congressional representatives. Northerners were willing to count slaves when deciding each state's share of direct taxes but not for purposes of representation. On this issue the Congress of the Confederation had supplied a handy precedent when it sought an amendment to make population rather than land values the standard for

Slave Trade

This cross-sectional view of the British slave ship *Brookes* shows the crowded conditions that enslaved Africans endured in the international slave trade.

fiscal requisitions. The proposed amendment to the Articles of Confederation would have counted three fifths of the slaves for this purpose. The delegates, with little dissent, agreed to incorporate the same three-fifths ratio into the new constitution as a basis for apportioning both representatives and direct taxes.

A more sensitive issue involved an effort to prevent the central government from stopping the transatlantic slave trade. Virginia's George Mason, himself a slaveholder, condemned the "infernal traffic," which his state had already outlawed. He argued that the issue concerned "not the importing states alone but the whole union." People in the western territories were "already calling out for slaves for their new lands." He feared that they would "fill the country" with enslaved people. Such a development would bring forth "the judgment of Heaven" on the country. Southern delegates were quick to challenge Mason's reasoning. They argued that the continued importation of slaves was vital to their states' economies.

To resolve the question, the delegates established a time limit: Congress could not forbid the foreign slave trade before 1808, but it could levy a tax of \$10 a head on all imported slaves. In both provisions a sense of delicacy—and hypocrisy—dictated the use of euphemisms. The Constitution spoke of "free Persons" and "all other persons," of "such persons as any of the States Now existing shall think proper to admit," and of persons "held to Service of Labor." The odious word *slavery* did not appear in the Constitution until the Thirteenth Amendment (1865) abolished the practice.

If the delegates found the slavery issue distracting, they considered irrelevant any discussion of the legal or political role of women under the new constitution. The Revolutionary rhetoric of liberty prompted some women to demand political equality. "The men say we have no business [with politics]," Eliza Wilkinson of South Carolina observed as the Constitution was

being framed, “but I won’t have it thought that because we are the weaker sex as to bodily strength we are capable of nothing more than domestic concerns.” Her complaint, however, fell on deaf ears. There was never any formal discussion of women’s rights at the convention. The new nationalism still defined politics and government as outside the realm of female endeavor.

The Constitution also said little about the processes of immigration and naturalization, and most of what it said was negative. In Article II, Section 1, it prohibits any future immigrant from becoming president, limiting that office to a “natural born Citizen.” In Article I, Sections 2 and 3, respectively, it stipulates that no person can serve in the House of Representatives who has not “been seven Years a Citizen of the United States” or in the Senate who has not “been nine Years a Citizen.” On the matter of defining citizenship, the Constitution gives Congress the authority “to establish an uniform Rule of Naturalization,” but offers no further guidance on the matter. As a result, naturalization policy has changed significantly over the years in response to fluctuating social attitudes and political moods. In 1790 the first Congress passed a naturalization law that allowed “free white persons” who had been in the country for as few as two years to be made naturalized citizens in any court. This meant that persons of African descent were denied citizenship by the federal government; it was left to individual states to determine whether free blacks were citizens. And because Indians were not “free white persons,” they were also treated as aliens rather than citizens. Not until 1924 would American Indians be granted citizenship—by an act of Congress rather than a constitutional amendment.

THE SEPARATION OF POWERS The details of the government structure embedded in the Constitution aroused less debate than the basic issues pitting the large states against the small and the northern states against the southern. Existing state constitutions, several of which already separated powers among legislative, executive, and judicial branches, set an example that reinforced the convention’s resolve to disperse power with checks and balances. Although the Founding Fathers hated royal tyranny, most of them also feared rule by the people and favored various mechanisms to check public passions. Some delegates displayed a thumping disdain for any democratizing of the political system. Elbridge Gerry asserted that most of the nation’s problems “flow from an excess of democracy.” Alexander Hamilton once called the people “a great beast.”

Those elitist views were accommodated by the Constitution’s mixed legislative system. The lower house was designed to be closest to the voters, who elected its delegates every two years. It would be, according to Virginia’s

George Mason, “the grand repository of the democratic principle of the Government.” House members should “sympathize with their constituents, should think as they think, & feel as they feel; and for these purposes should even be residents among them.” The upper house, or Senate, its members elected by the state legislatures, was intended to be more detached from the voters. Staggered six-year terms prevent the choice of a majority in any given year and thereby further isolate senators from the passing fancies of public passion.

The decision that a single person be made the chief executive caused the delegates “considerable pause,” according to James Madison. George Mason protested that this would create a “fetus of monarchy.” Indeed, several of the chief executive’s powers actually exceeded those of the British monarch. This was the sharpest departure from the recent experience in state government, where the office of governor had commonly been diluted because of the recent memory of struggles with royal governors. The president had a veto over acts of Congress, subject to being overridden by a two-thirds vote in each house, whereas the royal veto had long since fallen into complete disuse. The president was commander in chief of the armed forces and responsible for the execution of the laws. The chief executive could make treaties with the advice and consent of two thirds of the Senate and had the power to appoint diplomats, judges, and other officers with the consent of a majority of the Senate. The president was instructed to report annually on the state of the nation and was authorized to recommend legislation, a provision that presidents eventually would take as a mandate to promote extensive programs.

But the president’s powers were limited in certain key areas. The chief executive could neither declare war nor make peace; those powers were reserved for Congress. Unlike the British monarch, moreover, the president could be removed from office. The House could impeach (indict) the chief executive—and other civil officers—on charges of treason, bribery, or “other high crimes and misdemeanors,” and upon conviction the Senate could remove an impeached president by a two-thirds vote. The presiding officer at the trial of a president would be the chief justice, since the usual presiding officer of the Senate (the vice president) would have a personal stake in the outcome.

The leading nationalists—men like James Madison, James Wilson, and Alexander Hamilton—wanted to strengthen the independence of the executive by entrusting the choice to popular election. But an elected executive was still too far beyond the American experience. Besides, a national election would have created enormous problems of organization and voter qualification. Wilson suggested instead that the people of each state choose presidential

electors equal to the number of their senators and representatives. Others proposed that the legislators make the choice. Finally, the convention voted to let the legislature decide the method in each state. Before long nearly all the states were choosing the electors by popular vote, and the electors were acting as agents of the party will, casting their votes as they had pledged them before the election. This method diverged from the original expectation that the electors would deliberate and make their own choices.

On the third branch of government, the judiciary, there was surprisingly little debate. Both the Virginia and the New Jersey Plans had called for a supreme court, which the Constitution established, providing specifically for a chief justice of the United States and leaving up to Congress the number of other justices. Although the Constitution nowhere authorizes the courts to declare laws void when they conflict with the Constitution, the power of judicial review is implied and was soon exercised in cases involving both state and federal laws. Article VI declares the federal constitution, federal laws, and treaties “to be the supreme Law of the Land,” state laws or constitutions “to the Contrary notwithstanding.” The advocates of states’ rights thought this a victory, since it eliminated the proviso in the Virginia Plan for Congress to settle all conflicts between the federal government and individual states. As it

Signing the Constitution, September 17, 1787

Thomas Pritchard Rossiter’s painting shows George Washington presiding over what Thomas Jefferson called an assembly of demigods.

turned out, however, the clause became the basis for an important expansion of judicial review of legislative actions.

Although the Constitution extended vast new powers to the national government, the delegates' mistrust of unchecked power is apparent in repeated examples of countervailing forces: the separation of the three branches of government, the president's veto, the congressional power of impeachment and removal, the Senate's power to approve or reject treaties and appointments, the courts' implied right of judicial review. In addition, the new frame of government specifically forbade Congress to pass bills of attainder (criminal condemnation by a legislative act) or *ex post facto* laws (laws adopted after an event to criminalize deeds that have already been committed). It also reserved to the states large areas of sovereignty—a reservation soon made explicit by the Tenth Amendment. By dividing sovereignty between the people and the government, the framers of the Constitution provided a distinctive contribution to political theory. That is, by vesting ultimate authority in the people, they divided sovereignty *within* the government. This constituted a dramatic break with the colonial tradition. The British had always insisted that the sovereignty of the king-in-Parliament was indivisible.

The most glaring defect of the Articles of Confederation, the rule of state unanimity that defeated every effort to amend them, led the delegates to provide a less forbidding though still difficult method of amending the new constitution. Amendments can be proposed either by a two-thirds vote of each house or by a convention specially called, upon application of two thirds of the legislatures. Amendments can be ratified by approval of three fourths of the states acting through their legislatures or in special conventions. The national convention has never been used, however, and state conventions have been called only once—to ratify the repeal of the Eighteenth Amendment, which had prohibited “the manufacture, sale, or transportation of” alcoholic beverages.

THE FIGHT FOR RATIFICATION The final article of the Constitution provided that it would become effective upon ratification by nine states (not quite the three-fourths majority required for amendment). After fighting off efforts to censure the convention for exceeding its authority, the Confederation Congress submitted its work to the states on September 28, 1787.

In the ensuing political debate, advocates of the Constitution, who might properly have been called Nationalists because they preferred a strong central government, assumed the more reassuring name of Federalists. Opponents, who favored a more decentralized federal system, became

anti-Federalists. The initiative that the Federalists took in assuming their name was characteristic of the whole campaign. They got the jump on their critics. Their leaders had been members of the convention and were already familiar with the document and the arguments on each point. They were not only better prepared but also better organized and, on the whole, made up of the more able leaders in the political community.

Historians have hotly debated the motivation of the advocates of the Constitution. For more than a century the tendency prevailed to idolize the Founding Fathers. In 1913, however, Charles A. Beard's book *An Economic Interpretation of the Constitution* advanced the shocking thesis that the Philadelphia convention was made up of men who had a selfish economic interest in the outcome. Beard argued that the delegates represented an economic elite of speculators in western lands, holders of depreciated government securities, and creditors whose wealth was mostly in "paper": mortgages, stocks, bonds, and the like. The holders of western lands and government bonds would benefit from a stronger government. Creditors generally stood to gain from the prohibitions against state currency issues and the impairment of contract, provisions clearly aimed at the paper-money issues and the stay laws that were then effective in many states. Stay laws prevented people to whom money was due from enforcing their contractual rights to foreclose on debtors.

Beard's thesis provided a useful antidote to unquestioning hero worship and still contains a germ of truth, but he exaggerated. Most of the delegates, according to evidence unavailable to Beard, had no compelling stake in paper wealth, and most were far more involved in landholding. Many prominent nationalists, including "the Father of the Constitution," James Madison, had no western lands, bonds, or much other personal property. Some opponents of the Constitution, on the other hand, held large blocks of land and securities. Economic interests certainly figured in the process, but they functioned in a complex interplay of state, sectional, group, and individual interests that turned largely on how well people had fared under the Confederation.

The most notable aspect of the new American republic was not selfishness but cooperation. The American Revolution had led not to general chaos and terror but to "an outbreak of constitution-making." From the 1760s through the 1780s, there occurred a prolonged debate over the fundamental issues of government, which in its scope and depth—and in the durability of its outcome—is without parallel.

THE FEDERALIST Among the supreme legacies of the debate over the Constitution is *The Federalist*, a collection of essays originally published in the New York press between 1787 and 1788. Instigated by Alexander

Hamilton, the eighty-five articles published under the name Publius include about fifty by Hamilton, thirty by James Madison, and five by John Jay. The authorship of some selections remains in doubt. Written in support of ratification, the essays defended the principle of a supreme national authority, but sought to reassure doubters that the people and the states had little reason to fear usurpations and tyranny by the new government.

In perhaps the most famous essay, Number 10, Madison argued that the very size and diversity of the country would make it impossible for any single faction to form a majority that could dominate the government. This contradicted the conventional wisdom of the time, which insisted that republics could survive only in small, homogeneous countries like Switzerland and the Netherlands. Large republics, on the other hand, would fragment, dissolving into anarchy and tyranny through the influence of factions. Quite the contrary, Madison insisted. Given a balanced federal polity, a republic could work in large and diverse countries probably better than in smaller nations. “Extend the sphere,” he wrote, “and you take in a greater variety of parties and interests; you make it less probable that a majority of the whole will have a common motive to invade the rights of other citizens.”

The Federalists insisted that the new union would contribute to prosperity. The anti-Federalists, however, talked more of the dangers of power in terms that had become familiar during the long struggles with Parliament and the crown. They noted the absence of a bill of rights to protect the rights of individuals and states. They found the process of ratification highly irregular, as it was—indeed, it was illegal under the Articles of Confederation. Not only did Patrick Henry refuse to attend the Constitutional Convention, but he later demanded (unsuccessfully) that it be investigated as a conspiracy. The anti-Federalist leaders—George Mason, Patrick Henry, and Richard Henry Lee of Virginia, George Clinton of New York, Samuel Adams and Elbridge Gerry of Massachusetts, Luther Martin of Maryland—were often men whose careers and reputations had been established well before the Revolution. The Federalist leaders were more likely to be younger men whose careers had begun in the Revolution—men such as Hamilton, Madison, and John Jay.

The disagreement between the two groups was more over means than ends, however. Both sides, for the most part, agreed that a stronger national authority was needed and that it required an independent income to function properly. Both were convinced that the people must erect safeguards against tyranny, even the tyranny of the majority. Few of the Constitution’s supporters liked it in its entirety, but most believed that it was the best document obtainable; few of its opponents found it unacceptable in its

entirety. Once the new government had become an accomplished fact, few wanted to undo the work of the Philadelphia convention.

THE DECISION OF THE STATES Ratification gained momentum before the end of 1787, and several of the smaller states were among the first to act, apparently satisfied that they had gained all the safeguards they could hope for in equality of representation in the Senate. Delaware, New Jersey, and Georgia voted unanimously in favor. Massachusetts, still sharply divided in the aftermath of Shays’s Rebellion, was the first state in which the outcome was close. There the Federalists carried the day by winning over two hesitant leaders of the popular party. They dangled before John Hancock the possibility of his becoming vice president and won the acquiescence of Samuel Adams when they agreed to recommend amendments designed to protect human rights, including one that would specifically reserve to the states all powers not granted to the new government. Massachusetts approved the Constitution by 187 to 168 on February 6, 1788.

New Hampshire was the ninth state to ratify the Constitution, allowing it to be put into effect, but the Union could hardly succeed without the approval of Virginia, the most populous state, or New York, which had the third highest population and occupied a key position geographically. Both states harbored strong opposition groups. In Virginia, Patrick Henry became the chief spokesman for backcountry farmers who feared the powers of the new government, but wavering delegates were won over by the same strategem as in Massachusetts. When it was proposed that the convention

RATIFICATION OF THE CONSTITUTION

<i>Order of Ratification</i>	<i>State</i>	<i>Date of Ratification</i>
1	Delaware	December 7, 1787
2	Pennsylvania	December 12, 1787
3	New Jersey	December 18, 1787
4	Georgia	January 2, 1788
5	Connecticut	January 9, 1788
6	Massachusetts	February 6, 1788
7	Maryland	April 28, 1788
8	South Carolina	May 23, 1788
9	New Hampshire	June 21, 1788
10	Virginia	June 25, 1788
11	New York	July 26, 1788
12	North Carolina	November 21, 1789
13	Rhode Island	May 29, 1790

should recommend a bill of rights, Edmund Randolph, who had refused to sign the finished document, announced his conversion to the cause.

Upon notification that New Hampshire had become the ninth state to ratify the Constitution, the Confederation Congress began to draft plans for an orderly transfer of power. On September 13, 1788, it selected New York City as

Sixth Pillar

An engraving published in 1788 in the American newspaper *The Centinel* after Massachusetts became the sixth state to ratify the new Constitution. By the end of 1788, five more states would ratify and the Constitution would go into effect. The last two states to ratify were North Carolina in 1789 and Rhode Island in 1790.

the seat of the new government and fixed the date for elections. Each state would set the date for electing the first members of Congress. On October 10, 1788, the Confederation Congress transacted its last business and passed into history.

“Our constitution is in actual operation,” the elderly Benjamin Franklin wrote to a friend; “everything appears to promise that it will last; but in this world nothing is certain but death and taxes.” George Washington was even more uncertain about the future under the new plan of government. He had told a fellow delegate as the convention adjourned, “I do not expect the Constitution to last for more than twenty years.”

The Constitution has lasted much longer, of course, and in the process it has provided a model of resilient republican government whose features have been repeatedly borrowed by other nations through the years. Yet what makes the U.S. Constitution so distinctive is not its specific provisions but its remarkable harmony with the particular “genius of the people” it governs. The Constitution has been neither a static abstraction nor a “machine that would go of itself,” as the poet James Russell Lowell would later assert. Instead, it has provided a flexible system of government that presidents, legislators, judges, and the people have adjusted to changing social, economic, and political circumstances. In this sense the Founding Fathers not only created “a more

perfect Union” in 1787; they also engineered a frame of government whose resilience has enabled later generations to continue to perfect their republican experiment. But the framers of the Constitution failed in one significant respect: in skirting the issue of slavery so as to cement the Union, they unknowingly allowed tensions over the “peculiar institution” to reach the point where there would be no political solution—only civil war.

MAKING CONNECTIONS

- The debate over the nature of the national government and its relationship to the people and the states will reemerge in the Kentucky and Virginia Resolutions (Chapter 8), the Hartford Convention (Chapter 9), and the nullification crisis (Chapter 11).
- Slavery, viewed by the delegates to the Constitutional Convention as little more than a “distracting question,” would soon become a major political problem, especially after the Missouri Compromise (Chapter 10).

The federal Constitution, ratified in 1788, was a bundle of deft compromises intended to create a more powerful central government better capable of managing a sprawling—and rapidly growing—new republic. Although the U.S. Constitution has become the world's most enduring national charter, skeptics in the late eighteenth century doubted that it would survive more than a few years. A Massachusetts anti-Federalist said that governing such an “extensive empire . . . upon republican principles” was impossible. It was one thing to draft a dramatic new constitution but quite another to exercise such expanded powers. The Constitution's ideals were profound, but its premises and theories were untested. Creating a “more perfect union” would prove to be a long, complicated, and painful process. During the 1790s the new federal government would confront civil rebellions, threats of secession, international intrigues, and foreign wars. In 1789 Americans wildly celebrated the inauguration of George Washington as the nation's first president. But amid the excitement

was a powerful undercurrent of uncertainty, suspicion, and anxiety. The Constitution provided a framework but not a blueprint; it left unanswered many questions about the actual structure and conduct of the new government. As James Madison had acknowledged, “We are in a wilderness without a single footstep to guide us.”

A NEW NATION

In 1789 the United States and the western territories reached from the Atlantic Ocean to the Mississippi River and hosted almost 4 million people. This vast new nation, much larger than any in Europe, harbored distinct regional differences. A southerner noted the clashing regional outlooks when he said that “men who come from New England are different from us.” Although still characterized by small farms and bustling seaports, New England was on the verge of developing a manufacturing sector. The middle Atlantic states boasted the most well-balanced economy, the largest cities, and the most diverse collection of ethnic and religious groups. The South was an

A New Society

An engraving from the title page of *The Universal Asylum and Columbian Magazine*, (published in Philadelphia in 1790). America is represented as a woman laying down her shield to engage in education, art, commerce, and agriculture.

agricultural region more ethnically homogeneous and increasingly dependent upon slave labor. By 1790 the southern states were exporting as much tobacco as they had been before the Revolution. Most important, however, was the surge in cotton production. Between 1790 and 1815 the annual production of cotton rose from less than 3 million pounds to 93 million pounds.

Overall, the United States in 1790 was predominantly a rural society. Eighty percent of households were involved in agricultural production. Only a few cities had more than 5,000 residents. The first national census, taken in 1790, counted 750,000 African Americans, almost one fifth of the population. Most of them lived in the five southernmost states; less than 10 percent lived outside the South. Most African Americans, of course, were enslaved, but there were many free blacks as a result of the Revolution. In fact, the proportion of free to enslaved blacks was never higher than in 1790.

The 1790 census did not even count the many Indians still living east of the Mississippi River. Most Americans viewed the Native Americans as those people whom the Declaration of Independence had dismissed as “merciless Indian Savages.” It is estimated that there were over eighty tribes totaling perhaps as many as 150,000 persons in 1790. In the Old Northwest along the Great Lakes, the British continued to arm the Indians and encouraged them to resist American encroachments. Between 1784 and 1790 Indians killed or captured some 1,500 settlers in Kentucky alone. Such bloodshed generated a ferocious reaction. “The people of Kentucky,” observed an official frustrated by his inability to negotiate a treaty between whites and Indians, “will carry on private expeditions against the Indians and kill them whenever they meet them, and I do not believe there is a jury in all Kentucky that will punish a man for it.” In the South the five most powerful tribes—the Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles—numbered between 50,000 and 100,000. They steadfastly refused to recognize U.S. authority and used Spanish-supplied weapons to thwart white settlement.

Only about 125,000 whites and blacks lived west of the Appalachian Mountains in 1790. But that was soon to change. The great theme of nineteenth-century American history would be the ceaseless stream of migrants flowing westward from the Atlantic seaboard. By foot, horse, boat, and wagon, pioneers and adventurers headed west. Kentucky, still part of Virginia but destined for statehood in 1792, harbored 75,000 settlers in 1790. In 1776 there had been only 150 pioneers there. Rapid population growth, cheap land, and new economic opportunities fueled the western migration. The average white woman gave birth to eight children, and the white population doubled approximately every twenty-two years. This made for a very

young population on average. In 1790 almost half of all white Americans were under the age of sixteen.

A NEW GOVERNMENT The men who drafted the Constitution knew that many questions were left unanswered, and they feared that putting the new frame of government into practice would pose unexpected challenges. On the appointed date, March 4, 1789, the new Congress of the United States, meeting in New York City, could muster only eight senators and thirteen representatives. A month passed before both chambers gathered a quorum. Only then could the temporary presiding officer of the Senate count the ballots and certify the foregone conclusion that George Washington, with sixty-nine votes, was the unanimous choice of the Electoral College for president. John Adams, with thirty-four votes, the second-highest number, became vice president.

Washington was a reluctant president. He greeted the news of his election with “a heart filled with distress” because he imagined “the ten thousand embarrassments, perplexities and troubles to which I must again be exposed.” He told a friend as he prepared to assume office in New York that he felt like a “culprit who is going to the place of his execution.” Yet Washington felt compelled to serve because he had been “summoned by my country.” A self-made man with little formal education, he brought to his new office a remarkable capacity for moderation and mediation that helped keep the infant republic from disintegrating. In his inaugural address, Washington appealed for national unity, pleading with the new Congress to abandon “local prejudices” and “party animosities” in order to create the “national” outlook necessary for the fledgling republic to thrive. Within a few months the new president would see his hopes dashed. Personal rivalries, sectional tensions, and partisan conflict characterized political life in the 1790s.

THE GOVERNMENT’S STRUCTURE President Washington had a larger staff at his Mount Vernon estate than he did as president. During the summer of 1789, Congress created executive departments corresponding to those formed under the Confederation. To head the Department of State, Washington named Thomas Jefferson, recently back from his diplomatic duties in France. To head the Department of the Treasury, Washington picked his devoted wartime aide, Alexander Hamilton, now a prominent lawyer in New York. The new position of attorney general was occupied by Edmund Randolph, former governor of Virginia.

Almost from the beginning, Washington routinely called these men to sit as a group to discuss matters of policy. This was the origin of the president’s

cabinet, an advisory body for which the Constitution made no formal provision. The office of vice president also took on what would become its typical character. “The Vice-Presidency,” John Adams wrote his wife, Abigail, is the most “insignificant office . . . ever . . . contrived.”

The structure of the court system, like that of the executive departments, was left to Congress, except for a chief justice and the Supreme Court. Congress determined to set the membership of the highest court at six—the chief justice and five associates—and it created thirteen federal district courts. From these, appeals might go to one of three circuit courts, composed of two Supreme Court justices and the district judge, who met twice a year in each district. Members of the Supreme Court, therefore, became itinerant judges riding the circuit during a good part of the year. All federal cases originated in a district court and, if appealed on issues of procedure or legal interpretation, went to the circuit courts and from there to the Supreme Court.

Washington named John Jay as the first chief justice of the Supreme Court, and he served until 1795. Born in New York City in 1745, Jay graduated from King’s College (now Columbia University). His distinction as a lawyer led New York to send him as its representative to the First and Second Continental Congresses. After serving as president of the Continental Congress in 1778–1779, Jay became the American minister in Spain. While in Europe he helped John Adams and Benjamin Franklin negotiate the Treaty of Paris in 1783. After the Revolution, Jay served as secretary of foreign affairs. He joined Madison and Hamilton as co-author of the *The Federalist* and became one of the most effective champions of the Constitution.

THE BILL OF RIGHTS In the new House of Representatives, James Madison made a bill of rights a top priority. The lack of provisions guaranteeing individuals’ and states’ rights had been one of the anti-Federalists’ major objections to the Constitution. Madison viewed a bill of rights as “the most dramatic single gesture of

John Jay

Chief justice of the Supreme Court (painted in 1794). Jay favored a strong union and emphatically supported the Constitution.

conciliation that could be offered the remaining opponents of the government.” Those “opponents” included prominent statesmen as well as artisans, small traders, and backcountry farmers who doubted that even the “best men” were capable of subordinating self-interest to the good of the republic. They believed that all people are prone to corruption; that no one can be trusted. Therefore, a bill of rights must be added to the Constitution protect the liberties of all against the encroachments of a few.

The first eight Amendments to the Constitution were modeled after the Virginia Declaration of Rights that George Mason had written in 1776. They provided safeguards for specified rights of individuals: freedom of religion, press, speech, and assembly; the right to keep and bear firearms; the right to refuse to house soldiers in private homes; protection against unreasonable searches and seizures; the right to refuse to testify against oneself; the right to a speedy public trial, with legal counsel present, before an impartial jury; and protection against cruel and unusual punishment.

The Ninth and Tenth Amendments addressed the demand for specific statements that the enumeration of rights in the Constitution “shall not be construed to deny or disparage others retained by the people” and that “powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.” The first ten amendments, which constitute the Bill of Rights, became effective on December 15, 1791. The Bill of Rights provided no rights or legal protection to African Americans or Indians.

RAISING REVENUE Revenue was the new federal government’s most critical need. When George Washington took office, the nation’s finances were in shambles. There was an acute shortage of capital. To raise funds, Madison proposed a modest tariff (a tax on imports) for revenue only, but the demands of manufacturers in the northern states for tariffs high enough to protect them from foreign competition forced a compromise that imposed higher tariffs on specified items. Madison linked the tariff to a proposal for a mercantile system that would levy extra tonnage duties on foreign ships, and an especially heavy duty on countries that had no commercial treaty with the United States.

Madison’s goal was to wage economic war against Great Britain, which had no such treaty but more foreign trade with the new nation than any other country. Northern businessmen, however, fearing any disruption in the economy, were in no mood for a renewal of economic pressures. Hamilton, as secretary of the Treasury, agreed with them. In the end the only discrimination built into the Tonnage Act of 1789 was between U.S. and all foreign

ships: U.S. ships paid a duty of 6¢ per ton; American-built foreign-owned ships paid 30¢; and ships that were foreign built and owned paid 50¢ per ton.

The disagreements created by the trade measures were portents of quarrels yet to come. Should economic policy favor Britain or France? The more persistent question was whether tariff and tonnage duties should penalize farmers in the interest of northern manufacturers and shipowners. By imposing a tax on imports, tariffs and tonnage duties resulted in higher prices on goods bought by Americans, most of whom were tied to the farm economy. This raised a basic and perennial question: should rural consumers be forced to subsidize the nation's infant manufacturing sector? This issue became a sectional question of South versus North.

HAMILTON'S VISION

The tariff and tonnage duties, linked as they were to other issues, marked but the beginning of the effort to get the country on sound fiscal footing. In 1789, thirty-four-year-old Alexander Hamilton seized the initiative. The first secretary of the Treasury was a protégé of the president. Born out of wedlock on a Caribbean island and deserted by his ne'er-do-well Scottish father, Hamilton was left an orphan at thirteen by the death of his mother and soon became a clerk in a trading house. With the help of friends and relatives, he found his way, at seventeen, to New York, attended King's College, and entered the Continental army, where he became a favorite aide of George Washington's. After the war he studied law, passed the bar examination, established a thriving legal practice in New York City, and became a self-made aristocrat, serving as a collector of revenues and as a member of the Confederation Congress. An early convert to nationalism, Hamilton had a major role in promoting the Constitutional Convention. Shrewd, energetic, determined and combative, the red-haired, blue-eyed attorney was consumed with social and political ambition. As he recognized at age fourteen, "To confess my weakness, my ambition is prevalent." The same could be said of most of the Founding Fathers.

During the Revolutionary War, Colonel Hamilton had witnessed the near-fatal weaknesses of the Confederation Congress. Its lack of authority and money almost lost the war. Now, as the nation's first secretary of the Treasury, he was determined to transform an economically weak and fractious nation. To flourish in a warring world, Hamilton believed, the United States needed to unleash the energy and ambition of its citizens so as to create a vibrant economy driven by the engines of capitalism. He wanted to nurture the

success in minting a budget, a funded debt, a federal tax system, a national bank, a customs service, and a coast guard provided the foundations for American capitalism and American government.

In a series of brilliant reports submitted to Congress in the two years from January 1790 to December 1791, Hamilton outlined his far-sighted program for government finances and the economic development of the United States. The reports were soon adopted, with some alterations in detail but little in substance. The last of the series, the “Report on Manufactures,” outlined a program of protective tariffs and other government supports of business, which would eventually become government policy, despite much brave talk of free enterprise and free trade.

ESTABLISHING THE PUBLIC CREDIT Hamilton submitted the first and most important of his reports to the House of Representatives in 1790. This first of two “Reports on Public Credit,” as the work has since been called, dealt with the vexing issue of war-generated debt. Both the federal government and the individual states had emerged from the Revolution with substantial debts. France, Spain, and Holland had lent the United States money and matériel to fight the war, and Congress had incurred more debt by printing paper money and selling government bonds. State governments

hustling, bustling, aspiring spirit that he believed distinguished Americans from others. Just as he had risen from poverty and shame to become immensely successful, he wanted to ensure that Americans would always have such opportunities. To do so, he envisioned a limited but assertive government that encouraged new fields of enterprise and fostered investment and entrepreneurship. Thriving markets and new industries would best ensure the fate of the republic, and a secure federal debt would give investors a stake in the success of the new national government. The young Hamilton was supremely confident in his ability to shape fiscal policies that would provide economic opportunity and ensure government stability. His

had also accumulated huge obligations. After the war some states had set about paying off their debts, but the efforts were uneven. Only the federal government could wipe the slate clean. Hamilton insisted that the debts from the Revolution were a *national* responsibility because all Americans had benefited from independence. He also knew that federal assumption of state debts would enhance a sense of nationalism by helping the people see the benefits of a strong central government. Finally, the Treasury secretary was determined to shore up the federal government's finances because he believed that preserving individual freedom and the sanctity of property went hand in hand.

Hamilton's controversial report on public credit made two key recommendations: first, it called for funding the federal debt at face value, which meant that citizens holding deflated war bonds could exchange them for new interest-bearing bonds, and second, it declared that the federal government should assume state debts from the Revolution. Holders of state bonds would exchange them for new national bonds.

The funding scheme was controversial because many farmers and farmer soldiers in immediate need of money had sold their securities for a fraction of their value to speculators who were eager to buy them up after reading Hamilton's first report. These common folk argued that they should be reimbursed for their losses; otherwise, the speculators would gain a windfall from the new government's funding of bonds at face value. Hamilton sternly resisted their pleas. The speculators, he argued, had "paid what the commodity was worth in the market, and took the risks." Therefore, they should reap the benefits. In fact, Hamilton insisted, the government should favor the financial community because it represented the bedrock of a successful nation.

The report sparked lengthy debates before its substance was adopted. Then, in short order, Hamilton authored three more reports: the second of the "Reports on Public Credit," which included a proposal for an excise tax on liquor to aid in raising revenue to cover the nation's debts, a report recommending the establishment of a national bank and a national mint, which were set up in 1791–1792; and the "Report on Manufactures," which proposed an extensive program of government aid and other encouragement to stimulate the development of manufacturing enterprises.

Hamilton's economic program was substantially the one that Robert Morris had urged upon the Confederation a decade before and Hamilton had strongly endorsed at the time. "A national debt," he had written Morris in 1781, "if it is not excessive, will be to us a national blessing; it will be a powerful cement of our union. It will also create a necessity for keeping up taxation to a degree which without being oppressive, will be a spur to industry."

Payment of the national debt, in short, would be not only a point of national honor and sound finance, ensuring the country's credit for the future; it would also be an occasion to assert the federal power of taxation and thus instill respect for the authority of the national government. Not least, the plan would win the new government the support of wealthy, influential creditors who would now have a direct financial stake in the survival of the government.

THE EMERGENCE OF SECTIONAL DIFFERENCES The Virginian James Madison, who had been Hamilton's close ally in promoting ratification of the Constitution, broke with him over the matter of a national debt. Madison did not question whether the debt should be paid; he was troubled, however, that speculators and stockjobbers would become the chief beneficiaries. That the far greater portion of the debt was owed to northerners than to southerners further troubled him. Madison, whom Hamilton had expected to champion his program in the House, advanced an alternative plan, one that gave a larger share to the first owners of government bonds than to the later speculators. Madison's opposition to Hamilton's plan touched off a vigorous debate, but Hamilton carried his point by a margin of three to one when the House brought it to a vote.

Madison's opposition to the assumption of state debts got more support, however, and more clearly set up a political division along sectional lines. The southern states, with the exception of South Carolina, had whittled down their debts. New England, with the largest unpaid debts, stood to be the greatest beneficiary of the assumption plan. Rather than see Virginia victimized, Madison held out another alternative. Why not, he suggested, have the government assume state debts as they stood in 1783, at the conclusion of the peace treaty? Debates on this point deadlocked the whole question of debt funding and assumption, and Hamilton grew so frustrated with the legislative stalemate that he considered resigning.

The gridlock finally ended in the summer of 1790, when Jefferson, Hamilton, and Madison agreed to a compromise. In return for northern votes in favor of locating the permanent national capital on the Potomac River, Madison pledged to seek enough southern votes to pass the assumption, with the further arrangement that those states with smaller debts would get in effect outright grants from the federal government to equalize the difference. With these arrangements enough votes were secured to carry Hamilton's funding and assumption schemes. The national capital would be moved from New York City to Philadelphia for ten years, after which it would be settled at a federal city on the Potomac, the site to be chosen by the

president. Jefferson later claimed to have been “duped” by Hamilton into agreeing to the “Compromise of 1790” because he did not fully understand the implications of the debt-assumption plan. It is more likely that Jefferson had been outsmarted. He only later realized how relatively insignificant the location of the national capital was when compared with the far-reaching effects of Hamilton’s economic program.

A NATIONAL BANK By this vast new financial program, Hamilton had called up from nowhere, as if by magic, a great sum of capital for the federal government. Having established the public credit, the relentless Hamilton moved on to a related measure essential to his vision of national greatness: a national bank, which by issuance of bank notes (paper money) might provide a uniform currency that would address the chronic shortage of gold and silver. Government bonds held by the bank would back up the value of its new bank notes. The national bank, chartered by Congress, would remain under government control, but private investors would supply four fifths of the \$10 million capital and name twenty of the twenty-five directors; the government would provide the other one fifth of the capital and name five directors. Government bonds would be received in payment for three

The Bank of the United States

Proposed by Alexander Hamilton, the bank opened in Philadelphia in 1791.

fourths of the stock in the bank, and the other fourth would be payable in gold and silver.

The bank, Hamilton explained, would serve many purposes. Like the national banks of Europe, it would provide a stable and flexible national currency and a source of capital for loans to fund the development of business and commercial development. Bonds, which might otherwise be stowed away in safes, would become the basis for a productive capital by backing up bank notes available for loan at low rates of interest, the “natural effect” of which would be “to increase trade and industry.” What is more, the existence of the bank would serve certain housekeeping needs of the government: a safe place to keep its funds, a source of “pecuniary aids” in sudden emergencies, and the ready transfer of funds to and from branch offices through bookkeeping entries rather than the shipment of metals.

Once again James Madison rose to lead the opposition, arguing that he could find no basis in the Constitution for a national bank. That was enough to raise in President Washington’s mind serious doubts as to the constitutionality of the measure, which Congress passed fairly quickly over Madison’s objections. The vote in Congress revealed the growing sectional division in the young United States. Representatives from the northern states voted thirty-three to one in favor of the national bank; southern congressmen opposed the bank nineteen to six.

Before signing the bill into law, President Washington sought the advice of his cabinet, where he found an equal division of opinion. The result was the first great debate on constitutional interpretation. Should there be a strict or a broad construction of the document? Were the powers of Congress only those explicitly stated, or were others implied? The argument turned chiefly on Article I, Section 8, which authorizes Congress to “make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers.”

Such language left room for disagreement and led to a confrontation between Jefferson and Hamilton. Secretary of State Jefferson pointed to the Tenth Amendment, which reserves to the states and the people powers not delegated to Congress. “To take a single step beyond the boundaries thus specially drawn around the powers of Congress,” he wrote, “is to take possession of a boundless field of power, no longer susceptible of any definition.” A bank might be a convenient aid to Congress in collecting taxes and regulating the currency, but it was not, as Article I, Section 8, specified, *necessary*.

In a lengthy report to the president, Hamilton countered that the power to charter corporations was included in the sovereignty of any government,

whether or not expressly stated. And in a classic summary he expressed his criterion on constitutionality:

This criterion is the *end*, to which the measure relates as a *mean*. If the *end* be clearly comprehended within any of the specified powers, collecting taxes and regulating the currency, and if the measure have an obvious relation to that *end*, and is not forbidden by any particular provision of the Constitution, it may safely be deemed to come within the compass of the national authority.

Hamilton's sophisticated analysis convinced Washington to sign the controversial bank bill. In doing so, the president had indeed, in Jefferson's words, opened up "a boundless field of power," which in the coming years would lead to a further broadening of implied powers with the approval of the Supreme Court. Under the leadership of Chief Justice John Marshall the Court would eventually adopt Hamilton's words almost verbatim. On July 4, 1791, stock in the new Bank of the United States was put up for sale, and it sold out within an hour.

ENCOURAGING MANUFACTURES Alexander Hamilton's fertile imagination and his audacious ambitions for the new country were not yet exhausted. In the last of his great reports, the "Report on Manufactures," he set in place the capstone of his design for a modern national economy: the active encouragement of manufacturing to provide productive uses for the new capital created by his funding, assumption (of state debts), and banking schemes. Hamilton believed that several advantages would flow from the aggressive development of manufactures: the diversification of labor in a country given over too much to farming; improved productivity through greater use of machinery; paid work for those not ordinarily employed outside the home, such as women and children; the promotion of immigration; a greater scope for the diversity of talents in business; more ample and various opportunities for entrepreneurial activity; and a better domestic market for agricultural products.

To secure his ends, Hamilton proposed to use the means to which other countries had resorted: tariffs (taxes) on foreign goods, or in Hamilton's words, "protecting duties," which in some cases might be put so high as to deter imports altogether; restraints on the export of raw materials; government-paid bounties and premiums to encourage certain industries; tariff exemptions for imported raw materials needed for American manufacturing; the encouragement of inventions and discoveries; regulations for the

Certificate of the New York Mechanick Society

inspection of commodities; and finally, the financing of improvements in transportation, including the development of roads, canals, and rivers.

Some of Hamilton's tariff proposals were enacted in 1792. Otherwise the program was filed away—but not forgotten. It became an arsenal of arguments for the advocates of manufactures in years to come. Hamilton denied that there was any necessary economic conflict between the northern and southern regions of the Union. If, as seemed likely, the northern and middle Atlantic states should become the chief scenes of manufacturing, they would create robust markets for agricultural products, some of which the southern states were peculiarly qualified to produce. Both North and South would benefit, he argued, as more commerce moved between those regions than across the Atlantic, thus strengthening the Union.

HAMILTON'S ACHIEVEMENT Largely owing to the skillful Hamilton, the Treasury Department began to retire the Revolutionary War debt during the early 1790s, and foreign capital began to flow in once again. Economic growth, so elusive in the 1780s, was widespread by the end of the

century. A Bostonian reported in late 1790 that the United States had never “had a brighter sunshine of prosperity. . . . Our agricultural interest smiles, our commerce is blessed, our manufactures flourish.” But Hamilton’s policies had done much more than revive the economy. Against fierce opposition, Hamilton had established the foundations for a capitalist republic that has since demonstrated its resilience and durability. In the process he helped Americans see beyond their local interests. Hamilton was a consummate nationalist. As an immigrant he never developed the intense loyalty to a state felt by most Americans. And during the Revolutionary War he had seen how shortsighted and selfish states could be in refusing to provide adequate support of the Continental army. He dreamed of the United States’ becoming a commercial and industrial empire, a world power remarkable for its ability to balance individual freedom with government power. As he recognized, “Liberty may be endangered by the abuses of liberty as well as by the abuses of power.”

Yet however profound Hamilton’s economic insights were and however beneficial his policies were to the nation’s long-term economic development, they initially provoked fierce opposition. Hamilton admired the British system of government and professed a cynical view of human nature. People, he believed, were naturally selfish and greedy. The role of government, therefore, was to channel the public’s “ambition and avarice” into activities that would strengthen the nation. Like Adam Smith, the Scotsman who wrote *The Wealth of Nations*, Hamilton believed that private vices could be turned into public virtues through the natural operations of the capitalist marketplace. What he did not acknowledge was that the rich do not always choose the national interest over their own. He persistently displayed a naïve faith in merchants and capitalists. By championing industry and commerce as well as the expansion of federal authority at the expense of the states, Hamilton infuriated a growing number of people, especially in the South. Competition between Jefferson and Hamilton boiled over into a nasty feud between the government’s two most talented men. The concerted opposition to Hamilton’s politics and policies soon fractured George Washington’s cabinet and spawned the nation’s first political parties.

THE REPUBLICAN ALTERNATIVE

Hamilton’s ideas became the foundation of the party known as the Federalists; Madison and Jefferson led those who took the name Republicans (also called the Democratic Republicans) and thereby implied that the Federalists

aimed at a monarchy. Neither side in the disagreement over national policy deliberately set out to create a party system. But there were growing differences of both philosophy and self-interest that would not subside. At the outset, Madison assumed leadership of Hamilton's opponents in Congress. Madison, like Thomas Jefferson, was rooted in Virginia, where opposition to Hamilton's economic policies flourished. Patrick Henry, for example, proclaimed that Hamilton's policies were "dangerous to the rights and subversive of the interests of the people."

After the Compromise of 1790, which assured the federal assumption of state debts, Madison and Jefferson ever more resolutely opposed Hamilton's policies: his effort to place an excise tax on whiskey, which laid a burden especially on the trans-Appalachian farmers, whose livelihood depended upon the production and sale of the beverage; his proposal for the national bank; and his "Report on Manufactures." As the differences built, hostility between Jefferson and Hamilton festered within the cabinet, much to the distress of President Washington.

Thomas Jefferson, twelve years Hamilton's senior, was in most respects his opposite. Jefferson was an agrarian aristocrat, his father a successful surveyor and land speculator, his mother a Randolph, from one of the first families of Virginia. Jefferson was brilliant. He developed a breadth of cultivated interests that ranged widely in science, the arts, and the humanities. He read or spoke seven languages. He was an architect of distinction

(Monticello, the Virginia state capitol, and the University of Virginia are monuments to his talent), a courtly gentleman who understood mathematics and engineering, an inventor, and an agronomist. He knew music and practiced the violin, although one wit remarked that only Patrick Henry played it worse.

Hamilton and Jefferson represented opposite visions of the character of the Union and defined certain contrasting philosophical and political issues that still echo more than two centuries later. Hamilton was a hardheaded realist who foresaw a diversified capitalist economy, with agriculture balanced by commerce

Thomas Jefferson

A portrait by Charles Willson Peale (1791).

and industry, and was thus the better prophet. Jefferson was an agrarian idealist who feared that the growth of crowded cities would divide society into a capitalist aristocracy on the one hand and a deprived proletariat on the other. Hamilton feared anarchy and loved order; Jefferson feared tyranny and loved liberty.

Hamilton championed a strong central government actively engaged in encouraging capitalist enterprise. Jefferson wanted a decentralized republic made up primarily of small farmers. "Those who labor in the earth," he wrote, "are the chosen people of God, if ever he had a chosen people, whose breasts He has made His peculiar deposit for genuine and substantial virtue." Jefferson did not oppose all forms of manufacturing; he feared that the unlimited expansion of commerce and industry would produce a growing class of wage laborers who were dependent upon others for their livelihood and therefore subject to political manipulation and economic exploitation.

In their quarrel, Hamilton isolated Jefferson as the leader of the opposition to his policies. In the summer of 1791, Jefferson and Madison set out on a "botanizing" excursion up the Hudson River in New York and into New England. The supposed vacation trip was actually a cover for consultations with New York political figures who personally and politically opposed Hamilton. Although the significance of that single trip was blown out of proportion, there did ultimately arise an informal alliance of Jeffersonian Republicans in the South and New York that would become a constant if sometimes divisive feature of the new party and its successor, the Democratic party. By mid-1792 Hamilton and Jefferson could no longer disguise their disdain for each other. Jefferson told a friend that the two rivals "daily pitted in the cabinet like two cocks."

Still, amid the rising political tensions, there was little opposition to George Washington, who longed to end his exile from his beloved Mount Vernon and even began drafting a farewell address but was urged by both Hamilton and Jefferson to continue in public life. In the fragile infancy of the new nation, Washington was the only man who could transcend party differences and hold things together with his unmatched prestige. In 1792 Washington was unanimously reelected.

CRISES FOREIGN AND DOMESTIC

During George Washington's second term the problems of foreign relations surged to center stage, delivered by the consequences of the French Revolution, which had begun in 1789, during the first months of his presidency.

Americans followed the tumultuous events in France with almost universal sympathy, up to a point. By the spring of 1792, the French experiment in liberty, equality, and fraternity had transformed itself into a monster. France plunged into war with Austria and Prussia. The French Revolution began devouring its own children, along with its enemies, during the Terror of 1793–1794. Thousands of political prisoners were executed, and barbarism ruled the streets of Paris.

After the execution of King Louis XVI, early in 1793, Great Britain and Spain entered into the coalition of monarchies at war with the chaotic French republic. For the next twenty-two years, Britain and France were at war, with only a brief respite, until the final defeat of the French forces under Napoléon in 1815. The European war presented George Washington, just beginning his second term, with an awkward decision. By the 1778 Treaty of Alliance, the United States was a perpetual ally of France, obligated to defend her possessions in the West Indies.

But Americans wanted no part of the European war. They were determined to maintain their lucrative trade with both sides in the conflict. And besides, the Americans had no navy with which to wage a war on the high seas. Neutrality was the only sensible policy. For their part, Hamilton and Jefferson found in the neutrality policy one issue on which they could agree. Where they differed was in how best to implement it. Hamilton had a simple and direct answer: declare the French alliance invalid because it was made with a French government that no longer existed. Jefferson preferred to delay and use the alliance as a bargaining point with the British. In the end, however, Washington followed the advice of neither. Taking a middle course, the president issued a neutrality proclamation on April 22, 1793, that declared the United States “friendly and impartial toward the belligerent powers” and warned U.S. citizens that “aiding or abetting hostilities” or other nonneutral acts might be prosecuted. Instead of settling matters in his cabinet, however, Washington’s proclamation brought to a boil the feud between Hamilton and Jefferson. Jefferson dashed off an angry letter to James Madison, urging his ally to “take up your pen” and cut Hamilton “to pieces” in the newspapers.

CITIZEN GENET At the same time, Washington accepted Jefferson’s argument that the United States should recognize the new French republican government (becoming the first country to do so) and receive its new ambassador, the headstrong and indiscreet Edmond-Charles-Édouard Genet. Early in 1793, Citizen Genet landed at Charleston, to a hero’s welcome. Along the route to Philadelphia, the enthusiasm of his American

sympathizers gave the swaggering Genet an inflated notion of his influence. In Charleston he had engaged privateers to capture British ships, and in Philadelphia he continued the process. He also intrigued with frontiersmen and land speculators with an eye to an attack on Spanish Florida and Louisiana.

In the American capital, Genet quickly became an embarrassment even to his Republican friends. Among other missteps he denounced President Washington's neutrality policy. Jefferson decided that the French minister had overreached himself when he violated a promise not to outfit a captured British ship as a French privateer—the action could have provoked a British declaration of war against the United States. When Genet threatened to appeal his cause directly to the American people over the head of their president, the cabinet unanimously agreed that the French troublemaker had to go; in August 1793 Washington demanded his recall. Meanwhile, a new party of radicals had gained power in France and sent its own minister with a warrant for Genet's arrest. Instead of returning to Paris and risk the guillotine, Genet sought asylum in the United States.

Genet's foolishness and the growing excesses of the French radicals were fast cooling U.S. support for their wayward revolution. To Hamilton's followers what was occurring in France began to resemble their worst nightmares of democratic anarchy. The French made it hard even for American Republicans to retain sympathy, but they swallowed hard and made excuses. "The liberty of the whole earth was depending on the issue of the contest," the genteel Jefferson wrote, "and . . . rather than it should have failed, I would have seen half the earth devastated." Nor did the British make it easy for Federalists to rally to their side. Near the end of 1793, they informed the U.S. government that they intended to occupy their Great Lakes forts indefinitely and began to seize the cargoes of American ships trading with the French islands in the West Indies.

The French and British causes deeply divided American opinion. In the contest, it seemed, one had to either be a Republican and support liberty, reason, and France or become a Federalist and support order, religious faith, and Britain. The division gave rise to curious loyalties: slaveholding planters joined the cheers for radical revolutionaries who dispossessed aristocrats in France, and they supported the protest against British seizures of New England ships; Massachusetts shippers still profited from the British trade and kept quiet. Boston, once a hotbed of revolution, became a bastion of Federalism. Thomas Jefferson was so disgusted by George Washington's refusal to support the French Revolution and by his own ideological warfare with Alexander Hamilton that he resigned as secretary of state at the end of 1793.

JAY’S TREATY By 1794 a prolonged foreign-policy crisis between the United States and Great Britain threatened to renew warfare between the two old enemies. Early in 1794 the Republican leaders in Congress were gaining support for commercial retaliation to end British trade abuses when the British gave President Washington a timely opening for a settlement. They stopped seizing American ships, and on April 16, 1794, Washington named Chief Justice John Jay as a special envoy to Great Britain. Jay left with instructions to settle all major issues: to get the British out of the northwestern forts and to secure reparations for the losses of American shippers, compensation for Southern slaves carried away in 1783, and a commercial treaty that would legalize American commerce with the British West Indies.

To win his objectives, Jay accepted the British definition of neutral rights—that exports of tar, pitch, and other products needed for naval ships were contraband and that provisions could not go in neutral ships to enemy ports—and the “rule of 1756” prevailed, meaning that trade that was prohibited in peacetime because of mercantilist restrictions could not be opened in wartime. Britain also gained most-favored-nation treatment in American commerce and a promise that French privateers would not be outfitted in American ports. Finally, Jay conceded that the British need not compensate U.S. citizens for the enslaved people who escaped during the war and that the pre-Revolutionary American debts to British merchants would be paid by the U.S. government. In return for these concessions, he won three important points: British evacuation of the northwestern forts by 1796, reparations for the seizures of American ships and cargo in 1793–1794, and legalization of trade with the British West Indies. But the last of these (Article XII) was so hedged with restrictions that the Senate eventually struck it from the treaty.

Trade Limitations

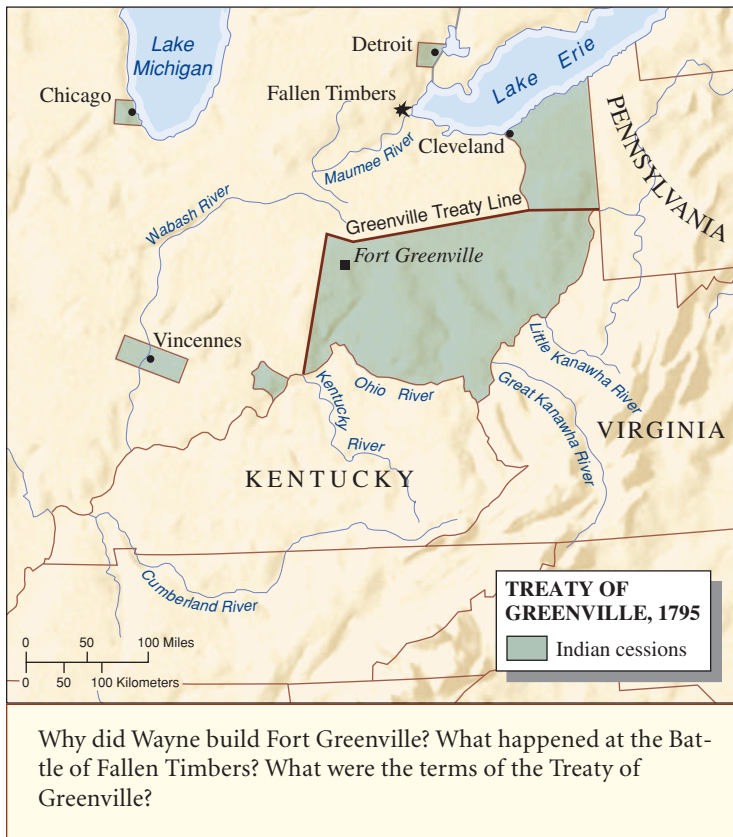

A 1794 watercolor of Fort Detroit, a major center of Indian trade that the British agreed to evacuate under the terms of Jay’s Treaty.

Public outrage greeted the terms of Jay's Treaty. The debate was so intense that some Americans feared civil war might erupt. Even Federalist shippers, ready for a settlement with the British on almost any terms, were disappointed by the limitations on their trading privileges in the British West Indies. But much of the outcry was simply an expression of disappointment by Republican partisans who had sought an escalation of the conflict with the hated Great Britain. Some of it, too, was the outrage of Virginia planters at the concession on old debts to British merchants and the failure to get reparations for slaves liberated by British forces during the Revolution. George Washington himself wrestled with doubts over the treaty and delayed making it available to the public. He worried that his opponents were prepared to separate "the Union into Northern & Southern." Once he endorsed it, there were even calls for his impeachment. Yet the president, while acknowledging that the proposed agreement was imperfect, concluded that adopting it was the only way to avoid war with Britain. Still, the Senate debated the treaty in secret, and without a single vote to spare, Jay's Treaty got the necessary two-thirds majority on June 24, 1795, with Article XII (the provision regarding the West Indies) expunged. The major votes in Congress were again aligned by region; 80 percent of the votes for the treaty came from New England or the middle Atlantic states; 74 percent of those voting against the treaty were cast by southerners.

President Washington still hesitated but finally signed the flawed treaty, concluding that it was the best he was likely to get. In the House, opponents, spurred on by James Madison, went so far as to demand that the president produce all papers relevant to the treaty, but the president refused on the grounds that approval of treaties was solely the business of the Senate. He thereby set an important precedent of executive privilege (a term not used at the time), and the House finally relented, supplying by a close vote the money required to carry out the terms of the treaty. The desperate effort to thwart Jay's Treaty cost James Madison his friendship with George Washington.

THE FRONTIER Other events also had an important bearing on Jay's Treaty, adding force to the importance of its settlement of the Canadian frontier and strengthening Spain's conviction that it, too, needed to settle long-festered problems along America's southwestern frontier. While John Jay was haggling in London, frontier conflict with Indians escalated, with U.S. troops twice crushed by northwestern Indians. At last, Washington named General Wayne, known as Mad Anthony, to head an expedition into the Northwest Territory. In the fall of 1793, Wayne marched into Indian country

with some 2,600 men, built Fort Greenville, and with reinforcements from Kentucky went on the offensive in 1794.

In August some 2,000 Shawnee, Ottawa, Chippewa, and Potawatomi warriors, reinforced by Canadian militias, attacked Wayne's troops at the Battle of Fallen Timbers, south of Detroit. The Americans repulsed them. The Indians' heavy losses were exacerbated when American soldiers destroyed their fields and villages. The Indians finally agreed to the Treaty of Greenville, signed in August 1795. According to the terms of the treaty, the United States bought from twelve tribes, at the cost of a \$10,000 annuity, the rights to the southeastern quarter of the Northwest Territory (now Ohio and Indiana) and enclaves at the sites of Detroit, Chicago, and Vincennes, Indiana.

THE WHISKEY REBELLION General Wayne's forces were still mopping up after the Battle of Fallen Timbers when the administration resolved

on another show of strength in the backcountry, against the so-called Whiskey Rebellion. Alexander Hamilton's excise tax on liquor, levied in 1791, had outraged frontier farmers because it taxed their most profitable commodity. During the eighteenth and early nineteenth centuries nearly all Americans regularly drank alcoholic beverages: beer, hard cider, ale, wine, rum, brandy, or whiskey. In the areas west of the Appalachian Mountains, the primary cash commodity was liquor distilled from grain or fruit. Such emphasis on distilling reflected a practical problem. Many farmers could not afford to transport bulky crops of corn and rye across the mountains or down the Mississippi River to the seaboard markets. Instead, it was much more profitable to distill liquor from corn and rye or apples and peaches. Unlike grain crops, distilled spirits could be easily stored, shipped, or sold—and at higher profits. A bushel of corn worth 25¢ could yield two and a half gallons of liquor, worth ten times as much.

Western farmers were also suspicious of the new federal government in Philadelphia. The frontiersmen considered the whiskey tax another part of Hamilton's scheme to pick the pockets of the poor to enrich the pockets of urban speculators. All through the backcountry, from Georgia to Pennsylvania and beyond, the tax provoked resistance and evasion.

In the summer of 1794, discontent over the federal tax on whiskey exploded into open rebellion in western Pennsylvania. Vigilantes began terrorizing revenue officers and taxpayers. They blew up the stills of those who paid the tax, robbed the mails, stopped court proceedings, and threatened an assault on Pittsburgh. On August 7, 1794, President Washington issued a proclamation ordering the insurgents home and calling out 12,900 militiamen from Virginia, Maryland, Pennsylvania, and New Jersey. Getting no response from the "Whiskey boys," he ordered the army to suppress the rebellion.

Under the command of General Henry Lee, the army marched out from Harrisburg across the Alleghenies with Alexander Hamilton in its midst, itching to smite the insurgents. But the rebels vanished into the hills, and the troops met with little opposition. They finally rounded up twenty barefoot, ragged prisoners, whom they paraded down Market Street in Philadelphia and clapped into prison. Eventually two of them were found guilty of treason, but they were pardoned by Washington on the grounds that one was a "simpleton" and the other "insane." Although Washington had overreacted, the government had made its point and gained "reputation and strength," according to Hamilton, by suppressing a rebellion that, according to Jefferson, "could never be found." The use of such excessive force, however, led many who sympathized with the frontiersmen to become Republicans, and Jefferson's party scored heavily in the next Pennsylvania elections.

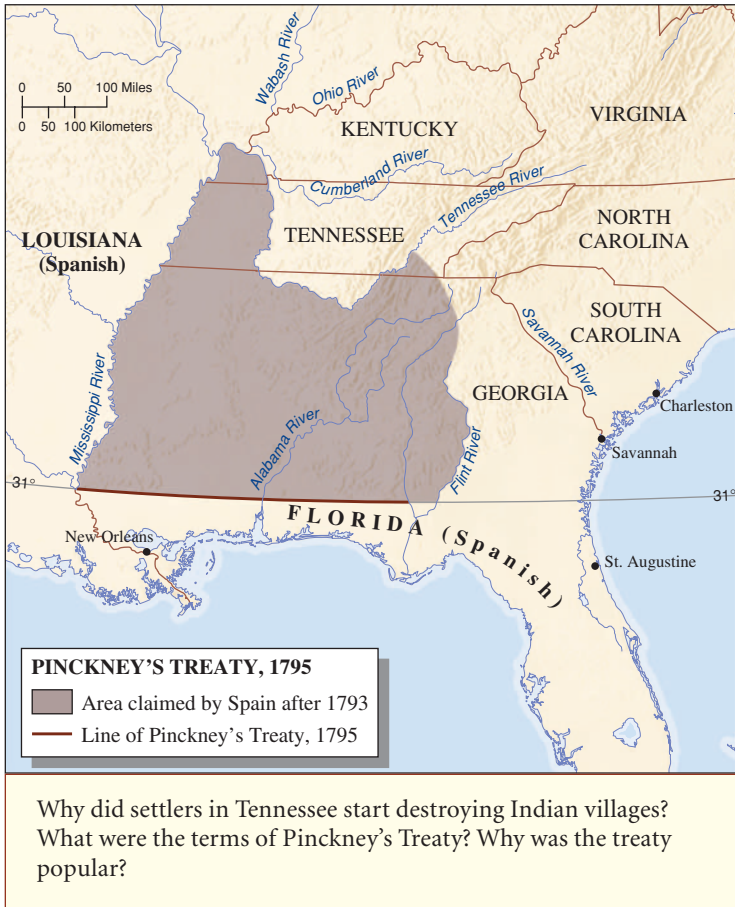

Whiskey Rebellion

George Washington as commander in chief reviews the troops mobilized to quell the Whiskey Rebellion in 1794.

Nor was it the end of the whiskey rebellions, which continued in an unending war of wits between moonshiners and revenue officers.

PINCKNEY'S TREATY While these stirring events were transpiring in Pennsylvania, Spanish intrigues among the Creeks, Choctaws, Chickasaws, and Cherokees in the Southwest were keeping up the same sort of turmoil that the British had fomented along the Ohio. In Tennessee, settlers reacted by burning and leveling Indian villages. The defeat of their Indian allies, combined with Britain's concessions in the north and worries about possible American intervention in Louisiana, led the Spanish to enter into treaty negotiations with the Americans. U.S. negotiator Thomas Pinckney pulled off a diplomatic triumph in 1795 when he won acceptance of a boundary at the

31st parallel, free navigation of the Mississippi River, the right to deposit goods at New Orleans for three years with a promise of renewal, a commission to settle American claims against Spain, and a promise on each side to refrain from inciting Indian attacks on the other. Ratification of Pinckney's Treaty ran into no opposition. In fact, it was immensely popular, especially among westerners eager to use the Mississippi River to transport their crops to market.

SETTLEMENT OF NEW LAND

Now that Jay and Pinckney had settled matters with Britain and Spain and the army in the Northwest and the Tennessee settlers in the South had

subdued the Indians, the West was open for a renewed surge of settlers. New lands, ceded by the Indians in the Treaty of Greenville, revealed a Congress once again divided on the issue of federal land policy. There were two basic viewpoints on the matter: that the public domain should serve mainly as a source of revenue and that it was more important to get the new country settled, an endeavor that required low land prices. In the long run the evolution of policy would be from the first to the second viewpoint, but for the time being the federal government's need for revenue took priority.

LAND POLICY Opinions on land policy, like opinions on other issues, separated Federalists from Republicans. Federalists involved in speculation might prefer lower land prices, but the more influential Federalists, like Hamilton and Jay, preferred to build the population of the eastern states first, lest the East lose political influence and a labor force important to the growth of manufactures. Men of their persuasion favored high land prices to enrich the Treasury, the sale of relatively large parcels of land to speculators rather than small parcels to settlers, and the development of compact settlements. Jefferson and Madison were reluctantly prepared to go along for the sake of reducing the national debt, but Jefferson expressed the hope for a plan by which the lands could be more readily settled. In any case, he suggested, frontiersmen would do as they had done before: "They will settle the lands in spite of everybody."

For the time being, however, Federalist policy prevailed. With the Land Act of 1796, Congress resolved to extend the rectangular surveys ordained in 1785 but doubled the price to \$2 per acre, with only one year in which to complete payment. Half the townships would be sold in 640-acre sections, making the minimum cost \$1,280, and alternate townships would be sold in blocks of eight sections, or 5,120 acres, making the minimum cost \$10,240. Either price was well beyond the means of ordinary settlers and a bit much even for speculators, who could still pick up state lands at lower prices. By 1800 federal land offices had sold fewer than 50,000 acres under the act. Continuing criticism in the West led to the Land Act of 1800, which reduced the minimum unit to 320 acres and spread payments over four years. Thus, with a down payment of \$160, one could buy a farm. All land went for the minimum price if it did not sell at auction within three weeks. Under the Land Act of 1804, the minimum unit was reduced to 160 acres, which became the traditional homestead, and the price per acre went down to \$1.64.

THE WILDERNESS ROAD The lure of western lands led thousands of settlers to follow Daniel Boone into the territory known as Kentucky or

The Emergence of Agriculture

This painting by Edward Hicks shows the residence of David Twining, a Pennsylvania farmer, as it appeared in 1785.

Kaintuck, from the Cherokee name Ken-Ta-Ke (Great Meadow). In the late eighteenth century, Kentucky was a farmer's fantasy and a hunter's paradise, with its fertile soil and abundant forests teeming with buffalo, deer, and wild turkeys.

Boone himself was the product of a pioneer background. Born on a small farm in 1734 in central Pennsylvania, he was a deadeye marksman by the age of twelve and would soon become an experienced farmer and an accomplished woodsman. In 1750 the Boone family moved to western North Carolina. There Daniel emerged as the region's greatest hunter, trading animal skins for salt and other household needs. After hearing numerous reports about the territory over the mountains, Boone set out alone in 1769 to find a trail into Kentucky. Armed with a long rifle, tomahawk, and hunting knife and dressed in a hunting shirt, deerskin leggings, and moccasins, he found what was called the

The Wilderness Trail

Daniel Boone Escorting Settlers through the Cumberland Gap by George Caleb Bingham.

Warriors' Path, a narrow foot trail that buffalo, deer, and Indians had worn along the steep ridges. It took him through the Cumberland Gap in southwestern Virginia. For two years thereafter, Boone explored the region, living off the plentiful game. He returned to North Carolina with exciting stories about the riches of Kentucky.

In 1773 Boone led the first group of settlers through the Appalachian Mountains at the Cumberland Gap. Two years later Boone and thirty woodsmen used axes to widen the Warriors' Path into what became

known as the Wilderness Road, a passage that more than 300,000 settlers would use over the next twenty-five years. At a point where a branch of the Wilderness Road intersected with the Kentucky River, near what is now Lexington, Boone built a settlement known as Boonesborough in an area called Transylvania.

A steady stream of settlers, mostly Scotch-Irish from Pennsylvania, Virginia, and North Carolina, poured into Kentucky during the last quarter of the eighteenth century. The backcountry settlers came on foot or horseback, often leading a mule or a cow that carried their few tools and other possessions. On a good day they might cover fifteen miles. Near a creek or spring they would buy a parcel or stake out a claim and mark its boundaries by chopping notches into "witness trees." They would then build a lean-to for temporary shelter and clear the land for planting. The larger trees could not be felled with an ax. Instead, they were girdled: a cut would be made around the trunk, and the tree would be left to die. Because the process often took years, a farmer had to hoe and plant a field filled with stumps and trees. The pioneers grew melons, beans, turnips, and other vegetables, but corn was the preferred crop because it kept well and had so many uses. Ears were roasted and eaten on the cob, and kernels were ground into meal for making mush, hominy grits, and hoecakes, or johnnycakes (dry flourcakes suitable for travelers that were originally called journeycakes). Pigs provided pork, and cows supplied milk, butter, and cheese. Many frontier families also built crude stills to manufacture a potent whiskey they called corn likker.

TRANSFER OF POWER

By 1796 President Washington had decided that two terms in office were enough. Weary of increasingly bitter political quarrels and the venom of the partisan press, he was ready to retire at last to Mount Vernon. He would leave behind a formidable record of achievement: the organization of a national government with demonstrated power, a secure national credit, the recovery of territory from Britain and Spain, a stable northwestern frontier, and the admission of three new states: Vermont (1791), Kentucky (1792), and Tennessee (1796).

WASHINGTON'S FAREWELL With the considerable help of Alexander Hamilton, Washington drafted a valedictory speech to the nation. His farewell address, dated September 17, 1796, called for unity among the people in backing their new government. Washington decried the rising spirit of sectionalism; he feared the emergence of regional political parties promoting local interests. In foreign relations, Washington said, the United States should show “good faith and justice toward all nations” and avoid either “an habitual hatred or an habitual fondness” for other countries. Europe, he noted, “has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of

Mount Vernon

George Washington and the marquis de Lafayette at Mount Vernon in 1784. Washington enlarged the estate, which overlooks the Potomac River, to nearly 8,000 acres, dividing it among five farms.

which are essentially foreign to our concerns.” The United States should keep clear of those quarrels. It was, moreover, “our true policy to steer clear of permanent alliances with any portion of the foreign world.” A key word here is *permanent*. Washington opposed permanent arrangements like the one with France, still technically in effect. He specifically advised that “we may safely trust to temporary alliances for extraordinary emergencies.” Washington’s warning against permanent foreign entanglements served as a fundamental principle in U.S. foreign policy until the early twentieth century.

THE ELECTION OF 1796 With George Washington out of the race, the United States had its first partisan election for president. The logical choice of the Federalists would have been Washington’s protégé, Alexander Hamilton, the chief architect of their programs. But Hamilton’s policies had left scars and made enemies. Nor did he suffer fools gladly, a common affliction of Federalist leaders, including the man on whom the choice fell. In Philadelphia a caucus of Federalist congressmen chose John Adams as their heir apparent, with Thomas Pinckney of South Carolina, fresh from his triumph in Spain, as the nominee for vice president. As expected, the Republicans drafted Thomas Jefferson and added geographic balance to the ticket with Aaron Burr of New York.

The increasing strength of the Republicans, fueled by the smoldering resentment of Jay’s Treaty, very nearly swept Jefferson into office and perhaps would have but for the public appeals of the French ambassador for his election—an action that backfired. Then, despite a Federalist majority among the electors, Alexander Hamilton hatched an impulsive scheme that very nearly threw the election away after all. Thomas Pinckney, Hamilton thought, would be subject to more influence than the strong-minded Adams. He therefore sought to have the South Carolina Federalists withhold a few votes for Adams and bring Pinckney in first. The Carolinians more than cooperated—they divided their vote between Pinckney and Jefferson—but the New Englanders got wind of the scheme and dropped Pinckney. The upshot of Hamilton’s failed scheme was to cut Pinckney out of both the presidency and the vice presidency and elect Jefferson vice president with sixty-eight electoral votes, to Adams’s seventy-one.

THE ADAMS YEARS

Vain and cantankerous, short and paunchy, John Adams had crafted a distinguished career as a Massachusetts lawyer; a leader in the Revolutionary

movement; the hardest-working member of the Continental Congress; a diplomat in France, Holland, and Britain; and George Washington's vice president. His political philosophy fell somewhere between Jefferson's and Hamilton's. He shared neither the one's faith in the common people nor the other's fondness for a financial aristocracy of "paper wealth." Adams feared the concept of democracy and considered equality a fanciful notion. He favored the classic mixture of aristocratic, democratic, and monarchical elements, though his use of *monarchical* interchangeably with *executive* exposed him to the attacks of Republicans who saw a monarchist in every Federalist. Adams was always haunted by a feeling that he was never properly appreciated—and he may have been right. Yet on the overriding issue of his administration, war and peace, he kept his head when others about him were losing theirs—probably at the cost of his reelection.

John Adams

Political philosopher and politician.

Adams was the first president to take up residence in the White House, in 1801.

WAR WITH FRANCE John Adams faced the daunting task of succeeding the most popular man in America. He also inherited an undeclared naval war with France, a byproduct of Jay's Treaty. When John Jay had accepted the British position that food supplies and naval stores—as well as war matériel—were contraband subject to seizure, the French reasoned that American cargo headed for British ports was subject to the same interpretation and loosed their corsairs in the British West Indies, with an even more devastating effect than the British had had in 1793–1794. By the time of Adams's inauguration, in 1797, the French had plundered some 300 American ships and broken diplomatic relations with the United States. As ambassador to Paris, James Monroe had become so pro-French and so hostile to Jay's Treaty that George Washington had removed him for his indiscretions. France, grown haughty and contemptuous with Napoléon's military conquests, had then refused to accept Monroe's replacement, Charles Cotesworth Pinckney (brother of Thomas Pinckney), and ordered him out of the country.

John Adams immediately acted to restore relations with France in the face of an outcry for war from the “high Federalists,” including Secretary of State Timothy Pickering. Alexander Hamilton agreed with Adams on this point and approved his last-ditch effort for a diplomatic settlement. In 1797 Pinckney returned to Paris with John Marshall (a Virginia Federalist) and Elbridge Gerry (a Massachusetts Republican) for further negotiations. After nagging delays the three commissioners were accosted by three French counterparts (whom Adams labeled X, Y, and Z in his report to Congress), agents of France’s unscrupulous foreign minister, Charles-Maurice de Talleyrand, a past master of the diplomatic shakedown. The French diplomats delicately let it be known that negotiations could begin only if the Americans paid a bribe of \$250,000.

Such bribes were common eighteenth-century diplomatic practice, but Talleyrand’s price was high for a mere promise to negotiate. The answer from the American side, according to the commissioners’ report, was “no, no, not a sixpence.” When the XYZ affair was reported in Congress and the

Conflict with France

public press, the response was translated into the more stirring slogan “Millions for defense but not one cent for tribute.” Thereafter, the expressions of hostility toward France rose in a crescendo and even the most partisan Republicans—with the exception of Thomas Jefferson—were hard put to make any more excuses for the French, and many of them joined the cry for war. Yet President Adams resisted a formal declaration of war; the French would have to bear the onus for that. Congress, however, authorized the capture of armed French ships, suspended commerce with France, and renounced the 1778 Treaty of Alliance, which was already a dead letter.

In 1798 George Logan, a Pennsylvania Quaker and Republican sympathizer, visited Paris at his own expense, hoping to head off war. He did secure the release of some American seamen and won assurances that a new U.S. minister to France (ambassador) would be welcomed. The fruit of his mission, otherwise, was passage of the Logan Act (1799), which still forbids private citizens to negotiate with foreign governments without official authorization.

Amid a nation churning with patriotism and war fever, Adams strengthened American defenses. Militias marched and mobilized, and a navy began to emerge. An American navy had ceased to exist at the end of the Revolution. No armed ships were available when Algerian brigands began to prey on American commerce in 1794. As a result, Congress had authorized the arming of six ships. These were incomplete in 1796, when Washington bought peace with the Algerians, but Congress allowed work on three of them to continue: the *Constitution*, the *United States*, and the *Constellation*, all completed in 1797. In 1798 Congress authorized a Department of the Navy and by the end of the year an undeclared naval war had begun in the West Indies with the French capture of an American schooner.

While the naval war was being fought, Congress, in 1798, authorized a force of 10,000 men to serve three years. Adams called George Washington from retirement to be its commander, and Washington agreed only on condition that Alexander Hamilton be his second in command. Adams relented but resented the slight to his authority as commander in chief. The rift among the Federalists thus widened further.

Peace overtures began to come from the French by the autumn of 1798, before the naval war was fully under way. Adams took it upon himself, without consulting his cabinet, to name the U.S. minister to the Netherlands, William Vans Murray, as special envoy to Paris. The Hamiltonians, infected with a virulent case of war fever, fought the nomination but finally compromised, in the face of Adams’s threat to resign, on a commission of three envoys. After a long delay the men left late in 1799 and arrived in France to find themselves confronting a new government under First Consul Napoléon

Bonaparte. By the Convention of 1800, they won the best terms they could from the triumphant Napoléon. In return for giving up all claims of indemnity for American losses, they got official suspension of the 1778 perpetual alliance with France and an end to the quasi war. The Senate ratified the agreement, contingent upon outright abrogation of the alliance, and it became effective on December 21, 1801.

THE WAR AT HOME The simmering naval conflict with France mirrored a ferocious ideological war at home between Federalists and Republicans. Already-heated partisan politics had begun boiling over during the latter years of Washington's administration. The rhetoric grew so personal and tempers grew so short that opponents commonly resorted to duels. Federalists and Republicans saw each other as traitors to the principles of the American Revolution. Jefferson, for example, decided that Alexander Hamilton, George Washington, John Adams, and other Federalists were suppressing individual liberty in order to promote selfish interests. He adamantly opposed Jay's Treaty because it was pro-British and anti-French, and he was disgusted by the army's suppression of the Whiskey Rebellion.

Such volatile issues forced Americans to take sides, and the Revolutionary generation of leaders, a group that John Adams had called the band of brothers, began to fragment into die-hard factions. Long-standing political friendships disintegrated amid the partisan attacks, and sectional divisions between North and South grew more fractious. Jefferson observed that a "wall of separation" had come to divide the nation's political leaders. "Politics and party hatreds," he told his daughter, "destroy the happiness of every being here."

Jefferson's combative tactics contributed directly to the partisan tensions. He frequently planted rumors about his opponents in the press, wrote anonymous newspaper attacks himself, and asked others to disparage his opponents. As vice president under Adams, he displayed a gracious deviousness. He led the Republican faction opposed to Adams and actively schemed to embarrass him. In 1797 Jefferson secretly hired a rogue journalist, James Callender, to produce a scurrilous pamphlet that described President Adams as a deranged monarchist intent upon naming himself king. By the end of the century, Jefferson had become an ardent advocate of polarized party politics: "I hold it as immoral to pursue a middle line, as between parties of Honest men and Rogues, into which every country has divided."

For his part John Adams refused to align himself completely with the Federalists, preferring instead to mimic George Washington and retain his independence as chief executive. He was too principled and too prickly to toe a party

line. Soon after his election he invited Jefferson to join with him in creating a bipartisan administration. After all, they had worked well together in the Continental Congress and in France, and they harbored great respect for each other. After consulting with James Madison, however, Jefferson refused to accept the new president's offer. Within a year he and Adams were at each other's throats. Adams expressed regret at losing Jefferson as a friend but "felt obliged to look upon him as a man whose mind is warped by prejudice." He had become "a child and the dupe" of the Republican faction in Congress, which was led by James Madison.

The conflict with France only deepened the partisan divide emerging in the young United States. The real purpose of the French crisis all along, the more ardent Republicans suspected, was to provide Federalists with an excuse to put down the domestic opposition. The infamous Alien and Sedition Acts of 1798 lent credence to their suspicions. These and two other acts, passed in the wave of patriotic war fever, limited freedom of speech and the press and the liberty of aliens. Proposed by extreme Federalists in Congress, the acts did not originate with John Adams but had his blessing. Goaded by his wife, Abigail, his primary counselor, Adams signed the controversial statutes and in doing so made the greatest mistake of his presidency. Timothy Pickering, his disloyal secretary of state, claimed that Adams acted without consulting "any member of the government and for a reason truly remarkable—because he knew we should all be opposed to the measure." By succumbing to the partisan hysteria and enacting the vindictive acts, Adams seemed to bear out what Benjamin Franklin had said about him years before: he "means well for his country, is always an honest man, often a wise one, but sometimes and in some things, [is] absolutely out of his senses."

Three of the four repressive acts reflected hostility to foreigners, especially the French and the Irish, a large number of whom had become active Republicans and were suspected of revolutionary intent. The Naturalization Act lengthened from five to fourteen years the residency requirement for citizenship. The Alien Act empowered the president to deport "dangerous" aliens on pain of imprisonment. The Alien Enemies Act authorized the president in time of declared war to expel or imprison enemy aliens at will. Finally, the Sedition Act defined as a high misdemeanor any conspiracy against legal measures of the government, including interference with federal officers and insurrection or rioting. What is more, the law forbade writing, publishing, or speaking anything of "a false, scandalous and malicious" nature against the government or any of its officers.

The Sedition Act was designed to punish Republicans, whom Federalists could scarcely distinguish from French revolutionary radicals and traitors.

To be sure, partisan Republican journalists were resorting to scandalous lies and misrepresentations, but so were Federalists; it was a time when both sides seemed afflicted with paranoia. But the fifteen indictments brought under the act, with ten convictions, were all directed at Republicans.

In the very first case one inebriated Republican was fined \$100 for wishing out loud that the wad of a salute cannon might hit President Adams in his rear. The most conspicuous targets of prosecution were Republican editors and a Republican congressman, Matthew Lyon of Vermont, a rough-and-tumble Irishman who castigated Adams's "continual grasp for power" and "unbounded thirst for ridiculous pomp, foolish adulation, and selfish avarice." Lyon was imprisoned for four months and fined \$1,000, but from his cell he continued to write articles and letters for the Republican papers. The few convictions under the act only created martyrs to the cause of freedom of speech and the press and exposed the vindictiveness of Federalist judges.

Lyon and the others based their defense on the unconstitutionality of the Sedition Act, but Federalist judges dismissed the notion. It ran against the Republican grain, anyway, to have federal courts assume the authority to declare

laws unconstitutional. To offset the “reign of witches” unleashed by the Alien and Sedition Acts, therefore, Jefferson and Madison drafted what came to be known as the Kentucky and Virginia Resolutions. These passed the legislatures of their respective states in 1798, and further Kentucky Resolutions, adopted in 1799, responded to counterresolutions from northern states. These resolutions, much alike in their arguments, denounced the Alien and Sedition Acts as “alarming infractions” of constitutional rights. Since the Constitution arose as a compact among the states, the resolutions argued, the states should decide when Congress had exceeded its powers. The Virginia Resolutions, drafted by Madison, declared that states “have the right and are in duty bound to interpose for arresting the progress of the evil.” The second set of Kentucky Resolutions, in restating the states’ right to judge violations of the Constitution, added, “That a nullification of those sovereignties, of all unauthorized acts done under color of that instrument, is the rightful remedy.”

These doctrines of interposition and nullification, reworked and edited by later theorists, were destined to be used for causes unforeseen by their authors. (Years later Madison would disclaim the doctrine of nullification as developed by John C. Calhoun, but his own doctrine of interposition would resurface as late as the 1950s as a device to oppose racial integration.) At the time, it seems, both men intended the resolutions to serve chiefly as propaganda, the opening guns in the political campaign of 1800. Neither Kentucky nor Virginia took steps to nullify or interpose its authority in the enforcement of the Alien and Sedition Acts. Instead, both called upon the other states to help them win a repeal. In Virginia, citizens talked of armed resistance to the federal government. Jefferson counseled against any thought of violence: it was “not the kind of opposition the American people will permit.” He assured a fellow Virginian that the Federalist “reign of witches” would soon end, that it would be discredited by the arrival of the tax collector more than anything else.

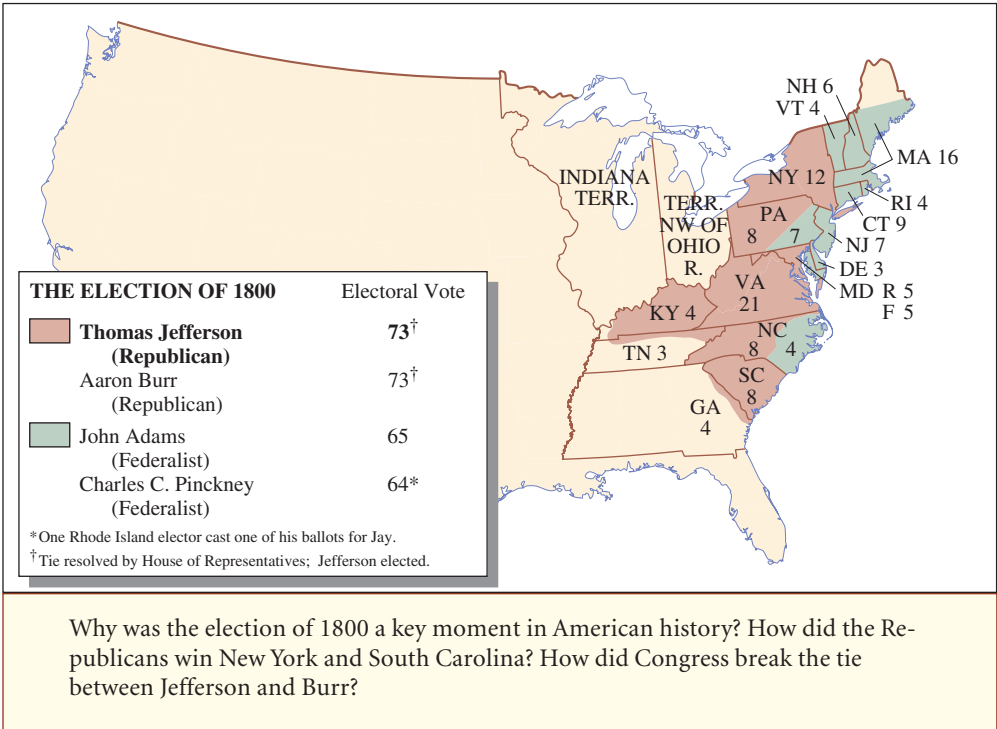

REPUBLICAN VICTORY As the presidential election of 1800 approached, civil unrest boiled over. Grievances were mounting against Federalist policies: taxation to support an unneeded army; the Alien and Sedition Acts, which cast the Federalists as anti-liberty; the lingering fears of “monarchism”; the hostilities aroused by Alexander Hamilton’s economic programs; the suppression of the Whiskey Rebellion; and Jay’s Treaty. When Adams opted for peace with France in 1800, he probably doomed his one chance for reelection—a wave of patriotic war fever with a united party behind him. His decision gained him much goodwill among Americans at large but left the Hamiltonians angry and his party divided. In 1800 the

Federalists summoned enough unity to name as their candidates Adams and Charles Cotesworth Pinckney; they agreed to cast all their electoral votes for both. But the Hamiltonian Federalists continued to snipe at Adams and his policies, and soon after his renomination Adams removed two of them from his cabinet. A furious Hamilton struck back with a pamphlet questioning Adams's fitness to be president, citing his "disgusting egotism." Intended for private distribution among Federalist leaders, the pamphlet reached the hands of New York Republican Aaron Burr, who put it in general circulation.

Jefferson and Burr, as the Republican presidential candidates, once again represented the alliance of Virginia and New York. Jefferson, perhaps even more than Adams, was attacked by Federalists as a supporter of the radical French revolutionaries and an atheist. His election, Americans were warned, would bring civil war—"dwellings in flames, hoary hairs bathed in blood, female chastity violated . . . children writhing on the pike and halberd." Jefferson kept quiet, refused to answer the attacks, and directed the campaign by mail from his home at Monticello. His supporters portrayed him as the farmers' friend, the champion of states' rights, frugal government, liberty, and peace.

Adams proved more popular than his party, whose candidates generally fared worse than the president, but the Republicans edged him out by seventy-three electoral votes to sixty-five. The decisive states were New York and South Carolina, either of which might have given the victory to Adams. But in New York former senator Aaron Burr's organization won control of the legislature, which cast the electoral votes. In South Carolina, Charles Pinckney (cousin of the Federalist Pinckneys) won over the legislature by well-placed promises of Republican patronage. Still, the result was not final, for Jefferson and Burr had tied with seventy-three votes each, and the choice of the president was thrown into the House of Representatives, where Federalist diehards tried vainly to give the election to Burr. This was too much for Hamilton, who opposed Jefferson but held a much lower opinion of Burr. The stalemate in the House continued for thirty-five ballots. The deadlock was broken only when a confidant of Jefferson's assured a Delaware congressman that Jefferson would refrain from the wholesale removal of Federalists appointed to federal offices and would uphold Hamilton's financial policies. The representative resolved to vote for Jefferson, and several other Federalists agreed simply to cast blank ballots, permitting Jefferson to win without any of them having to vote for him.

Before the Federalists relinquished power to the Jeffersonian Republicans on March 4, 1801, their lame-duck Congress passed the Judiciary Act of 1801. Intended to ensure Federalist control of the judicial system, this act provided that the next vacancy on the Supreme Court would not be filled, created sixteen

circuit courts with a new judge for each, and increased the number of attorneys, clerks, and marshals. Before he left office, Adams named John Marshall to the vacant office of chief justice and appointed Federalists to all the new positions, including forty-two justices of the peace for the new District of Columbia. The Federalists, defeated and destined never to regain national power, had in the words of Jefferson “retired into the judiciary as a stronghold.”

The election of 1800 marked a major turning point in American political history. It was the first time that one political party, however ungracefully, relinquished power to the opposition party. Jefferson’s victory signaled the emergence of a new, more democratic political system, dominated by parties, partisanship, and wider public participation—at least among white men. Before and immediately after independence, politics was popular but not democratic: people took a keen interest in public affairs, but socially prominent families, the “rich, the able, and the wellborn,” dominated political life. However, the fierce political battles of the late 1790s, culminating in 1800 with Jefferson’s election as the nation’s third president, wrested control of politics from the governing elite and established the right of more people to play an active role in

governing the young republic. With the gradual elimination of property qualifications for voting and the proliferation of newspapers, pamphlets, and other publications, the “public sphere” in which political issues were debated and decided expanded enormously in the early nineteenth century.

The Republican victory in 1800 also marked the political triumph of the slaveholding South. Three Virginia slaveholders—Thomas Jefferson, James Madison, and James Monroe—would control the White House for the next twenty-four years. While Republicans celebrated democracy, they also prospered because of slavery. The tensions between republican ideals and plantation slavery would eventually lead to civil war.

John Adams regretted the democratization of politics and the rise of fractious partisanship. “Jefferson had a party, Hamilton had a party, but the commonwealth had none,” he sighed. The defeated president was so distraught at the turn of events that he decided not to participate in Jefferson’s inauguration in Washington, D.C. Instead, he boarded a stagecoach for the 500-mile trip to his home in Quincy, Massachusetts. He and Jefferson would not communicate for the next twelve years. As Adams returned to work on his Massachusetts farm, he reported that he had exchanged “honors and virtue for manure.” He told his son John Quincy, who would become president himself, that the American president “has a hard, laborious, and unhappy life.”

MAKING CONNECTIONS

- Thomas Jefferson’s Republican philosophy offered a strong alternative to Alexander Hamilton’s Federalism. As the next chapter shows, however, once the Republicans got into power, they adopted several Federalist principles and positions.
- The Bank of the United States and the protective tariff continued to be controversial. The bank’s charter was renewed for another twenty years in 1816, the same year in which the first truly protective tariff was passed (Chapter 10), but in the 1830s the bank was eliminated, and the tariff became a major source of sectional conflict (Chapter 11).
- The foreign-policy crises with England and France described in this chapter will lead to the War of 1812, discussed in Chapter 9.

THE EARLY REPUBLIC

FOCUS QUESTIONS

- What were the domestic policies of the Republicans once they were in power?
- How did politics divide the early republic?
- What were the causes and effects of the War of 1812?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

The early years of the new republic laid the foundation for the nation's development as the first society in the world organized by the principle of democratic capitalism and its promise of equal opportunity for all—except slaves, Indians, and women. White American men in the fifty years after independence were on the move and on the make. Their prospects seemed unlimited, their optimism unrestrained. As John Adams observed, “There is no people on earth so ambitious as the people of America . . . because the lowest can aspire as freely as the highest.”

Land sales west of the Appalachian Mountains soared in the early nineteenth century as aspiring farmers shoved Indians aside in order to establish homesteads of their own. Enterprising, mobile, and increasingly diverse in religion and national origin, tens of thousands of ordinary folk uprooted themselves from settled communities and went in search of personal advancement, occupying more territory in a single generation than had been

settled in the 150 years of colonial history. “Never again,” as the historian Joyce Appleby wrote, “would so large a portion of the nation live in new settlements.” Between 1800 and 1820 the trans-Appalachian population soared from 300,000 to 2 million. By 1840, over 40 percent of Americans lived west of the mountains in eight new states.

The migrants flowed westward in three streams between 1780 and 1830. One ran from the Old South—Virginia, Maryland, and the Carolinas—through Georgia into the newer states of Alabama and Mississippi. Another wave traversed the Blue Ridge Mountains from Maryland and Virginia, crossing into Kentucky and Tennessee. The third route was in the North, taking New Englanders westward across the Berkshires into New York, Pennsylvania, Ohio, and Michigan. Many of the pioneers stayed only a few years before continuing westward in search of cheaper and more fertile land.

The spirit of opportunistic independence affected free African Americans as well as whites, Indians as well as immigrants. Free blacks were the fastest growing segment of the population during the early nineteenth century. Many enslaved Americans had gained their freedom during the Revolutionary War by escaping, by joining the British forces, or by serving in American units. Every state except South Carolina promised freedom to slaves who fought the British. Afterward, state after state in the North outlawed slavery, and anti-slavery societies blossomed, exerting increasing pressure on the South to end the degrading practice. The westward migration of whites brought incessant conflict with Native Americans. Indians fiercely resisted but ultimately succumbed to a federal government and a federal army determined to displace them.

Most white Americans, however, were less concerned about Indians and slavery than they were about seizing their own opportunities. Politicians sought to suppress the volatile issue of slavery rather than confront it; their priorities were elsewhere. Westward expansion, economic growth, urban development, and the democratization of politics fostered a pervasive entrepreneurial spirit among the generation of Americans born after 1776—especially outside the South. In 1790 nine out of ten Americans lived on the land and engaged in what is called household production; their sphere of activity was local. But with each passing year, farmers increasingly focused on producing surplus crops and livestock to be sold in regional markets. Cotton prices soared, and in the process the Deep South grew ever more committed to a plantation economy dependent upon slave labor, New England merchants, and world markets. The burgeoning market economy produced boom-and-bust cycles, but overall the years from 1790 to 1830 were quite prosperous, with young Americans experiencing a “widening scope of opportunity.”

The colonial economy had been organized according to what Great Britain wanted from its New World possessions. This dependency brought the hated imperial restrictions on manufacturing, commerce, and shipping. With independence, however, Americans could create new industries, pursue new careers, and exploit new markets. It was not simply Alexander Hamilton's financial initiatives and the actions of wealthy investors and speculators that sparked America's dramatic commercial growth in these years. It was also the efforts of ordinary men and women who were willing to take risks, uproot families, use unstable paper money issued by unregulated local banks, purchase factory-made goods, and tinker with new machines and tools. Free enterprise was the keynote of the era.

While most Americans continued to work as farmers, a growing number of young adults found employment in new or greatly expanded enterprises: textiles, banking, transportation, publishing, retailing, teaching, preaching, medicine, law, construction, and engineering. Technological innovations (steam power, power tools, and new modes of transportation) and their social applications (mass communication, turnpikes, the postal service, banks, and corporations) fostered an array of new industries and businesses. The emergence of a factory system transformed the nature of work for many Americans. Proud apprentices, journeymen, and master craftsmen, who controlled their labor and invested their work with an emphasis on quality rather than quantity, resented the proliferation of mills and factories populated by "half-trained" workers dependent upon an hourly wage and subject to the sharp fluctuations of the larger economy.

The decentralized agrarian republic of 1776, nestled along the Atlantic seaboard, had become by 1830 a sprawling commercial nation connected by networks of roads and canals and cemented by economic relationships—all animated by a restless spirit of enterprise, experimentation, and expansion.

JEFFERSONIAN SIMPLICITY

On March 4, 1801, the fifty-seven-year-old Thomas Jefferson, tall and thin, with red hair and a ruddy complexion, became the first president to be inaugurated in the new federal city, Washington, District of Columbia. The city was still a motley array of buildings around two centers, Capitol Hill and the executive mansion. Congress, having met in eight towns and cities since 1774, had at last found a permanent home but enjoyed few amenities. There were only two places of amusement, one a racetrack, the other a theater thick with "tobacco smoke, whiskey breaths, and other stench."

The New Federal City

Plan of Washington, D.C., from 1792.

Jefferson's informal inauguration befitted the primitive surroundings. The new president left his lodgings and walked down a stump-strewn Pennsylvania Avenue to the unfinished Capitol. He entered the Senate chamber, took the oath administered by Chief Justice John Marshall, read his inaugural address in a barely audible voice, and returned to his boardinghouse for dinner. A tone of simplicity and conciliation ran through his inaugural speech. The campaign between Federalists and Republicans had been so fierce that some had predicted civil war. Jefferson appealed for unity. "We are all Republicans—we are all Federalists. If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it." Jefferson concluded with a summary of the "essential principles" that would guide his administration: "Equal and exact justice to all men . . . ; peace, commerce, and honest friendship with all nations, entangling alliances with none . . . ; freedom of religion; freedom of the press; and freedom of person, under the protection of the habeas corpus; and trial by juries impartially selected. . . . The

wisdom of our sages and the blood of our heroes have been devoted to their attainment.”

JEFFERSON IN OFFICE

The deliberate display of republican simplicity at Jefferson’s inauguration set the style of his administration. Although a man of expensive personal tastes, he took pains to avoid the occasions of pomp and circumstance that had characterized the Federalist administrations and to his mind suggested the trappings of monarchy. Presidential messages went to Congress in writing lest they resemble the parliamentary speech from the throne. The practice also allowed Jefferson, a notoriously bad public speaker, to exploit his skill as a superb writer.

Jefferson liked to think of his election as the “revolution of 1800,” but the electoral margin had been razor thin, and the policies that he followed were more conciliatory than revolutionary. His overwhelming reelection in 1804 attests to the popularity of his philosophy. Jefferson placed in policy-making positions men of his own party, and he was the first president to pursue the role of party leader, cultivating congressional support at his dinner parties and elsewhere. In the cabinet the leading figures were Secretary of State James Madison, a longtime neighbor and political ally, and Secretary of the Treasury Albert Gallatin, a Swiss-born Pennsylvania Republican whose

financial skills had won him the respect of the Federalists. In an effort to cultivate Federalist New England, Jefferson chose men from that region for the positions of attorney general, secretary of war, and postmaster general.

In lesser offices, however, Jefferson often succumbed to pressure from the Republicans to remove Federalists. In one area he removed the offices rather than the appointees. In 1802 Congress repealed the Judiciary Act of 1801 and so abolished the circuit judgeships and other offices to which John Adams had made his “midnight appointments.” A new judiciary act restored to six the number of Supreme Court justices and set up six circuit courts, each headed by a justice.

MARBURY V. MADISON The “midnight appointments” that John Adams made just before leaving office sparked the pathbreaking case of *Marbury v. Madison* (1803), the first in which the Supreme Court declared a federal law unconstitutional. The case involved the appointment of the Maryland Federalist William Marbury as justice of the peace in the District of Columbia. Marbury’s letter of appointment, or commission, signed by President Adams two days before he left office, was still undelivered when Madison took office as secretary of state, and Jefferson directed him to withhold it. Marbury then sued for a court order (a writ of mandamus) directing Madison to deliver his commission.

The Court’s unanimous opinion, written by Chief Justice John Marshall, a brilliant Virginian, held that Marbury deserved his commission but then denied that the Court had jurisdiction in the case. Section 13 of the Federal Judiciary Act of 1789, which gave the Court original jurisdiction in mandamus proceedings, was unconstitutional, the Court ruled, because the Constitution specified that the Court should have original jurisdiction only in cases involving ambassadors or states. The Court, therefore, could issue no order in the case. With one bold stroke the Federalist Marshall had chastised the Jeffersonians while avoiding an awkward confrontation with an administration that might have defied his order. At the same time he established the stunning precedent of the Court’s declaring a federal law invalid on the grounds that it violated provisions of the Constitution. Marshall stressed that it “is emphatically the province and duty of the judicial department to say what the law is.” In other words, the Supreme Court was assuming the right of judicial review, meaning that it would decide whether acts of Congress were constitutional. So even though Marbury never gained his judgeship, Marshall established the Supreme Court as the final judge of constitutional interpretation. Since the Marbury decision the Court has struck down over 150 acts of Congress and over 1,100 acts of state legislatures.

The Court's decision, about which Jefferson could do nothing, confirmed his fear of the judges' partisanship, and he resolved to counter the Federalist influence. In 1804 Republicans used the impeachment power against two of the most partisan Federalist judges and succeeded in ousting one of them, District Judge John Pickering of New Hampshire. Pickering was clearly insane, which was not a "high crime or misdemeanor," but he was also given to profane and drunken harangues from the bench, which the Senate quickly decided was an impeachable offense.

DOMESTIC REFORMS Jefferson's first term was a succession of triumphs in both domestic and foreign affairs. The president did not set out to dismantle Alexander Hamilton's economic program. Under the tutelage of Treasury Secretary Gallatin, he learned to accept the national bank as an essential convenience, and he did not endorse the bank's repeal, which more dogmatic Republicans promoted. It was too late, of course, to undo Hamilton's funding and debt-assumption operations but none too soon, in the opinion of both Jefferson and Gallatin, to begin retiring the resultant federal debt. Jefferson detested Hamilton's belief that a regulated federal debt was a national "blessing" because it gave the bankers and investors who lent money to the U.S. government a direct stake in the success of the new republic. Jefferson believed that a large federal debt would bring only high taxes and government corruption, so he set about reducing government expenses and paying down the debt. At the same time he won the repeal of the whiskey tax and other Federalist excises, much to the relief of backwoods distillers, drinkers, and grain farmers.

Without income from the excise taxes, frugality was all the more necessary to a federal government dependent chiefly upon tariffs and the sale of western lands for its revenue. Happily for the Treasury, both sources of income flourished. The European war continually increased American shipping traffic, and thus tariff revenues padded the federal Treasury. At the same time, settlers flocked to western land they purchased from the government. Ohio's admission to the Union in 1803 increased to seventeen the number of states.

By the "wise and frugal government" the president promised in his inaugural address, Jefferson and Gallatin reasoned, the United States could live within its income, like a prudent farmer. The basic formula was simple: cut back military expenses. A standing army menaced a free society anyway, Jefferson believed. It therefore should be kept to a minimum and the national defense left, in Jefferson's words, to "a well-disciplined militia, our best reliance in peace, and for the first moments of war, till regulars may relieve them." The navy, which the Federalists had already reduced, ought to be

Cincinnati in 1800

Though its population was only about 750, its inhabitants were already promoting Cincinnati as “the metropolis of the NorthWestern Territory.”

reduced further. Coastal defense, Jefferson argued, should rely upon land-based fortifications and a “mosquito fleet” of small gunboats.

In 1807 Jeffersonian reforms culminated in an act that outlawed the foreign slave trade as of January 1, 1808, the earliest date possible under the Constitution. At the time, South Carolina was the only state that still permitted the trade, having reopened it in 1803. But for years to come, an illegal traffic would continue. By one informal estimate perhaps 300,000 enslaved blacks were smuggled into the United States between 1808 and 1861.

THE BARBARY PIRATES Issues of foreign relations intruded upon Jefferson early in his term, when events in the Mediterranean gave him second thoughts about the need for a navy. On the Barbary Coast of North Africa, the rulers of Morocco, Algiers, Tunis, and Tripoli had for years practiced piracy and extortion. After the Revolution, American shipping in the Mediterranean became fair game, no longer protected by British payments of tribute. The new U.S. government yielded up protection money too, first to Morocco in 1786, then to the others in the 1790s. In 1801, however, the pasha of Tripoli upped his demands and declared war on the United States by the symbolic gesture of chopping down the flagpole at the U.S. consulate. Jefferson sent warships to blockade Tripoli.

A wearisome war dragged on until 1805, punctuated in 1804 by the notable exploit of Lieutenant Stephen Decatur, who slipped in to Tripoli harbor by night and set fire to the frigate *Philadelphia*, which had been captured

(along with its crew) after it ran aground. The pasha finally settled for a \$60,000 ransom and released the *Philadelphia's* crew, whom he had held hostage for more than a year. It was still tribute, but less than the \$300,000 the pasha had demanded at first and much less than the cost of war.

THE LOUISIANA PURCHASE While the conflict with the Barbary pirates continued, events elsewhere led to the greatest single achievement of the Jefferson administration. The Louisiana Purchase of 1803 more than doubled the territory of the United States. It included the entire Mississippi River valley west of the river itself. Louisiana, settled by the French, had been ceded to Spain by victorious Great Britain in 1763 in exchange for West Florida. Since that time the dream of retaking Louisiana had stirred the French. In 1800 Napoléon had secured its return to France. When word of the deal between Spain and France reached Washington in 1801, Jefferson hastened the New Yorker Robert R. Livingston, the new U.S. minister to France, on his way to Paris. Spain in control of the Mississippi River outlet was bad enough, but Napoléon in control could only mean serious trouble. “The day that France takes possession of New Orleans,” Jefferson wrote Livingston, “we must marry ourselves to the British fleet and nation,” an unhappy prospect for the French-loving Jefferson.

Negotiations with the French dragged into 1803 while Spanish forces remained in control in Louisiana, awaiting the arrival of the French. Early that year, Jefferson sent his trusted Virginia friend James Monroe to assist Livingston in Paris. But no sooner had Monroe arrived than Napoléon's foreign minister, Talleyrand, surprised Livingston by asking if the United States would like to buy the whole of the Louisiana Territory. Livingston, once he regained his composure, snapped up the offer.

Disease again played an important role in shaping history. Napoléon was willing to sell the territory because his French army in Haiti had been decimated not only by a slave revolt but also by yellow fever. Concerned about financing another round of warfare in Europe, Napoléon decided to cut French losses in the New World by selling the North American property.

By the treaty of cession, dated April 30, 1803, the United States obtained the Louisiana Territory for about \$15 million. The treaty was vague in defining the precise boundaries of the territory stretching from the Mississippi River to the Rocky Mountains. When Livingston asked about the boundaries, Talleyrand responded: “I can give you no direction. You have made a noble bargain for yourselves, and I suppose you will make the most of it.”

The surprising turn of events had presented Jefferson with a “noble bargain,” a great new “empire of liberty,” but also with a constitutional dilemma.

Nowhere did the Constitution mention the purchase of territory. Jefferson at first suggested a constitutional amendment, but his advisers argued against delay lest Napoléon change his mind. The power to purchase territory, they reasoned, resided in the power to make treaties. Jefferson relented, trusting, he said, “that the good sense of our country will correct the evil of loose construction when it shall produce ill effects.” New England Federalists boggled at the prospect of new western states that would probably strengthen the Jeffersonian party. They aimed their fire at a proviso in the treaty that the inhabitants be “incorporated in the Union” as citizens. In a reversal that anticipated many more reversals on constitutional issues, Federalists found themselves arguing for strict construction of the Constitution while Republicans brushed aside their scruples in favor of implied power. Gaining over 800,000 square miles trumped any legal reservations.

The Senate ratified the treaty by an overwhelming vote of twenty-six to six, and on December 20, 1803, U.S. officials took formal possession of the sprawling Louisiana Territory. For the time being the Spanish kept West Florida, but within a decade that area would be ripe for the plucking. In 1808 Napoléon put his brother on the throne of Spain. With the Spanish colonial administration in disarray, American settlers in 1810 staged a rebellion in Baton Rouge and proclaimed the republic of West Florida, which was quickly annexed and occupied by the United States as far east as the Pearl River. In 1812, upon becoming the Union’s eighteenth state, Louisiana absorbed the region, still known as the Florida parishes. In 1813, with Spain itself a battlefield for French and British forces, Americans took over the rest of West Florida, the Gulf coast of the future states of Mississippi and Alabama. Legally, the U.S. government has claimed ever since, all these areas were included in the Louisiana Purchase.

LEWIS AND CLARK As an amateur scientist long before he became president, Thomas Jefferson wished to nourish his curiosity about the vast region west of the Mississippi River, its geography, its flora and fauna, and its prospects for trade and agriculture. Thus in 1803 he asked Congress to finance a mapping and scientific expedition to the far Northwest, beyond the Mississippi River, in what was still foreign territory. Congress approved, and Jefferson assigned as commanders the twenty-nine-year-old Meriwether Lewis, his former private secretary, and another Virginian, a former army officer, William Clark.

In 1804 the “Corps of Discovery,” numbering nearly fifty, set out from the small village of St. Louis to ascend the muddy Missouri River. Forced to live off the land, they quickly adapted to the new environment. Local Indians

How did the United States acquire the Louisiana Purchase? What was the mission of Lewis and Clark's expedition? What were the consequences of Lewis and Clark's reports about the Western territory?

introduced them to clothes made from deer hides and taught them hunting techniques. Lewis and Clark kept detailed journals of their travels and drew maps of the unexplored regions. As they moved up the Missouri, the landscape changed from forest to prairie grass. They saw huge herds of bison and other animals, which had become more abundant after a smallpox epidemic had wiped out most of the Indian villages in the area. They passed trappers and traders headed south with rafts and boats laden with furs. Six months after leaving St. Louis, near the Mandan Sioux villages in what would become North Dakota, they built Fort Mandan and wintered in relative comfort,

sending downriver a barge loaded with maps, soil samples, and live specimens such as the prairie dog and the magpie, previously unknown in America.

In the spring, Lewis and Clark added to their main party a remarkable Shoshone woman named Sacagawea, who proved an enormous help as an interpreter of Indian languages, and the group set out westward into uncharted territory. At the head of the Missouri River, they took the north fork, which they named the Jefferson River, crossed the Rocky Mountains at Lemhi Pass, and in dugout canoes descended the Snake and Columbia rivers to the Pacific. Near the future site of Astoria, Oregon, at the mouth of the Columbia, they built Fort Clatsop, in which they spent the winter. The following spring they split into two parties, with Lewis heading back by almost the same route and Clark going by way of the Yellowstone River. They rejoined at the juncture of the Missouri and Yellowstone rivers, returning together to St. Louis in 1806, having been gone nearly two and a half years. Along the way they had been chased by grizzly bears, attacked and aided by Indians, buffeted by blizzards and illness, and forced by starvation to eat their own horses. "I have been wet and as cold in every part as I ever was in my life," William Clark wrote in his journal. "Indeed I was at one time fearful my feet would freeze in the thin moccasins which I wore." But the intrepid discoverers had, in their own words, "proceeded on" day after day against the odds.

Exploring the Far Northwest

Captain Clark and his men shooting bears, from a book of engravings of the Lewis and Clark expedition (ca. 1810).

No longer was the far West unknown country. It would be nearly a century before a good edition of the *Journals of the Lewis and Clark Expedition* appeared in print; many of the explorers' findings came out piecemeal, however, including an influential map in 1814. Their reports of friendly Indians and abundant beaver pelts quickly attracted traders and trappers to the region and gave the United States a claim to the Oregon Country by right of discovery and exploration.

POLITICAL SCHEMES Jefferson's policies, including the Louisiana Purchase, brought him solid support in the South and the West. Even New Englanders were moving to his side. By 1809 John Quincy Adams, the son of the second president, would become a Republican! Federalists read the handwriting on the wall. The acquisition of a vast new empire in the West would reduce New England and the Federalist party to insignificance in political affairs. Under the leadership of Thomas Pickering, secretary of state under Washington and Adams and now a U.S. senator, a group of ardent Massachusetts Federalists called the Essex Junto considered seceding from the Union, an idea that would simmer in New England circles for another decade.

Federalists also hatched a scheme to link New York with New England and consequently contacted Vice President Aaron Burr, who had been on the outs with the Jeffersonians. Their plan, which depended upon Burr's election as governor of New York, could not win the support of even the extreme Federalists: Alexander Hamilton bitterly opposed it on the grounds that Burr was "a dangerous man, and one who ought not to be trusted with the reins of government."

Those remarks led to Hamilton's famous duel with Burr, in July 1804 at Weehawken, New Jersey. Hamilton personally opposed dueling, but his romantic streak and sense of honor compelled him to meet the vice president's challenge and demonstrate his courage—he was determined not to fire at his opponent. Burr had no such scruples. On a grassy ledge about the Hudson River, he shot Hamilton through the heart. Hamilton went to his death, as his son had gone to his in a similar affair, also settled in Weehawken, the previous year. Hamilton's death ended both Pickering's scheme and Burr's political career—but not Burr's intrigues.

Burr would lose the gubernatorial election. In the meantime the presidential campaign of 1804 began when a congressional caucus of Republicans renominated Jefferson and chose the New Yorker George Clinton for vice president. (By then, to avoid the problems associated with parties running multiple candidates for the presidency, Congress had passed, and the states would soon ratify, the Twelfth Amendment, providing that electors use separate ballots to vote for

the president and vice president.) Opposed by the Federalists Charles C. Pinckney and Rufus King, Jefferson and Clinton won 162 of the 176 electoral votes. It was the first landslide election in American history. Jefferson's policy of conciliation had made him a national rather than a sectional candidate.

DIVISIONS IN THE REPUBLICAN PARTY

JOHN RANDOLPH AND THE OLD REPUBLICANS Freed from a strong opposition—Federalists made up only one quarter of the new Congress—the Republican majority began to fragment. The Virginian John Randolph—known as John Randolph of Roanoke—initially a loyal Jeffersonian, became the most conspicuous of the dissidents. He was a powerful combination of principle, eccentricity, and rancor. Famous for his venomous assaults delivered in a shrill soprano, the colorful congressman strutted about the House floor with a whip in his hand, a symbol of his relish for contrarian positions. Few colleagues had the stomach for his tongue-lashings.

Randolph became the crusty spokesman for a shifting group of “old Republicans,” whose adherence to party principles had rendered them more Jeffersonian than Jefferson himself. The Old Republicans were mostly southerners who defended states' rights and strict construction of the Constitution. They opposed any compromise with the Federalists and promoted an agrarian way of life. The Jeffersonian, or moderate, Republicans tended to be more pragmatic and nationalist in their orientation. As Thomas Jefferson himself demonstrated, they were willing to go along with tariffs and national banks.

THE BURR CONSPIRACY Sheer brilliance and opportunism had carried Aaron Burr to the vice presidency in 1800. He might easily have become Jefferson's heir apparent, but a taste for intrigue was the tragic flaw in his character. Caught up in the dubious schemes of Federalist diehards in 1800 and again in 1804, he ended his political career for good when he killed Alexander Hamilton. Indicted for murder and heavily in debt, the vice president fled to Spanish-held Florida. Once the furor subsided, he boldly returned to Washington to preside over the Senate. As long as he stayed out of New York and New Jersey, he was safe.

But Burr focused his attention less on the Senate than on a cockeyed scheme to carve out a personal empire for himself in the West. What came to be known as the Burr conspiracy was hatched when Burr met with General James Wilkinson. Just what Wilkinson and Burr were up to may never be known. The most likely explanation is that they conspired to get the Louisiana Territory

Aaron Burr

Burr graduated from what is now Princeton University, where he changed his course of study from theology to law.

to secede and set up an independent republic. Earlier Burr had solicited British support for his scheme to separate “the western part of the United States in its whole extent.”

Whatever the goal, Burr learned in early 1807 that Jefferson had ordered his arrest. He tried to flee to Florida but was caught and taken to Richmond, Virginia. Charged with treason, Burr was brought for trial before Chief Justice John Marshall. The case revealed both Marshall and Jefferson at their partisan worst, and it established two major constitutional precedents. First, Jefferson ignored a subpoena requiring him to appear in court with certain papers in his possession. He refused, as had George Washington, to submit papers to Congress on the

grounds that the independence of the executive branch would be compromised if the president were subject to a court writ. The second major precedent was Marshall’s rigid definition of treason. Treason under the Constitution, Marshall wrote, consists of “levying war against the United States or adhering to their enemies” and requires “two witnesses to the same overt act” for conviction. Since the prosecution failed to produce two witnesses to an overt act of treason by Burr, the jury found him not guilty.

Whether or not Burr escaped his just deserts, Marshall’s strict construction of the Constitution protected the United States, as its framers clearly intended, from the capricious judgments of “treason” that governments through the centuries have used to terrorize dissenters. As for Burr, with further charges pending, he skipped bail and took refuge in France but returned unmolested in 1812 to practice law in New York. He survived to a virile old age. At age seventy-eight, shortly before his death in 1836, he was divorced on grounds of adultery.

WAR IN EUROPE

Oppositionists of whatever stripe were more an annoyance than a threat to Jefferson. The more intractable problems of his second term

involved the renewal of the European war in 1803, which helped resolve the problem of Louisiana but put more strains on Jefferson's desire to avoid "entangling alliances" and the quarrels of Europe. In 1805 Napoléon's crushing defeat of Russian and Austrian forces at Austerlitz left him in control of western Europe. The same year, Britain's defeat of the French and Spanish fleets in the Battle of Trafalgar secured control of the seas. The war devolved into a battle of elephant and whale, Napoléon dominant on land, the British dominant on the water, neither able to strike a decisive blow at the other, and neither restrained by concerns over neutral rights or international law.

HARASSMENT BY BRITAIN AND FRANCE For two years after the renewal of European warfare, American shippers reaped the benefits, taking over trade with the French and Spanish West Indies. But in the case of the *Essex* (1805), a British court ruled that the practice of shipping French and Spanish goods through U.S. ports on their way elsewhere did not neutralize enemy goods. The practice violated the British rule of 1756, under which trade closed in time of peace remained closed in time of war. Goods shipped in violation of the rule, the British held, were liable to seizure at any point under the doctrine of continuous voyage. In 1807 the commercial provisions of Jay's Treaty expired, and James Monroe, the U.S. minister to Great Britain, failed to get a renewal satisfactory to Jefferson. After that the British interference with American shipping increased, not just to keep supplies from Napoléon's continent but also to hobble competition with British merchant ships.

In a series of orders in council adopted in 1806 and 1807, the British government set up a "paper blockade" of Europe that barred all trade between England and continental Europe. Moreover, vessels headed for European ports were required to get British licenses and were subject to British inspection. It was a paper blockade because even the powerful British navy was not large enough to monitor every European port. Napoléon retaliated with his "Continental System," proclaimed in the Berlin Decree of 1806 and the Milan Decree of 1807. In the Berlin Decree he declared his own paper blockade of the British Isles and barred British ships from ports under French control. In the Milan Decree he ruled that neutral ships that complied with British regulations were subject to seizure when they reached Continental ports. The situation presented American shippers with a dilemma: if they complied with the demands of one side, they were subject to seizure by the other.

The risks were daunting, but the prospects for profits were so great that American shippers ran the risk. For seamen the danger was heightened by a

renewal of the practice of impressment. The use of pressgangs to kidnap men in British (and colonial) ports was a long-standing method of recruitment used by the British navy. The seizure of British subjects from American vessels became a new source of recruits, justified on the principle that British citizens remained British subjects for life: “Once an Englishman, always an Englishman.” Mistakes might be made, of course, since it was sometimes hard to distinguish British subjects from Americans; indeed, a flourishing trade in fake citizenship papers arose in American ports. Impressment was mostly confined

to merchant vessels, but on at least two occasions before 1807 vessels of the U.S. Navy had been stopped on the high seas and seamen removed.

In the summer of 1807, the British frigate *Leopard* accosted a U.S. naval vessel, the frigate *Chesapeake*, just outside territorial waters off Norfolk, Virginia. After the *Chesapeake*’s captain refused to be searched, the *Leopard* opened fire, killing three Americans and wounding eighteen. The *Chesapeake*, unready for battle, was forced to strike its colors. A British search party seized four men, one of whom was later hanged for desertion from the British navy. Soon after the *Chesapeake* limped back into Norfolk, the *Washington Federalist* editorialized: “We have never, on any occasion, witnessed . . . such a thirst for revenge.” Public wrath was so aroused that Jefferson could have had a war on the spot. Had Congress been in session, he might have been forced into one. But Jefferson, like John Adams before him, resisted war fever—and suffered politically as a result. One Federalist called him a “dish of skim milk curdling at the head of our nation.”

Preparation for War to Defend Commerce

In 1806 and 1807 American shipping was caught in the crossfire of the war between Britain and France.

THE EMBARGO Jefferson resolved to use public indignation at the British to promote “peaceable coercion.” In 1807, in response to his request, Congress passed the Embargo Act, which stopped all exports of American

goods and prohibited American ships from leaving for foreign ports. The constitutional basis of the embargo was the power to regulate commerce, which in this case Republicans interpreted broadly as the power to prohibit commerce.

Jefferson's embargo failed from the beginning, however, because few Americans were willing to make the necessary sacrifices. The idealistic spirit that had made economic pressures effective in the pre-Revolutionary crises was lacking. Illegal trade with Britain and France remained profitable despite the risks, and violation of Jefferson's embargo was almost laughably easy. While American ships sat idle in ports, their crews laid off and unpaid, smugglers flourished and the British enjoyed a near monopoly of legitimate trade. As it turned out, France was little hurt by the embargo. The lack of American cotton hurt some British manufacturers and workers, but they carried little weight with the government, and British shippers benefited. With American ports closed, they found a new trade in Latin American ports thrown open by the colonial authorities when Napoléon occupied the mother countries of Spain and Portugal.

American resistance to the embargo revived the Federalist party in New England, which renewed the charge that Jefferson was in league with the French. At the same time, farmers in the South and West suffered for want of foreign outlets for their grain, cotton, and tobacco. After fifteen months of

The Election of 1808

This 1807 Federalist cartoon compares Washington and Jefferson. Washington (left) is flanked by the British lion and the American eagle, while Jefferson (right) is flanked by a snake and a lizard. Below Jefferson are volumes by French philosophers.

ineffectiveness, Jefferson accepted failure and repealed the embargo in 1809, shortly before he relinquished the “splendid misery” of the presidency.

In the election of 1808 the presidential succession passed to another Virginian, Secretary of State James Madison. George Clinton was again the candidate for vice president. The Federalists, backing Charles C. Pinckney of South Carolina and Rufus King of New York, revived enough as a result of the embargo to win 47 electoral votes to Madison’s 122.

THE DRIFT TO WAR From the beginning, James Madison’s presidency was entangled in foreign affairs. Still insisting on neutral rights and freedom of the seas, Madison pursued Jefferson’s policy of “peaceable coercion” by different but no more effective means. In place of the embargo, Congress had substituted the Nonintercourse Act, which reopened trade with all countries except France and Great Britain and authorized the president to reopen trade with whichever of these gave up its restrictions. The British minister in Washington, David Erskine, assured Madison’s secretary of state that Britain would revoke its restrictions in 1809. With that assurance, Madison reopened trade with Britain, but Erskine had acted on his own, and the foreign secretary, repudiating his action, recalled him. Nonintercourse resumed, but it proved as ineffective as the embargo. In the vain search for an alternative, Congress in 1810 reversed itself and adopted a measure introduced by Nathaniel Macon of North Carolina, Macon’s bill number 2, which reopened trade with the warring powers but provided that if either dropped its restrictions, nonintercourse would be restored with the other.

This time, Napoléon took a turn at trying to bamboozle Madison. Napoléon’s foreign minister, the duke de Cadore, informed the U.S. minister in Paris that he had withdrawn the Berlin and Milan Decrees, but the carefully worded Cadore letter had strings attached: revocation of the decrees depended upon withdrawal of the British orders in council. The strings were plain to see, but Madison either misunderstood or, more likely, went along in the hope of putting pressure on the British. The British initially refused to give in, and on June 1, 1812, Madison reluctantly asked Congress to declare war. On June 16, 1812, however, the British foreign minister, facing economic crisis, announced revocation of the orders in council. Britain preferred not to risk war with the United States on top of its war with Napoléon. But on June 18, 1812, not having heard of the British actions, Congress concurred with Madison’s request. With more time, with more patience, or with a transatlantic cable, Madison’s policy would have been vindicated without resort to war.

THE WAR OF 1812

CAUSES The main cause of the war—the demand for neutral shipping rights—seems clear enough. Neutral rights dominated Madison’s war message and provided the salient reason for a mounting hostility toward the British. Yet the geographic distribution of the congressional vote for war raises a troubling question. The preponderance of the vote came from members of Congress representing the farm regions from Pennsylvania southward and westward. The maritime states of New York and New England, the region that bore the brunt of British attacks on U.S. trade, voted against the declaration of war. One explanation for this seeming anomaly is simple enough. The farming regions suffered damage to their markets for grain, cotton, and tobacco while New England shippers made profits from smuggling in spite of the British restrictions.

Other plausible explanations for the sectional vote, however, include frontier Indian attacks that were blamed on the British, western land hunger, and the desire for new land in Canada and the Floridas. Indian troubles were endemic to a rapidly expanding West. Land-hungry settlers and speculators kept moving out ahead of government surveys and sales in search of fertile acres. The constant pressure to open new lands repeatedly forced or persuaded Indians to sign treaties they did not always understand, causing stronger resentment among tribes that were losing more and more of their land. It was an old story, dating from the Jamestown settlement, but one that took a new turn with the rise of two Shawnee leaders, Tecumseh and his twin brother, Tenskwatawa, “the Prophet.”

Tecumseh saw with blazing clarity the consequences of Indian disunity. From his base on the Tippecanoe River in northern Indiana, he traveled from Canada to the Gulf of Mexico in an effort to form a confederation of tribes to defend Indian hunting grounds,

Tecumseh

The Shawnee leader who tried to unite Indian tribes in defense of their land. He was killed in 1813 at the Battle of the Thames.

insisting that no land cession was valid without the consent of all tribes, since they held the land in common. His brother supplied the inspiration of a religious revival, calling upon Indians to worship the “Master of Life,” resist the white man’s liquor, and lead a simple life within their means. By 1811 Tecumseh had matured his plans and headed south to win the Creeks, Cherokees, Choctaws, and Chickasaws to his cause.

William Henry Harrison, the governor of the Indiana Territory, learned of Tecumseh’s plans, met with him twice, and pronounced him “one of those uncommon geniuses who spring up occasionally to produce revolutions and overturn the established order of things.” In the fall of 1811, Harrison decided that Tecumseh must be stopped. He gathered 1,000 troops and advanced on Tecumseh’s capital, Prophetstown, on the Tippecanoe River, while the leader was away. Tecumseh’s followers attacked Harrison’s encampment on the Tippecanoe River, although Tecumseh had warned against any fighting in his absence. The Shawnees lost a bloody engagement that left about one quarter of Harrison’s men dead or wounded. Only later did Harrison realize that he had inflicted a defeat on the Indians, who had become so demoralized that many fled to Canada. Harrison burned the town and destroyed its supplies. Tecumseh’s dreams of an Indian confederacy went up in smoke, and Tecumseh himself fled to British protection in Canada.

The Battle of Tippecanoe reinforced suspicions that the British were inciting the Indians. Actually the incident was mainly Harrison’s doing. With little hope of help from war-torn Europe, British officials in Canada had steered a careful course, discouraging warfare but seeking to keep the Indians’ friendship and fur trade. To eliminate the Indian menace, frontiersmen reasoned, they needed to remove its foreign support, and they saw the province of Ontario as a pistol pointing at the United States. Conquest of Canada would accomplish a twofold purpose: it would eliminate British influence among the Indians and open a new empire for land-hungry Americans. It was also one place where the British, in case of war, were vulnerable to an American attack. Madison and others acted on the mistaken assumption that the Canadians were eager to be liberated from British control. Thomas Jefferson had told Madison that the American “acquisition of Canada” was “[a] matter of marchin [north with a military force].” To the far south the British were also vulnerable. East Florida, still under Spanish control, posed a similar threat to the Americans. Spain was too weak or simply unwilling to prevent sporadic Indian attacks across the frontier. In addition, the British were suspected of smuggling goods through Florida and intriguing with the Indians on the southwestern border.

Such concerns helped generate war fever. In the Congress that assembled in late 1811, new members from southern and western districts clamored for war in defense of “national honor.” Among them were Henry Clay and Richard Mentor Johnson of Kentucky, Felix Grundy of Tennessee, and John C. Calhoun of South Carolina. John Randolph of Roanoke christened these “new boys” the war hawks. After they entered the House, Randolph said, “We have heard but one word—like the whip-poor-will, but one eternal monotonous tone—Canada! Canada! Canada!” The young senator Henry Clay, a tall, rawboned westerner known for his combative temperament and propensity for dueling, yearned for war. “I am for resistance by the *sword*,” he vowed. He promised that the Kentucky militia stood ready to march on Canada and acquire its lucrative fur trade.

PREPARATIONS As it turned out, the war hawks would get neither Canada nor Florida, for James Madison had carried into war a nation that was ill prepared both financially and militarily. The Republican program of small federal budgets and military cutbacks was not an effective way to win a war. And Madison, a studious, soft-spoken man, lacked anything resembling martial qualities. He was no George Washington.

In 1811, despite earnest pleas from Treasury Secretary Gallatin, Congress had let the twenty-year charter of the Bank of the United States expire. A combination of strict-constructionist Republicans and Anglophobes, who feared the large British interest in the bank, had done it in. In addition, many state banks were being mismanaged, resulting in deposits lost through bankruptcy. Trade had dried up, and tariff revenues had declined. Loans were now needed to cover about two thirds of the war costs, and northeastern opponents of the war were reluctant to lend money.

The military situation was almost as bad. War had been likely for nearly a decade, but Republican defense cutbacks had prevented preparations. When the War of 1812 began, the army numbered only 6,700 men, ill trained, poorly equipped, and led by aging officers. Most of the senior officers were veterans of the Revolution. A young Virginia officer named Winfield Scott, destined for military distinction, commented that most of the veteran commanders “had very generally slunk into either sloth, ignorance, or habits of intemperate drinking.”

The navy, on the other hand, was in comparatively good shape, with able officers and trained men whose seamanship had been tested in the fighting against France and Tripoli. Its ships were well outfitted and seaworthy—all sixteen of them. In the first year of the war, it was the navy that produced the only U.S. victories, in isolated duels with British vessels, but their effect was

The American Navy

John Bull (the personification of England) stung to agony by the *Wasp* and *Hornet*, two American ships that won early victories in the War of 1812.

mainly an occasional boost to morale. Within a year the British had blockaded the U.S. coast, except for New England, where they hoped to cultivate anti-war feeling, and most of the little American fleet was bottled up in port.

THE WAR IN THE NORTH The only place where the United States could effectively strike at the British was Canada. Madison's best hope was a quick attack on Quebec or Montreal to cut Canada's lifeline, the St. Lawrence River, but inadequate preparations, poor leadership, untrained troops, and faulty coordination stymied the American forces—and led to disaster.

The Madison administration opted for a three-pronged drive against Canada: along the Lake Champlain route toward Montreal, with General Henry Dearborn in command; along the Niagara River, with forces under General Stephen Van Rensselaer; and into Upper Canada (north of Lake Erie) from Detroit, with General William Hull and some 2,000 men. In 1812 Hull marched his men across the Detroit River but was pushed back by the British. Sickly and senile, Hull procrastinated in Detroit while his position

worsened. The British commander cleverly played upon Hull’s worst fears. Gathering what redcoats he could to parade in view of Detroit’s defenders, he announced, that thousands of Indian allies were at the rear and that once fighting began, he would be unable to control them. Fearing a massacre, Hull surrendered his entire force.

Along the Niagara River front, General Van Rensselaer was more aggressive. An advance party of 600 Americans crossed the river and worked their way up the bluffs on the Canadian side. The stage was set for a major victory, but the New York militia refused to reinforce Van Rensselaer’s men, claiming

that their military service did not obligate them to leave the country. They complacently remained on the New York side and watched their outnumbered countrymen fall to a superior force across the river.

On the third front, the old invasion route via Lake Champlain, General Dearborn led his army north from Plattsburgh, New York, toward Montreal. He marched them up to the border, where the state militia once again stood on its alleged constitutional rights and refused to cross, so Dearborn marched them back to Plattsburgh.

Madison's navy secretary now pushed vigorously for American control of inland waters. At Presque Isle (near Erie), Pennsylvania, in 1813, twenty-eight-year-old Oliver Hazard Perry, already a fourteen-year veteran, was building ships from the wilderness lumber. By the end of the summer, Commodore Perry had superior numbers and set out in search of the British, whom he found at Lake Erie's Put-in-Bay on September 10. After completing the preparations for battle, Perry told an aide, "This is the most important day of my life."

Two British warships used their superior weapons to pummel the *Lawrence*, Perry's flagship. Blood flowed on the deck so freely that the sailors slipped and fell as they wrestled with the cannon. After four hours of intense shelling, none of the *Lawrence's* guns was working, and most of the crew was dead or wounded. The British expected the Americans to flee, but Perry refused to quit. He had himself rowed to another vessel, carried the battle to the enemy, and finally accepted surrender of the entire British squadron. Hatless and bloodied, Perry sent to General William Henry Harrison the long-awaited message: "We have met the enemy and they are ours."

American naval control of Lake Erie forced the British to evacuate Upper Canada. They gave up Detroit, and when they took a defensive stand at the Battle of the Thames on October 5, General Harrison inflicted a defeat that eliminated British power in Upper Canada. In the course of the battle, Tecumseh fell, his dream of Indian unity dying with him.

THE WAR IN THE SOUTH In the South, too, the war flared up in 1813. On August 30 Creeks allied with the British attacked Fort Mims, on the Alabama River above Mobile, killing 553 people and scalping half of them. The news found Andrew Jackson at home in Tennessee, recovering from a street brawl with Thomas Hart Benton, later a senator from Missouri. As major general of the Tennessee militia, Jackson summoned about 2,000 volunteers and set out on a vengeful campaign that crushed the Creek resistance. The decisive battle occurred on March 27, 1814, at Horseshoe Bend, on the Tallapoosa River, in the heart of the Upper Creek country in east-central Alabama. With the Treaty of Fort Jackson, the Creeks ceded two thirds of their land to the

United States, including part of Georgia and most of Alabama. Red Eagle, the chief of the Creeks, told Jackson: "I am in your power. . . . My people are all gone. I can do no more but weep over the misfortunes of my nation."

Four days after the Battle of Horseshoe Bend, Napoléon's empire collapsed. Now free to deal solely with the United States, the British developed a three-fold plan of operations for 1814: they would launch a two-pronged invasion of America from Canada via Fort Niagara and Lake Champlain to increase the clamor for peace in the Northeast; extend the naval blockade to New England, subjecting coastal towns to raids; and seize New Orleans to cut the Mississippi River, lifeline of the West.

MACDONOUGH'S VICTORY The main British effort focused on a massive invasion via Lake Champlain. From the north, General George Prevost, governor general of Canada, advanced with the finest army yet assembled on American soil: fifteen regiments of regulars and Canadian militia, a total of about 15,000. The front was saved only by Prevost's vacillation and the superb ability of Commodore Thomas Macdonough, commander of the U.S. naval squadron on Lake Champlain. England's army bogged down while its flotilla engaged Macdonough in a deadly battle that ended with the entire British fleet either destroyed or captured.

FIGHTING IN THE CHESAPEAKE Meanwhile, however, U.S. forces suffered the most humiliating experience of the war as the British captured and burned Washington, D.C. With attention focused on the Canadian front, the Chesapeake Bay offered the British several inviting targets, including Baltimore, now the fourth-largest city in America. In 1814 a British force landed without opposition at Benedict, Maryland, and headed for Washington, thirty miles away. To defend the capital, the Americans had a militia force of about 7,000, which melted away in the face of the smaller British force.

The redcoats marched unopposed into Washington, where British officers ate a meal in the White House that had been prepared for President and Mrs. Madison, who had joined other refugees in Virginia. The British then burned the White House, the Capitol, and most other government buildings. A tornado the next day compounded the damage, but a violent thunderstorm dampened both the fires and the enthusiasm of the British forces, who left to prepare a new assault on Baltimore in September.

The British attack on Baltimore was a different story. About 1,000 men held Fort McHenry, on an island in the harbor. The British fleet bombarded the fort to no avail, and the invaders abandoned the attack. Francis Scott Key, a Washington lawyer, watched the siege from a vessel in the harbor. The sight of the flag still in place at dawn inspired him to draft the verses of what came to be called "The Star-Spangled Banner." Later revised and set to the tune of an English drinking song, it eventually became America's national anthem.

THE BATTLE OF NEW ORLEANS The British failure at Baltimore followed by three days their failure on Lake Champlain; their offensive against New Orleans, however, had yet to run its course. Along the Gulf coast, General Andrew Jackson had been busy shoring up the defenses of Mobile and New Orleans. Without authorization he invaded Spanish Florida and took Pensacola, putting an end to British intrigues there. Back in Louisiana he began to erect defenses on the approaches to New Orleans as the British

Jackson's Army Defends New Orleans

Andrew Jackson's defeat of the British at New Orleans, January 1815.

fleet, with some 8,000 European veterans under General Sir Edward Pakenham, took up positions on a level plain on the banks of the Mississippi just south of New Orleans.

Pakenham's painfully careful approach—he waited until all his artillery was available—gave Jackson time to build earthworks bolstered by cotton bales. It was an almost invulnerable position, but Pakenham, contemptuous of Jackson's force of frontier militiamen, Creole aristocrats, free blacks, and pirates, rashly ordered his veterans forward in a frontal assault at dawn on January 8, 1815. His redcoats ran into a murderous hail of artillery shells and rifle fire. Before the British withdrew, about 2,000 had been wounded or killed, including Pakenham himself. A British officer, after watching his battered and retreating troops, wrote that there “never was a more complete failure.”

The slow pace of transatlantic communications during the early nineteenth century meant that the Battle of New Orleans occurred after a peace treaty had been signed in Europe. But this is not to say that it was an anticlimax or that it had no effect on the outcome of the war, for the treaty was yet to be ratified, and the British might have exploited the possession of New Orleans had they won it. The battle did ensure ratification of the treaty as it stood, and both governments acted quickly.

THE TREATY OF GHENT Peace efforts had begun in 1812, even before hostilities got under way. The British, after all, had repealed their orders

in council two days before the declaration of war and confidently expected at least an armistice. Secretary of State James Monroe, however, had told the British that they would have to give up the outrage of impressment as well. Meanwhile, Czar Alexander of Russia had offered to mediate the dispute, hoping to relieve the pressure on Great Britain, his ally against France. Madison had sent Albert Gallatin and James Bayard to join John Quincy Adams, the U.S. minister to Russia, in St. Petersburg. They arrived in 1813, but the czar was at the war front, and they waited impatiently for six months. At that point the British refused Russia's mediation and instead offered to negotiate directly. Madison then appointed Henry Clay and Jonathan Russell to join the other three commissioners in talks that finally got under way in 1814 in the Flemish city of Ghent in August.

In contrast to the array of talent gathered in the American contingent, the British diplomats were nonentities. The Americans had more leeway to use their own judgment, and sharp disagreements developed that were patched up by Albert Gallatin. The sober John Quincy Adams and the hard-drinking, poker-playing Henry Clay, especially, rubbed each other the wrong way. The American delegates at first were instructed to demand that the British abandon impressment and paper blockades and to get payment for the seizure of American ships. The British opened the discussions with demands for territory in New York and Maine, removal of U.S. warships from the Great Lakes, an autonomous Indian buffer state in the Northwest, access to the Mississippi River, and abandonment of U.S. fishing rights off Labrador and Newfoundland. If the British insisted on such a position, the Americans informed them, the negotiations would be at an end.

But the British were stalling, awaiting news of victories to strengthen their hand. The news of the U.S. victory on Lake Champlain arrived in October and weakened the British resolve. The British will to fight was further eroded by a continuing power struggle with France, by the eagerness of British merchants to renew trade with America, and by the war-weariness of a tax-burdened public. The British finally decided that the American war was not worth the cost. One by one, demands were dropped on both sides, until the envoys agreed to end the war, return the prisoners, restore the previous boundaries, and settle nothing else. The questions of fisheries and disputed boundaries were referred to commissions for future settlement. The Treaty of Ghent was signed on Christmas Eve of 1814.

THE HARTFORD CONVENTION While the diplomats converged on a peace settlement in Europe, an entirely different kind of meeting was taking place in Hartford, Connecticut. An ill-fated affair, the Hartford Convention

represented the climax of New England's disaffection with "Mr. Madison's war." New England had managed to keep aloof from the war and extract a profit from illegal trading and privateering. Both Massachusetts and Connecticut had refused to contribute militias to the war effort; merchants had continued to sell supplies to British troops in Canada. After the fall of Napoléon, however, the British extended their blockade to New England, occupied Maine, and conducted several raids along the coast. Even Boston seemed threatened. Instead of rallying to the American flag, however, Federalists in the Massachusetts legislature voted in October 1814 for a convention of New England states to plan independent action.

On December 15 the Hartford Convention assembled with delegates chosen by the legislatures of Massachusetts, Rhode Island, and Connecticut as well as two delegates from Vermont and one from New Hampshire—twenty-two in all. The convention proposed seven constitutional amendments designed to limit Republican (and southern) influence: abolishing the counting of slaves in apportioning state representation in Congress, requiring a two-thirds vote to declare war or admit new states, prohibiting embargoes lasting more than sixty days, excluding foreign-born individuals from holding federal offices, limiting the president to one term, and forbidding successive presidents from the same state.

Their call for a later convention in Boston carried the unmistakable threat of secession if the demands were ignored. Yet the threat quickly evaporated. In February 1815, when messengers from Hartford reached Washington, D.C., they found the battered capital celebrating the good news from Ghent and New Orleans. "Their position," according to a French diplomat, was "awkward, embarrassing, and lent itself to cruel ridicule," and they swiftly withdrew their recommendations. The consequence was a fatal blow to the Federalist party, which never recovered from the stigma of disloyalty stamped on it by the Hartford Convention.

THE AFTERMATH For all the fumbling ineptitude with which the War of 1812 was fought, it generated an intense patriotism. Despite the standoff with which it ended at Ghent, the public nourished a sense of victory, courtesy of Andrew Jackson and his men at New Orleans as well as the heroic exploits of American frigates in their duels with British ships. Under Republican leadership the nation had survived a "second war of independence" against the greatest power on earth and emerged with new symbols of nationhood and a new gallery of heroes. The war also launched the United States toward economic independence, as the interruption of trade with Europe had encouraged the growth of American manufactures. After forty

We Owe Allegiance to No Crown

The War of 1812 generated a renewed spirit of nationalism.

dey of Algiers agreed to cease molesting American ships and to give up all U.S. prisoners. Decatur's show of force induced similar treaties from Tunis and Tripoli. This time there was no tribute; this time, for a change, the Barbary pirates paid for the damage they had done. This time, victory put an end to the piracy and extortion in that quarter permanently.

One of the strangest results of the War of 1812 and its aftermath was a reversal of roles by the Republicans and the Federalists. Out of the wartime experience the Republicans had learned some lessons in nationalism. Certain needs and inadequacies revealed by the war had "Federalized" Madison or "re-Federalized" this Father of the Constitution. Perhaps, he reasoned, a peacetime army and navy were necessary. The lack of a national bank had added to the problems of financing the war. Now Madison wanted it back. The rise of new industries during the war led to a clamor for increased tariffs on imports to protect the infant companies from foreign competition. Madison went along. The problems of overland transportation in the West had revealed the need for internal improvements. Madison agreed, but on that point kept his constitutional scruples. He wanted a constitutional amendment. So while Madison embraced nationalism and broad construction of the Constitution, the Federalists took up the Jeffersonians' position of states' rights and strict construction. It was the first great reversal of roles in constitutional interpretation. It would not be the last.

years of independence, it dawned on the world that the new American republic might be emerging as a world power.

As if to underline the point, Congress authorized a quick, decisive blow at the pirates of the Barbary Coast. During the War of 1812, North Africans had again set about plundering American ships. On March 3, 1815, little more than two weeks after the Senate ratified the Treaty of Ghent, Congress sent Captain Stephen Decatur with ten vessels to the Mediterranean. Decatur seized two Algerian ships and then sailed boldly into the harbor of Algiers. On June 30, 1815, the

MAKING CONNECTIONS

- Jefferson's embargo and the War of 1812 encouraged the beginnings of manufacturing in the United States, an important subject, to be discussed in Chapter 12.
- The Federalist party collapsed because of its opposition to the War of 1812. But as the next chapter shows, Republicans did not prosper as much as might have been expected in the absence of political opposition.
- The American success in the War of 1812 (a moral victory at best) led to a tremendous sense of national pride and unity, a spirit analyzed in the next chapter.

Hickey's *The War of 1812: A Forgotten Conflict* (1989). See also David Curtis Skaggs and Gerard T. Altoff's *A Signal Victory: The Lake Erie Campaign, 1812–1813* (1997).

Part Three

AN
EXPANSIVE
NATION

Americans during the early nineteenth century formed a relentless migratory stream that spilled over the Appalachian Mountains, spanned the Mississippi River, and in the 1840s reached the Pacific Ocean. Wagons, canals, flatboats, steamboats, and eventually railroads helped transport them. The feverish expansion of the United States into new western territories brought Americans into conflict with Native Americans, Mexicans, the British, and the Spanish. Only a few people, however, expressed moral reservations about displacing others. Most Americans believed it was the “manifest destiny” of the United States to spread across the entire continent—at whatever cost and at whomever’s expense. Americans generally believed that they enjoyed the blessing of Providence in their efforts to consolidate the entire continent under their control.

While most Americans continued to earn their living from the soil, textile mills and manufacturing plants began to dot the landscape and transform the nature of work and the pace of life. By midcentury the United States was emerging as one of the world’s major industrial powers. In addition, the lure of cheap land and plentiful jobs, as well as the promise of political equality and religious freedom, attracted hundreds of thousands of immigrants from Europe. The newcomers, mostly from Germany and Ireland, faced ethnic prejudices, religious persecution, and language barriers that made assimilation into American culture difficult.

These developments gave American life in the second quarter of the nineteenth century a dynamic and fluid quality. The United States, said the philosopher-poet Ralph Waldo Emerson, was “a country of beginnings, of projects, of designs, of expectations.” A restless optimism characterized the period. People of a lowly social status who heretofore had accepted their lot in life now strove to climb the social ladder and enter the political arena. The patrician republic espoused by Jefferson and Madison gave way to the frontier democracy promoted by the Jacksonians. Americans were no longer content to be governed by a small, benevolent aristocracy of talent and wealth. They began to demand—and obtain—government of, by, and for the people.

The fertile economic environment during the antebellum era helped foster the egalitarian idea that individuals (except African Americans, Native Americans, and women) should have an equal opportunity to better themselves and should be granted political rights and privileges.

In America, observed a journalist in 1844, “one has as good a chance as another according to his talents, prudence, and personal exertions.”

The exuberant individualism embodied in such mythic expressions of economic equality and political democracy spilled over into the cultural arena during the first half of the century. The so-called Romantic movement applied democratic ideals to philosophy, religion, literature, and the fine arts. In New England, Ralph Waldo Emerson and Henry David Thoreau joined other transcenden-

talists in espousing a radical individualism. Other reformers were motivated more by a sense of spiritual mission than by democratic individualism. Reformers sought to promote public-supported schools, abolish slavery, promote temperance, and improve the lot of the disabled, the insane, and the imprisoned. Their efforts ameliorated some of the problems created by the frenetic economic growth and territorial expansion. But the reformers made little headway against slavery. It would take a brutal civil war to dislodge America’s “peculiar institution.”

amid the jubilation that followed the War of 1812, Americans began to transform their young nation. Hundreds of thousands of people streamed westward at the same time that the largely local economy was being transformed into a national market. The spread of plantation slavery and the cotton culture into the Old Southwest—Georgia, Alabama, Mississippi, Louisiana, and Texas—disrupted family ties and transformed social life. In the North and the West, meanwhile, a dynamic urban middle class began to emerge and grow in towns and cities. Such dramatic changes prompted vigorous political debates over economic policies, transportation improvements, and the extension of slavery into the new territories. In the process the nation began to divide into three powerful regional blocs—North, South, and West—whose shifting alliances would shape the political landscape until the Civil War.

ECONOMIC NATIONALISM

Immediately after the War of 1812, Americans experienced a new surge of nationalism. The young United States was growing from a loose confederation of territories into a fully functioning nation-state that spanned almost an entire continent. An abnormal economic prosperity after the war fed a feeling of well-being and enhanced the prestige of the national government. Thomas Jefferson's embargo ironically had spawned the factories that he abhorred. The idea spread that the country needed a more balanced economy of farming, commerce, and manufacturing. After a generation of war, shortages of farm products in Europe forced up the prices of American products and stimulated agricultural expansion—indeed, it induced a wild speculation in farmland. Southern cotton, tobacco, and rice came to account for about two thirds of American exports. At the same time the postwar market was flooded with cheap English goods that planters and farmers could buy. The new manufacturers would seek protection from this foreign competition.

President James Madison, in his first annual message to Congress after the war, recommended several steps to strengthen the government: improved fortifications, a permanent army and a strong navy, a new national bank, effective protection of new industries, a system of canals and roads for commercial and military use, and to top it off, a great national university. “The

A textile mill established during the embargo of 1807. The Union Manufactories would employ over 600 people.

Republicans have out-Federalized Federalism,” one New Englander remarked. Congress responded by authorizing a standing army of 10,000 and strengthening the navy as well.

THE BANK OF THE UNITED STATES The trinity of economic nationalism—proposals for a second national bank, a protective tariff, and internal improvements—inspired the greatest controversies. After the first national bank expired in 1811, the country had fallen into a financial mud-dle. State-chartered banks mushroomed with little or no control, and their bank notes (paper money) flooded the channels of commerce with currency of uncertain value. Because hard money had been so short during the war, many state banks had suspended specie (gold or silver) payments when redeeming their paper notes, thereby depressing their value. The absence of a central bank had been a source of financial embarrassment to the government, which had neither a ready means of floating loans nor a way of transferring funds across the country.

Madison and most younger Republicans salved their constitutional scruples about a national bank with a dash of pragmatism. The issue of a central bank, Madison said, had been decided “by repeated recognitions . . . of the validity of such an institution in acts of the legislative, executive, and judicial branches of the Government, accompanied by . . . a concurrence of the general will of the nation.” In 1816 Congress adopted, over the protest of Old Republicans, a provision for a new Bank of the United States, which would be located in Philadelphia. Once again the charter ran for twenty years, and the federal government owned one fifth of the stock and named five of the twenty-five directors, with the Bank of the United States serving as the government depository for federal funds. Its bank notes were accepted in payments to the government. In return for its privileges, the bank had to take care of the government’s funds without charge, lend the government up to \$5 million upon demand, and pay the government a cash bonus of \$1.5 million.

The bitter debate over the bank, then and later, helped to set the pattern of regional alignment for most other economic issues. Missouri senator Thomas Hart Benton predicted that the currency-short western towns would be at the mercy of a centralized eastern bank. “They may be devoured by it any moment! They are in the jaws of the monster! A lump of butter in the mouth of a dog! One gulp, one swallow, and all is gone!”

The debate over the Bank of the United States was also noteworthy because of the leading roles played by the era’s greatest statesmen: John C. Calhoun of South Carolina, Henry Clay of Kentucky, and Daniel Webster of New Hampshire. Calhoun, still in his youthful phase as a war-hawk

nationalist, introduced the banking bill and pushed it through, justifying its constitutionality by citing the congressional power to regulate the currency. Clay, who had long opposed a national bank, now asserted that circumstances had made one indispensable. Webster, on the other hand, led the opposition of the New England Federalists, who did not want the banking center moved from Boston to Philadelphia. Later, after he had moved from New Hampshire to Massachusetts, Webster would return to Congress as the champion of a much stronger national power, whereas events would steer Calhoun toward a defiant embrace of states' rights.

A PROTECTIVE TARIFF The shift of capital from commerce to manufactures, begun during the embargo of 1807, had speeded up during the war. Peace in 1815 brought a sudden renewal of cheap British imports and generated pleas for tariffs (taxes on imports) to protect infant American industries from foreign competition. The self-interest of the manufacturers, who as yet had little political influence, was reinforced by a patriotic desire for economic independence from Britain. New England shippers and southern farmers opposed tariffs, but in both sections sizable minorities believed that the promotion of industry by means of tariffs enhanced both sectional and national welfare.

The tariff of 1816, the first intended more to protect industry against foreign competition than to raise revenue, easily passed in Congress. Both the South and New England split their votes, with New England supporting the tariff and the South opposing it, and the middle Atlantic states and the Old Northwest cast only five negative votes altogether. Nathaniel Macon of North Carolina opposed the tariff and defended the Old Republican doctrine of strict construction. The power to protect industry, Macon said, like the power to establish a bank, rested on the idea that there were implied powers embedded in the Constitution; Macon worried that such implied powers might one day be used to abolish slavery. The minority of southerners who voted for the tariff, led by John Calhoun, did so because they hoped that the South might itself become a manufacturing center. South Carolina was then developing a few textile mills. According to the census of 1810, the southern states had approximately as many manufacturers as New England. Within a few years, however, New England would move well ahead of the South, and Calhoun would accept Macon's views on protection. The tariff would then become a sectional issue, with manufacturers, wool processors, and food, sugar, and hemp growers favoring higher tariffs while cotton planters and shipping interests favored lower duties.

INTERNAL IMPROVEMENTS The third major issue of the time involved government support for internal improvements: the building of

Why were internal improvements a major point in James Monroe's first address to Congress? How did the National Road affect agriculture and trade? What were the constitutional issues that limited the federal government's ability to enact internal improvements?

roads and the development of water transportation. The war had highlighted the shortcomings of existing facilities. Troop movements through the western wilderness proved very difficult, and settlers found that unless they located themselves near navigable waters, they were cut off from trade and limited to a frontier subsistence.

The federal government had entered the field of internal improvements under Thomas Jefferson. He and both of his successors recommended a constitutional amendment to give the federal government undisputed power in the field. Lacking that, the constitutional grounds for federal action rested mainly on the provision of national defense and the expansion of the postal system. In 1803, when Ohio became a state, Congress decreed that 5 percent of the proceeds from land sales in the state would go to building a National Road from the Atlantic coast into Ohio and beyond as the territory developed. Construction of the National Road began in 1815.

Originally called the Cumberland Road, it was the first federally financed interstate roadway. By 1818 it was open from Cumberland, Maryland, to Wheeling, Virginia (now West Virginia), on the Ohio River. By 1838 the road

extended all the way to Vandalia, Illinois. By reducing transportation costs and opening up new markets, the National Road and other privately financed turnpikes helped accelerate the commercialization of agriculture.

In 1817 John C. Calhoun put through the House a bill to place in a fund for internal improvements the \$1.5 million bonus that the Bank of the United States had paid for its charter, as well as all future dividends on the government's bank stock. Opposition to federal spending on transportation projects centered in New England and the South, which expected to gain the least from western development, and support came largely from the West, which badly needed good roads. On his last day in office, President Madison vetoed the bill. While sympathetic to its purpose, he could not overcome his "insuperable difficulty . . . in reconciling the bill with the Constitution" and suggested instead a constitutional amendment. Internal improvements remained for another hundred years, with few exceptions, the responsibility of states and private enterprise. The federal government did not enter the field on a large scale until passage of the Federal Highways Act of 1916.

"GOOD FEELINGS"

JAMES MONROE As James Madison approached the end of a turbulent presidency, he, like Jefferson, turned to a fellow Virginian, another secretary of state, to be his successor. For Madison that man would be James Monroe.

James Monroe

Portrayed as he entered the presidency in 1817.

In the Republican caucus, Monroe won the nomination. In the 1816 election he overwhelmed his Federalist opponent, Rufus King of New York, with 183 to 34 votes in the Electoral College. The "Virginia dynasty" continued. Like three of the four presidents before him, Monroe was a Virginia planter, but with a difference: his plantation holdings were much smaller. At the outbreak of the Revolution, he was just beginning his studies at the College of William and Mary. He joined the army at the age of sixteen, fought with Washington during the Revolution, and later studied law with Jefferson.

Monroe had served in the Virginia assembly, as governor of the state, in the Confederation Congress and in the U.S. Senate, and as U.S. minister in Paris, London, and Madrid. Under Madison he was secretary of state and doubled as secretary of war. Monroe, with his powdered wig, cocked hat, and knee breeches, was the last of the Revolutionary generation to serve in the White House and the last president to dress in the old style.

Firmly grounded in Republican principles, Monroe failed to keep up with the onrush of the new nationalism. He accepted as an accomplished fact the Bank of the United States and the protective tariff, but during his tenure there was no further extension of economic nationalism. Indeed, there was a minor setback: he permitted the National Road to be carried forward, but in his veto of the Cumberland Road bill (1822), he denied the authority of Congress to collect tolls to pay for its repair and maintenance. Like Jefferson and Madison he urged a constitutional amendment to remove all doubt about federal authority in the field of internal improvements.

Monroe surrounded himself with some of the ablest young Republican leaders. John Quincy Adams became secretary of state. William H. Crawford of Georgia continued as secretary of the Treasury. John C. Calhoun headed the War Department after Henry Clay refused the job in order to stay on as Speaker of the House. The new administration found the country in a state of well-being: America was at peace, and the economy was flourishing. Soon after his 1817 inauguration, Monroe embarked on a goodwill tour of New England. In Boston, lately a hotbed of wartime dissent, a Federalist paper commented on the president's visit under the heading "Era of Good Feelings." The label became a popular catchphrase for Monroe's administration, one that historians would later seize upon. Yet the Era of Good Feelings was very brief. A resurgence of factionalism and sectionalism erupted just as the postwar prosperity collapsed in the panic of 1819.

In 1820 the president was reelected without opposition. The Federalists were too weak to put up a candidate. Monroe won all the electoral votes except for three abstentions and one vote from New Hampshire for John Quincy Adams. The Republican party was dominant—for the moment. In fact, it was about to follow the Federalists into oblivion. Amid the general political contentment of the era, the first party system was fading away, but rivals for the succession soon commenced the process of forming new parties.

RELATIONS WITH BRITAIN Fueling the contentment after the War of 1812 was a growing trade with Britain (and India). The Treaty of Ghent had left unsettled a number of minor disputes, but subsequently two important compacts—the Rush-Bagot Agreement of 1817 and the Convention of

1818—removed several potential causes of irritation. In the first, resulting from an exchange of notes between Acting Secretary of State Richard Rush and the British minister Charles Bagot, the threat of naval competition on the Great Lakes vanished with an arrangement to limit forces there to several federal ships collecting customs duties. Although the exchange made no reference to the land boundary between the United States and Canada, its spirit gave rise to the tradition of an unfortified border, the longest in the world.

The Convention of 1818 covered three major points. The northern limit of the Louisiana Purchase was settled by extending the national boundary along the 49th parallel west from Lake of the Woods in what would become Minnesota to the crest of the Rocky Mountains. West of that point the Oregon Country would be open to joint occupation by the British and the Americans, but the boundary remained unsettled. The right of Americans to fish off Newfoundland and Labrador, granted in 1783, was acknowledged once again.

What territorial terms did the Convention of 1818 settle? How did Andrew Jackson's actions in Florida help John Q. Adams claim the territory from Spain? What were the terms of the treaty with Spain?

The chief remaining problem was Britain's exclusion of American ships from the West Indies in order to reserve that lucrative trade for the British. This remained a chronic irritant, and the United States retaliated with several measures. Under the Navigation Act of 1817, importation of West Indian produce was restricted to American vessels or vessels belonging to West Indian merchants. In 1818 U.S. ports were closed to all British vessels arriving from a colony that was legally closed to vessels of the United States. In 1820 Monroe approved an act of Congress that specified total nonintercourse—with British vessels, with all British colonies in the Americas, and even in goods taken to England and reexported. The rapprochement with Britain therefore fell short of perfection.

THE EXTENSION OF BOUNDARIES The year 1819 was one of the more fateful years in American history. Controversial efforts to expand U.S. territory, an intense financial panic, a tense debate over the extension of slavery, and several landmark Supreme Court cases combined to bring an unsettling end to the Era of Good Feelings. The new nationalism reached a climax with the acquisition of Florida and the extension of America's southwestern boundary to the Pacific, but nationalism quickly began to run afoul of domestic crosscurrents that would submerge the country in sectional squabbles.

In the calculations of global power, it had perhaps long since been reckoned that Florida would someday pass to the United States. Spanish sovereignty was more a technicality than an actuality and extended little beyond St. Augustine on the east coast and Pensacola and St. Marks on the Gulf. The province had been a thorn in the side of the United States during the recent war, when it had served as a center of British intrigue; a haven for Creek refugees, who were beginning to take the name Seminole (Runaway or Separatist); and a harbor for runaway slaves and criminals.

Spain, once dominant in the Americas, was now a declining power unable to enforce its obligations, under Pinckney's Treaty of 1795, to pacify the frontier. In 1816 U.S. forces clashed with a group of escaped slaves who had taken over a British fort on the Appalachicola River. Seminoles were soon fighting

Unrest in Florida

Portrait of an escaped slave who lived with the Seminoles in Florida.

white settlers in the area, and in 1817 Americans burned a Seminole border settlement, killed five of its inhabitants, and dispersed the rest across the border into Florida.

At that point, Secretary of War Calhoun authorized a campaign against the Seminoles, and he summoned General Andrew Jackson from Nashville to take command. Jackson's orders allowed him to pursue the offenders into Spanish territory but not to attack any Spanish post. A frustrated Jackson pledged to President Monroe that if the United States wanted Florida, he could wind up the whole controversy in sixty days.

When it came to Spaniards or Indians, few white Tennesseans—and certainly not Andrew Jackson—were likely to bother with technicalities. Jackson pushed eastward through Florida, reinforced by Tennessee volunteers and friendly Creeks, taking a Spanish post, skirmishing with the Seminoles, and destroying their settlements. He hanged two of their leaders. He then turned west, seized Pensacola, and returned home to Nashville. The whole episode had taken about four months; the Florida Panhandle was in American hands by 1818.

The news of Jackson's exploits aroused anger in Madrid and concern in Washington. Spain demanded the return of its territory and the punishment of Jackson, but Spain's impotence was plain for all to see. Monroe's cabinet was at first prepared to disavow Jackson's actions, especially his direct attack on Spanish posts. Calhoun, as secretary of war, was inclined, at least officially,

to discipline Jackson for disregard of orders—a stand that would later cause bad blood between the two men—but privately confessed a certain pleasure at the outcome. In any case a man as popular as Jackson was almost invulnerable. And he had one important friend, Secretary of State John Quincy Adams, who realized that Jackson had strengthened his own hand in negotiations already under way with the Spanish minister. U.S. forces withdrew from Florida, but negotiations resumed with the knowledge that the United States could retake Florida at any time.

Andrew Jackson

Victor at the Battle of New Orleans, Indian fighter, and future president.

With the fate of Florida a foregone conclusion, John Quincy Adams turned

his eye to a larger purpose, a definition of the ambiguous western boundary of the Louisiana Purchase and—his boldest stroke—extension of its boundary to the Pacific coast. In lengthy negotiations, Adams gradually gave ground on claims to Texas but stuck to his demand for a transcontinental line. Agreement came early in 1819. Spain ceded all of Florida in return for the U.S. government's assumption of private American claims against Spain up to \$5 million. The western boundary of the Louisiana Purchase would run along the Sabine River and then, in stair-step fashion, up to the Red River, along the Red, and up to the Arkansas River. From the source of the Arkansas, it would go north to the 42nd parallel and thence west to the Pacific coast. A dispute over land claims held up ratification for another two years, but those claims were revoked and final ratifications were exchanged in 1821. Florida became a U.S. territory, and its first governor, albeit briefly, was Andrew Jackson. In 1845 Florida achieved statehood.

CRISES AND COMPROMISES

THE PANIC OF 1819 John Quincy Adams's Transcontinental Treaty of 1819 was a diplomatic triumph and the climactic event of the postwar nationalism. Even before it was signed, however, two thunderclaps signaled the end of the brief Era of Good Feelings and gave warning of stormy weather ahead: the financial panic of 1819 and the controversy over Missouri statehood. The occasion for the panic was the sudden collapse of cotton prices. At one point in 1818, cotton had soared to 32.5¢ per pound. The high prices prompted British textile mills to turn from American sources to cheaper East Indian cotton, and by 1819 cotton was averaging only 14.3¢ per pound in New Orleans. The price collapse set off a decline in the demand for other American goods and suddenly revealed the fragility of the prosperity that had begun after the War of 1812.

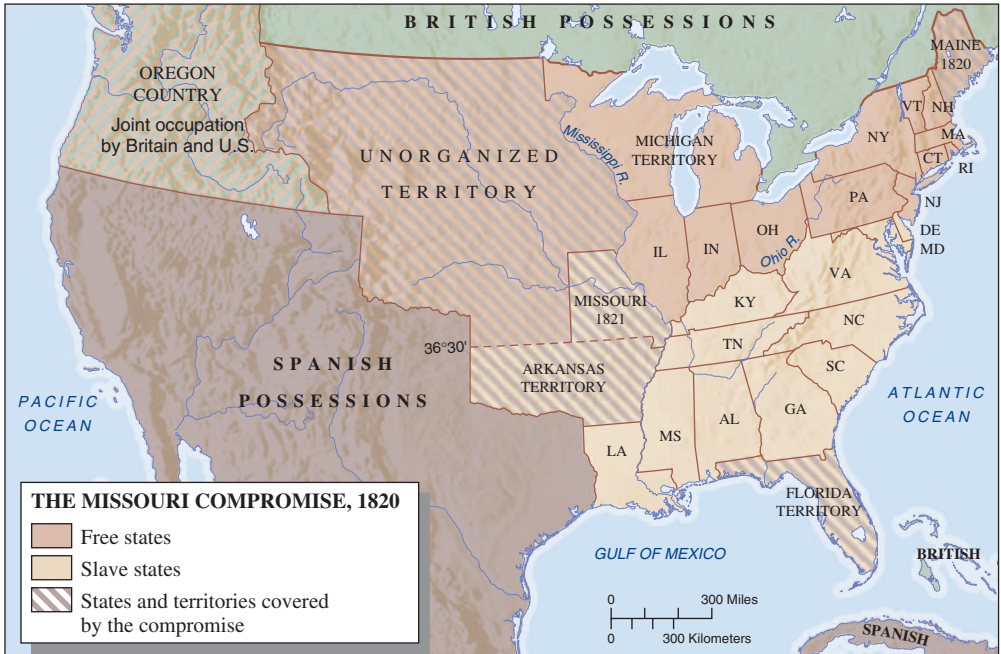

Since 1815 a speculative bubble had grown, with expectations that economic expansion would go on forever. But American industry struggled to find markets for its goods. Even the tariff of 1816 had not been a strong enough force to eliminate British competition. What was more, businessmen, farmers, and land speculators had inflated the bubble with a volatile expansion of credit. The sources of this credit were both government and the banks. Under the Land Act of 1800, the government had extended four years' credit to those who bought western land. After 1804 one could buy as little as 160 acres at a minimum price of \$1.64 per acre (although in auctions the best land went for more). In many cases, speculators took up large tracts,

paying only one fourth down, and then sold them to settlers with the understanding that the settlers would pay the remaining installments. With the collapse of crop prices and, subsequently, land values, both speculators and settlers saw their income plummet.

The reckless practices of the state banks compounded the inflation of credit. To enlarge their loans, they issued more bank notes than they could redeem. Even the second Bank of the United States, which was supposed to introduce some order to the financial arena, got caught up in the mania. Its first president yielded to the contagion of the get-rich-quick fever that was sweeping the country. The proliferation of branches, combined with little supervision by Philadelphia, carried the bank into the same reckless extension of loans that state banks had pursued. In 1819, just as alert businessmen began to take alarm, a case of extensive fraud and embezzlement in the Baltimore branch of the Bank of United States came to light. The disclosure prompted the appointment of Langdon Cheves, a former congressman from South Carolina, as the bank's president.

Cheves reduced salaries and other costs, postponed the payment of dividends, restrained the extension of credit, and presented for redemption the state bank notes that came in, thereby forcing the state-chartered banks to keep specie reserves. Cheves rescued the bank from near ruin, but only by putting heavy pressure on the state banks. State banks in turn put pressure on their debtors, who found it harder to renew old loans or get new ones. In 1822, considering his task completed, Cheves retired and was succeeded the following year by Nicholas Biddle of Philadelphia. The Cheves policies were the result rather than the cause of the panic, but they pinched debtors. Hard times lasted about three years, and the bank took much of the blame in the popular mind. The panic passed, but resentment of the bank lingered in the South and the West.

THE MISSOURI COMPROMISE Just as the financial panic spread over the country, another cloud appeared on the horizon: the onset of a fierce sectional controversy over slavery. By 1819 the country had an equal number of slave and free states—eleven of each. The line between them was defined by the southern and western boundaries of Pennsylvania and the Ohio River. Although slavery lingered in some places north of the line, it was on the way to extinction there. Beyond the Mississippi River, however, no move had been made to extend the dividing line across the Louisiana Territory, where slavery had existed since the days when France and Spain had colonized the area. At the time the Missouri Territory embraced all of the Louisiana Purchase except the state of Louisiana (1812) and the Arkansas

What caused the sectional controversy over slavery in 1819? What were the terms of the Missouri Compromise? What was Henry Clay's solution to the Missouri constitution's ban on free blacks in that state?

Territory (1819). The old French town of St. Louis became the funnel through which settlers rushed westward beyond the Mississippi. They were largely from the South—and they brought their slaves with them.

In 1819 the House of Representatives was asked to approve legislation enabling Missouri to draft a state constitution, its population having passed the minimum of 60,000. At that point, Representative James Tallmadge Jr., a New York congressman, proposed a resolution prohibiting the further introduction of slaves into Missouri, which already had some 10,000, and providing freedom at age twenty-five to those born after the territory's admission as a state. After brief but fiery exchanges, the House passed the amendment on an almost strictly sectional vote. The Senate rejected it by a similar tally, but with several northerners joining in the opposition. With population at the time growing faster in the North, a balance between the two sections could be held only in the Senate. In the House, slave states had 81 votes while free states had 105; a balance was unlikely ever to be restored there.

Maine's application for statehood made it easier to arrive at an agreement. Since colonial times, Maine had been the northern province of Massachusetts. The Senate linked its request for separate statehood with Missouri's and voted to admit Maine as a free state and Missouri as a slave state, thus maintaining the balance between free and slave states in the Senate. An Illinois senator further extended the compromise by an amendment to exclude slavery from the rest of the Louisiana Purchase north of 36°30', Missouri's southern border. Slavery thus would continue in the Arkansas Territory and in the state of Missouri but would be excluded from the remainder of the area. People at that time presumed that what remained was the Great American Desert, unlikely ever to be settled. Thus the arrangement seemed to be a victory for the slave states. By a very close vote it passed the House on March 2, 1820.

Then another problem arose. The pro-slavery elements that dominated Missouri's constitutional convention inserted in the proposed new state constitution a proviso excluding free blacks and mulattoes from the state. This clearly violated the requirement of Article IV, Section 2, of the Constitution: "The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States." Free blacks were citizens of many states, including the slave states of North Carolina and Tennessee, where until the mid-1830s they also voted.

Henry Clay

Clay entered the Senate at age twenty-eight despite the requirement that senators be at least thirty years old.

The renewed controversy threatened final approval of Missouri's admission until Henry Clay formulated a "second" Missouri Compromise: admission of Missouri as a state would depend upon assurance from the Missouri legislature that it would never construe the offending clause in such a way as to sanction the denial of privileges that citizens held under the Constitution. It was one of the more artless dodges in American history, for it required the legislature to affirm that the state constitution did not mean what it clearly said, but the compromise worked. The Missouri legislature duly adopted the pledge while denying that the legislature had any power to bind the people of the state to it. On August 10, 1821, President Monroe proclaimed

the admission of Missouri as the twenty-fourth state. For the moment the controversy subsided. “But this momentous question,” the aging Thomas Jefferson wrote to a friend after the first compromise, “like a firebell in the night awakened and filled me with terror. I considered it at once as the knell of the Union.”

JUDICIAL NATIONALISM

JOHN MARSHALL, CHIEF JUSTICE Meanwhile, nationalism still flourished in the Supreme Court, where Chief Justice John Marshall preserved Hamiltonian Federalism for yet another generation. Marshall, a survivor of the Revolution and a distant cousin of Thomas Jefferson’s, established the power of the Supreme Court by his force of mind and crystalline logic.

During Marshall’s early years on the Court (he served thirty-four years altogether), he affirmed the principle of judicial review. In *Marbury v. Madison* (1803) and *Fletcher v. Peck* (1810) the Court struck down first a federal law and then a state law as unconstitutional. In the cases of *Martin v. Hunter’s Lessee* (1816) and *Cohens v. Virginia* (1821), the Court assumed the right to take appeals from state courts on the grounds that the Constitution, the laws, and the treaties of the United States could be kept uniformly the supreme law of the land only if the Court could review decisions of state courts. In the first case the Court overruled Virginia’s confiscation of Loyalist property after the Revolution, because it violated treaties with Great Britain; in the second the Court upheld Virginia’s right to forbid the sale of lottery tickets.

PROTECTING CONTRACT RIGHTS In the fateful year of 1819, John Marshall and the Court made two more decisions of major importance in checking the states and building the power of the central government. One of them, *Dartmouth College v. Woodward*, involved an attempt by the New Hampshire legislature to alter

John Marshall

Chief Justice and pillar of judicial nationalism.

a provision in Dartmouth's charter, under which the college's trustees became a self-perpetuating board. In 1816 the state's Republican legislature, offended by this relic of monarchy and even more by the Federalist majority on the board, placed Dartmouth under a new board named by the governor. The original trustees sued, lost in the state courts, but with Daniel Webster as counsel won on appeal to the Supreme Court. The charter, Marshall said, was a valid contract that the legislature had impaired, an act forbidden by the Constitution. This decision implied a new and enlarged definition of *contract* that seemed to put private corporations beyond the reach of the states that chartered them. Thereafter states commonly wrote into charters and general laws of incorporation provisions making them subject to modification. Such provisions were then part of the "contract."

STRENGTHENING THE FEDERAL GOVERNMENT The second major Supreme Court case of 1819 was John Marshall's single most important interpretation of the constitutional system: *McCulloch v. Maryland*. James McCulloch, a clerk in the Baltimore branch of the Bank of the United States, had failed to affix state revenue stamps to bank notes as required by a Maryland law taxing the notes. Indicted by the state, McCulloch, acting for the bank, appealed to the Supreme Court, which handed down a unanimous judgment upholding the power of Congress to charter the bank and denying any right of the state to tax it. In a lengthy opinion, Marshall rejected Maryland's argument that the federal government was the creature of sovereign states. Instead, he argued, it arose directly from the people acting through the conventions that had ratified the Constitution. Whereas sovereignty was divided between the states and the national government, the latter, "though limited in its powers, is supreme within its sphere of action."

Marshall went on to endorse the doctrine of the federal government's having implied constitutional powers. The "necessary and proper" clause, he argued, did not mean "absolutely indispensable." The test of constitutionality was, in his view, a practical one: "Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional."

Maryland's effort to tax the national bank conflicted with the supreme law of the land. One great principle that "entirely pervades the Constitution," Marshall wrote, was "that the Constitution and the laws made in pursuance thereof are supreme: that they control the Constitution and laws of the respective states, and cannot be controlled by them." The effort by a state to tax

a federal bank therefore was unconstitutional, for the “power to tax involves the power to destroy”—which was precisely what the legislatures of Maryland and several other states had in mind with respect to the bank.

REGULATING INTERSTATE COMMERCE John Marshall’s last great decision, *Gibbons v. Ogden* (1824), established national supremacy in regulating interstate commerce. In 1808 Robert Fulton and Robert R. Livingston (Jefferson’s minister to France in 1801), who pioneered commercial use of the steamboat, won from the New York legislature the exclusive right to operate steamboats on the state’s waters. From them in turn Aaron Ogden received the exclusive right to navigate the Hudson River between New York and New Jersey. Thomas Gibbons, however, operated a coastal trade under a federal license and came into competition with Ogden. On behalf of a unanimous Court, Marshall ruled that the monopoly granted by the state conflicted with the federal Coasting Act, under which Gibbons operated. Congressional power to regulate commerce, the Court said, “like all others vested in

Deck Life on the Paragon, 1811–1812

The *Paragon*, “a whole floating town,” was the third steamboat operated on the Hudson by Robert Fulton and Robert R. Livingston.

Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution.”

The opinion stopped just short of stating an exclusive federal power over commerce, and later cases would clarify the point that states had a concurrent jurisdiction so long as it did not come into conflict with federal action. For many years there was in fact little federal regulation of commerce, so that in striking down the monopoly created by the state, Marshall had opened the way to extensive development of steamboat navigation and, soon afterward, railroads. Economic expansion often depended upon judicial nationalism.

NATIONALIST DIPLOMACY

THE NORTHWEST In foreign affairs, too, nationalism continued to be an effective force. Within two years of final approval of John Quincy Adams’s Transcontinental Treaty, the secretary of state was able to draw another important transcontinental line. In 1819 Spain had abandoned its claim to the Oregon Country above the 42nd parallel, but in 1821 the Russian czar claimed the Pacific coast as far south as the fifty-first parallel, which in the American view lay within the Oregon Country.

In 1823 Secretary of State Adams contested “the right of Russia to any territorial establishment on this continent.” The U.S. government, he informed the Russian minister, assumed the principle “that the American continents are no longer subjects for any new European colonial establishments.” His protest resulted in a treaty signed in 1824, whereby Russia, which had more pressing concerns in Europe, accepted the line of 54°40’ as the southern boundary of its claim. In 1825 a similar agreement between Russia and Britain gave the Oregon Country clearly defined boundaries, although it was still subject to joint occupation by the United States and Great Britain under their agreement of 1818. In 1827 both countries agreed to extend indefinitely the provision for joint occupation, subject to termination by either power.

THE MONROE DOCTRINE Secretary of State Adams’s disapproval of further hemispheric colonization had clear implications for Latin America as well. One consequence of the Napoleonic Wars and the French occupation of Spain and Portugal was a series of wars of liberation in Latin America. Within little more than a decade after the flag of rebellion was first raised in 1811, Spain had lost almost its entire empire in the Americas. All that was left were the islands of Cuba and Puerto Rico and the colony of Santo

Domingo on the island of Hispaniola. The only other European possessions in the Americas, 330 years after Columbus's first voyage, were Russian Alaska, British Canada, British Honduras, and the Dutch, French, and British Guianas.

In 1823 rumors began to circulate that France wanted to restore the Spanish king's power over Spain's American empire. President Monroe and Secretary of War Calhoun were alarmed at the possibility, although John Quincy Adams took the more realistic view that any such action was unlikely. The British foreign minister, George Canning, told the American minister to London that the two countries should jointly oppose any incursions by France or Spain in the Western Hemisphere.

Monroe at first agreed, with the support of his sage advisers Jefferson and Madison. Adams, however, urged upon Monroe and the cabinet the independent course of proclaiming a unilateral policy against the restoration of Spain's colonies. "It would be more candid," Adams said, "as well as more dignified, to avow our principles explicitly to Russia and France, than to come in as a cockboat in the wake of the British man-of-war." Adams knew that the British navy would stop any action by the Quintuple Alliance (Austria, France, Great Britain, Prussia, and Russia) in Latin America, and he suspected that the alliance had no intention to intervene anyway. The British, moreover, wanted the United States to agree not to acquire any more Spanish territory, including Cuba, Texas, and California, but Adams preferred to avoid such a commitment.

Monroe incorporated the substance of Adams's views into his annual message to Congress in 1823. The Monroe Doctrine, as it was later called, comprised four major points: (1) that "the American continents . . . are henceforth not to be considered as subjects for future colonization by any European powers"; (2) that the political system of European powers was different from that of the United States, which would "consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety"; (3) that the United States would not interfere with existing European colonies; and (4) that the United States would keep out of the internal affairs of European nations and their wars.

At the time the statement drew little attention either in the United States or abroad. The Monroe Doctrine, not even so called until 1852, became one of the cherished principles of American foreign policy, but for the time being it slipped into obscurity for want of any occasion to invoke it. In spite of Adams's affirmation, the United States came in as a cockboat in the wake of the British man-of-war after all, for the effectiveness of the doctrine depended upon British naval supremacy. The doctrine had no standing in international

law. It was merely a statement of intent by an American president to Congress and did not even draw enough interest at the time for European powers to acknowledge it.

ONE-PARTY POLITICS

Almost from the start of James Monroe's second term, in 1821, the jockeying for the presidential succession began. Three members of Monroe's cabinet were active candidates: Secretary of War John Calhoun, Secretary of the Treasury William H. Crawford, and Secretary of State John Quincy Adams. Henry Clay, longtime Speaker of the House, also hungered for the office. And on the fringes of the Washington scene, a new force appeared in the person of Andrew Jackson, the scourge of the British, Spanish, Creeks, and Seminoles, the epitome of what every frontiersman admired, who became a senator from Tennessee in 1823. All were Republicans, for again no Federalist stood a chance, but they were competing in a new political world, complicated by the crosscurrents of nationalism and sectionalism. With only one party there was in effect no party, for there existed no generally accepted method for choosing a "regular" candidate.

PRESIDENTIAL NOMINATIONS Selection of presidential candidates by congressional caucus, already under attack in 1816, had disappeared in the wave of unanimity that reelected Monroe in 1820 without the formality of a nomination. The friends of William Crawford sought in vain to breathe life back into "King Caucus," but only a minority of congressmen appeared in answer to the call. They duly named Crawford for president, but the endorsement was so weak as to be more a handicap than an advantage. Crawford was in fact the logical successor to the Virginia dynasty, a native of the state though a resident of Georgia. He had flirted with nationalism but swung back to states' rights and strict construction and assumed leadership of a faction, called the Radicals, that included Old Republicans and those who distrusted the nationalism of John Quincy Adams and John Calhoun. Crawford's candidacy foundered from the beginning, for the candidate had been stricken in 1823 by some unknown disease that left him half-paralyzed and half-blind. His friends protested that he would soon be well, but he never did fully recover.

Long before the Crawford caucus met in early 1824, indeed for two years before, the country had broken out in a rash of presidential endorsements by state legislatures and public meetings. In 1822 the Tennessee legislature

named Andrew Jackson as their choice to succeed Monroe. In 1824 a mass meeting of Pennsylvanians added their endorsement. Jackson, who had previously kept silent, responded that while the presidency should not be sought, it should not be declined. The same meeting named Calhoun for vice president, and Calhoun accepted. The youngest of the candidates, he was content to take second place and bide his time. Meanwhile, the Kentucky legislature had named its favorite son, Henry Clay, in 1822. The Massachusetts legislature named John Quincy Adams in 1824.

Of the four candidates, only two had clearly defined programs, and the outcome was an early lesson in the danger of committing oneself on the issues too soon. Crawford's friends emphasized his devotion to states' rights and strict construction. Clay, on the other hand, took his stand for the "American system": he favored the national bank, the protective tariff, and a national program of internal improvements to bind the country together and strengthen its economy. Adams was close to Clay, openly dedicated to internal improvements but less strongly committed to the tariff. Jackson, where issues were concerned, carefully avoided commitment so as to capitalize on his popularity as the hero of the Battle of New Orleans at the end of the War of 1812.

THE "CORRUPT BARGAIN" The 1824 election turned on personalities and sectional allegiance more than issues. Adams, the only northern candidate, carried New England, the former bastion of Federalism, and most of New York's electoral votes. Clay took Kentucky, Ohio, and Missouri. Crawford carried Virginia, Georgia, and Delaware. Jackson swept the Southeast plus Illinois and Indiana and, with Calhoun's support, the Carolinas, Pennsylvania, Maryland, and New Jersey. All candidates got scattered votes elsewhere. In New York, where Clay was strong, his supporters were outmaneuvered by the Adams forces in the legislature, which still chose the presidential electors.

The result was inconclusive in both the electoral vote and the popular vote wherever the state legislature permitted the choice of electors by the people. In the Electoral College, Jackson had 99 votes, Adams 84, Crawford 41, Clay 37. In the popular vote the trend ran about the same: Jackson 154,000, Adams 109,000, Crawford 47,000, and Clay 47,000. Whatever else might have been said about the outcome, one thing seemed apparent—it was a defeat for Clay's program of national economic development: New England and New York opposed him on internal improvements, the South and the Southwest on the protective tariff. Sectionalism had defeated the national economic program.

Yet the advocate of economic nationalism now assumed the role of president maker, as the election was thrown into the House of Representatives,

The Presidential "Race" of 1824

John Adams, William Crawford, and Andrew Jackson stride to the finish line (on the left) and Henry Clay lags behind (far right).

where the Speaker's influence was decisive. Clay had little trouble choosing, since he regarded Jackson as unfit for the office. "I cannot believe," he muttered, "that killing 2,500 Englishmen at New Orleans qualifies for the various, difficult and complicated duties of the Chief Magistracy." He eventually threw his support to Adams. The final vote in the House, which was by state, carried Adams to victory with thirteen votes to Jackson's seven and Crawford's four.

It was a costly victory, for the result united Adams's foes and crippled his administration before it got under way. There is no evidence that Adams entered into any bargain with Clay to win his support. Still, the charge was widely believed after Adams made Clay his secretary of state and thus put him in the office from which three successive presidents had risen. Adams's Puritan conscience could never quite overcome a sense of guilt at the maneuverings that were necessary to gain his election, and his opponents decried the "corrupt bargain" between Adams and Clay. A campaign to elect Jackson in 1828 was launched almost immediately after the 1824 decision. The Crawford people, including Martin Van Buren, "the Little Magician" of New York politics, soon moved into the Jackson camp. So, too, did the new vice president, John Calhoun of South Carolina, who had run on the ticket with both Adams and Jackson but favored the general from Tennessee.

JOHN Q. ADAMS John Quincy Adams was one of the ablest men, one of the hardest workers, and one of the finest intellects ever to enter the White House. Yet he lacked the common touch and the politician's gift for maneuver. A stubborn man who saw two brothers and two sons die from alcoholism, he suffered from chronic bouts of depression that aroused in him a grim self-righteousness and self-pity, qualities that did not endear him to fellow politicians. His idealism also irritated the party faithful. He refused to play the game of patronage, arguing that it would be dishonorable to dismiss "able and faithful political opponents to provide for my own partisans." In four years he removed only twelve officeholders. His first annual message to Congress included a grandiose blueprint for national development, set forth in such a blunt way that it became a disaster of political ineptitude.

John Quincy Adams

A brilliant man but an ineffective leader.

In the boldness and magnitude of its conception, the Adams plan outdid the plans of both Hamilton and Clay. The central government, the president proposed, should promote internal improvements, set up a national university, finance scientific explorations, build astronomical observatories, and create a department of the interior. To refrain from using broad federal powers, Adams insisted, "would be treachery to the most sacred of trusts."

Whatever grandeur of conception the message to Congress had, it was obscured by an unhappy choice of language. For the son of John Adams to cite the example "of the nations of Europe and of their rulers" was downright suicidal. At one fell swoop he had revived all the Republican suspicions of the Adamses as closet monarchists and served to define a new party system. The minority who cast their lot with Adams and Clay were turning into National Republicans; the opposition, the growing party of Jacksonians, were the Democratic Republicans, who would eventually drop the name Republican and become Democrats.

Adams's headstrong plunge into nationalism and his refusal to play the game of politics condemned his administration to utter frustration. Congress ignored his domestic proposals, and in foreign affairs the triumphs that he had scored as secretary of state had no sequels. The climactic effort

to discredit Adams came on the tariff issue. The panic of 1819 had provoked calls for a higher tariff in 1820, but the effort failed by one vote in the Senate. In 1824 the advocates of protection renewed the effort, with greater success. The tariff of 1824 favored the middle Atlantic and New England manufacturers with higher duties on woolens, cotton, iron, and other finished goods. Clay's Kentucky won a tariff on hemp, and a tariff on raw wool brought the wool-growing interests to the support of the measure. Additional revenues were provided by duties on sugar, molasses, coffee, and salt. The tariff on raw wool was in obvious conflict with that on manufactured woolens, but the two groups got together and reached an agreement.

At this point, Jackson's supporters saw a chance to advance their candidate through an awkward scheme hatched by John Calhoun. The plan was to present a bill with such outrageously high tariffs on raw materials that the manufacturers of the East would join the commercial interests there and, with the votes of the agricultural South and Southwest, defeat the measure. In the process, Jackson supporters in the Northeast could take credit for supporting the tariff, and wherever it fit their interests, other Jacksonians elsewhere could take credit for opposing it—while Jackson himself remained in the background. John Randolph of Roanoke saw through the ruse. The bill, he asserted, “referred to manufactures of no sort or kind, but the manufacture of a President of the United States.”

The complicated scheme helped elect Jackson, but in the process Calhoun became a victim of his own machinations. The high tariffs ended up becoming law. Calhoun had calculated upon neither the defection of Van Buren, who supported a crucial amendment to satisfy the woolens manufacturers, nor the growing strength of manufacturing interests in New England. Daniel Webster, now a senator from Massachusetts, explained that he was ready to deny all he had said against the tariff because New England had built up its manufactures on the understanding that the protective tariff was a settled policy.

When the tariff bill passed, in May 1828, it was Calhoun's turn to explain his newfound opposition to the gospel of protection, and nothing so well illustrates the flexibility of constitutional principles as the switch in positions by Webster and Calhoun. Back in South Carolina, Calhoun prepared the *South Carolina Exposition and Protest* (1828), which was issued anonymously along with a series of resolutions by the South Carolina legislature. In that document, Calhoun declared that a state could nullify an act of Congress that it found unconstitutional.

THE ELECTION OF JACKSON Thus far the stage was set for the election of 1828, which might more truly than that of 1800 be called a revolution.

The Bloody Deeds of General Andrew Jackson

This anti-Jackson handbill, published during the 1828 campaign, depicts Jackson as a merciless frontier ruffian.

But if the issues of the day had anything to do with the election, they were hardly visible in the campaign, in which politicians on both sides reached depths of scurrilousness that had not been plumbed since 1800. Those campaigning for Adams denounced Jackson as a hot-tempered and ignorant barbarian, a participant in repeated duels and frontier brawls, a man whose fame rested upon his reputation as a killer. In addition, his enemies dredged up the story that Jackson had lived in adultery with his wife, Rachel, before they had been legally married; in fact they had lived together for two years in the mistaken belief that her divorce from her former husband was final. As soon as the official divorce had come through, Andrew and Rachel had been remarried.

The Jacksonians, however, got in their licks against Adams, condemning him as a man who had lived his adult life on the public treasury, who had been corrupted by foreigners in the courts of Europe, and who had allegedly delivered up an American girl to serve the lust of Czar Alexander I while serving as minister to Russia. They called him a gambler and a spendthrift for having bought a billiard table and a chess set for the White House and a puritanical hypocrite for despising the common people and warning Congress to ignore the will of its constituents. He had finally reached the presidency, the Jacksonians claimed, by a “corrupt bargain” with Henry Clay.

In the campaign of 1828, Jackson held most of the advantages. As a military victor he projected patriotism. As a son of the West and a fabled Indian fighter, he was a hero in the frontier states. As a farmer, lawyer, and slaveholder he had the trust of southern planters. Debtors and local bankers who hated the national bank also turned to Jackson. In addition, his vagueness on the issues protected him from attack by interest groups. Not least of all, Jackson benefited from a spirit of democracy in which the common folk were no longer satisfied to look to their betters for leadership, as they had

The Man of the People

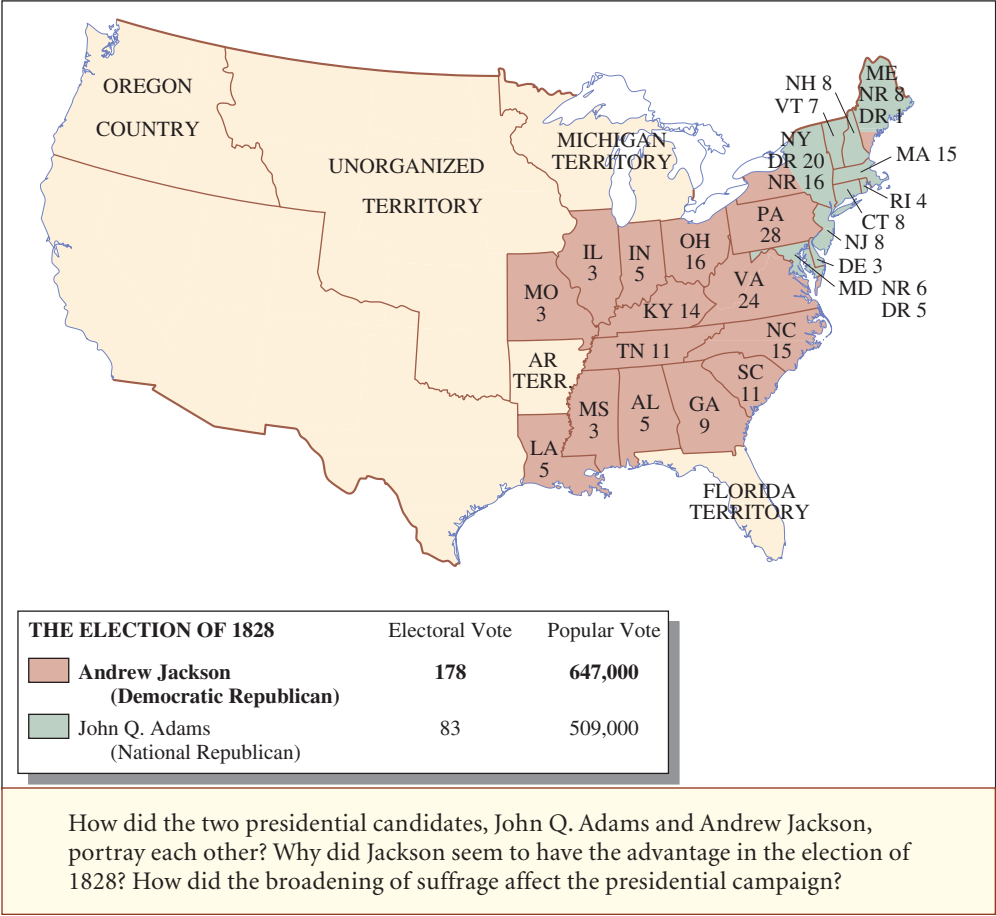

This 1828 handbill identifies Andrew Jackson with the democratic impulse of the time.

done in the eighteenth century. It had become politically fatal to be labeled an aristocrat.

Since the Revolution and especially since 1800, white male suffrage had been gaining ground. The traditional story is that a surge of Jacksonian democracy came out of the West like a great wave, supported mainly by small farmers, leading the way for the East. But in the older states there were other forces working toward a wider franchise: the Revolutionary doctrine of equality and the feeling on the part of the workers, artisans, and small merchants of the towns, as well as small farmers and landed gentry, that a democratic ballot provided

a means to combat the rising commercial and manufacturing interests. From the beginning, Pennsylvania had opened the ballot box to all adult males who paid taxes; by 1790 Georgia and New Hampshire had similar arrangements. Vermont, in 1791, became the first state with universal manhood suffrage, having first adopted it in 1777. Kentucky, admitted to the Union in 1792, became the second. Tennessee, admitted in 1796, had only a light taxpaying qualification. New Jersey in 1807 and Maryland and South Carolina in 1810 abolished property and taxpaying requirements, and after 1815 the new states of the West came in with either white manhood suffrage or a low taxpaying requirement. Connecticut in 1818, Massachusetts in 1821, and New York in 1821 abolished their property requirements.

Along with the broadening of the suffrage went a liberalization of other features of government. Representation was reapportioned more nearly in line with the population. An increasing number of officials, even judges, were chosen by popular vote. Final disestablishment of the Congregational Church in New England came in Vermont in 1807, New Hampshire in 1817, Connecticut in 1818, Maine in 1820, and Massachusetts in 1834. In 1824 six state legislatures still chose presidential electors. By 1828 the popular vote prevailed in all but South Carolina and Delaware and by 1832 in all but South Carolina.

How did the two presidential candidates, John Q. Adams and Andrew Jackson, portray each other? Why did Jackson seem to have the advantage in the election of 1828? How did the broadening of suffrage affect the presidential campaign?

The spread of the suffrage brought a new type of politician to the fore: the man who had special appeal to the masses or knew how to organize the people for political purposes and who became a vocal advocate of the people’s right to rule. Jackson fit the ideal of this new political world, a leader sprung from the people rather than a member of the aristocracy, a frontiersman of humble origin who had scrambled up the political ladder by will and tenacity. “Adams can write,” went one of the campaign slogans, “Jackson can fight.” He could write, too, but he once said that he had no respect for a man who could think of only one way to spell a word.

When the 1828 returns came in, Jackson won by a comfortable margin. The electoral vote was 178 to 83, and the popular vote was about 647,000 to

509,000 (the figures vary). Adams had won all of New England (except one of Maine's nine electoral votes), sixteen of the thirty-six from New York, and six of the eleven from Maryland. All the rest belonged to Jackson.

MAKING CONNECTIONS

- Thomas Jefferson referred to the Missouri Compromise as “a firebell in the night.” He was right. The controversy over the expansion of slavery, introduced here, will reappear in Chapter 14, in the discussion of Texas and the Mexican War.
- John Quincy Adams's National Republicans, who could trace some of their ideology to the Federalists, will be at the core of the Whig coalition that opposes Jackson in Chapter 11.
- Several of the issues on which the nation united during the Era of Good Feelings—the bank and the protective tariff, for example—will become much more divisive, as discussed in the next chapter.

THE JACKSONIAN IMPULSE

FOCUS QUESTIONS

- What was the social and political context of the Jackson and Van Buren administrations?
- What were Andrew Jackson's attitudes and actions concerning the tariff (and nullification), Indian policy, and the Bank of the United States?
- Why did a new party system of Democrats and Whigs emerge?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

The election of Andrew Jackson initiated a new era in American politics and social development. Jackson was the first president not to come from a prominent colonial family. As a self-made soldier, politician, and land speculator from the backcountry, he symbolized the changing social scene. The nation he prepared to govern was vastly different from that led by George Washington and Thomas Jefferson. In 1828 the United States boasted twenty-four states and nearly 13 million people, many of them recent arrivals from Germany and Ireland. The national population was growing at a phenomenal rate, doubling every twenty-three years. An extraordinary surge in foreign demand for cotton and other goods, along with British investment in American enterprises, helped fuel an economic boom and a transportation revolution. Textile mills sprouted like mushrooms across the New England countryside, their ravenous

All Creation Going to the White House

The scene following Jackson's inauguration as president, according to the satirist Robert Cruikshank.

spinning looms fed by cotton grown in the newly cultivated lands of Alabama and Mississippi. This fluid new economic environment fostered a mad scramble for material gain and political advantage. People of all backgrounds engaged in a frenzied effort to acquire wealth and thereby gain social status and prestige.

The Jacksonians sought to democratize economic opportunity and political participation. Yet to call the Jacksonian era the age of the common man, as many historians have, is misleading. While political participation increased during the Jacksonian era, most of the common folk remained *common* folk. The period never produced true economic and social equality. Power and privilege, for the most part, remained in the hands of an “uncommon” elite of powerful men. Jacksonians in power proved to be as opportunistic and manipulative as the patricians they displaced. And they never embraced the principle of economic equality. “Distinctions in society will always exist under every just government,” Andrew Jackson observed. “Equality of talents, or education, or of wealth cannot be produced by human institutions.” He and other Jacksonians wanted every American to have an

equal chance to compete in the marketplace and in the political arena, but they never sanctioned equality of results. “True republicanism,” one commentator declared, “requires that every man shall have an equal chance—that every man shall be free to become as unequal as he can.” But in the afterglow of Jackson’s electoral victory, few observers troubled with such distinctions. It was time to celebrate the commoner’s ascension to the presidency.

SETTING THE STAGE

Andrew Jackson’s father had died before Andrew was born, and his mother had scratched out a meager living as a housekeeper before dying of cholera when her son was fifteen. Jackson grew to be proud, gritty, and short-tempered, and he became a good hater. During the Revolution, when he was a young boy, two of his brothers were killed by redcoats, and the young Jackson was scarred by a British officer’s saber. He also carried with him the conviction that it was not enough for a man to be right; he had to be tough as well, a quality that inspired his soldiers to nickname him Old Hickory. During a duel with a man reputed to be the best shot in Tennessee, Jackson nevertheless let his opponent fire first. For his gallantry the future president received a bullet wedged next to his heart. But he straightened himself, patiently took aim, and killed his foe. “I should have hit him,” Jackson claimed, “if he had shot me through the brain.”

APPOINTMENTS AND RIVALRIES Jackson believed that a man should serve a term in government, then return to the status of private citizen, for officials who stayed in office too long grew corrupt. During his first year in office, however, Jackson replaced only about 9 percent of the appointed officials in the federal government and during his entire term replaced fewer than 20 percent.

Jackson’s administration was from the outset divided between the partisans of Secretary of State Martin Van Buren and those of Vice President John C. Calhoun. Much of the political history of the next few years would turn upon the rivalry of the two statesmen as each jockeyed for position as Jackson’s successor. Van Buren held most of the advantages, foremost among them his skill at timing and tactics. Jackson, new to political administration, leaned heavily upon him for advice and for help in soothing the ruffled feathers of rejected office seekers. Van Buren had perhaps more skill at maneuvering than Calhoun and certainly more freedom to maneuver because

his home base of New York was more secure politically than Calhoun's base in South Carolina. But Calhoun, a man of towering intellect, humorless outlook, and apostolic zeal, could not be taken lightly. A visitor remarked after a three-hour discussion with the bushy-browed Calhoun, "I hate a man who makes me think so much . . . and I hate a man who makes me feel my own inferiority." As vice president, Calhoun was determined to defend southern interests against the worrisome advance of northern industrialism and abolitionism.

THE EATON AFFAIR In his battle with Calhoun over political power, Van Buren had luck on his side. Fate handed him a trump card: the succulent scandal known as the Peggy Eaton affair. The daughter of an Irish tavern owner, Margaret Eaton was a vivacious widow whose husband had supposedly committed suicide upon learning of her affair with the Tennessee senator John Eaton. Her marriage to Eaton, three months before he became Jackson's secretary of war, had scarcely made a virtuous woman of her in the eyes of the proper ladies of Washington. Floride Calhoun, the vice president's wife, especially objected to Peggy Eaton's lowly origins and unsavory past. She pointedly snubbed her, and the cabinet wives followed suit.

Peggy's plight reminded Jackson of the gossip that had pursued his own wife Rachel, and he pronounced Peggy "chaste as a virgin." To a friend he wrote: "I did not come here to make a Cabinet for the Ladies of this place, but for the Nation." His cabinet members, however, were unable to cure their wives of what Van Buren dubbed "the Eaton Malaria." Van Buren, though, was a widower and therefore free to lavish on poor Peggy all the attention that Jackson thought was her due. Mrs. Eaton herself finally gave in to the chill and withdrew from society. The outraged Jackson came to link Calhoun with what he called a conspiracy against her and drew even closer to Van Buren.

INTERNAL IMPROVEMENTS While Washington social life weathered the winter of 1829–1830, Van Buren delivered some additional blows to Calhoun. It was easy to bring Jackson into opposition to federal financing of transportation improvements, programs with which Calhoun had long been identified. Jackson did not oppose road building per se, but he had the same constitutional scruples as Madison and Monroe about using federal aid to fund local projects. In 1830 the Maysville Road bill, passed by Congress, offered Jackson a happy chance for a dual thrust at rivals John Calhoun and Henry Clay. The bill authorized the government to buy stock in a road from Maysville to Clay's hometown of Lexington. The road lay entirely within

the state of Kentucky, and though part of a larger scheme to link up with the National Road via Cincinnati, it could be viewed as a purely local undertaking. On that ground, Jackson vetoed the bill, calling it unconstitutional, to widespread popular acclaim.

Yet while Jackson continued to oppose federal aid to local projects, he supported interstate projects such as the National Road, as well as road building in the territories and river and harbor bills, the “pork barrels” from which every congressman tried to pluck a morsel for his district. Even so, Jackson’s attitude toward the Maysville Road set an important precedent, on the eve of the railroad age, for limiting federal support of internal improvements. Railroads would be built altogether by state and private capital at least until 1850.

King Andrew the First

Opponents considered Jackson’s veto of the Maysville Road bill an abuse of power. This cartoon shows “King Andrew” trampling on the Constitution, internal improvements, and the Bank of the United States.

NULLIFICATION

CALHOUN’S THEORY There is a fine irony to John Calhoun’s plight in the Jackson administration, for the South Carolinian was now midway between his early phase as a war-hawk nationalist and his later phase as a states’ rights sectionalist. Conditions in his home state had brought on the change. Suffering from agricultural depression, South Carolina lost almost 70,000 residents to emigration during the 1820s and was fated to lose nearly twice that number in the 1830s. Most South Carolinians blamed the protective tariff for raising the price of manufactured goods. Insofar as tariffs discouraged the sale of foreign goods in the United States, they reduced the ability of British and French traders to buy southern cotton. This situation worsened already existing problems of low cotton prices

John C. Calhoun

During the Civil War the Confederate government printed, but never issued, a one-cent postage stamp bearing Calhoun's likeness.

and exhausted lands. Compounding the South Carolinians' malaise was growing anger over the North's criticism of slavery. Hardly had the country emerged from the Missouri controversy when Charleston, South Carolina, was thrown into panic by the Denmark Vesey slave insurrection of 1822, though the Vesey plot was quickly put down.

The unexpected passage of the tariff of 1828 (called the tariff of abominations by its critics) left Calhoun no choice but to join those in opposition or give up his home base.

Calhoun's *South Carolina Exposition and Protest*, written in opposition to the new tariff, had actually been an effort to check the most extreme states' rights advocates with finespun theory, in which nullification stopped short of secession from the Union. The unsigned statement accompanied resolutions of the South Carolina legislature protesting the tariff and urging its repeal. Calhoun, it was clear, had not entirely abandoned his earlier nationalism. He wanted to preserve the Union by protecting the minority rights that the agricultural and slaveholding South claimed. The fine balance he struck between states' rights and central authority was actually not as far removed from Jackson's own philosophy as it might seem, but growing tensions between the two men would complicate the issue. The flinty Jackson, in addition, was determined to draw the line at any defiance of federal law.

Nor would Calhoun's theory permit any state to take up such defiance lightly. His concept of nullification, or interposition, whereby a state could interpose state authority and in effect repeal a federal law, followed that by which the original thirteen states had ratified the Constitution. A special state convention, like the ratifying conventions, which embody the sovereign power of the people, could declare a federal law null and void within the state's borders because it violated the Constitution, the original compact among the states. One of two outcomes would then be possible: the federal government would have to abandon the law, or it would have to propose a constitutional amendment removing all doubt as to its validity. The immediate issue was the constitutionality of a tariff designed mainly to protect American

industries from foreign competition. The South Carolinians argued that the Constitution authorized tariffs for revenue only.

THE WEBSTER-HAYNE DEBATE South Carolina's leaders hated the tariff, but they had postponed any action against its enforcement, awaiting with hope the election of 1828, in which anti-tariff Calhoun was the Jacksonian candidate for vice president. Yet after Jackson assumed the presidency in early 1829, neither he nor Congress saw fit to reduce the tariff duties. There the issue stood until 1830, when the great Webster-Hayne debate sharpened the lines between states' rights and the Union.

The immediate occasion for the debate, however, was the question of public land. The federal government owned immense tracts of unsettled land, and what to do with them set off an intense sectional debate. Late in 1829 Senator Samuel A. Foot of Connecticut proposed that the federal government restrict land sales in the West. When the Foot Resolution came before the Senate in 1830, Thomas Hart Benton of Missouri denounced it as a northern effort to hamstring the settlement of the West so that the East might maintain its supply of cheap factory labor. Senator Robert Y. Hayne of South Carolina took Benton's side. Hayne saw in the issue a chance to strengthen the alliance of South and West reflected in the vote for Jackson. Perhaps by supporting a policy of cheap land in the West, southerners could gain western support for lower tariffs. The government, said Hayne, endangered the Union by imposing any policy that would cause a hardship on one section of the nation to the benefit of another. The sale of public land as a source of revenue for the central government would create "a fund for corruption—fatal to the sovereignty and independence of the states."

Daniel Webster of Massachusetts rose to defend the East. Possessed of a thunderous voice and a theatrical flair, Webster was widely recognized as the nation's foremost orator and lawyer. With the gallery hushed, he denied that the East had ever shown a restrictive policy toward the West. He then rebuked those southerners who disparaged the Union. Webster had adroitly lured Hayne into defending states' rights and upholding the doctrine of nullification instead of pursuing a coalition with the West.

Hayne took the bait. He defended the *South Carolina Exposition*, appealed to the example of the Virginia and Kentucky Resolutions of 1798, and called attention to the Hartford Convention, in which New Englanders had taken much the same position against majority measures as South Carolina now did. The Union constituted a compact of the states, Hayne argued, and the

The eloquent Massachusetts senator stands to rebut the argument for nullification in the Webster-Hayne debate.

federal government, which was their “agent,” could not be the judge of its own powers, else its powers would be unlimited. Rather, the states remained free to judge when their agent had overstepped the bounds of its constitutional authority. The right of state interposition was “as full and complete as it was before the Constitution was formed.”

In rebutting the idea that a state could thwart a federal law, Webster defined a nationalistic view of the Constitution. From the beginning, he asserted, the American Revolution had been a crusade of a united nation rather than one of separate colonies. True sovereignty resided in the people as a whole, for whom both federal and state governments acted as agents in their respective spheres. If a single state could nullify a law of the national government, then the Union would be a “rope of sand,” a practical absurdity. A state could neither nullify a federal law nor secede from the Union. The practical outcome of nullification would be a confrontation leading to civil war.

Hayne may have had the better argument historically in advancing the states’ compact theory, but the Senate galleries and much of the country at large thrilled to the eloquence of “the God-like Daniel.” Webster’s closing statement became an American classic, reprinted in school texts and

committed to memory by young orators: “Liberty and Union, now and forever, one and inseparable.” In the practical world of coalition politics, Webster had the better argument, for the Union and majority rule meant more to westerners, including Jackson, than the abstractions of state sovereignty and nullification. As for the public lands, the Foot Resolution was soon defeated anyway. And whatever one might argue about the origins of the Union, its evolution would more and more validate Webster’s position: the states could not act separately from the national government.

THE RIFT WITH CALHOUN As yet, however, Jackson had not spoken out on the issue. Like Calhoun he was a slaveholder, albeit a westerner, and might be expected to sympathize with South Carolina, his native state. Soon all doubt was removed, at least on the point of nullification. On April 13, 1830, the Jefferson Day dinner was held in Washington to honor the birthday of the former president. Jackson and Van Buren agreed that Jackson should present a toast proclaiming his opposition to nullification. When his turn came, after twenty-four toasts, many of them extolling states’ rights, Jackson raised his glass, pointedly stared at Calhoun, and announced: “Our Union—It must be preserved!” Calhoun, who followed, tried quickly to retrieve the situation with a toast to “The Union, next to our liberty most dear! May we all remember that it can only be preserved by respecting the rights of the States and distributing equally the benefit and the burden of the Union!” But Jackson had set off a bombshell that exploded the plans of the states’ righters.

Nearly a month afterward a final nail was driven into the coffin of Calhoun’s presidential ambitions. On May 12, 1830, Jackson first saw a letter confirming reports of Calhoun’s stand in 1818, when as secretary of war he had proposed disciplining General Jackson for his invasion of Florida. A tense correspondence between Jackson and Calhoun followed, ending with a curt note from Jackson cutting it off. “Understanding you now,” Jackson wrote two weeks later, “no further communication with you on this subject is necessary.”

The acidic rift between the two proud men prompted Jackson to remove all Calhoun partisans from the cabinet. Before the end of the summer of 1831, the president had a new cabinet, one entirely loyal to him. He named Martin Van Buren, who had resigned from the cabinet, minister to Great Britain, and Van Buren departed for London. Van Buren’s friends now urged Jackson to repudiate his previous intention of serving only one term. It might be hard, they believed, to win the 1832 nomination for the New Yorker, who had been charged with intrigues against Calhoun, and the still-popular Carolinian might yet gain the presidency.

The Rats Leaving a Falling House

During his first term, Jackson was beset by dissension within his administration. Here “public confidence in the stability and harmony of this administration” is toppling.

Now that his presidential hopes were blasted, Calhoun assumed public leadership of the South Carolina nullificationists. They thought that despite Jackson’s gestures, tariff rates remained too high and represented an unconstitutional tax designed to enrich the industrial North at the expense of the agricultural South. Jackson accepted the principle of using tariffs to protect new American industries from foreign competition. Nevertheless, he had called upon Congress in 1829 to reduce tariffs on goods “which cannot come in competition with our own products.” Late in the spring of 1830, Congress lowered duties on such consumer products as tea, coffee, salt, and molasses. That and the Maysville veto, coming at about the same time, mollified a few South Carolinians, but nullifiers regarded the two actions as “nothing but sugar plums to pacify children.” By the end of 1831, Jackson was calling for further reductions to take the wind out of the nullificationists’ sails, and the tariff of 1832, pushed through by John Quincy Adams (back in Washington as a congressman), cut rates again. But tariffs on cloth and iron remained high.

Jackson relented and in the fall of 1831 announced his readiness for one more term, with the idea of returning Van Buren from London in time to win the presidency in 1836. But in 1832, when the Senate reconvened, Van Buren’s enemies opposed his appointment as minister to England, and gave Calhoun, as vice president, a chance to reject the nomination with a tie-breaking vote. “It will kill him, sir, kill him dead,” Calhoun told Senator Thomas Hart Benton. Benton disagreed: “You have broken a minister, and elected a Vice President.” So, it turned out, he had. Calhoun’s vote against Van Buren evoked popular sympathy for the New Yorker, who returned from London and would soon be nominated to succeed Calhoun as vice president.

THE SOUTH CAROLINA ORDINANCE South Carolinians, living in the only state where slaves were a majority of the population, feared that the federal authority to impose tariffs might eventually be used to end slavery. In the state elections of 1832, attention centered on the nullification issue. The nullificationists took the initiative in organization and agitation, and the newly formed Unionist party was left with distinguished leaders but little support. A special session of the legislature called for the election of a state convention, which overwhelmingly adopted an ordinance of nullification that repudiated the federal tariff acts of 1828 and 1832 and forbade collection of the duties in the state after February 1, 1833. The reassembled legislature then provided that any citizen whose property was seized by federal authorities for failure to pay the duty could get a state court order to recover twice its value. The legislature chose Robert Hayne as governor and elected Calhoun to succeed him as senator. Calhoun promptly resigned as vice president in order to defend nullification on the Senate floor.

JACKSON'S FIRM RESPONSE In the crisis, South Carolina found itself standing alone: other states expressed sympathy, but none endorsed nullification. Jackson's response was measured but not rash—at least not in public. In private he threatened to hang Calhoun and all other traitors—and later expressed regret that he had failed to hang at least Calhoun. In his annual message on December 4, 1832, Jackson announced his firm intention to enforce the tariff but once again urged Congress to lower the rates. On December 10, Jackson followed up with his nullification proclamation, which characterized the doctrine of nullification as an “impractical absurdity.” He appealed to the people of his native state not to follow false leaders: “The laws of the United States must be executed. . . . Those who told you that you might peaceably prevent their execution, deceived you; they could not have been deceived themselves. . . . Their object is disunion. But be not deceived by names. Disunion by armed force is treason.”

CLAY'S COMPROMISE Jackson then sent federal soldiers and ships to South Carolina. The nullifiers mobilized the state militia while Unionists in the state organized a volunteer force. In 1833 the president requested from Congress a “force bill” specifically authorizing him to use the army to compel compliance with federal law in South Carolina. Under existing legislation he already had such authority, but this affirmation would strengthen his hand. At the same time he supported a bill in Congress that would have lowered tariff duties substantially within two years.

The nullifiers postponed enforcement of their ordinances in anticipation of a compromise. Passage of the compromise bill depended upon the support of the Kentucky senator Henry Clay, who finally yielded to those urging him to save the day. On February 12, 1833, he circulated a plan to reduce the tariff gradually until 1842. It was less than South Carolina preferred, but it got the nullifiers out of the corner into which they had painted themselves.

On March 1, 1833, Congress passed the compromise tariff and the force bill, and the next day Jackson signed both. The South Carolina convention then met and rescinded its nullification of the tariff acts. In a face-saving gesture, it nullified the force bill, for which Jackson no longer had any need. Both sides were able to claim victory. Jackson had upheld the supremacy of the Union, and South Carolina had secured a reduction of the tariff. Calhoun, worn out by the controversy, returned to his plantation. “The struggle, so far from being over,” he ominously wrote, “is not more than fairly commenced.”

JACKSON’S INDIAN POLICY

During the 1820s and 1830s the United States was fast becoming a multicultural nation of peoples from many countries. Most whites, however, were openly racist in their treatment of blacks and Indians. As economic growth reinforced the institution of slavery and accelerated westward expansion, policy makers struggled to preserve white racial homogeneity and hegemony. “Next to the case of the black race within our bosom,” declared former president James Madison, “that of the red [race] on our borders is the problem most baffling to the policy of our country.”

Andrew Jackson, however, saw nothing baffling about Indian policy. His attitude toward Indians was the typically western one: Native Americans were barbarians and better off out of the way. At the Battle of Horseshoe Bend in Alabama in 1814, General Jackson’s federal troops had massacred nearly 900 Creeks. Jackson and most Americans on the frontier despised and feared Indians—and vice versa. Jackson believed that a “just, humane, liberal policy toward Indians” dictated moving all of them onto the plains west of the Mississippi River, to the Great American Desert, which white settlers would never covet, since it was believed to be fit mainly for horned toads and rattlesnakes.

INDIAN REMOVAL In response to a request by Jackson, Congress in 1830 approved the Indian Removal Act. It authorized the president to give

Indians federal land west of the Mississippi River in exchange for the land they occupied in the East and the South. By 1835 Jackson was able to announce that the policy had been carried out or was in the process of completion for all but a handful of Indians. Some 46,000 people were relocated at government expense. The policy was effected with remarkable speed, but even that was too slow for state authorities in the South and Southwest. Unlike the Ohio River valley and the Great Lakes region, where the flow of white settlement had constantly pushed the Indians westward before it, in the Old Southwest settlement moved across Kentucky and Tennessee and down the Mississippi, surrounding the Creeks, Choctaws, Chickasaws, Seminoles, and Cherokees. These tribes had over the years taken on many of the features of white society. The Cherokees even had such products of white "civilization" as a constitution, a written language, and African-American slaves.

Most of the northern tribes were too weak to resist the offers of commissioners who, if necessary, used bribery and alcohol to woo the chiefs. On the whole, there was remarkably little resistance. In Illinois and the Wisconsin Territory an armed clash erupted in 1832, which came to be known as the Black Hawk War. Under Chief Black Hawk the Sauk and Fox sought to reoccupy some lands they had abandoned in the previous year. Facing famine and hostile Sioux west of the Mississippi, they were simply seeking a place to raise a crop of corn. The Illinois militia mobilized to expel them, chased them into the Wisconsin Territory, and massacred women and children as they tried to escape across the Mississippi. The Black Hawk War came to be remembered, however, less because of the atrocities inflicted on the Indians than because among the participants were two native Kentuckians later pitted against each other: Lieutenant Jefferson Davis of the regular army and Captain Abraham Lincoln of the Illinois volunteers.

In the South two nations, the Seminoles and the Cherokees, put up a stubborn resistance to the federal removal policy. The Seminoles of Florida fought a protracted guerrilla war in the Everglades from 1835 to 1842. But their resistance waned after 1837, when their leader, Osceola, was seized by treachery under a flag of truce, imprisoned, and left to die at Fort Moultrie near Charleston harbor. After 1842 only a few hundred Seminoles remained, hiding out in the swamps. Most of the rest had been banished to the West.

THE TRAIL OF TEARS The Cherokees had, by the end of the eighteenth century, fallen back into the mountains of northern Georgia and western North Carolina, onto land guaranteed to them in 1791 by treaty

Why did Congress exile the Choctaws, Chickasaws, Creeks, Seminoles, and Cherokees to the territory west of Arkansas and Missouri? How far did the tribes have to travel, and what were the conditions on the trip? Why were the Indians not forced to move earlier than the 1830s?

with the United States. But when Georgia ceded its western lands in 1802, it did so on the ambiguous condition that the United States extinguish all Indian titles within the state “as early as the same can be obtained on reasonable terms.” In 1827 the Cherokees, relying on their treaty rights, adopted a constitution in which they declared pointedly that they were not subject to any other state or nation. In 1828 Georgia responded by declaring that after

June 1, 1830, the authority of state law would extend over the Cherokees living within the boundaries of the state.

The discovery of gold in 1829 whetted the whites' appetite for Cherokee land and brought bands of rough prospectors into the country. The Cherokees sought relief in the Supreme Court, but in *Cherokee Nation v. Georgia* (1831) John Marshall ruled that the Court lacked jurisdiction because the Cherokees were a "domestic dependent nation" rather than a foreign state in the meaning of the Constitution. Marshall added, however, that the Cherokees had "an unquestionable right" to their lands "until title should be extinguished by voluntary cession to the United States." In 1830 a Georgia law had required whites in the territory to obtain licenses authorizing their residence there and to take an oath of allegiance to the state. Two New England missionaries among the Indians refused to abide by the law and were sentenced to four years at hard labor. On appeal their case reached the Supreme Court as *Worcester v. Georgia* (1832), and the Court held that the Cherokee Nation was "a distinct political community" within which Georgia law had no force. The Georgia law was therefore unconstitutional.

Six years earlier Georgia had faced down President John Quincy Adams when he tried to protect the rights of the Creeks. Now Georgia faced down the Supreme Court with the tacit consent of another president. Andrew Jackson did nothing to enforce the Court's decision. Under the circumstances there was nothing for the Cherokees to do but give in and sign a treaty, which they did in 1835. They gave up their land in the Southeast in exchange for tracts in the Indian Territory west of Arkansas, \$5 million from the federal government, and expenses for transportation.

They gave up their land in the Southeast in exchange for tracts in the Indian Territory west of Arkansas, \$5 million from the federal government, and expenses for transportation.

By 1838 some 17,000 Cherokees had departed westward on the "Trail of Tears," following other tribes on an 800-mile journey marked by the cruelty and neglect of soldiers and private contractors and scorn and pilferage by whites along the way. A few held out in the mountains and acquired title to federal land in North Carolina; thenceforth they were the "Eastern Band" of

the Cherokees. Some Seminoles were able to hide out in the Everglades in south Florida, and a few of the others remained scattered in the Southeast, especially mixed-blood Creeks who could pass for white. Only 8,000 of the exiles survived the forced march to Oklahoma.

THE BANK CONTROVERSY

THE BANK'S OPPONENTS The overriding national issue in the campaign of 1832 was neither Jackson's Indian policy nor South Carolina's obsession with the tariff. It was the question of rechartering the Bank of the United States. On the bank issue, as on others, Jackson had made no public commitment, but his personal opposition to the bank was already formed. Jackson had absorbed the western attitude of hostility toward the bank after the panic of 1819. He was convinced that the central bank was unconstitutional no matter what Chief Justice John Marshall had said in *McCulloch v. Maryland*.

Under the management of Nicholas Biddle, the Bank of the United States had prospered and grown. It had facilitated business expansion and supplied a stable currency by forcing the 464 state banks to keep a specie (gold or silver) reserve on hand to back their paper currency. The bank also acted as the collecting and disbursing agent for the federal government, which held one fifth of the bank's \$35 million capital stock. From the start this combination of private and public functions caused problems for the Bank of the United States. As the government's revenues soared, the bank became the most powerful lending institution in the country, a central bank, in effect, whose huge size enabled it to determine the amount of available credit for the nation.

Arrayed against the bank were powerful enemies: some of the state and local banks that had been forced to reduce their volume of paper money, groups of debtors who suffered from the reduction, and businessmen and speculators "on the make," who wanted easier credit. States' rights groups questioned the bank's constitutionality, though Calhoun, who had sponsored the original charter and valued the bank's function of regulating the currency, was not among them. Financiers on New York's Wall Street resented the supremacy of the bank, which was located on Philadelphia's Chestnut Street.

Like Jackson, many westerners and workingmen felt in their bones that the bank was, in Thomas Hart Benton's word, a "Monster," a monopoly controlled by a wealthy few with power that was irreconcilable with a democracy. "I think it right to be perfectly frank with you," Jackson told Biddle in 1829.

“I do not dislike your Bank any more than [I dislike] all banks.” Jackson was perhaps right in his instinct that the bank lodged too much power in private hands, but he was mistaken in his understanding of the bank’s policies. By issuing paper money of its own, the bank provided a stable and uniform currency for the expanding economy as well as a mechanism to control the pace of growth.

Biddle at first tried to conciliate Jackson by appointing a number of Jackson men to branch offices. In 1829, however, in his first annual message, the president questioned the bank’s constitutionality and asserted (whatever the evidence to the contrary) that it had failed to maintain a sound and uniform currency. Jackson talked of a compromise, perhaps a bank completely owned by the government with its operations confined chiefly to government deposits, its profits payable to the government, and its authority to set up branches in any state dependent upon the state’s wishes. But Jackson would never commit himself on the precise terms of compromise. The defense of the bank was left up to Biddle.

THE RECHARTER EFFORT The bank’s twenty-year charter would run through 1836, but Biddle could not afford the uncertainty of waiting until then for a renewal. He pondered whether to force the issue of recharter before the election of 1832 or after. On this point, leaders of the National Republicans, especially Henry Clay and Daniel Webster (who was legal counsel to the bank as well as a senator), argued that the time to move was before the election. Clay, already the presidential candidate of the National Republicans, proposed making the bank the central election issue. Friends of the bank held a majority in Congress, and Jackson would risk loss of support in the election if he vetoed a renewal. But they failed to grasp the depth of public suspicion of the bank and succeeded mainly in handing Jackson a popular issue on the eve of the election. “The Bank,” Jackson told Martin Van Buren in May 1832, “is trying to kill me. But I will kill it.”

Both houses passed the recharter by a comfortable margin but without the two-thirds majority needed to override a veto. On July 10, 1832, Jackson vetoed the bill, sending it back to Congress with a ringing denunciation of monopoly and special privilege. Jackson argued that the bank was unconstitutional no matter what the Court and Congress said: “The opinion of the judges has no more authority over Congress than the opinion of Congress had over the judges, and on that point the President is independent of both.” Besides, there were substantive objections apart from the question of constitutionality. Foreign stockholders in the bank had an undue influence. The bank, Jackson added, had shown favors to members of Congress and

Rechartering the Bank

Jackson battling the Hydra-headed Bank of the United States.

exercised an improper power over state banks. An effort to overrule the veto failed in the Senate, thus setting the stage for a nationwide financial crisis.

CAMPAIGN INNOVATIONS The year 1832 witnessed another presidential election. For the first time a third party entered the field. The Anti-Masonic party grew out of popular hostility toward the Masonic order, members of which were suspected of having kidnapped and murdered a New Yorker for revealing the “secrets” of his lodge. Opposition to a fraternal order was hardly the foundation on which to build a lasting political party, but the Anti-Masonic party had three important firsts to its credit: in addition to being the first third party, it was the first party to hold a national nominating convention and the first to announce a platform, both of which it accomplished in 1831 when it nominated William Wirt of Maryland for president.

The major parties followed its example by holding national conventions of their own. In December 1831 the delegates of the National Republican party assembled in Baltimore to nominate Henry Clay. Jackson endorsed the idea of a nominating convention for the Democratic party (the name Republican was

Verdict of the People

George Caleb Bingham's painting depicts the increasingly democratic politics of the mid-nineteenth century.

now formally dropped) to demonstrate popular support for its candidates. To that purpose the convention, also meeting at Baltimore, first adopted the two-thirds rule for nomination (which prevailed until 1936, when it became a simple majority) and then named Martin Van Buren as Jackson's running mate. The Democrats, unlike the other two parties, adopted no formal platform at their first convention and relied to a substantial degree upon hoopla and the personal popularity of the president to carry their cause.

The outcome was an overwhelming endorsement of Jackson in the Electoral College, by 219 votes to 49 for Clay, and a less overwhelming but solid victory in the popular vote, 688,000 to 530,000. William Wirt carried only Vermont, winning several electoral votes. South Carolina, preparing for nullification and unable to stomach either Jackson or Clay, delivered its eleven votes to Governor John Floyd of Virginia.

THE REMOVAL OF GOVERNMENT DEPOSITS Andrew Jackson interpreted his election as a mandate to further weaken the Bank of the United States. He asked Congress to investigate the safety of government deposits in the bank, since a rumor told of empty vaults, carefully concealed. After a committee had checked on the bank's operations, the Calhoun and

Clay forces in the House of Representatives passed a resolution affirming that government deposits were safe and could be continued. The resolution passed on March 2, 1833, by chance the same day that Jackson signed the compromise tariff and the force bill. With the nullification issue out of the way, however, Jackson was free to wage his unrelenting war on the bank, that “hydra of corruption,” which still had nearly four years to run on its charter. Despite the House study and resolution, Jackson now resolved to remove all government deposits from the bank.

When Secretary of the Treasury Louis McLane opposed removal of the government deposits and suggested a new and modified version of the bank, Jackson again shook up his cabinet. In the reshuffling, Attorney General Roger Taney moved to the Treasury Department, where he gladly complied with the presidential wishes, which corresponded to his own views, against the bank.

Taney continued to draw on government accounts with Biddle’s bank but deposited all new federal receipts in state banks. By the end of 1833, twenty-three state banks—“pet banks,” as they came to be called—had the benefit of federal deposits. Transferring the government’s deposits was a highly questionable action under the law, and the Senate voted to censure Jackson for it. Biddle refused to surrender. “This worthy President,” he declared, “thinks that because he has scalped Indians and imprisoned Judges he is to have his way with the Bank. He is mistaken.” Biddle ordered that the bank curtail loans throughout the nation and demand the redemption of state bank notes in gold or silver as quickly as possible. He sought to bring the economy to a halt, create a sharp depression, and reveal to the nation the importance of maintaining the bank. By 1834 the tightness of credit was creating distress in the business community. Most likely both sides were exaggerating for political effect: Biddle to show the evil consequences of the withdrawal of deposits, the Jacksonians to show how Biddle abused his power.

Biddle’s contraction policy, however, unwittingly unleashed a speculative binge encouraged by the deposit of government funds in the pet banks. With the restraint of Biddle’s bank removed, the state banks gave full rein to their wildcat tendencies. New banks mushroomed, printing bank notes with abandon for the purpose of lending money to speculators. Sales of public lands rose from 4 million acres in 1834 to 15 million in 1835 and 20 million in 1836. At the same time the states plunged heavily into debt to finance the building of roads and canals, inspired by the success of New York’s Erie Canal. By 1837 total state indebtedness had soared to \$170 million, a very large sum for the time. The supreme irony of Jackson’s war on the bank was that it sparked the speculative mania that he most feared.

FISCAL MEASURES The surge of cheap money reached its peak in 1836, when events combined suddenly to deflate it. Most important among these were the Distribution Act and the Specie Circular. Distribution of the government's surplus funds to the states had long been a pet project of Henry Clay's. One of its purposes was to eliminate the federal surplus, thus removing one argument for cutting the tariff. Much of the surplus, however, resulted from the "land-office business" in western property sales and was therefore in the form of bank notes that had been issued to speculators. Many westerners thought that the solution to the surplus was simply to lower the price of land; southerners preferred to lower the tariff—but such action would now upset the compromise achieved with the tariff of 1833. For a time the annual surpluses could be applied to paying off the government debt, but the debt, reduced to \$7 million by 1832, was entirely paid off by 1835.

Still, the federal surplus continued to mount. Clay again proposed distribution of the dollars to the states, but Jackson had constitutional scruples about the process. Finally a compromise was worked out whereby the government would distribute most of the surplus as loans to the states. To satisfy Jackson's concerns, the funds were technically deposits, but in reality they were never demanded. Distribution of the surplus was to be in proportion to each state's representation in the two houses of Congress and was to be paid out in quarterly installments beginning in 1837.

The Specie Circular, issued by the secretary of the Treasury at Jackson's order, applied the president's hard-money conviction to the sale of public lands. According to his order, the government would accept only gold or silver coins in payment for land. The purposes declared in the circular were to "repress frauds," to withhold support "from the monopoly of the public lands in the hands of speculators and capitalists," and to discourage the "ruinous extension" of bank notes and credit.

Irony dogged Jackson to the end on this matter. Since few settlers could get their hands on gold or silver, they were now left all the more at the mercy of speculators for land purchases. Both the Distribution Act and the Specie Circular put many state banks in a plight. The distribution of the surplus to the state governments resulted in federal funds' being withdrawn from the state banks. In turn the state banks had to require many borrowers to pay back their loans immediately in order to be able to transfer the federal funds to the state governments. This situation caused greater disarray in the already chaotic state banking community. At the same time the new requirement that only hard money be accepted for federal land purchases put an added strain on the supplies of gold and silver.

BOOM AND BUST But the boom-and-bust cycle of the 1830s had causes larger even than Andrew Jackson, causes that were beyond his control. The inflation of the mid-1830s was rooted not so much in a prodigal expansion of bank notes, as it seemed at the time, but in an increase of gold and silver payments from England and France and, especially, Mexico, for investment and for the purchase of American cotton and other products. At the same time, British credits enabled Americans to buy British goods without having to export gold or silver. Meanwhile, the flow of hard cash to China, where silver had been much prized, decreased. Now the Chinese took in payment for their goods British credits, which they could in turn use to cover rapidly increasing imports of opium from British India.

Contrary to appearances, therefore, the reserves of gold and silver in U.S. banks kept pace with the increase of bank notes, despite reckless behavior on the part of some banks. But by 1836 a tighter British economy caused a decline in both British investments and British demand for American cotton just when the new western lands were creating a rapid increase in the cotton supply. Fortunately for Jackson the financial panic of 1837 did not erupt until he was out of the White House. His successor would serve as the scapegoat.

In May 1837 New York banks suspended gold and silver payments on their bank notes, and fears of bankruptcy set off runs on banks around the country, many of which were soon overextended. A brief recovery followed in 1838, stimulated in part by a bad wheat harvest in England, which forced the British to buy American wheat. But by 1839 that stimulus had passed. The same year a bumper cotton crop overloaded the market, and a collapse of cotton prices set off a depression from which the economy did not fully recover until the mid-1840s.

VAN BUREN AND THE NEW PARTY SYSTEM

THE WHIG COALITION Before the depression set in, however, the Jacksonian Democrats reaped a political bonanza. Jackson had slain the dual monsters of nullification and the bank, and the people loved him for it. The hard times following the contraction of the economy turned Americans against Biddle and the Bank of the United States but not against Jackson, the professed friend of “the people” and foe of the “selfish” interests of financiers and speculators. But in 1834 his opponents began to pull together a new coalition of diverse elements, united chiefly by their hostility to him. The imperious demeanor of the feisty champion of democracy had given rise to

the name King Andrew I. Jackson's followers therefore were Tories, supporters of the king, and his opponents became Whigs, a name that linked them to the Patriots of the American Revolution.

The diverse coalition making up the Whigs clustered around the National Republican party of John Quincy Adams, Henry Clay, and Daniel Webster. Into the combination came remnants of the Anti-Masonic and Democratic parties, who for one reason or another were alienated by Jackson's stand on the bank or states' rights. Of the forty-one Democrats in Congress who had voted to recharter the bank, twenty-eight had joined the Whigs by 1836.

Whiggery always had about it an atmosphere of social conservatism and superiority. The core Whigs were the supporters of the charismatic Henry Clay and his economic nationalism. In the South the Whigs enjoyed the support of the urban banking and commercial interests, as well as their planter associates, owners of most of the slaves in the region. In the West, farmers who valued internal improvements joined the Whig ranks. Most states' rights supporters eventually dropped away, and by the early 1840s the Whigs were becoming more clearly the party of Henry Clay's nationalism, even in the South. Unlike the Democrats, who attracted Catholics from Germany and Ireland, Whigs tended to be native-born or British-American evangelical Protestants—Presbyterians, Baptists, and Congregationalists—who were active in promoting social reforms such as abolition and temperance.

THE ELECTION OF 1836 By the presidential election of 1836, a new two-party system was emerging from the Jackson and anti-Jackson forces, a system that would remain in fairly even balance for twenty years. In 1835, eighteen months before the election, the Democrats held their second national convention, nominating Jackson's hand picked successor, Vice President Martin Van Buren. The Whig coalition, united chiefly in its opposition to Jackson, held no convention but adopted a strategy of multiple candidacies, hoping to throw the election into the House of Representatives.

The result was a free-for-all reminiscent of 1824, except that this time one candidate stood apart from the rest. It was Van Buren against the field. The Whigs put up three favorite sons: Daniel Webster, named by the Massachusetts legislature; Hugh Lawson White, chosen by anti-Jackson Democrats in the Tennessee legislature; and William Henry Harrison of Indiana, nominated by a predominantly Anti-Masonic convention in Harrisburg, Pennsylvania. In the South the Whigs made heavy inroads on the Democratic vote by arguing that Van Buren would be soft on anti-slavery advocates and that the South could trust only a southerner—that is, Hugh White—as president. In the popular vote, Van Buren outdistanced the entire Whig field, with 765,000

came to be known as the Little Magician. In 1824 he supported Crawford, then switched his allegiance to Jackson in 1828 but continued to look to the Old Republicans of Virginia as the southern anchor of his support. Elected governor of New York, he quickly resigned to join Jackson’s cabinet and because of the president’s favor became vice president.

votes to 740,000 for the Whigs, most of which were cast for Harrison. Van Buren had 170 electoral votes, Harrison 73, White 26, and Webster 14.

Martin Van Buren, the eighth president, was the first of Dutch ancestry. The son of a tavern keeper in Kinderhook, New York, he had attended a local academy, studied law, and entered politics. Although he kept up a limited legal practice, he had been for most of his adult life a professional politician, so skilled in the arts of organization and manipulation that he

THE PANIC OF 1837 Van Buren inherited a financial panic. An already precarious economy was tipped over by a depression in England, which resulted in a drop in the price of American cotton and caused English banks and investors to cut back their commitments in the New World and refuse extensions of loans. This was a particularly hard blow because much of America’s economic expansion depended upon European—and mainly English—investment capital. On top of everything else, in 1836 there had been a failure of the wheat crop, the export of which in good years helped offset the drain of payments abroad. As creditors hastened to foreclose, the inflationary spiral went into reverse. States curtailed ambitious plans for roads and canals and in many cases felt impelled to repudiate their debts. In the crunch many of the wildcat state banks succumbed, and the federal government itself lost some \$9 million it had deposited in pet banks.

The working class, as always, was particularly hard hit during the economic slump and largely had to fend for itself. By the fall of 1837, one third of the workforce was jobless, and those still fortunate enough to have jobs saw their wages cut by 30 to 50 percent within two years. At the same time, prices for food and clothing soared. As the winter of 1837 approached, a journalist reported that in New York City 200,000 people were “in utter and hopeless distress with no means of surviving the winter but those provided

Jacksonian Treasury Note

A parody of the often-worthless fractional currencies, or shinplasters, issued by banks and businesses in lieu of coins. These fractional notes proliferated during the panic of 1837, with the emergency suspension of gold and silver payments. In the main scene, Van Buren, a monster on a wagon driven by Calhoun, is about to pass through an arch labeled “Wall Street” and “Safety Fund Banks.”

by charity.” There was no government aid; churches and voluntary societies were the major sources of support for the indigent.

Van Buren’s advisers and supporters were inclined to blame the depression on speculators and bankers, at the same time expecting the evildoers would get what they deserved in a healthy shakeout that would restabilize the economy. Van Buren did not believe that he or the government had any responsibility to rescue hard-pressed farmers or businessmen or to provide public relief. He did feel obliged to keep the government itself in a healthy financial situation, however. To that end he called a special session of Congress in 1837, which quickly voted to postpone indefinitely the distribution of the surplus because of a probable upcoming deficit and approved an issue of Treasury notes to cover immediate expenses.

AN INDEPENDENT TREASURY Van Buren believed that the government should cease risking its deposits in shaky state banks and set up an independent Treasury. Under this plan the government would keep its funds in its own vaults and do business entirely in hard money. The Independent Treasury Act elicited opposition from a combination of Whigs and conservative Democrats who feared deflation. It had taken Van Buren several years

of maneuvering to get what he wanted. Calhoun signaled a return to the Democratic fold, after several years of flirting with the Whigs, when he came out for the treasury act. Van Buren gained western support by backing a more liberal policy regarding federal land sales. Congress finally passed the Independent Treasury Act on July 4, 1840. Although it lasted little more than a year (the Whigs repealed it in 1841), it would be restored in 1846.

The drawn-out struggle over the Treasury was only one of several squabbles that kept Washington preoccupied through the Van Buren years. A flood of petitions for Congress to abolish slavery and the slave trade in the District of Columbia brought on tumultuous debate, especially in the House of Representatives. Border incidents growing out of a Canadian insurrection in 1837 and a dispute over the Maine boundary kept British-American animosity at a simmer, but General Winfield Scott, the president's ace troubleshooter, managed to keep the hotheads in check along the border. The spreading malaise of the time was rooted in the depressed condition of the economy, which lasted through Van Buren's term. Fairly or not, the administration became the target of growing discontent. The president won renomination easily enough but could not get the Democratic convention to agree on his vice-presidential choice, which was left up to the Democratic electors.

THE “LOG CABIN AND HARD CIDER” CAMPAIGN The Whigs got an early start on their campaign when they met at Harrisburg, Pennsylvania, on December 4, 1839, to choose a candidate. Henry Clay expected 1840 to be his year and had soft-pedaled talk of his economic nationalism in the interest of building broader support. Although Clay led on the first ballot, the convention sought a Whiggish Jackson, as it were, a military hero who could enter the race with few known political convictions or enemies, and the delegates finally turned to William Henry Harrison. His credentials were impressive: victor at the Battle of Tippecanoe against the Shawnees in 1811, former governor of the Indiana Territory, briefly congressman and senator from Ohio, more briefly minister to Colombia. Another advantage of Harrison's was that the Anti-Masons liked him. To rally their states' rights wing, the Whigs chose for vice president John Tyler of Virginia, a close friend of Clay's.

The Whigs had no platform. A platform would have risked dividing a coalition united chiefly by opposition to the Democrats. But they had a catchy slogan, “Tippecanoe and Tyler too.” And they soon had a rousing campaign theme, which a Democratic newspaper unwittingly supplied: the *Baltimore Republican* declared sardonically “that upon condition of his receiving a

pension of \$2,000 and a barrel of cider, General Harrison would no doubt consent to withdraw his pretensions, and spend his days in a log cabin on the banks of the Ohio.” The Whigs seized upon the cider and log-cabin symbols to depict Harrison as a simple man sprung from the people. Actually, he sprang from one of the first families of Virginia and lived in a large farmhouse.

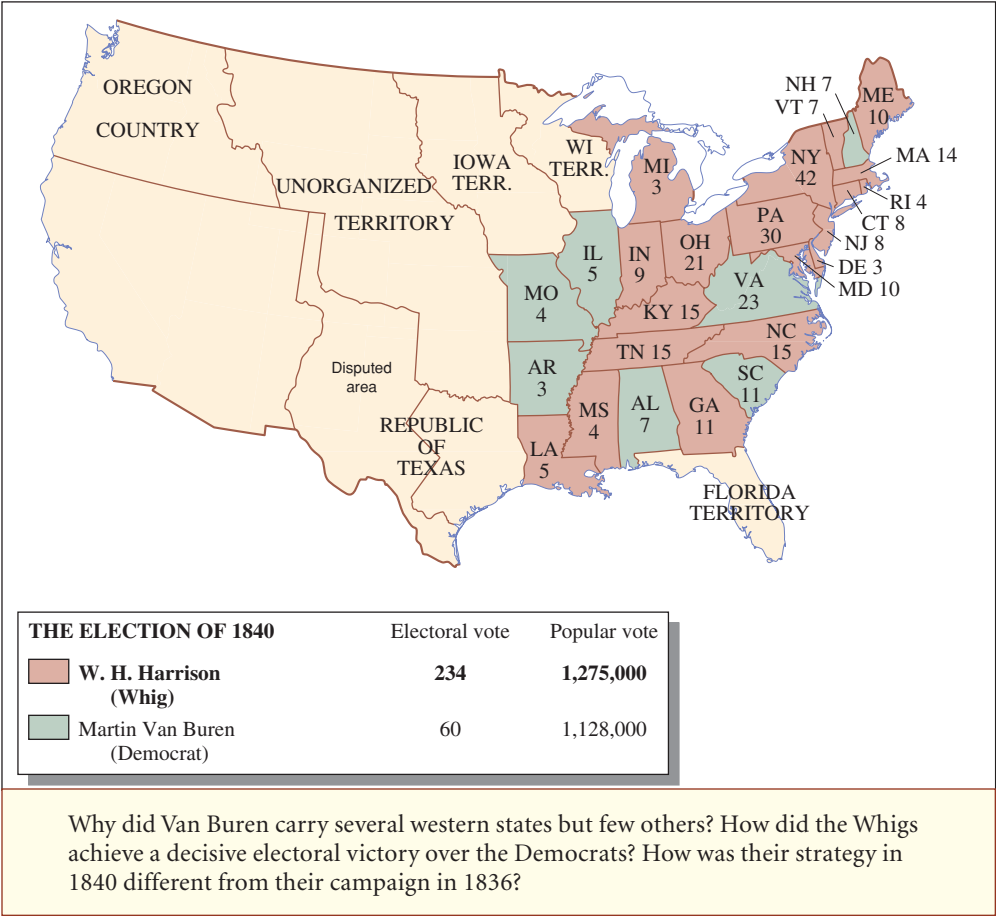

The Whig “Log Cabin and Hard Cider” campaign featured portable log cabins rolling through the streets along with barrels of cider. All the devices of hoopla were mobilized: placards, emblems, campaign buttons, floats, effigies, great rallies, and a campaign newspaper, the *Log Cabin*. Building on the example of the Jacksonians’ campaign to discredit John Quincy Adams, the Whigs pictured Van Buren, who unlike Harrison really did have humble origins, as an aristocrat living in luxury at “the Palace.”

“We have taught them to conquer us!” the *Democratic Review* lamented. The Whig party had not only learned its lessons well, but it had also improved upon its teachers in the art of campaigning. “Van! Van! Is a Used-Up Man!” went one campaign refrain, and down he went by the thumping

Uncle Sam’s Pet Pups

margin of 234 votes to 60 in the Electoral College. In the popular vote it was closer: 1,275,000 for Harrison, 1,128,000 for Van Buren.

ASSESSING THE JACKSON YEARS

The Whigs may have won in 1840, but the Jacksonian impulse had permanently altered American politics. By 1840 both parties were organized down to the precinct level, and the proportion of adult white males who voted in the presidential election had tripled, from 26 percent in 1824 to 78 percent in 1840. That much is beyond dispute, but the phenomenon of Jackson, the heroic symbol for an age, continues to spark historical debate.

The earliest historians of the Jackson era belonged largely to an eastern elite nurtured in a “Whiggish” culture, men who could never quite forgive Jackson for the spoils system, which in their view excluded the fittest from office. A later school of “progressive” historians depicted Jackson as the leader of a vast democratic movement that welled up in the West and mobilized a farmer-labor alliance to sweep the “monster” national bank into the dustbin of history. Some historians have recently focused on local power struggles, in which the great national debates of the time often seemed empty rhetoric or at most snares to catch the voters. One view of Jackson makes him out to be essentially a frontier opportunist for whom democracy “was good talk with which to win the favor of the people.”

Most recently scholars have highlighted the fact that Jacksonian “democracy” was for white males only; it did not apply to African Americans, Indians, or women. These revisionist historians have also stressed the finding that greater participation in politics was much more a northern development than a southern development. As late as 1857, for example, North Carolina’s fifty-acre property requirement for voting disenfranchised almost half the state’s voters.

Yet there seems little question that whatever else Jackson and his supporters had in mind, they followed an ideal of republican virtue, of returning to the Jeffersonian vision of the old republic, in which government would play as limited a role as possible. In the Jacksonian view the alliance of government and business was always an invitation to special favors and an eternal source of corruption. The national bank was the epitome of such evil. The right policy for government, at the national level in particular, was to refrain from granting special privileges and to let free competition in the marketplace regulate the economy.

In the bustling world of the nineteenth century, however, the idea of a return to agrarian simplicity was a futile exercise in nostalgia. Instead, free-enterprise policies opened the way for a host of aspiring entrepreneurs eager to replace the established economic elite with a new order of free-enterprise capitalism. And in fact there was no great conflict in the Jacksonian mentality between the farmer or planter who delved in the soil and the independent speculator and entrepreneur who grew wealthy by other means. Jackson himself was both. What the Jacksonian mentality did not foresee was the degree to which, in a growing country, unrestrained enterprise could lead to new centers of economic power largely independent of government regulation. But history is forever marked by unintended consequences. Here the ultimate irony would be that the *laissez-faire* rationale for republican simplicity eventually became the justification for the growth of

unregulated corporate powers far greater than any ever wielded by Biddle's bank.

MAKING CONNECTIONS

- This chapter analyzed the political side of “Jacksonian Democracy.” Chapter 12 concludes with an assessment of the accuracy of that term from social and economic perspectives.
- John C. Calhoun, Henry Clay, and Daniel Webster, three of the statesmen considered in this chapter, continued for many years to be the major spokesmen for their positions. Their last great debate, over the Compromise of 1850, is discussed in Chapter 16.

The Jacksonian-era political debate between democratic ideals and elitist traditions was rooted in a profound transformation of American social and economic life. Between 1815 and 1850 the United States expanded all the way to the Pacific coast. An industrial revolution in the Northeast began to reshape the region's economy and propel an unrelenting process of urbanization. In the West an agricultural empire began to emerge, based upon the foundation of corn, wheat, and cattle. In the South, cotton became king, and its reign came to depend upon the expanding institution of slavery. At the same time, innovations in transportation—larger horse-drawn wagons, called Conestogas; canals; steamboats; and railroads—knit together a national market for goods and services. An eighteenth-century economy based primarily upon small-scale farming and local commerce matured into a far-flung capitalist marketplace entwined with world markets. These economic developments

in turn generated changes in every other area of life, from politics to the legal system, from the family to social values, from work to recreation.

AGRICULTURE AND THE NATIONAL ECONOMY

The first stage of industrialization brought with it an expansive commercial and urban outlook that by the end of the century would supplant the agrarian philosophy espoused by Thomas Jefferson and many others. “We are greatly, I was about to say fearfully, growing,” South Carolina’s John C. Calhoun told his congressional colleagues in 1816, and many other statesmen shared his ambivalent outlook. Would the republic retain its virtue and cohesion amid the turmoil of chaotic commercial development? In the brief period of good feelings after the War of 1812, such a troublesome question was easily brushed aside. Economic opportunities seemed abundant, and nowhere more than in Calhoun’s native South Carolina. The reason was cotton, the new staple crop of the South, which spread rapidly from South Carolina and Georgia into the fertile new lands of Mississippi, Alabama, Louisiana, and Arkansas.

COTTON Cotton had been used from ancient times, but the Industrial Revolution and its spread of textile mills created a rapidly growing market for the fluffy fiber. It had remained for many years rare and expensive because of the need for hand labor to separate the lint from tenacious seeds. One person working all day could manage to separate barely one pound by hand. Cotton could not be king until a better way was found to separate the seeds from the fiber.

The rising cotton kingdom of the lower South was born at a plantation called Mulberry Grove in coastal Georgia, the home of Catharine Greene, widow of the

Whitney's Cotton Gin

Eli Whitney's drawing, which accompanied his 1794 federal patent application, shows the side and the top of the machine and the saw teeth that separated the seeds from the fiber.

Revolutionary War hero Nathanael Greene. At Mulberry Hill, discussion often focused on the problem of separating cotton seeds from the cotton fiber. In 1792 young Eli Whitney, recently graduated from Yale, visited fellow graduate Phineas Miller, who was overseer at Mulberry Hill. Catharine Greene noticed her visitor's mechanical aptitude and suggested that young Whitney devise a mechanism for removing the seeds from upland cotton. He mulled over the problem and solved it in ten days. In the spring of 1793, Whitney had a working model of a cotton "gin" (short for *engine*). With it one person could separate fifty times as much cotton as a worker could separate by hand.

Whitney had unwittingly begun a revolution. Green-seed cotton first engulfed the up-country hills of South Carolina and Georgia and after the War of 1812 migrated into the former Creek, Choctaw, and Chickasaw lands to the west. Cotton production soared, and in the process planters found a new and profitable use for slavery. Planters migrated westward with their gangs of workers in tow, and a lucrative trade began to develop in the sale of slaves from the coastal South to the Southwest. The cotton culture became a way of life that tied the Old Southwest to the coastal Southeast in a common interest.

Not the least of the cotton gin's revolutionary consequences, although less apparent at first, was that cotton became almost immediately a major export commodity. Cotton exports averaged about \$9 million annually from 1803 to 1807, about 22 percent of the value of all exports; from 1815 to 1819, they averaged over \$23 million, or 39 percent of the total; and from the mid-1830s to 1860, they accounted for more than half the value of all exports in the nation. The South supplied the North with both raw materials and markets for manufactures. Income from the North's role in handling the cotton trade then provided surpluses for capital investment. Cotton thereby became a crucial element of the national economy.

FARMING THE WEST The westward flow of planters and their slaves to Alabama and Mississippi during these flush times mirrored another migration through the Ohio Valley and the Great Lakes region, where the Indians had been steadily pushed westward. By 1860 more than half the nation's population resided in trans-Appalachia, and the restless movement had long since spilled across the Mississippi River and touched the shores of the Pacific.

North of the expanding cotton belt, in the Gulf states, the fertile woodland soil, riverside bottomlands, and black loam of the prairies drew farmers from the rocky lands of New England and the exhausted soils of the Southeast. A new land law of 1820, passed after the panic of 1819, reduced the price of federal land. A settler could get a farm for as little as \$100, and over the years

the proliferation of state banks made it possible to continue buying on credit. Even that was not enough for westerners, however, who began a long—and eventually victorious—agitation for further relaxation of the land laws. They favored “preemption,” the right of squatters to purchase land at the minimum price, and graduation, the progressive reduction of the price on lands that did not sell.

Congress eventually responded with two bills. Under the Preemption Act of 1830, squatters could stake out claims ahead of the land surveys and later get 160 acres at the minimum price of \$1.25 per acre. In effect the law recognized a practice enforced more often than not by frontier vigilantes. Under the Graduation Act of 1854, prices of unsold lands were to go down in stages until the lands could sell for 12.5¢ per acre after thirty years.

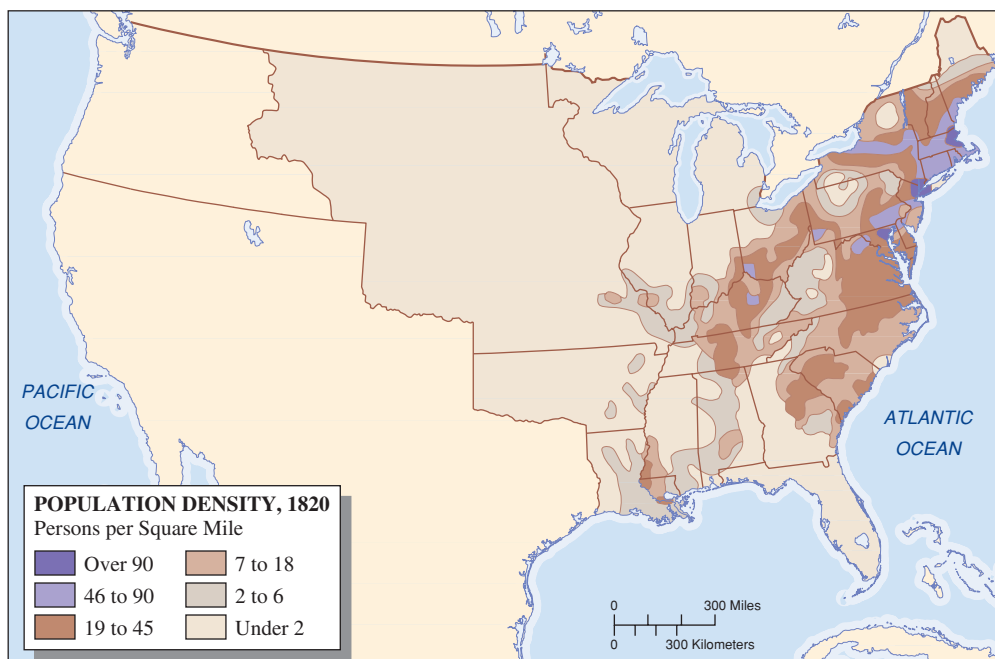

The process of settling new lands followed the old pattern of clearing trees, grubbing out the stumps and underbrush, and settling down at first to a crude subsistence. The development of effective iron plows greatly eased the backbreaking job of tilling the soil. In 1819 Jethro Wood of New York developed an improved iron plow with separate replaceable parts. The iron plow was a godsend to those farmers who first ventured onto the sticky black loam of the treeless midwestern prairies. Further improvements would follow, including John Deere’s steel plow (1837) and the chilled-iron and steel plow of John Oliver (1855).

By the 1840s new mechanical seeders had replaced the process of sowing seed by hand. Even more important, twenty-two-year-old Cyrus Hall

McCormick’s Reaping Machine

This illustration appeared in the catalogue of the Great Exhibition, held at the Crystal Palace in London in 1851. The plow eased the transformation of rough plains into fertile farmland, and the reaping machine accelerated farm production.

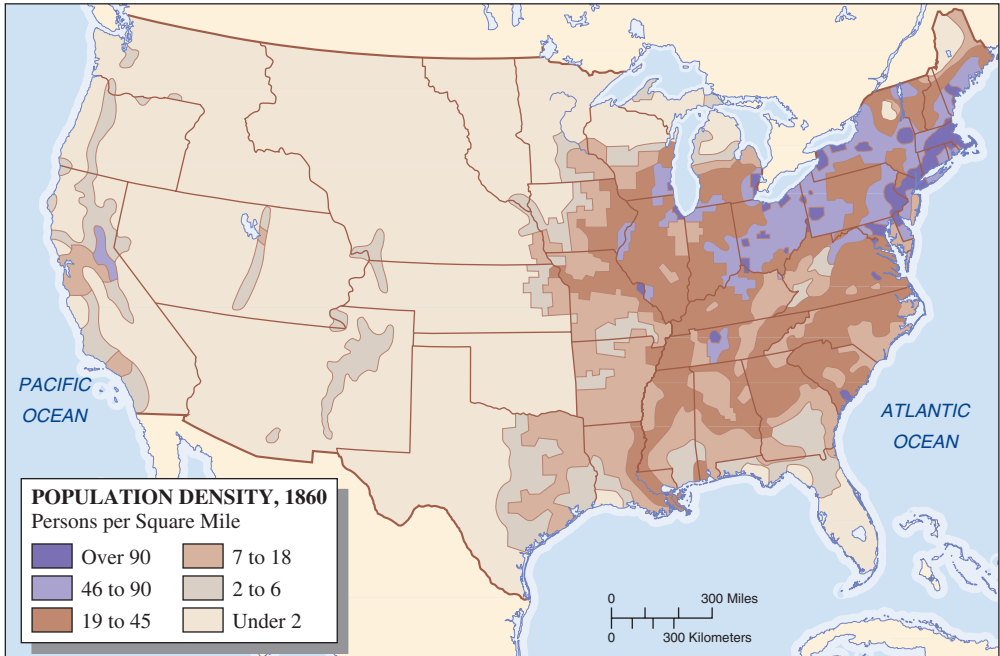

In 1820, which regions had the greatest population densities? Why? How did changes in the 1820 land law encourage western expansion? What events caused the price of land to decrease between 1800 and 1841?

McCormick of Virginia invented a primitive grain reaper in 1831, a development as significant to the agricultural economy of the Old Northwest as the cotton gin was to the South. After tinkering with his strange-looking horse-drawn machine for almost a decade, McCormick began selling it so fast that in 1847 he moved to Chicago and built a manufacturing plant for his reapers and mowers. Within a few years he had sold thousands of new machines, transforming the scale of agriculture. Using a hand-held sickle, a farmer could harvest half an acre of wheat a day; with a McCormick reaper two people could work twelve acres a day.

McCormick's success inspired other manufacturers and inventors, and soon there were mechanical threshers to separate the grains of wheat from the straw. Farming remained, as it still is, a precarious vocation, subject to the whims of climate, assaults by insects, and the fluctuations of foreign markets, but by the 1850s it had become a major commercial activity. As the volume of agricultural products soared, prices dropped, income rose, and for many farm families in the Old Northwest the standard of living improved.

In 1860, which regions had the greatest population densities? Why? How did new technologies allow farmers to grow more crops on larger pieces of land? What regions benefited most from the new technologies?

TRANSPORTATION AND THE NATIONAL ECONOMY

NEW ROADS Transportation improvements helped spur the development of a national market. As settlers moved west, people demanded better roads. In 1795 the Wilderness Road, along the trail blazed by Daniel Boone twenty years before, was opened to wagon and stagecoach traffic, thereby easing the route through the Cumberland Gap into Kentucky and along the Walton roads, completed the same year, into Tennessee. Even so, travel was difficult at best. Stagecoaches crammed with as many as a dozen people crept along at four miles per hour. South of these roads there were no such major highways. South Carolinians and Georgians pushed westward on whatever trails or rutted roads had appeared.

To the northeast a movement for graded and paved roads (macadamized with crushed stones packed down) gathered momentum after completion of

the Philadelphia-Lancaster Turnpike in 1794 (the term *turnpike* derives from a pole, or pike, at the tollgate, which was turned to admit the traffic). By 1821 some 4,000 miles of turnpikes had been completed, mainly connecting eastern cities. Western traffic moved along the Frederick Turnpike to Cumberland and thence along the National Road to Wheeling, Virginia, on the Ohio River (opened in 1818), then to Columbus in the Northwest Territory and (by about mid century) on to Vandalia, Illinois.

WATER TRANSPORTATION Once turnpike travelers had reached the Ohio River, they could float westward on flatboats in comparative comfort. In the early 1820s an estimated 3,000 flatboats went down the Ohio every year, and for many years after that the flatboat remained the chief conveyance for heavy traffic downstream.

By the early 1820s the turnpike boom was giving way to new developments in water transportation: the river steamboat and the canal barge, which carried people and commodities far more cheaply than did wagons on the National Road. The first commercially successful steamboat appeared when Robert Fulton and Robert R. Livingston sent the *Clermont* up the Hudson River to Albany in 1807. Thereafter the use of steamboats spread rapidly to other eastern rivers and to the Ohio and Mississippi, opening nearly half a

Traveling the Western Waters

Steamboats at the levee at St. Paul, Minnesota in 1859.

continent to water traffic. Steamboats transformed inland water transportation. To travel from Pittsburgh to New Orleans on a flatboat took up to six weeks. And because flatboats could not make the return trip upstream, they were chopped up in New Orleans for firewood, and the crews had to make their way back home by other means. In 1815 the first steamboat made the trip upriver from New Orleans to Pittsburgh in twenty-five days.

By 1836, 361 steamboats had navigated the western waters, reaching ever farther up the tributaries that fed into the Mississippi River. The durable flatboat, however, still carried to market most of the western wheat, corn, flour, meal, bacon, ham, pork, whiskey, soap and candles (byproducts of slaughterhouses), lead from Missouri, copper from Michigan, wood from the Rockies, and ironwork from Pittsburgh. But the steamboat, by bringing two-way traffic to the Mississippi River valley, created a continental market and an agricultural empire that became the nation's new breadbasket. Farming became even more a commercial activity, producing surpluses for the livestock and commodities markets. Along with the new farmers came promoters, speculators, and boomers. Villages at strategic trading points along the streams evolved into centers of commerce and urban life. The port of New Orleans grew in the 1830s and 1840s to lead all others in exports.

But by then the Erie Canal in New York was drawing eastward much of the trade that once went down to the Gulf, and this development would have

major economic and political consequences, tying together the West and the East while further isolating the Deep South. In 1817 the New York legislature endorsed Governor DeWitt Clinton's dream of connecting the Hudson River with Lake Erie. Eight years later, in 1825, the canal, forty feet wide and four feet deep, was open for the entire 363 miles from Albany to Buffalo; branches soon put most of the state within its reach. The Erie Canal brought a "river of gold" to New York City.

The Erie Canal was an engineering marvel. The longest canal in the world, it traversed rivers and valleys, forests and marshes. It reduced travel time from New York City to Buffalo from twenty days to six, and the cost of moving a ton of freight plummeted from \$100 to \$5. After 1828 the Delaware and Hudson Canal linked New York to the coalfields of northeastern Pennsylvania. The speedy success of the New York system inspired a mania for canals in other states that lasted more than a decade and resulted in the completion of about 3,000 miles of waterways by 1837. But no canal ever matched the spectacular success of the Erie, which rendered the entire Great Lakes region an economic tributary to the port of New York. With the further development

The Erie Canal

Junction of the Northern and Western Canals (1825), an aquatint by John Hill.

of canals spanning Ohio and Indiana from north to south, much of the upper Ohio River valley also came within the economic sphere of New York.

RAILROADS The panic of 1837 and the subsequent depression cooled the canal fever. Meanwhile, a new and more versatile form of transportation was gaining on the canal: the railroad. As early as 1814, the first practical steam locomotive was built in England. In 1825, the year the Erie Canal was completed, the world's first commercial steam railway began operation in England. By the 1820s the port cities of Baltimore, Charleston, and Boston were alive with schemes to connect the hinterlands by rail. Over the next forty years, railroads grew nearly tenfold to cover 30,626 miles; more than two thirds of that total was built in the 1850s.

Travel on the early railroads was a risky venture. Iron straps on top of wooden rails tended to work loose and curl up into "snakesheads" that sometimes pierced the railway coaches. Wood was used for fuel, and sparks often caused fires or damaged passengers' clothing. Land travel, whether by stagecoach or train, was a jerky, bumpy, wearying ordeal.

Water travel, where available, offered far more comfort, but the railroad gained supremacy over other forms of transportation because of its economy, speed, and reliability. Trains averaged ten miles per hour, more than twice the speed of stagecoaches and four times that of boats. By 1859 railroads had greatly reduced the cost of transportation. Railroads also provided indirect benefits, by encouraging new settlement and the expansion of farming. During the antebellum period the reduced freight costs resulting from the growth of railroads aided the expansion of farming more than manufacturing, since manufacturers in the Northeast, especially New England, had better access to water transportation. The railroads' demand for iron and equipment of various kinds did provide an enormous market for the industries that made these capital goods, however. And the ability of railroads to operate year round in most kinds of weather gave them an advantage in carrying finished goods, too.

OCEAN TRANSPORTATION For oceangoing traffic the start of regularly scheduled passenger service was the most important change of the early 1800s. In the first week of 1818, ships of the Black Ball Line inaugurated weekly transatlantic service between New York and Liverpool, England. Beginning with four ships in all, the Black Ball Line thereafter had one ship leaving each port monthly at an announced time. By 1845 some fifty-two transatlantic shipping lines were based in New York City, with three regular sailings per week. Many others ran in the coastwise trade, to Charleston, Savannah, New Orleans, and elsewhere.

The same year, 1845, witnessed a great innovation with the launching of the first clipper ship, the *Rainbow*. Built for speed, the sleek clippers were the nineteenth-century equivalent of the supersonic jetliner. They doubled the speed of the older merchant vessels. Long and lean, with taller masts and many sails, they cut dashing figures during their brief but colorful career, which lasted less than two decades. What prompted the clipper boom was the lure of Chinese tea, a drink long coveted in America but in scarce supply. Tea leaves were a perishable commodity that had to reach the market quickly, and the new clipper ships made this possible. Even more important, the discovery of California gold in 1848 lured thousands of prospectors and entrepreneurs from the Atlantic seaboard. The new settlers generated an urgent demand for goods, and the clippers met it. In 1854 the *Flying Cloud* took eighty-nine days and eight hours to travel from New York to San Francisco. But clippers, while fast, lacked ample cargo space, and after the Civil War they would give way to the steamship.

THE ROLE OF GOVERNMENT The dramatic transportation improvements of the antebellum era were the product of initiatives by both state governments and private ventures, undertaken sometimes jointly and sometimes separately. After the panic of 1837, however, the states left railroad development mainly to private corporations. Still, several southern and

New Oceangoing Vessels

Clipper ship in New York Harbor in the 1840s.

Where was the first railroad built? Where did the railroads that had been built by 1850 in the United States begin and end? Why? Describe some of the experiences of travel on the first railroads.

Why did railroads expand rapidly in the 1850s? What were the principal east-west lines? Why did many lines terminate in places like St. Louis and Chicago?

western states built their own lines, and most states granted generous tax concessions to railroad companies.

The federal government helped too, despite the belief of some politicians that direct involvement in internal improvements was unconstitutional. The national government bought stock in turnpike and canal companies and after the success of the Erie Canal extended land grants to several western states for the support of canal projects. Congress provided for railroad surveys by government engineers and reduced the tariff duties on iron used in railroad construction. In 1850 Senator Stephen A. Douglas of Illinois and others prevailed upon Congress to extend a major land grant to support a north-south line connecting Chicago and Mobile, Alabama. Grants of three square miles for each mile of railroad subsidized the building of the Illinois Central and the Mobile and Ohio Railroads. Regarded at the time as a special case, the 1850 grant set a precedent for other bounties that totaled about 20 million acres by 1860—a small amount compared with the land grants for transcontinental lines during the Civil War decade.

A COMMUNICATIONS REVOLUTION

During the first half of the nineteenth century, the transportation revolution helped spark dramatic improvements in communications. At the beginning of the century, it took days—often weeks—for news to travel along the Atlantic seaboard. For example, after George Washington died, in 1799 at his estate at Mount Vernon in Virginia, the news of his death did not appear in New York City newspapers until a week later. Naturally news took even longer to travel to and from Europe. It took forty-nine days for news of the peace treaty ending the War of 1812 to reach New York from Europe.

The speed of communications accelerated greatly as the nineteenth century unfolded. The construction of turnpikes, canals, and railroads and the development of steamships and the telegraph generated a communications revolution. By 1829 it was possible to “convey” Andrew Jackson’s inaugural address from Washington, D.C., to New York City in sixteen hours. It took six days to reach New Orleans. Mail began to be delivered by “express,” a system in which riders could mount fresh horses at a series of relay stations. Still, even with such advances the states and territories west of the Appalachian Mountains struggled to get timely deliveries and news.

AMERICAN TECHNOLOGY Americans became famous for their “practical” inventiveness. One of the most striking examples of the connection

between pure research and innovation was in the work of Joseph Henry, a Princeton physicist. His research in electromagnetism provided the basis for Samuel F. B. Morse's invention of the telegraph and for the invention of electrical motors. In 1846 Henry became head of the new Smithsonian Institution, founded with a bequest from the Englishman James Smithson "for the increase and diffusion of knowledge." Two years later, in 1848, the American Association for the Advancement of Science was founded to "advance science and serve society."

Technological advances helped improve living conditions: houses could be larger, better heated, and better illuminated. Although working-class residences had few creature comforts, the affluent were able to afford indoor plumbing, central heating, gas lighting, bathtubs, iceboxes, and sewing machines. Even the lower classes were able to afford new coal-burning cast-iron cooking stoves, which facilitated the preparation of more varied meals and improved heating. The first sewer systems helped cities begin to rid their streets of human and animal waste, while underground water lines enabled fire companies to use hydrants rather than bucket brigades. Machine-made clothes fit better and were cheaper than those sewed by hand from homespun cloth; newspapers and magazines were more abundant and affordable, as were clocks and watches.

A spate of inventions in the 1840s generated dramatic changes. In 1844 Charles Goodyear patented a process for vulcanizing rubber, which made the product stronger and more elastic. In 1846 Elias Howe patented his design of the sewing machine, soon improved upon by Isaac Merrit Singer. The sewing machine, incidentally, actually slowed the progress of the factory. Since it was adapted to use in the home, it gave the "putting-out" system a new life in the clothing industry.

In 1844 the first intercity telegraph message was transmitted, from Baltimore to Washington, D.C., on the device Samuel Morse had invented back in 1832. The telegraph may have triggered more social changes than any other invention. Until it appeared, communications were conveyed by boat, train, or horseback or delivered by hand. With the telegraph, people could learn of events and exchange messages instantaneously. The invention was slow to catch on, but by the mid-1850s the North American Telegraph Company and the Western Union Telegraph Company had consolidated national networks. In 1861, seventeen years after the first demonstration, connections to San Francisco were completed, and an entire continent had been wired for instant communication.

Taken together, the communications and transportation improvements of the first half of the nineteenth century reshaped the contours of economic, social, and political life. Steamboats, canals, and railroads helped unite the

western portion of the country with the East, boost trade, and open up the West for settlement. Between 1800 and 1860 an undeveloped land dotted with scattered farms, primitive roads, and modest local markets was transformed into an engine of capitalist expansion, audacious investment, and global reach.

THE INDUSTRIAL REVOLUTION

While the South and the West developed the agricultural basis for a national economy, the Northeast was engineering an industrial revolution. Technology in the form of the cotton gin and the mechanical harvester and improvements in transportation had quickened agricultural development and to some extent decided its direction. But technology altered the economic landscape even more profoundly, by giving rise to the factory system.

EARLY TEXTILE MANUFACTURES At the end of the colonial period, manufacturing remained at the household, or handicraft, stage of development or, at most, at the “putting-out” stage, in which a merchant capitalist would distribute raw materials (say, leather patterns for shoes) to be worked up at home, collected, and sold. Farm families had to produce much of what they needed in the way of crude implements, shoes, and clothing, and in their simple workshops inventive genius was sometimes nurtured. The transition from home production to the factory was slow, but one for which a base had been laid before 1815.

In the eighteenth century, Great Britain had gotten a long head start in industrial production. The foundations of Britain’s advantage were the invention of the steam engine in 1705, its improvement by James Watt in 1765, and a series of inventions that mechanized the production of textiles. Britain carefully guarded its hard-won secrets, forbidding the export of machines or even publication of descriptions of them, even restricting the emigration of informed mechanics. But the secrets could not be kept. In 1789 Samuel Slater arrived in America from England with the plan of a water-powered spinning machine in his head. He contracted with an enterprising merchant-manufacturer in Rhode Island to build a mill in Pawtucket, and in that little mill, completed in 1790, nine children turned out a satisfactory cotton yarn, which was then worked up by the putting-out system.

The progress of textile production was slow and faltering until Thomas Jefferson’s embargo in 1807 stimulated domestic production. Policies adopted during the War of 1812 restricted imports and encouraged the

New England Factory Village (1830)

Mills and factories gradually transformed the New England landscape in the early nineteenth century.

merchant capitalists of New England to transfer their resources to manufacturing. New England, it happened, had the distinct advantage of many rivers, which provided power and transportation. By 1815 textile mills numbered in the hundreds. A flood of British imports after the War of 1812 dealt a temporary setback to the infant industry, but the foundations of textile manufacture were laid, and they spurred the growth of garment trades and a machine-tool industry that built and serviced the mills.

THE LOWELL SYSTEM The factory system sprang full-blown upon the American scene at Waltham, Massachusetts, in 1813, in the plant of the Boston Manufacturing Company, formed by the Boston Associates, one of whom was Francis Cabot Lowell. Their plant was the first factory in which the processes of spinning and weaving by power machinery were brought together under one roof, with every process mechanized, from the production of the raw material to that of finished cloth. In 1822 the Boston Associates developed a new water-powered center at a village along the Merrimack River.

At the village, which they renamed Lowell, the founders of the enterprise sought to establish an industrial center compatible with the republican values of plain living and high thinking. They insisted that they could design model factory communities that would strengthen rather than corrupt the

social fabric. To avoid the drab, crowded, and wretched life of the English mill villages, they located their mill in the countryside and established an ambitious program of paternal supervision of the workers.

The Lowell factory workers were mostly young women from New England farm families. Employers preferred to hire women because of their dexterity in operating machines and their willingness to work for wages lower than those paid to men. Moreover, by the 1820s there was a surplus of women in the region because so many men had migrated westward in search of cheap land and new economic opportunities. As many of the household goods produced by families' daughters gave way to the "store-bought" goods of a market economy, young farm women faced diminishing prospects for employment as well as marriage. The chance to escape the routine of farm life, earn cash, and thus help their families or improve their own circumstances also drew many women to the Lowell mills. In the early 1820s a steady stream of single women began flocking toward Lowell. To reassure worried parents, the mill owners promised to provide the "Lowell girls" with tolerable work, prepared meals, secure and comfortable boardinghouses, moral discipline, and a variety of educational and cultural opportunities.

Initially the "Lowell idea" worked pretty much according to plan. Visitors commented on the well-designed red-brick mills with their lecture halls and libraries. The laborers appeared "healthy and happy." The female workers lived in dormitories staffed by matronly supervisors who enforced mandatory church attendance and curfews. Despite thirteen-hour days and six-day workweeks spent tending the knitting looms, some of the women found the time and energy to form study groups, publish a literary magazine, and attend lectures. But Lowell soon lost its innocence as it experienced mushrooming growth. By 1840 there were thirty-two mills and factories in operation, and the blissful rural town had become an industrial city—bustling, grimy, and bleak.

Other factory centers sprouted up across New England, displacing forests and farms and engulfing villages, filling the air with smoke, noise, and stench. Between 1820 and 1840 the number of Americans engaged in manufacturing increased eightfold, and the number of city dwellers more than doubled. Booming growth transformed the Lowell experiment in industrial republicanism. By 1846 a concerned worker told young farm women thinking about taking a job in a factory that "it will be better for you to stay at home on your fathers' farms than to run the risk of being ruined in a manufacturing village."

During the 1830s, as textile prices and mill wages dropped, relations between workers and managers deteriorated. A new generation of owners and foremen began stressing efficiency and profit margins over community

values. They worked employees and machines at a faster pace. The women organized strikes to protest deteriorating conditions. In 1834, for instance, they unsuccessfully “turned out” (went on strike) against the mills after learning of a proposed sharp cut in their wages.

The “Lowell girls” drew attention less because they were typical than because they were special. An increasingly common pattern in industrial New England was the family system, sometimes called the Rhode Island system or the Fall River system, which prevailed in textile companies outside northern New England. The Rhode Island factories, which relied on waterpower, were often built in unpopulated areas, and the complexes included tenements or mill villages. Whole families might be hired, the men for heavy labor, the women and children for lighter work. Like the Lowell model, the Rhode Island system promoted paternalism. Employers dominated the life of the mill villages. Employees worked from sunup to sunset and longer in winter—a sixty-eight- to seventy-two-hour week. Such hours were common on the farms of the time, but in textile mills the work was more intense and offered no seasonal letup.

Mill Girls

Massachusetts mill workers of the mid-nineteenth century, photographed holding shuttles. Although mill work initially provided women with an opportunity for independence and education, conditions soon deteriorated as profits took precedence.

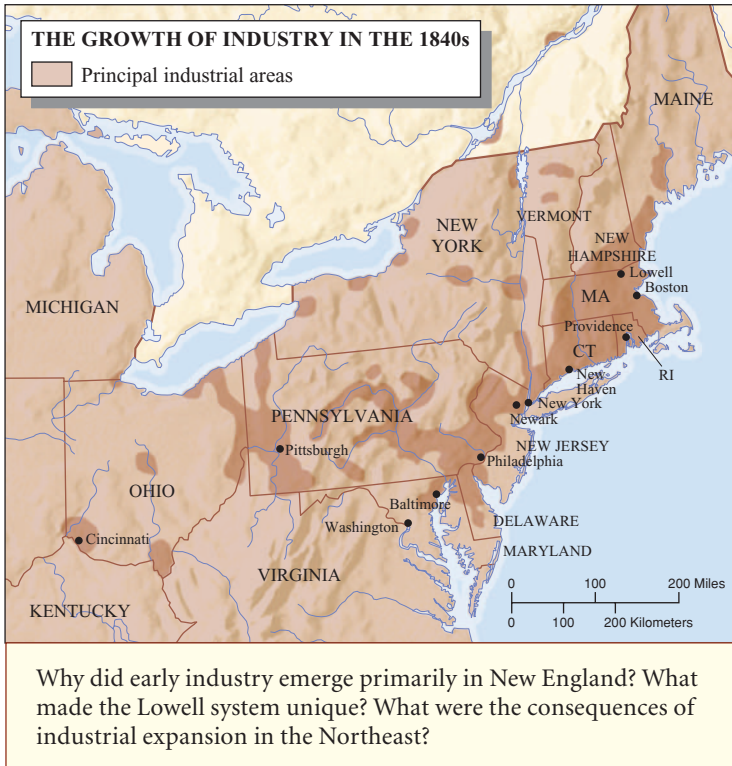

Entrepreneurs acquired water rights by purchasing land adjoining rivers and buying the acquiescence of nearby landowners; then, in the 1820s, they began renting the water that flowed to the textile mills. Water suddenly became a commodity independent of the land. It was then fully incorporated into the industrial process. Canals, locks, and dams were built to facilitate the needs of the proliferating mills. Flowing water was transformed from a societal resource to a private commodity.

The changing uses of water transformed the region's ecology. Rivers shape regions far beyond their banks, and the changing patterns of streams now affected marshlands, meadows, vegetation, and the game and wildlife that depended upon those habitats. The dams built to harness water to turn the mill wheels that ground corn and wheat flooded pastures and decimated fish populations, spawned urban growth that in turn polluted the river, and aroused intense local resentment, particularly among the New Hampshire residents far upstream of the big Massachusetts textile factories. In 1859

INDUSTRIALIZATION AND THE ENVIRONMENT

Between 1820 and 1850 some forty textile and flour mills were built along the Merrimack River, which runs from New Hampshire through northeastern Massachusetts. In pre-industrial England and America the common-law tradition required that water be permitted to flow as it had always flowed; the right to use it was reserved to those who owned land adjoining streams and rivers. In other words, running water, by nature, could not be converted into private property. People living along rivers could divert water for domestic use or to water livestock but could not use natural flowing water to irrigate land or drive machinery.

The rise of the water-powered textile industry challenged those long-standing assumptions. En-

angry farmers, loggers, and fishermen tried to destroy a massive dam in Lake Village, New Hampshire. But their axes and crow bars caused little damage. By then the Industrial Revolution could not be stopped. It was not only transforming lives and property; it was reshaping nature as well.

INDUSTRY AND CITIES The rapid growth of commerce and industry spurred the growth of cities. In terms of the census definition of *urban* as a place with 8,000 inhabitants or more, the proportion of urban to rural populations grew from 3 percent in 1790 to 16 percent in 1860. Because of their strategic locations, the four great Atlantic seaports of New York, Philadelphia, Baltimore, and Boston remained the largest cities. New Orleans became the nation's fifth-largest city from the time of the Louisiana Purchase. Its focus on cotton exports to the neglect of imports eventually caused it to lag behind its northeastern competitors, however. New York outpaced all its competitors and the nation as a whole in its population growth. By 1860 it

was the first city to reach a population of more than 1 million, largely because of its superior harbor and its unique access to commerce.

Pittsburgh, at the head of the Ohio River, was already a center of iron production by 1800, and Cincinnati, at the mouth of the Little Miami River, soon surpassed all other meatpacking centers. Louisville, because it stood at the falls of the Ohio River, became an important trading center. On the Great Lakes the leading cities—Buffalo, Cleveland, Detroit, Chicago, and Milwaukee—also stood at important breaking points in water transportation. Chicago was well located to become a hub of both water and rail transportation, connecting the Northeast, the South, and the trans-Mississippi West. During the 1830s St. Louis tripled in size mainly because most of the trans-Mississippi fur trade was funneled down the Missouri River. By 1860 St. Louis and Chicago were positioned to challenge Baltimore and Boston for third and fourth places.

Before 1840 commerce dominated the activities of major cities, but early industry often created new concentrations of population at places convenient to waterpower or raw materials. During the 1840s and 1850s, however, the

New York's economy and industry, like those of many other cities, grew rapidly in the early nineteenth century.

stationary steam engine and declining transportation costs offset the advantages of such locations and enhanced the attractions of older cities: pools of experienced labor, capital, warehousing and trading services, access to information, the savings in bulk purchasing and handling, and the many amenities of city life. Urbanization thus was both a consequence of economic growth and a positive force in its promotion.

THE POPULAR CULTURE

During the colonial era, Americans had little time for play or amusement. Their priority was sheer survival, and most adults worked from dawn to dusk six days a week. In rural areas free time was often spent in communal activities, such as barn raisings and corn-husking parties, shooting matches and footraces, while residents of the seacoast sailed and fished. In colonial cities, people attended balls, went on sleigh rides and picnics, and played “parlor games” at home—billiards, cards, and chess.

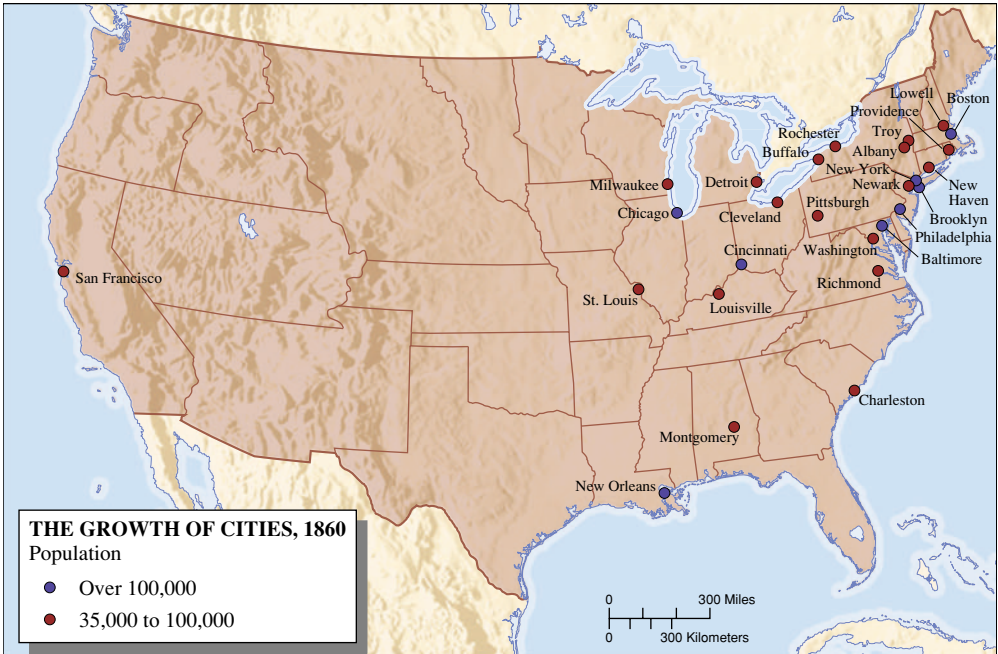

By the early nineteenth century, however, a more urban society could indulge in more diverse forms of recreation. As more people moved to cities in the first half of the nineteenth century, they began to create a distinctive urban

culture. Laborers and shopkeepers sought new forms of leisure and entertainment as pleasant diversions from their long workdays.

URBAN RECREATION Social drinking was pervasive during the first half of the nineteenth century. In 1829 the secretary of war estimated that three quarters of the nation's laborers drank at least four ounces of "hard liquor" daily. The drinking of distilled spirits accompanied virtually every social event or public occasion. Barn raisings, corn huskings, quilting parties, militia musters, church socials, court sessions, holidays, and political gatherings—all featured liquor, cider, or beer.

This drinking culture cut across all regions, races, and classes. Taverns and social or sporting clubs in the burgeoning cities served as the nexus of recreation and leisure. So-called blood sports were also a popular form of amusement. Cockfighting and dogfighting at saloons attracted excited crowds and frenzied betting. Prizefighting, also known as boxing, eventually displaced

What is the connection between industrialization and urbanization? Why did Chicago, Pittsburgh, Cincinnati, and St. Louis become major urban centers in the mid-nineteenth century? How did new technologies make cities more appealing for commerce?

the animal contests. Imported from Britain, boxing proved popular with all social classes. The early contestants tended to be Irish or English immigrants, often sponsored by a neighborhood fire company, fraternal association, or street gang. In the antebellum era, boxers fought with bare knuckles, and the results were brutal. A match ended only when a contestant could not continue. A bout in 1842 lasted 119 rounds and ended when one fighter died in his corner. Such deaths prompted clergymen to condemn prizefighting, and several cities outlawed the practice, only to see it reappear as an underground activity.

THE PERFORMING ARTS Theaters were the most popular form of indoor entertainment during the first half of the nineteenth century. People of all classes flocked to opera houses and theaters to watch a wide spectrum of performances: Shakespeare's tragedies, "blood and thunder" melodramas,

Bare Knuckles

Blood sports emerged as popular urban entertainment for men of all social classes.

comedies, minstrel shows, operas, magic shows, performances by acrobatic troupes, and local pageants. Audiences were predominantly young and middle-aged men. “Respectable” women rarely attended because women were dissuaded from entering any boisterous establishment, and the prevailing “cult of domesticity” kept women in the home. Behavior in antebellum theaters was raucous and at times disorderly. Audiences cheered the heroes and heroines and hissed at the villains. If an actor did not meet expectations, audiences hurled curses, nuts, eggs, fruit, shoes, or chairs.

The 1830s witnessed the emergence of the first uniquely American form of mass entertainment: the blackface minstrel show. Rooted in a tradition of folk theatricals, minstrel shows featured white performers made up as blacks. “Minstrelsy” drew upon African-American subjects and reinforced prevailing racial stereotypes. It featured banjo and fiddle music, “shuffle” dances, and lowbrow humor. Between the 1830s and the 1870s minstrel shows were immensely popular throughout the nation, especially among northern working-class ethnic groups and southern whites.

The most popular minstrel songs were written by a young white composer named Stephen Foster. Born near Pittsburgh on July 4, 1826, Foster was a self-taught musician who could pick up any tune by ear. In 1846 he composed “Oh! Susanna,” which immediately became a national favorite. Its popularity catapulted Foster into the national limelight, and equally

popular tunes followed, such as “Old Folks at Home” (popularly known as “Way Down upon the Swanee River”), “Massa’s in de Cold, Cold Ground,” “My Old Kentucky Home,” and “Old Black Joe,” all of which perpetuated the sentimental myth of contented slaves, and none of which used actual African-American melodies.

IMMIGRATION

Throughout the nineteenth century, land in America remained plentiful and relatively cheap, while labor was scarce and relatively dear. The United States thus remained a strong magnet for immigrants, offering them chances to take up farming or urban employment. Glowing reports from early arrivals who made good reinforced romantic views of American opportunity and freedom. “Tell Miriam,” one immigrant wrote, “there is no sending children to bed without supper, or husbands to work without dinner in their bags.” A German immigrant in Missouri applauded America’s “absence of overbearing soldiers, haughty clergymen, and inquisitive tax collectors.” In 1834 an English immigrant reported that America is ideal “for a poor man that is industrious, for he has to want for nothing.”

During the forty years from the outbreak of the Revolution to the end of the War of 1812, immigration had slowed to a trickle. The French Revolution and the Napoleonic Wars restricted travel from Europe until 1815. Thereafter, however, the number of new arrivals rose steadily. After 1845 the tempo picked up rapidly. The years from 1845 to 1854 saw the greatest proportional influx of immigrants in U.S. history, 2.4 million, or about 14.5 percent of the total population in 1845. In 1860 America’s population was 31 million, with more than one of every eight residents foreign born. The largest groups were the Irish (1.6 million), the Germans (1.2 million), and the British—mostly English (588,000).

The Crow Quadrilles

This sheet-music cover, printed in 1837, shows eight vignettes caricaturing African Americans. Minstrel shows enjoyed nationwide popularity while reinforcing racial stereotypes.

THE IRISH What caused so many Irish to flee their homeland in the nineteenth century was the onset of a prolonged depression that brought immense social hardship. The most densely populated country in Europe, Ireland was so ravaged by its economic collapse that in rural areas the average age at death declined to nineteen. After an epidemic of potato rot in 1845 brought to rural Ireland a famine that killed more than 1 million peasants, the flow of Irish immigrants to Canada and the United States became a flood. Buoyed by the promise of a better life in America, immigrants braved the Atlantic crossing under crowded, unsanitary conditions. Thousands died of dysentery, typhus, and malnutrition during the six-week ocean crossing on what came to be called coffin ships. In 1847 alone 40,000 Irish perished at sea.

By 1850 the Irish constituted 43 percent of the foreign-born population of the United States. Unlike the German immigrants, who were predominantly male, the Irish newcomers were more evenly apportioned by sex; in fact a slight majority of them were women, most of whom were single young adults. Most of the Irish arrivals had been tenant farmers, but their rural suf-

ferings left them with little taste for farmwork and little money with which to buy land in America. Great numbers of the men hired on with the construction gangs building canals and railways. Others worked in iron foundries, steel mills, warehouses, and shipyards. Many Irish women found jobs as domestic servants, laundresses, or workers in textile mills in New England. In 1845 the Irish constituted only 8 percent of the workforce in the Lowell mills; by 1860 they made up 50 percent. Relatively few immigrants during the Jacksonian era found their way to the South, where land was expensive and industries scarce. The widespread use of slavery also left few opportunities in the region for free manual laborers.

Irish Immigration

In 1847 nearly 214,000 Irish immigrated to the United States and Canada aboard ships of the White Star Line and other companies. Despite promises of spacious, well-lit, well-ventilated, and heated accommodations in steerage, 20 percent of these immigrants died on board.

Too poor to move inland, most of the destitute Irish congregated in the eastern cities, in or near their port of entry. By the 1850s the Irish made up over half the population of Boston and New York City and were almost as prominent in Philadelphia. Irish newcomers crowded into filthy, poorly ventilated tenements, plagued by high rates of crime, infectious disease, prostitution, alcoholism, and infant mortality. The archbishop of New York at midcentury described the Irish as “the poorest and most wretched population that can be found in the world.”

But many enterprising Irish immigrants forged remarkable careers. Twenty years after arriving in New York, Alexander T. Stewart became the owner of the nation’s largest department store and thereafter accumulated vast real-estate holdings in Manhattan. Michael Cudahy, who began work in a Milwaukee meatpacking business at age fourteen, became head of the Cudahy Packing Company and developed a process for the curing of meats under refrigeration. Dublin-born Victor Herbert emerged as one of America’s most revered composers, and Irish dancers and playwrights came to dominate the stage. Irishmen were equally successful in the boxing arena and on the baseball diamond.

These accomplishments did little to quell the anti-Irish sentiments prevalent in nineteenth-century America. Irish immigrants confronted demeaning stereotypes and intense anti-Catholic prejudices. The Irish were characterized as ignorant, filthy, clannish folk incapable of assimilation. Many employers posted “No Irish Need Apply” signs. But Irish Americans could be equally contemptuous of other groups, such as free African Americans, who competed with them for low-status jobs. In 1850 the *New York Tribune* expressed concern that the Irish, having themselves escaped from “a galling, degrading bondage” in their homeland, typically voted against any proposal for equal rights for the Negro and frequently arrived at the polls shouting, “Down with the Nagurs! Let them go back to Africa, where they belong.” For their part, many African Americans viewed the Irish with equal disdain. In 1850 a slave expressed a common sentiment: “My Master is a great tyrant, he treats me badly as if I were a common Irishman.”

After becoming citizens, the Irish formed powerful voting blocs. Drawn mainly to the party of Andrew Jackson, they set a crucial example of identification with the Democrats, one that other ethnic groups by and large followed. In Jackson the Irish immigrants found a hero. Himself the son of Irish colonists, he was also popular for having defeated the hated British at New Orleans. In addition, the Irish immigrants’ loathing of aristocracy, which they associated with British rule, attracted them to a politician and a party claiming to represent “the common man.” Although property requirements initially

kept most Irish Americans from voting, a New York State law extended the franchise in 1821, and five years later the state removed the property qualification altogether. In the 1828 election, masses of Irish voters made the difference in the race between Jackson and John Quincy Adams. One newspaper expressed alarm at this new force in politics: "It was emphatically an Irish triumph. The foreigners have carried the day." With African Americans, women, and Native Americans still years from enfranchisement, Irish men became perhaps the first "minority group" to exert a remarkable political influence.

Perhaps the greatest collective achievement of the Irish immigrants was their stimulating the growth of the Catholic Church in the United States. Years of persecution had instilled in Irish Catholics a fierce loyalty to the doctrines of the church as "the supreme authority over all the affairs of the world." Such passionate attachment to Catholicism generated both community cohesion among Irish Americans and fears of Roman Catholicism among American Protestants. By 1860 Catholics had become the largest denomination in the United States.

THE GERMANS A new wave of German migration peaked in 1854, just a few years after the crest of Irish arrivals, when 215,000 Germans disembarked in U.S. ports. These immigrants included a large number of learned, cultured professional people—doctors, lawyers, teachers, engineers—some of them refugees from the failed German revolution of 1848. In addition to an array of political opinions ranging from laissez faire conservatism to Marxism, the Germans brought with them a variety of religious preferences. One third of the new arrivals were Catholics, most were Protestants (usually Lutherans), and a significant number were Jews or freethinking atheists or agnostics. By the end of the century, some 250,000 German Jews had emigrated to the United States.

Unlike the Irish more Germans settled in rural areas than in cities, and the influx included many independent farmers, skilled workers, and shopkeepers who arrived with the means to get themselves established in skilled jobs or on the land. More so than the Irish, they migrated in families and groups rather than individually, and this clannish quality helped them better sustain elements of their language and culture in the New World. More of them also tended to return to their native country. About 14 percent of the Germans eventually went back to their homeland, compared with 9 percent of the Irish.

Among the German immigrants who prospered in the New World were Ferdinand Schumacher, who began peddling flaked oatmeal in Ohio and whose company eventually became part of the Quaker Oats Company;

German Beer Garden, New York (1825)

German immigrants established their own communities, where they maintained the traditions of their homeland.

Heinrich Steinweg, a piano maker from the Harz Mountains, who in America changed his name to Steinway and became famous for the quality of his instruments; and Levi Strauss, a Jewish tailor who followed the gold rushers to California and began making durable work pants that were later dubbed blue jeans, or Levi's. Major centers of German settlement developed in southwestern Illinois and Missouri (around St. Louis), Texas (near San Antonio), Ohio, and Wisconsin (especially around Milwaukee). The larger German communities developed traditions of bounteous food, beer, and music, along with German turnvereins (gymnastic societies), sharpshooter clubs, fire-engine companies, and kindergartens.

THE BRITISH, SCANDINAVIANS, AND CHINESE British immigrants continued to arrive in the United States in large numbers during the first half of the nineteenth century. They included a great many professionals, independent farmers, and skilled workers. Some British workers, such as Samuel Slater, helped transport the technology of British factories to the United States. Two other groups that began to arrive in noticeable numbers during the 1840s and 1850s served as the vanguard for greater numbers of their compatriots. Annual arrivals from Scandinavia did not exceed 1,000 until 1843, but by 1860, 72,600 Scandinavians lived in the United States. The Norwegians and Swedes gravitated to Wisconsin and Minnesota, where the climate and woodlands reminded them of home. By the 1850s the rapid development of California was attracting Chinese, who, like the Irish in the

East, did the heavy work of construction. Infinitesimal in number until 1854, the Chinese in America numbered 35,500 by 1860.

NATIVISM Not all Americans welcomed the flood of immigrants. Many “natives” resented the newcomers, with their alien languages and mysterious customs. The flood of Irish and German Catholics aroused Protestant hostility to “popery.” A militant Protestantism growing out of the evangelical revivals of the early nineteenth century fueled the anti-Catholic hysteria. There were also fears that German communities were fomenting political radicalism and that the Irish were forming voting blocs, but above all hovered the menace of unfamiliar religious practices. Catholic authoritarianism was widely perceived as a threat to hard-won liberties, religious and political.

In 1834 a series of anti-Catholic sermons by Lyman Beecher, a popular Congregationalist minister who served as president of Lane Theological Seminary in Cincinnati, incited a mob to attack and burn the Ursuline Convent in Charlestown, Massachusetts. In 1844 armed clashes between Protestants and Catholics in Philadelphia ended with about 20 killed and 100 injured. Sporadically the nativist spirit took organized form in groups that claimed to prove their patriotism by hating foreigners and Catholics.

As early as 1837, a Native American Association was formed in Washington D.C., but the most significant such group was the Order of the Star-Spangled Banner, founded in New York City in 1849. Within a few years this group had grown into a formidable third party known as the American party, which had the trappings of a secret fraternal order. Members pledged never to vote for any foreign-born or Catholic candidate. When asked about the organization, they were to say “I know nothing.” In popular parlance the American party became the Know-Nothing party. For a season it appeared to be on the brink of achieving major-party status. In state and local campaigns during 1854, the Know-Nothings carried one election after another. They swept the Massachusetts legislature, winning all but two seats in the lower house. That fall they elected more than forty congressmen. For a while the Know-Nothings threatened to control New England, New York, and Maryland and showed strength elsewhere, but the anti-Catholic movement subsided when slavery became the focal issue of the 1850s.

The Know-Nothings demanded the exclusion of immigrants and Catholics from public office and the extension of the period for naturalization (citizenship) from five to twenty-one years, but the party never gathered the political strength to effect such legislation. Nor did Congress act during the period to restrict immigration in any way. The first federal law on immigration, passed

A Know-Nothing Cartoon

The Catholic Church supposedly attempts to control American religious and political life through Irish immigration.

in 1819, enacted only safety and health regulations regarding supplies and the number of passengers on immigrant ships. That and subsequent acts designed to protect immigrants from overcrowding and unsanitary conditions were, however, poorly enforced.

ORGANIZED LABOR

Skilled workers in American cities before and after the Revolution were called artisans, craftsmen, or mechanics. They made or repaired shoes, hats, saddles, ironware, silverware, jewelry, glass, ropes, furniture, tools, weapons, and an array of wooden products, and printers published books, pamphlets, and newspapers. These skilled workers operated within a guild system, a centuries-old economic and social structure developed in medieval Europe.

Workers in several of the skilled trades, especially shoemaking and printing, formed their own professional associations. Like medieval guilds, which were organized by particular trades, these trade associations were local societies intended to promote the interests of the members. The trade groups pressured politicians for tariffs to protect them from foreign

imports, provided insurance benefits, and drafted regulations to improve working conditions, ensure quality control, and provide equitable treatment of apprentices and journeymen. In addition, they sought to control the total number of tradesmen in their profession so as to maintain wage levels. The New York shoemakers, for instance, complained about employers taking on too many apprentices, insisting that “two was as many as one man can do justice by.”

The use of slaves as skilled workers also caused controversy among tradesmen. White journeymen in the South objected to competing with enslaved laborers. Other artisans refused to take advantage of slave labor. The Baltimore Carpenters’ Society, for example, admitted as members only those employers who refused to use forced labor.

During the 1820s and 1830s artisans who emphasized quality and craftsmanship for a custom trade found it hard to meet the low prices made possible by the new factories and mass-production workshops. At the time few workers belonged to unions, but a growing fear that they were losing status

led artisans in the major cities to become involved in labor politics and unions.

The Shoemaker, from The Book of Trades (1807)

When Philadelphia boot makers and shoemakers went on strike in 1806, a court found them guilty of a “conspiracy to raise their wages.”

EARLY UNIONS Early labor unions faced serious legal obstacles—they were prosecuted as unlawful conspiracies. In 1806, for instance, Philadelphia shoemakers were found guilty of a “combination to raise their wages.” The court’s decision broke the union. Such precedents were used for many years to hamstring labor organizations until the Massachusetts Supreme Judicial Court made a landmark ruling in the case of *Commonwealth v. Hunt* (1842). In this case the court ruled that forming a trade union was not in itself illegal, nor was a demand that employers hire only members of the union. The

court also declared that workers could strike if an employer hired nonunion laborers.

Until the 1820s labor organizations took the form of local trade unions, confined to one city and one craft. From 1827 to 1837, however, organization on a larger scale began to take hold. In 1834 the National Trades' Union was set up to federate the city societies. At the same time, national craft unions were established by the shoemakers, printers, combmakers, carpenters, and handloom weavers, but all the national groups and most of the local ones vanished in the economic collapse of 1837.

LABOR POLITICS With the widespread removal of property qualifications for voting, labor politics flourished briefly during the Jacksonian era, especially in Philadelphia. A Workingmen's party, formed there in 1828, gained the balance of power in the city council that fall. This success inspired other Workingmen's parties in about fifteen states. The Workingmen's parties were broad reformist groups devoted to the interests of labor, but they faded quickly. The inexperience of labor politicians left the parties prey to manipulation by political professionals. In addition, some of their issues were co-opted by the major parties. Labor parties also proved vulnerable to charges of extreme radicalism.

Once the labor parties had faded, many of their supporters found their way into a radical wing of the Jacksonian Democrats. This faction acquired the name Locofocos in 1835, when their opponents in New York City's regular Democratic organization, Tammany Hall, turned off the gaslights at one of their meetings and they produced candles, lighting them with the new friction matches known as locofocos. The Locofocos soon faded as a separate group but endured as a radical faction within the Democratic party.

While the labor parties elected few candidates, they did succeed in drawing notice to their demands, many of which attracted the support of middle-class reformers. Above all they promoted free public education for all children and the abolition of imprisonment for debt, causes that won widespread popular support. The labor parties and unions actively promoted the ten-hour workday to prevent employers from abusing workers. In 1836 President Jackson established the ten-hour workday at the Naval Shipyard in Philadelphia in response to a strike, and in 1840 President Van Buren extended the limit to all government offices and projects. In private jobs the ten-hour workday became increasingly common, although by no means universal, before 1860. Other reforms put forward by the Workingmen's parties included mechanics' lien laws to protect workers from nonpayment

of wages; limits on the militia system, which allowed the rich to escape military service with fines but forced poor resisters to face jail terms; the abolition of “licensed monopolies,” especially banks; measures to ensure payment in hard money and to protect workers from inflated bank-note currency; measures to restrict competition from prison labor; and the abolition of child labor.

THE REVIVAL OF UNIONS After the financial panic of 1837, the nascent labor movement went into decline, and unions did not begin to revive until business conditions improved in the early 1840s. Even then unions remained local and weak. Often they came and went with a single strike. The greatest single labor dispute before the Civil War occurred on February 22, 1860, when shoemakers at Lynn and Natick, Massachusetts, walked out after their requests for higher wages were denied. Before the strike ended, it had spread through New England, involving perhaps twenty-five towns and 20,000 workers. The strike stood out not just for its size but also because the workers won. Most of the employers agreed to wage increases, and some also agreed to recognize the union as a bargaining agent.

By the mid-nineteenth century the labor-union movement was maturing. Workers began to emphasize the importance of union recognition and regular collective-bargaining agreements. They also shared a growing sense of solidarity. In 1852 the National Typographical Union revived the effort to organize skilled crafts on a national scale. Others followed, and by 1860 about twenty such organizations had appeared, although none was strong enough as yet to do much more than hold national conventions and pass resolutions.

THE RISE OF THE PROFESSIONS

The dramatic social changes of the first half of the nineteenth century opened up an array of new professions for Americans to pursue. Bustling new towns required new services—retail stores, printing shops, post offices, newspapers, schools, banks, law firms, doctors’ offices, and others—that created more high-status jobs than had ever existed before. By definition professional workers are those who have specialized knowledge and skills that ordinary people lack. To be a professional in Jacksonian America, to be a self-governing individual exercising trained judgment in an open society, was the epitome of the democratic ideal, an ideal that rewarded hard work, ambition, and merit.

The workforce was broadened and diversified by the rapid expansion of new communities, public schools, and institutions of higher learning; the emergence of a national market economy; and the growing sophistication of American life and society, which was fostered by new technologies. In the process, expertise garnered special prestige. In 1849 Henry Day delivered a lecture titled “The Professions” at the Western Reserve School of Medicine. He declared that the most important social functions in modern life were the professional skills. In fact, Day claimed, American society had become utterly dependent upon “professional services.”

TEACHING Teaching was one of the fastest growing vocations in the antebellum period. Public schools initially preferred men over women as teachers, usually hiring them at age seventeen or eighteen. The pay was so low that few stayed in the profession their entire career, but for many educated, restless young adults, teaching was a convenient first job that offered independence and stature, as well as an alternative to the rural isolation of farming. The New Englander Bronson Alcott remembered being attracted to teaching by “a curiosity to see beyond the limits of my paternal home and become acquainted with the great world.” Church groups and civic leaders started private academies or seminaries for girls. Initially viewed as finishing schools for young women, these institutions soon added courses in the liberal arts: philosophy, literature, Latin, and Greek.

LAW, MEDICINE, AND ENGINEERING Teaching was a common stepping-stone for men who became lawyers. In the decades after the Revolution, young men, often hastily or superficially trained, swelled the ranks of the legal profession. They typically would teach for a year or two before clerking for a veteran attorney, who would train them in the law in exchange for their labors. The absence of formal standards for legal training and the scarcity of law schools help explain why there were so many attorneys in the antebellum period. In 1820 eleven of the twenty-three states required no specific length or type of study for aspiring lawyers.

Like attorneys, physicians in the early nineteenth century often had little formal academic training. Healers of every stripe and motivation assumed the title of *doctor* and established a medical practice without regulation. Most of them were self-taught or had learned their profession by assisting a doctor for several years, occasionally supplementing such internships with a few classes at the handful of new medical schools, which in 1817 graduated a total of only 225 students. That same year there were almost 10,000 physicians in the nation. By 1860 there were 60,000 self-styled physicians,

and quackery was abundant. As a result, the medical profession lost its social stature and the public's confidence. Yet despite their relative lack of a first-rate medical education, physicians were responsible for many breakthroughs in the treatment of a variety of illnesses.

The physical and industrial expansion of the United States during the first half of the nineteenth century gave rise to the profession of engineering, a field that has since become the single largest professional occupation for men in the United States. Specialized expertise was required for the building of canals and railroads, the development of machine tools and steam engines, and the construction of roads and bridges. Beginning in the 1820s, Americans gained access to technical knowledge in mechanics' institutes, scientific libraries, and special schools that sprouted up across the young nation. Rensselaer Polytechnic Institute was founded in Troy, New York, in 1824 to teach the "applications of science to the common purposes of life." The already existing Franklin Institute of Philadelphia shifted its emphasis in the 1830s to mechanical engineering. By the outbreak of the Civil War, engineering had become one of the largest professions in the nation.

WOMEN'S WORK Women during the first half of the nineteenth century still worked primarily in the home. The prevailing assumption was that women by nature were most suited to marriage, motherhood, and the accompanying domestic duties. The only professions readily available to women were nursing (often midwifery, the delivery of babies) and teaching, both of which were extensions of the domestic roles of health care and child care. Teaching and nursing commanded relatively lower status and pay than did the male-dominated professions.

Many middle-class and affluent women spent their time outside the home engaged in religious and benevolent work. They were unstinting volunteers in churches and reform societies. A very few women, however, courageously pursued careers in male-dominated professions. Harriet Hunt of Boston was a teacher who, after nursing her sister through a serious illness, set up shop in 1835 as a self-taught physician and persisted in medical practice although she was twice rejected for admission by the Harvard Medical School. Elizabeth Blackwell of Ohio managed to gain admission to the Geneva Medical College of Western New York, despite the disapproval of the faculty. When she walked in to her first class, "a hush fell upon the class as if each member had been struck with paralysis." Blackwell had the last laugh when she finished at the head of her class in 1849, but thereafter

the medical school refused to admit any more women. Blackwell went on to found the New York Infirmary for Women and Children and later had a long career as a professor of gynecology at the London School of Medicine for Women.

JACKSONIAN INEQUALITY

During the years before the Civil War, the American legend of rags to riches, the image of the self-made man, was a durable myth. Speaking to the Senate in 1832, Kentucky's Henry Clay claimed that almost all the successful factory owners he knew were "enterprising self-made men, who have whatever wealth they possess by patient and diligent labor." The legend had just enough basis in fact to gain credence. John Jacob Astor, the wealthiest man in America (worth more than \$20 million at his death in 1848), came of humble if not exactly destitute origins. The son of a minor official in Germany, he arrived in the United States in 1784 with little or nothing and made a fortune on the western fur trade, which he then parlayed into a much larger fortune in New York real estate. But his and similar cases were more exceptional than common.

Social historians' research on the wealthy in major eastern cities shows that while men of moderate means could sometimes turn an inheritance into a fortune by good management and prudent speculation, those who started out poor and uneducated seldom made it to the top. In 1828 the top 1 percent of New York's families (worth \$34,000 or more) held 40 percent of the wealth, and the top 4 percent held 76 percent. Similar circumstances prevailed in Philadelphia, Boston, and other cities.

A supreme irony of the times was that the age of the common man, the age of Jacksonian democracy, seems actually to have been an age of growing economic and social inequality. Why that happened is difficult to say, except that the boundless wealth of the untapped frontier narrowed as the land was taken up and claims on various entrepreneurial opportunities were staked out. Such developments took place in New England towns even before the end of the seventeenth century. But despite growing social distinctions, it seems likely that the white population of America, at least, was better off than the general run of Europeans. New frontiers, both geographic and technological, raised the level of material well-being for all. And religious as well as political freedoms continued to attract people eager for liberty in a new land.

MAKING CONNECTIONS

- Eli Whitney's invention of the cotton gin had a profound effect on southern economic and social development. Chapter 15 describes the economy and society of the Old South in greater detail.
- The westward migration traced in this chapter increased tremendously in the 1840s, a trend discussed in Chapter 14.
- As this chapter demonstrated, the birth and expansion of railroads in the first half of the nineteenth century were an important part of "the dynamics of growth." Chapter 16 shows how a proposal for the first transcontinental railroad had an unexpected side effect: it intensified the debate over the spread of slavery westward.

AN AMERICAN RENAISSANCE: RELIGION, ROMANTICISM, AND REFORM

FOCUS QUESTIONS

- Why did new religious movements emerge in the early nineteenth century?
- How did a distinctive American literary culture develop?
- What were the goals of the different social-reform movements?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

The American novelist Nathaniel Hawthorne once lamented the difficulty of writing “about a country where there is no shadow, no antiquity, no mystery, no picturesque and gloomy wrong.” Unlike nations of the Old World, which have long been steeped in history and romance, the United States in the nineteenth century was an infant republic swaddled in the rational ideas of the Enlightenment. Those ideas, most vividly set forth in Thomas Jefferson’s Declaration of Independence, had in turn a universal application that would influence religion, literature, and various social-reform movements.

RATIONAL RELIGION

After the Revolution many Americans assumed that the United States had a mission to stand before the world as an example of republican virtue, much as Puritan New England had once stood before erring humanity as an example of an ideal Christian community. The concept of America's having a special mission in fact still carried strong spiritual overtones, for the religious fervor that quickened in the Great Awakening had reinforced the idea of the nation's fulfilling a providential purpose. This idea infused the national character with an element of perfectionism—and an element of impatience when reality fell short of expectations. The combination of widespread religious belief and fervent social idealism brought major reforms and advances in human rights during the first half of the nineteenth century. It also brought disappointments that at times festered and became cynicism and alienation.

DEISM The currents of the Enlightenment and the Great Awakening, now mingling, now parting, flowed on into the nineteenth century and in different ways eroded the remnants of Calvinist orthodoxy. As time passed, the image of a just but stern God promising predestined hellfire and damnation gave way to a more optimistic religious outlook. Enlightenment rationalism increasingly stressed humankind's inherent goodness rather than its depravity and encouraged a belief in social progress and the promise of individual perfectibility.

Many leaders of the Revolutionary War era, such as Thomas Jefferson and Benjamin Franklin, became Deists, even while nominally attached to existent churches. Deism, which arose in eighteenth-century Europe, carried to its logical conclusion Sir Isaac Newton's image of the world as a smoothly operating machine. The God of the Deist planned the universe, built it, set it in motion, and then left it to its own fate. By the use of reason, people might grasp the natural laws governing the universe. Deists rejected the belief that every statement in the Bible was literally true. They were skeptical of miracles and questioned the divinity of Jesus. Deists also defended free speech and freedom from religious coercion of all sorts.

Orthodox Christians could hardly distinguish such doctrine from atheism, but Enlightenment rationalism soon began to make deep inroads into American Protestantism. The old Puritan churches around Boston proved most vulnerable to the logic of Enlightenment rationalism. Boston's progress—or, some would say, its degeneration—from Puritanism to prosperity had persuaded many affluent families that they were anything but sinners in the hands of an angry God. Drawn to more consoling and less strenuous

religious doctrines, some went back to the traditional rites of the Episcopal Church. More of them simply dropped or qualified their adherence to Calvinism while remaining in the Congregational churches.

UNITARIANISM AND UNIVERSALISM By the end of the eighteenth century, many well-educated New Englanders were drifting into Unitarianism, a belief that emphasized the oneness and benevolence of God, the inherent goodness of humankind, and the primacy of reason and conscience over established creeds and confessions. People were not inherently depraved, Unitarians stressed; they were capable of doing tremendous good, and *all* were eligible for salvation. Boston was very much the center of the movement, and it flourished chiefly within Congregational churches. During the early nineteenth century more and more liberal churches adopted the name *Unitarian*.

William Ellery Channing of Boston's Federal Street Congregational Church emerged as the most inspiring Unitarian leader. "I am surer that my rational nature is from God," he said, "than that any book is an expression of his will." The American Unitarian Association in 1826 had 125 churches (all but a handful of them in Massachusetts). That same year, when the Presbyterian minister Lyman Beecher moved to Boston, he deplored the inroads that had been made by the new rationalist faith: "All the literary men of Massachusetts were Unitarian; all the trustees and professors of Harvard College were Unitarian; all the elite of wealth and fashion crowded Unitarian churches."

A parallel anti-Calvinist movement, Universalism, attracted a different social group: working-class people of a humbler status. In 1779 John Murray founded the first Universalist church at Gloucester, Massachusetts. Universalism stressed the salvation of all men and women, not just a predestined few. God, it taught, was too merciful to condemn anyone to eternal punishment. "Thus, the Unitarians and Universalists were in fundamental agreement," wrote one historian of religion, "the Universalists holding that God was too good to damn man; the Unitarians insisting that man was too good to be damned." Although both sects remained relatively small, they exercised a powerful influence over intellectual life, especially in New England.

THE SECOND GREAT AWAKENING

By the end of the eighteenth century, Enlightenment secularism had made deep inroads into American thought. Yet for all the impact of rationalism,

Americans remained a profoundly religious people—as they have been ever since. There was, the perceptive French visitor Alexis de Tocqueville observed, “no country in the world where the Christian religion retains a greater influence over the souls of men than in America.”

Around 1800, however, fears that secularism was taking root sparked an intense revival that soon grew into the Second Great Awakening, sometimes called the Great Revival. An early revivalist leader, Timothy Dwight, became president of Yale College in 1795 and struggled to purify a place that, in Lyman Beecher’s words, had turned into “a hotbed of infidelity.” Like his grandfather Jonathan Edwards, Dwight helped launch a series of revivals that captivated Yale students and spread to all of New England.

FRONTIER REVIVALS In its frontier phase the Second Great Awakening, like the first, generated great excitement and dramatic manifestations. It gave birth, moreover, to a new institution, the camp meeting, in which the fires of faith were repeatedly rekindled. Evangelists found ready audiences among lonely frontier folk hungry for spiritual intensity and a sense of community. Women especially flocked to the rural revivals and sustained religious life on the frontier. In the backwoods and in small rural hamlets, the traveling revival was as welcome an event as the traveling circus.

Among the established sects the Presbyterians were entrenched among the Scotch-Irish from Pennsylvania to Georgia. They gained further from the Plan of Union, worked out in 1801 with the Congregationalists of Connecticut and later with Congregationalists of other states. Since the Presbyterians and Congregationalists agreed on doctrine and differed mainly on the form of church government they adopted, they were able to form unified congregations and call a minister from either church. The result through much of the Old Northwest was that New Englanders became Presbyterians by way of the “Presbygational” churches.

The Baptists embraced a simplicity of doctrine and organization that appealed especially to the common people of the frontier. Their theology was grounded in the infallibility of the Bible and the recognition of humankind’s innate depravity. But they replaced the Calvinist notion of predestination with the concepts of free will and universal redemption and highlighted the ritual of adult baptism. They also stressed the equality of all before God, regardless of wealth, social standing, or education. Since each congregation was its own highest authority, a frontier church needed to appeal to no hierarchy before setting up shop and calling a Baptist minister or naming one of its own. Sometimes whole congregations moved across the mountains as a body.

The Methodists, who shared with the Baptists an emphasis on salvation by free will, established a much more centralized church structure. They also developed the most effective evangelical method of all: the minister on horseback, who sought out people in the most remote areas with the message of salvation as a gift free for the taking. The “circuit rider” system began with Francis Asbury, a tireless British-born revivalist who scoured the trans-Appalachian frontier for lost souls, traversing fifteen states and preaching thousands of sermons while defying hostile Indians and suffering through harsh winters. Asbury established a mobile evangelism perfectly suited to the frontier environment and the new democratic age. After Asbury, Peter Cartwright emerged as the most successful circuit rider and grew justly famous for his highly charged sermons. Cartwright roamed across Kentucky, Tennessee, Ohio, and Indiana, preaching a sermon a day for over twenty years. His message was simple: salvation is free for all to embrace. By the 1840s the Methodists had grown into the largest Protestant church in the country.

During the early nineteenth century, the Great Revival spread through the West and into more settled regions back East. Camp meetings were typically held in late summer or fall, when farmwork slackened. People came from far and wide, camping in wagons, tents, or crude shacks. African Americans, whether enslaved or free, were allowed to set up their own adjacent camp revivals. The largest camp meetings tended to be ecumenical affairs, with Baptist, Methodist, and Presbyterian ministers working as a team. The crowds often numbered in the thousands, and the unrestrained atmosphere made for chaos. If a particular hymn or sermon excited someone, he or she would cry, shout, dance, or repeat the phrase. One visitor to a Kentucky camp revival noted that no fewer than seven ministers at one time were scattered among the thousands of faithful, all preaching at the top of their lungs. Mass excitement swept up even the most skeptical onlookers, and infusions of the spirit moved participants to strange manifestations. Some went into trances; others contracted the “jerks,” laughed the “holy laugh,” babbled in unknown tongues, or got down on all fours and barked like dogs to “tree the devil,” as a hound might tree a raccoon.

But to dwell on the bizarre aspects of the camp meetings would be to distort an activity that offered a redemptive social outlet to isolated rural folk. This was especially true for women, for whom the camp meetings provided an alternative to the rigors and loneliness of frontier domesticity. Camp meetings also brought a more settled community life through the churches they spawned and helped spread a more democratic faith among people living on the frontier.

Religious Revival

An aquatint of a backwoods Methodist camp meeting in 1819.

THE BURNED-OVER DISTRICT Regions swept by revival fevers might be compared to forests devastated by fire. Western New York, in fact, experienced such intense levels of evangelical activity that it was labeled the burned-over district. The most successful evangelist in the burned-over district was a lawyer named Charles Grandison Finney. In the winter of 1830–1831, he preached for six months in upstate New York and helped generate 100,000 conversions. Finney wrestled with a question that had plagued Protestantism for centuries: What role can the individual play in earning salvation? Orthodox Calvinists had long argued that people could neither earn nor choose salvation of their own accord. Grace was a gift of God, a predetermined decision incapable of human understanding or control. In contrast, Finney insisted that the only thing preventing conversion was the individual. And what most often discouraged individual conversion was the terrifying loneliness of the decision. So Finney transformed revivals into collective conversion experiences in which spectacular public events displaced private communion. At his marathon revivals, Finney would call people forward to the “anxious bench,” a front pew where they struggled to confess their sins and seek conversion and forgiveness, assisted by friends and neighbors helping to “pray them through” the intense experience.

Finney compared his methods with those of politicians who used advertising and showmanship to attract attention. He carried the methods of the frontier revival to the cities of the East and as far as Great Britain. His gospel combined faith and good works: one led to the other. “All sin consists in

selfishness,” he said, “and all holiness or virtue, in disinterested benevolence.” In 1835 Finney took the professorship of theology in the newly established Oberlin College, founded by pious New Englanders in northern Ohio’s Western Reserve. Later he served as its president. From the start, Oberlin College radiated a spirit of reform predicated on faith; it was the first college in America to admit women and blacks, and it was a hotbed of anti-slavery agitation.

THE MORMONS The burned-over district gave rise to several new religious movements, of which the most important was the Church of Jesus Christ of Latter-day Saints, or the Mormons. The founder, Joseph Smith, was born in Vermont, the child of wandering parents who finally settled in the village of Palmyra, in western New York. In 1820 the fourteen-year-old Smith was praying in the woods when he had a vision of God and his Son. They cautioned the boy that all existing religious denominations were false. About three years later, Smith claimed, an angel led him to a hill near his father’s farm, where he claimed to have found the *Book of Mormon* engraved on golden tablets in a language he called “reformed Egyptian.” Four years later the barely literate Smith rendered into English what he described as a lost section of the Bible, which tells the story of ancient Hebrews who inhabited the New World and to whom Jesus had made an appearance. The *Book of Mormon* links the native Indians to the lost tribes of Israel and predicts the Second Coming of Christ.

On the basis of this revelation, the charismatic Smith began forming his own church in 1830. Within a few years he had gathered converts by the thousands, most of them New England farmers who had migrated to western New York. They found in Mormonism the promise of a pure kingdom of Christ in America and an alternative to the era’s social turmoil and degrading materialism. But their orthodox Christian neighbors found in Mormonism a threat to their faith. Like the Puritans in sixteenth-century England, Mormons were subjected to abuse and disdain. In their search for a refuge from persecution, the Mormons moved from New York to Kirtland, Ohio, where Smith was tarred and feathered, then to several places in Missouri, and finally, in 1839, to Commerce, Illinois, along the Mississippi River, which they renamed Nauvoo. There they settled and grew rapidly for some five years. Smith was a compelling preacher and an organizational genius. He named himself mayor of Nauvoo and general of the community’s 5,000 militiamen. He also owned the hotel and the general store. In 1844 a crisis arose when dissidents attacked Smith for practicing polygamy. Non-Mormons in the neighboring counties attacked Nauvoo, and Smith and his brother Hyrum were arrested. On June 27, 1844, an anti-Mormon mob of masked men stormed the jail and shot to death both Joseph and Hyrum Smith.

In Brigham Young, the remarkable successor to Joseph Smith, the Mormons found a new leader of uncommon qualities: strong-minded, intelligent, and decisive but also stern and authoritarian. After the murder of Smith, Young patched up an unsure peace with the neighbors by promising an early exodus from Nauvoo. Before the year was out, Young had chosen a new land near the Great Salt Lake in Utah, then part of Mexico, guarded by mountains to the east and north, deserts to the west and south, yet fed by mountain streams. Despite its isolation, it was close enough to the Oregon Trail for the Mormon “saints” to prosper by trade with passing “gentiles.”

A New Christianity

The Mormon Temple in Nauvoo, Illinois,
ca. 1840.

The Mormon trek to Utah was better organized and less burdensome than most of the overland migrations of the time. Early in 1846 a small band of courageous believers crossed the frozen Mississippi River into Iowa to set up the Camp of Israel, the first in a string of way stations along the route. By the fall of 1846, in wagons and on foot, all 15,000 of the migrants had reached the prepared winter quarters on the Missouri River, where they paused until the first bands set out the next spring for “the Promised Land.”

The first arrivals at Salt Lake in 1847 found only “a broad and barren plain hemmed in by mountains . . . the paradise of the lizard, the cricket and the rattlesnake.” Young tapped the ground with his cane and announced that their new holy city would be built upon the spot, “laid out perfectly square, north and south, east and west.” By the end of 1848, the Mormons had developed an efficient irrigation system, and over the next decade they brought about the greening of the desert. The Mormons had scarcely arrived when their land became part of the United States. At first they organized their own state, Deseret (meaning “Land of the Honey Bee,” according to Young), with ambitious boundaries that reached the Pacific in southern California. But

Where were Mormon settlements established between 1830 and 1851? Why did Joseph Smith initially lead his congregation west? Why was the Utah Territory an ideal place for the Mormons to settle?

the Utah Territory, which Congress created, afforded the Mormons almost the same control, with Governor Young the chief political and theocratic authority. By 1869 some 80,000 Mormons had settled in Utah.

ROMANTICISM IN AMERICA

The revival of emotional piety during the early 1800s represented a widespread tendency throughout the United States and Europe to accentuate the stirrings of the spirit rather than the dry logic of reason and the allure of material gain. Another great victory of heart over head was the Romantic movement in thought, literature, and the arts. By the 1780s a revolt was brewing in Europe against the well-ordered world of scientific rationalism. Were there not, after all, more things in this world than reason and logic could box

up and explain: moods, impressions, and feelings; mysterious, unknown, and half-seen things? Americans also took readily to the Romantics' emphasis on individualism, idealizing now the virtues of common people, now the idea of original or creative genius in the artist, the author, or the great personality.

The German philosopher Immanuel Kant gave the transatlantic Romantic movement a summary definition in the title of his *Critique of Pure Reason* (1781), an influential book that emphasized the limits of science and reason in explaining the universe. People have innate conceptions of conscience and beauty, the Romantics believed, and religious impulses too strong to be dismissed as illusions. In areas in which science could neither prove nor disprove concepts, people were justified in having faith. The impact of such ideas elevated intuitive knowledge at the expense of rational knowledge.

TRANSCENDENTALISM The most intense expression of such Romantic ideals was the transcendentalist movement of New England, which drew its name from its emphasis on those things that transcended (or rose above) the limits of reason. Transcendentalism, said one of its apostles, meant an interest in areas “a little beyond” the scope of reason. If transcendentalism drew much

Kaaterskill Falls, 1825

Thomas Cole's painting captures the romantic ideals that swept America in the wake of the Enlightenment.

of its inspiration from Kant, it was also rooted in New England Puritanism, to which it owed a pervasive moralism and profound spirituality. It also had a close affinity with the Quaker doctrine of the inner light. The inner light, a gift from God's grace, was transformed by Romantics into intuition, a faculty of the mind. Transcendentalism during the 1830s became the most energetic and influential intellectual and spiritual force in American culture.

An element of mysticism had always lurked in Puritanism, even if viewed as a heresy—Anne Hutchinson, for instance, had been banished from the Massachusetts Bay Colony for claiming direct revelations from God. The reassertion of mysticism had something in common, too, with the meditative religions of Asia, a continent with which New England now had a flourishing trade. Transcendentalists steeped themselves in the teachings of the Buddha, the Sufis of Islam, the Upanishads, and the Bhagavad Gita.

In 1836 an informal discussion group known as the Transcendental Club began to meet in Boston and Concord, Massachusetts. It was a loose association of diverse individualists. The club included liberal clergymen such as Theodore Parker, George Ripley, and James Freeman Clarke; writers such as Henry David Thoreau, Bronson Alcott, Nathaniel Hawthorne, and Orestes Brownson; and learned women such as Elizabeth and Sophia Peabody (who married Hawthorne in 1842) and Margaret Fuller. Fuller edited the group's quarterly review, the *Dial* (1840–1844), for two years before the duty fell to Ralph Waldo Emerson, soon to become the acknowledged high priest of transcendentalism.

Ralph Waldo Emerson

Transcendental poet and essayist.

RALPH WALDO EMERSON More than any other person, Emerson spread the transcendentalist gospel. Sprung from a line of New England ministers, he set out to be a Unitarian parson but quit the “cold and cheerless” denomination before he was thirty. After travel to Europe, where he met England’s greatest writers, Emerson settled in Concord to take up the life of an essayist, poet, and popular speaker on the lecture circuit, preaching the good news of optimism, self-reliance, and the individual’s unlimited potential. Having found pure reason “cold as a cucumber,” he was determined to *transcend* the limitations of inherited

conventions and rationalism in order to penetrate the inner recesses of the self.

Emerson's lectures and writings expressed the core of the transcendentalist worldview. His notable address "The American Scholar," delivered at Harvard in 1837, urged young Americans to put aside their awe of European culture and explore their own new world. It was "our intellectual Declaration of Independence," said one observer.

Emerson's essay on "Self-Reliance" (1841) has a timeless appeal to youth with its message of individualism and independence. Like most of Emerson's writings, it is crammed with pungent quotations:

Whoso would be a man, must be a nonconformist. . . . Nothing is at last sacred but the integrity of your own mind. . . . It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of a crowd keeps with perfect sweetness the independence of solitude. . . . A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. . . . Speak what you think now in hard words and tomorrow speak what tomorrow thinks in hard words again, though it contradict everything you said today. . . . To be great is to be misunderstood.

HENRY DAVID THOREAU Emerson's young friend and Concord neighbor Henry David Thoreau practiced the reflective self-reliance that Emerson preached. "I like people who can do things," Emerson stressed, and Thoreau, fourteen years his junior, could do many things well: carpentry, masonry, painting, surveying, sailing, gardening. The philosophical son of a father who was a pencil-maker and a mother who was a domineering abolitionist, Thoreau displayed a sense of uncompromising integrity, outdoor vigor, and tart individuality that Emerson found captivating. "If a man does not keep pace with his companions," Thoreau wrote, "perhaps it is because he hears a different drummer."

Thoreau himself marched to a different drummer all his life. After Harvard, where he exhausted the resources of the library in gargantuan bouts of reading, and after a brief stint as a teacher, in which he got in trouble for refusing to cane his students, Thoreau settled down to eke out a living by making pencils with his father. But he made frequent escapes to drink in the beauties of nature. He showed no interest in the contemporary scramble for wealth. It too often corrupted the pursuit of happiness. "The mass of men," he wrote, "lead lives of quiet desperation."

Determined to practice plain living and high thinking, Thoreau boarded with the Emersons for a time and then embarked on an experiment in

Henry David Thoreau

self-reliance. On July 4, 1845, he took to the woods to live in a cabin he had built on Emerson’s land beside Walden Pond, about a mile outside Concord. Thoreau wanted to see to what degree he could free himself from the complexities and hypocrisies of conventional life so as to devote his time to observation, reflection, and writing. His purpose was not to lead a hermit’s life. He frequently walked the mile or so to town to dine with his friends and often welcomed guests at his cabin. “I went to the woods because I wished to live deliberately,” he wrote in *Walden, or Life in the Woods* (1854), “and not, when I came to die, discover that I had not lived.”

While Thoreau was at Walden Pond, the Mexican War erupted. He saw it as an unjust war to advance the cause of slavery, so he refused to pay his poll tax as a gesture of opposition, for which he was put in jail (for only one night; an aunt paid the tax). The incident was so trivial as to be almost comic, but out of it grew the classic essay “Civil Disobedience” (1849), which would influence the passive-resistance movements of Mahatma Gandhi in India and Martin Luther King Jr. in the South. “If the law is of such a nature that it requires you to be an agent of injustice to another,” Thoreau wrote, “then, I say, break the law.”

The broadening ripples of influence more than a century after Thoreau’s death show the impact a contemplative person can have on the world of action. Thoreau and the transcendentalists taught a powerful lesson: people must follow their conscience. Though these thinkers attracted only a small following in their own time, they inspired reform movements and were the quickening force for a generation of writers that produced the first great age of American literature.

THE FLOWERING OF AMERICAN LITERATURE

The half decade of 1850–1855 witnessed an outpouring of great literature. It saw the publication of *Representative Men* by Emerson, *Walden* by

Thoreau, *The Scarlet Letter* and *The House of the Seven Gables* by Nathaniel Hawthorne, *Moby-Dick* by Herman Melville, and *Leaves of Grass* by Walt Whitman. As a noted literary critic wrote, “You might search all the rest of American literature without being able to collect a group of books equal to these in imaginative quality.” The flowering of New England literature featured, too, a foursome of poets who shaped the American imagination in a day when poetry was popular among the public: Henry Wadsworth Longfellow, John Greenleaf Whittier, Oliver Wendell Holmes Sr., and James Russell Lowell.

LITERARY GIANTS Nathaniel Hawthorne, the supreme writer of the New England group, never shared the sunny optimism of his neighbors or their perfectionist belief in reform. A sometime resident of Concord, Massachusetts, but a native and longtime inhabitant of Salem, he was haunted by the knowledge of evil bequeathed to him by his Puritan forebears—one of whom (John Hathorne) had been a judge at the Salem witchcraft trials. After college he worked in obscurity in Salem, gradually began to sell a few stories, and finally earned a degree of fame with his collection of *Twice-Told Tales* (1837). In these, as in most of his later work, he presented powerful moral allegories. His central themes examined sin and its consequences: pride and selfishness, secret guilt, and the impossibility of rooting sin out of the human soul.

Emily Dickinson, the most original and powerful of the New England poets, remained a white-gowned recluse in her second-story bedroom in Amherst, Massachusetts. As she once prophetically wrote, “Success is counted sweetest / By those who ne’er succeed.” Only a few of her almost 1,800 poems were published (anonymously) before her death, in 1886, and the full corpus of her work remained unknown for years thereafter. Born in Amherst in 1830, the child of a stern father and a gentle mother, she received a first-rate secondary education and attended the new Mount Holyoke Female Seminary. Neither she nor her sister married, and they both lived out their lives in their parents’ home. Perhaps it was Emily’s severe eye trouble during the 1860s

Emily Dickinson

Dickinson offered a fresh, female voice to the world of New England literature.

Edgar Allan Poe

Perhaps the most inventive American writer of the period.

that induced her solitary withdrawal from the larger society; perhaps it was the aching despair generated by her unrequited love for a married minister. Whatever the reason, her intense isolation led her to focus her writings on her own shifting psychological state. Her themes were elemental: life, death, fear, loneliness, nature, and above all, God, a “Force illegible,” a “distant, stately lover.”

Edgar Allan Poe, born in Boston but reared in Virginia, was a master of gothic horror and the inventor of the detective story. He judged prose by its ability to provoke emotional tension, and since he considered fear

to be the most powerful emotion, he focused his efforts on making the grotesque and supernatural seem disturbingly real to his readers. Anyone who has read “The Tell-Tale Heart” or “The Pit and the Pendulum” can testify to his success.

Herman Melville was a New Yorker who went to sea as a youth. After eighteen months aboard a whaler, he arrived in the Marquesas Islands, in the South Seas, and jumped ship with a companion. He spent several weeks with a friendly tribe in “the valley of the Typees” before signing on with an Australian whaler. He joined a mutiny in Tahiti and finally returned home as a seaman aboard a U.S. Navy frigate. An embroidered account of his exotic adventures, *Typee* (1846), became an instant popular success, which he repeated in *Omoo* (1847), based on his stay in Tahiti.

In 1851 Melville produced one of the world’s greatest novels. In *Moby-Dick*, the story of Captain Ahab’s obsessive quest for the white whale that had devoured his leg, Melville explored the darker recesses of the soul. The book was aimed at two audiences. On one level it was a ripping good yarn of adventure on the high seas. But on another level it explored profound philosophical and psychological realms: Ahab’s single-minded mission to slay the evildoer turned the captain into a monster of destruction who sacrificed his ship, his crew, and himself to his folly, leaving as the one survivor the narrator of the story. Yet neither the public nor the critics at the time accepted the novel on either level. Melville’s career wound down into futility. He supported himself for years with a job in the New York Customhouse and

A harpooned whale breaks the surface of the water, as described by Herman Melville in *Moby-Dick*.

turned to poetry, much of which, especially the Civil War *Battle-Pieces* (1866), won acclaim in later years.

WALT WHITMAN The most provocative writer during the antebellum period was Walt Whitman, a vibrant personality who disdained inherited conventions and artistic traditions. There was something elemental in Whitman's character, something bountiful and generous and compelling—even his faults and inconsistencies were ample. Born on a Long Island farm, he moved with his family to Brooklyn and from the age of twelve worked mainly as a handyman and journalist, frequently taking the ferry across the harbor to booming, bustling Manhattan. The city fascinated him, and he gorged himself on the urban spectacle: shipyards, crowds, factories, shop windows. From such material he drew his editorial opinions and poetic inspiration, but he remained relatively obscure until the first edition of *Leaves of Grass* (1855) caught the eye and aroused the ire of readers. Emerson found it “the most extraordinary piece of wit and wisdom that America has yet contributed,” but more conventional critics shuddered at Whitman's explicit sexual references and grouched at his

indifference to rhyme and meter as well as his buoyant egotism. The jaunty Whitman was a startling figure, with his frank sexual references and homoerotic overtones. He also stood out from the pack of fellow writers in rejecting the idea that a woman's proper sphere was in a supportive and dependent role. Thoreau described Whitman as "the greatest democrat the world has seen."

THE POPULAR PRESS The flowering of American literature during the first half of the nineteenth century coincided with a massive expansion in the popular press. Technology sparked a reading revolution. The steam-driven Napier press, introduced from England in 1825, could print 4,000 sheets of newsprint in an hour. Richard Hoe of New York improved on it, inventing in 1847 the rotary press, which printed 20,000 sheets an hour. Like many advances in technology, this one was a mixed blessing. The high cost of the press made it harder for a person of small means to break into publishing. On the other hand, it expedited production of inexpensive newspapers, magazines, and books.

The availability of daily newspapers costing only a penny each transformed daily reading into a form of popular entertainment. Newspaper circulation skyrocketed. The "penny dailies," explained one editor, "are

to be found in every street, lane, and alley; in every hotel, tavern, countinghouse, [and] shop." The United States had more newspapers than any nation in the world. It needed them to forge a network of communications across the expanding republic. As readership soared, the content of the newspapers expanded beyond political news and commentary to include society gossip, sports, and reports of sensational crimes and accidents. The number of newspapers around the country grew from about 1,200 in 1833 to some 3,000 in 1860. The proliferation of newspapers was largely a northern and western

phenomenon. Literacy rates in the South lagged behind those of the rest of the country. Before any state had even been formed in the Northwest Territory, for example, the region boasted thirteen newspapers while North Carolina had only four.

Magazines found a growing market, too. *Niles' Weekly Register* (1811–1849) of Baltimore and Washington, founded by the printer Hezekiah Niles, featured accurate and unbiased coverage of public events—all of which make it a basic source for historians. Boston's *North American Review* (1815–1940) was a favorite among scholarly readers. Its editor adorned the journal with materials on American history and biography. It also covered European literature. *Harper's Magazine* (1850–present), originally the organ of the publishers Harper and Brothers, pirated the output of popular English writers in the absence of an international copyright agreement. Gradually, however, *Harper's* began paying for fresh contributions and published original material by American authors. In New York, *Frank Leslie's Illustrated Newspaper* (1855–1922) used striking pictures to illustrate its material. *Leslie's* and a vigorous competitor of somewhat higher quality, *Harper's Illustrated Weekly* (1857–1916), appeared in time to provide a thoroughgoing pictorial record of the Civil War.

EDUCATION

A literate and well-informed citizenry, equipped with knowledge not only for obtaining a vocation but also for promoting self-government and self-culture, was one of the animating ideals of the Founding Fathers. Literacy in Jacksonian America was surprisingly widespread, given the condition of public education. By 1840, according to census data, some 78 percent of the total population and 91 percent of the white population could read and write. Ever since the colonial period, in fact, Americans had had the highest literacy rate in the Western world. Most children learned to read in church or in private “dame” schools, from formal tutors, or from their families. By 1830 no state had a school system in the modern sense, although for nearly two centuries Massachusetts had required towns to maintain schools.

EARLY PUBLIC SCHOOLS In the 1830s the demand for public schools peaked. Workers wanted free schools to give their children an equal chance to pursue the American dream. In 1830 the Workingmen's party of Philadelphia called for “a system of education that shall embrace equally all the children of the state, of every rank and condition.” Education,

it was argued, would improve manners and at the same time lessen crime and poverty.

Horace Mann of Massachusetts led the early drive for statewide school systems. Trained as a lawyer, he sponsored the creation of a state board of education, then served as its secretary. Mann went on to sponsor many reforms in Massachusetts, including the first state-supported “normal school” for the training of teachers, a state association of teachers, and a minimum school year of six months. He repeatedly promoted the public-school system as the way to achieve social stability and equal opportunity.

In the South, North Carolina led the way in state-supported education. By 1860 North Carolina had enrolled more than two thirds of its white school-age population for an average term of four months, kept so low because of the rural state’s need for children to do farmwork. But the educational pattern in the South continued to reflect the aristocratic pretensions of the region: the South had a higher percentage of college students than any other region but a lower percentage of public-school students. And the South had some 500,000 white illiterates, more than half the total number in the young nation.

Greek Class at the Western Reserve Eclectic Institute at Hiram, Ohio (1853)

At front right are the young James A. Garfield and his future wife, Lucretia Randolph.

For all the effort to establish state-supported schools, conditions for public education were seldom ideal. Funds were insufficient for buildings, books, and equipment; teachers were poorly paid and often poorly prepared. Most students going beyond the elementary grades went to private academies, often subsidized by church and public funds. Such schools, begun in colonial days, multiplied until in 1850 there were more than 6,000 of them. In 1821 the Boston English High School opened as the first free public secondary school, set up mainly for students not going on to college. By a law of 1827, Massachusetts required a high school in every town of 500; in towns of 4,000 or more, the school had to offer Latin, Greek, rhetoric, and other college-preparatory courses. Public high schools became well established only after the Civil War. In 1860 there were barely 300 in the whole country.

HIGHER EDUCATION The post-Revolutionary proliferation of colleges continued after 1800 with the spread of small church-supported schools and state universities. Nine colleges had been founded in the colonial period, all of which survived; but not many of the fifty that sprang up between 1776 and 1800 lasted. Of the seventy-eight colleges and universities in 1840, fully thirty-five had been founded after 1830, almost all affiliated with a religious denomination. A post-Revolutionary movement for state-supported universities flourished in those southern states that had had no colonial university. Federal policy abetted the spread of universities into the West. When Congress granted statehood to Ohio in 1803, it set aside two townships for the support of a state university and kept up that policy in other new states.

The coexistence of state and religious colleges led to conflicts over funding and curriculum, however. Beset by the need for funds, as colleges usually were, denominational schools often competed with tax-supported schools. Regarding curricula, many of the denominational colleges emphasized theology at the expense of science and the humanities. On the other hand, America's development required broader access to education and programs geared to vocations. The University of Virginia, "Mr. Jefferson's University," founded in 1819, introduced a curriculum modeled on Jefferson's view that education ought to combine pure knowledge with "all the branches of science useful *to us*, and *at this day*." The model influenced the other new state universities of the South and those of the West.

Technical education grew slowly. The U.S. Military Academy at West Point, founded in 1802, and the U.S. Naval Academy at Annapolis, opened in 1845, trained a limited number of engineers. More young men learned technical skills through practical experience with railroad and canal companies and by apprenticeship to experienced technologists. The president of Brown

University remarked that there were no colleges to provide “the agriculturalist, the manufacturer, the mechanic, and the merchant with any kind of professional preparation.”

Elementary education for girls met with general acceptance, but training beyond that level did not. Most people viewed higher education as unsuited to a woman’s destiny in life. Some did argue that education would produce better wives and mothers, but few were ready to demand equality on principle. Progress began with the academies, some of which taught boys and girls alike. Good “female seminaries,” like those founded by Emma Willard at Troy, New York (1821), and by Mary Lyon at South Hadley, Massachusetts (1837), grew into colleges. The curricula in female seminaries usually differed from the courses in men’s schools, giving more attention to the social amenities and such “embellishments” as music and art. Vassar, opened at Poughkeepsie, New York, in 1861, is usually credited with being the first women’s college to give priority to academic standards. In general the West gave the greatest impetus to coeducation, with state universities in the lead. But once admitted, female students remained in a subordinate status. At

The George Barrell Emerson School, Boston (ca. 1850)

Although higher education for women initially met with some resistance, seminaries like this one, started in the 1820s and 1830s, taught women mathematics, physics, and history, as well as music, art, and the social graces.

Oberlin College in Ohio, for instance, they were expected to clean male students' rooms and were not allowed to speak in class or recite at graduation exercises. Coeducation did not mean equality.

ANTEBELLUM REFORM

The United States in the antebellum period was awash in reform movements. The urge to eradicate evil had its roots in the widespread sense of spiritual zeal and moral mission, which in turn drew upon rising faith in human perfectibility. Reformers tackled such issues as observance of the Sabbath, dueling, crime and punishment, the hours and conditions of work, poverty, vice, care of the disabled, pacifism, foreign missions, temperance, women's rights, and the abolition of slavery. Some crusaders challenged a host of evils; others focused on pet causes. One Massachusetts reformer, for example, insisted that "a vegetable diet lies at the basis of all reforms."

TEMPERANCE The temperance crusade was perhaps the most widespread of all. The census of 1810 reported some 14,000 distilleries producing 25 million gallons of alcoholic spirits each year. William Cobbett, an English reformer who traveled in the United States, noted in 1819 that one could "go into hardly any man's house without being asked to drink wine or spirits, even *in the morning*."

The temperance movement rested on a number of arguments. Foremost was the religious concern that "soldiers of the cross" should lead blameless lives. The bad effects of distilled beverages on body and mind were noted by the respected physician Benjamin Rush as early as 1784. The dynamic new economy, with factories and railroads moving on strict schedules, made tipping by the labor force a far more dangerous problem than it had been in a simpler time. Humanitarians also emphasized the relations between drinking and poverty. Much of the movement's propaganda focused on the sufferings of innocent mothers and children. "Drink," said a pamphlet from the Sons of Temperance, "is the prolific source (directly or indirectly) of nearly all the ills that afflict the human family."

In 1826 a group of ministers in Boston organized the American Society for the Promotion of Temperance. The society worked through lecturers, press campaigns, essay contests, and the formation of local and state societies. A favorite device was to ask each person who took the pledge to put by his or her signature a *T* for "total abstinence." With that a new word entered the language: *teetotaler*.

The Temperance Crusade

A temperance banner, ca. 1850, depicts a young man being tempted by a woman who is offering him a glass of wine.

In 1833 the society called a national convention in Philadelphia, where the American Temperance Union was formed. The convention revealed internal tensions, however: was the goal moderation or total abstinence, and if the latter, abstinence merely from liquor or also from wine, cider, and beer? Should activists work by persuasion or by legislation? Like nearly every reform movement of the day, temperance had a wing of absolutists. They would brook no compromise with Demon Rum and carried the day with a resolution that liquor traffic was morally wrong and ought to be prohibited by law. The temperance union, at its spring convention in 1836, called for abstinence from all alcoholic beverages—a costly

victory that caused moderates to abstain from the temperance movement instead.

The demand for the prohibition of alcoholic beverages led in the 1830s and thereafter to experiments with more stringent regulations and local option laws. In 1838 Massachusetts forbade the sale of spirits in lots of less than fifteen gallons, thereby cutting off sales in taverns and to the poor—who could not handle it as well as their “betters,” or so their betters thought. By 1855 thirteen states had such laws. Rum-soaked New England had gone legally dry, along with New York and parts of the Midwest. But most of the laws were poorly drafted and vulnerable to court challenge. Within a few years they survived only in northern New England. Still, between 1830 and 1860 the temperance agitation drastically reduced per capita consumption of alcohol.

PRISONS AND ASYLUMS The Romantic era’s liberal belief that people were innately good and capable of improvement brought about major changes in the treatment of prisoners, the disabled, and dependent children. Public institutions arose that were dedicated to the treatment and cure of social ills.

Earlier these had been “places of last resort,” historian David Rothman has written. Now they “became places of first resort, the preferred solution to the problems of poverty, crime, delinquency, and insanity.” Removed from society, the theory went, the needy and the deviant could be made whole again. Unhappily, however, the asylums had a way of turning into breeding grounds for brutality and neglect.

In the colonial period, prisons were usually places for brief confinement before punishment, which was either death or some kind of pain or humiliation: whipping, mutilation, confinement in stocks, branding, and the like. A new attitude began to emerge after the Revolution, as reformers argued against the harshness of the penal code and asserted that the certainty of punishment was more important than its severity. Society, moreover, would benefit more from the prevention than the punishment of crime.

Gradually the idea of the penitentiary developed. It would be a place where the guilty experienced penitence and underwent rehabilitation, not just punishment. An early model of the new system, widely copied, was the Auburn Penitentiary, which opened in New York in 1816. The prisoners at Auburn had separate cells and gathered for meals and group labor. Discipline was severe. The men were marched out in lockstep and never put face-to-face or allowed to talk. But prisoners were at least reasonably secure from abuse by other prisoners. The system, its advocates argued, had a beneficial effect on the prisoners and saved money since the workshops supplied prison needs and produced goods for sale at a profit. By 1840 there were twelve prisons of the Auburn type scattered across the nation.

It was still more common, and the persistent curse of prisons, however, for inmates to be thrown together willy-nilly. In an earlier day of corporal punishment, jails housed mainly debtors. But as practices changed, debtors found themselves housed with convicts. The absurdity of the system was so obvious that the tardiness of reform seems strange. New York in 1817 made a debt of \$25 the minimum for which one could be imprisoned, but no state eliminated the practice altogether until Kentucky acted in 1821. Other states gradually fell in line, but it was still more than three decades before debtors’ prisons became a thing of the past.

The reform impulse also found outlet in the care of the insane. The Pennsylvania Hospital (1751), one of the first in the country, had a provision in its charter that it should care for “lunaticks,” but before 1800 few hospitals provided care for the mentally ill. The insane were usually confined at home with hired keepers or in jails and almshouses. In the years after 1815, however, asylums that separated the disturbed from criminals began to appear.

The most important figure in arousing the public conscience about the plight of the mentally ill was Dorothea Lynde Dix. A pious Boston schoolteacher, she

was called upon to instruct a Sunday-school class at the East Cambridge House of Correction in 1841. There she found a roomful of insane persons completely neglected and left without heat on a cold March day. Dix was so disturbed by the scene that she commenced a two-year investigation of jails and almshouses in Massachusetts. In a report to the state legislature in 1843, she revealed that insane persons were confined “in cages, closets, cellars, stalls, pens! Chained, naked, beaten with rods, and lashed into obedience!” Keepers of the institutions dismissed her charges as “slandrous lies,” but she won the support of leading reformers. From Massachusetts she carried her campaign throughout the country and abroad. By 1860 she had persuaded twenty states to heed her advice, thereby helping to transform social attitudes toward mental illness.

WOMEN’S RIGHTS Whereas Dorothea Dix stood out as an example of the opportunity that reform gave middle-class women to enter public life, Catharine Beecher, a leader in the education movement and founder of

women’s schools in Connecticut and Ohio, published a guide prescribing the domestic sphere for women. *A Treatise on Domestic Economy* (1841) became the leading handbook of what historians have labeled the cult of domesticity. While Beecher upheld high standards in women’s education, she also accepted the prevailing view that the “woman’s sphere” was the home and argued that young women should be trained in the domestic arts.

The social custom of assigning the sexes different roles was not new, of course. In earlier agrarian societies gender-based functions were closely tied to the household and often overlapped. As the more complex economy of the nineteenth century matured, economic production came to be increasingly separated from the

The American Woman's Home (1869)

An illustrated page from Catharine Beecher’s book.

home, and the home in turn became a refuge from the outside world, with separate and distinctive functions for men and women. Some have argued that the home became a trap for women, a prison that hindered fulfillment. But others have noted that it often gave women a sphere of independence in which they might exercise a degree of initiative and leadership. The so-called cult of domesticity idealized a woman's moral role in civilizing husband and family.

The official status of women during this period remained much as it had been in the colonial era. Women were barred from the ministry and most other professions. Higher education was hardly an option. Women could not serve on juries, nor could they vote. A wife had no control of her property or even of her children. A wife could not make a will, sign a contract, or bring suit in court without her husband's permission. Her legal status was like that of a minor, a slave, or a free black.

Gradually, however, women began to protest their status, and men began to listen. The organized movement for women's rights had its origins in 1840, when the anti-slavery movement split over the question of women's right to participate. Women decided then that they needed to organize on behalf of their own emancipation, too.

In 1848 two prominent moral reformers and advocates of women's rights, Lucretia Mott, a Philadelphia Quaker, and Elizabeth Cady Stanton, a graduate of Troy Female Seminary who refused to be merely "a household drudge," called a convention to discuss "the social, civil, and religious condition and rights of women." The hastily organized Seneca Falls Convention, the first of its kind, issued on July 19, 1848, a clever paraphrase of Jefferson's Declaration of Independence. Called the Declaration of Sentiments, it proclaimed the self-evident truth that "all men and women are created equal," and the attendant resolutions said that all laws that placed women "in a position inferior to that of men, are contrary to the great precept of nature, and therefore of no

Elizabeth Cady Stanton and Susan B. Anthony

Stanton (left) "forged the thunderbolts and Miss Anthony hurled them."

force or authority.” Such language was too strong for most of the 1,000 delegates, and only about one third of them signed it. Yet the Seneca Falls gathering represented an important first step in the evolving campaign for women’s rights.

From 1850 until the Civil War, the women’s rights leaders held annual conventions and carried on a program of organizing, lecturing, and petitioning. The movement struggled in the face of meager funds and anti-feminist women and men. Its success resulted from the work of a few undaunted women who refused to be cowed by the odds against them. Susan B. Anthony, already active in temperance and anti-slavery groups, joined the crusade in the 1850s. Unlike Stanton and Mott she was unmarried and therefore able to devote most of her attention to the women’s crusade. As one observer put it, Stanton “forged the thunderbolts and Miss Anthony hurled them.” Both were young when the movement started, and both lived into the twentieth century, focusing after the Civil War on demands for women’s suffrage. Many of the feminists, like Elizabeth Stanton and Lucretia Mott, had supportive husbands, and the movement won prominent male champions, such as Ralph Waldo Emerson, Walt Whitman, William Ellery Channing, and William Lloyd Garrison.

The fruits of the women’s rights movement ripened slowly. Women did not gain the vote but did make some legal gains. In 1839 Mississippi became the first state to grant married women control over their property; by the 1860s eleven more states had such laws. Still, the only jobs open to educated women in any number were nursing and teaching, both of which extended the domestic roles of health care and nurture to the outside world. Both brought relatively lower status and pay than “man’s work” despite the skills, training, and responsibility involved.

UTOPIAN COMMUNITIES Amid the pervasive climate of reform during the Jacksonian era, the quest for utopia flourished. Plans for ideal communities had long been an American passion, at least since the Puritans set out to build a wilderness Zion. More than 100 utopian communities sprang up between 1800 and 1900. Those founded by the Shakers, officially the United Society of Believers in Christ’s Second Appearing, proved to be long lasting. Ann Lee (Mother Ann Lee) arrived in New York from England with eight followers in 1774. Believing religious fervor to be a sign of inspiration from the Holy Ghost, Mother Ann and her followers had strange fits in which they saw visions and prophesied. These manifestations later evolved into a ritual dance—hence the name Shakers. Shaker doctrine held God to be a dual personality: in Christ the masculine side was manifested; in

The Shakers

Officially the United Society of Believers in Christ's Second Appearing, the Shakers participate in a ritual dance.

Mother Ann, the feminine element. Mother Ann preached celibacy to prepare Shakers for the perfection that was promised them in Heaven.

Mother Ann died in 1784, but the group found new leaders. From the first community, at New Lebanon, New York, the movement spread into New England, Ohio, and Kentucky. By 1830 about twenty groups were flourishing. In these Shaker communities all property was held in common. Governance of the colonies was concentrated in the hands of select groups chosen by the ministry, or "Head of Influence" at Mount Lebanon. To outsiders this might seem almost despotic, but the Shakers emphasized equality of labor and reward, and members were free to leave at will. The Shakers' farms were among the nation's leading sources of garden seed and medicinal herbs, and many of their manufactures, including clothing, household items, and especially furniture, were prized for their simple beauty. By the mid-twentieth century, however, few members remained alive; Shakers had reached the peak of activity between 1830 and 1860.

John Humphrey Noyes, founder of the Oneida Community, had a quite different model of the ideal community. The son of a Vermont congressman,

educated at Dartmouth and Yale Divinity School, Noyes was converted at one of Charles G. Finney's revivals and entered the ministry. He was forced out, however, when he declared that with true conversion came perfection and a complete release from sin. In 1836 he gathered a group of "Perfectionists" around his home in Putney, Vermont. Ten years later Noyes announced a new doctrine of "complex marriage," which meant that every man in the community was married to every woman and vice versa. "In a holy community," he claimed, "there is no more reason why sexual intercourse should be restrained by law, than why eating and drinking should be." Authorities thought otherwise, and Noyes was arrested for practicing his "free love" theology. He fled to New York State and in 1848 established the Oneida Community, which numbered more than 200 by 1851.

The communal group eked out a living with farming and logging until the mid-1850s, when the inventor of a new steel animal trap joined the community. Oneida traps were soon known as the best in the country. The community then branched out into sewing silk, canning fruit, and making silver spoons. The spoons were so popular that, with the addition of knives and forks, tableware became the Oneida specialty. In 1879, however, the community faced a crisis when Noyes fled to Canada to avoid prosecution for adultery. The members then abandoned universal marriage and in 1881 decided to convert the community to a joint-stock company, the Oneida Community, Ltd., which today remains a successful flatware company.

In contrast to these religious-based communities, Robert Owen's New Harmony was based upon a secular principle. A British capitalist who worried about the degrading social effects of the factory system, Owen built a model factory town, supported labor legislation, and set forth a scheme for a model community in his pamphlet *A New View of Society* (1813). Later he bought the town of Harmonie, Indiana, promptly christening it New Harmony. In 1825 a varied group of about 900 colonists gathered in New Harmony for a period of transition from Owen's ownership to the new system of cooperation. After a trial period of only nine months, Owen turned over management of the colony to a town meeting of all residents and a council of town officers. The high proportion of learned participants generated a certain intellectual electricity about the place. For a time it looked like a brilliant success, but New Harmony soon fell into discord. Every idealist wanted his or her own patented plan put into practice. In 1827 Owen returned from a visit to England to find New Harmony insolvent. The following year he dissolved the project and sold or leased the land on good terms, in many cases to the settlers. All that remained he turned over to his sons, who stayed and became U.S. citizens.

Brook Farm in Massachusetts was surely the most celebrated of all the utopian communities because it had the support of Ralph Waldo Emerson and other well-known literary figures of New England. Nathaniel Hawthorne, a member, later memorialized its failure in his novel *The Blithedale Romance* (1852). George Ripley, a Unitarian minister and transcendentalist, conceived of Brook Farm as a kind of early-day think tank, combining high thinking and plain living. The place survived, however, mainly because of an excellent community school that drew tuition-paying students from outside. In 1846 Brook Farm's main building burned down, and the community spirit expired in the embers.

Utopian communities, with few exceptions, quickly ran out of steam. The experiments, performed in relative isolation, had little effect on the outside world, where reformers wrestled with the sins of the multitudes. Among all the targets of the reformers' wrath, one great evil would finally take precedence over the others: human bondage. The paradox of American slavery coupled with American freedom, of "the world's fairest hope linked with man's foulest crime," in the novelist Herman Melville's words, would inspire the climactic crusade of the age, abolitionism, one that would ultimately move to the center of the political stage and sweep the nation into an epic civil war.

MAKING CONNECTIONS

- The anti-slavery campaign, especially its abolitionist aspect, was related to the reform movements discussed in this chapter. It is discussed again in Chapter 15, following the section on slavery.
- Chapter 17 will show how the Civil War had a significant impact on the status of women in American society, a continuation of a theme discussed here.

MANIFEST DESTINY

FOCUS QUESTIONS

- What were the main issues in national politics in the 1840s?
- Why did settlers migrate west, and what conditions did they face?
- What were the causes and consequences of the Mexican War?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

During the 1840s and after, Americans moved west in droves, seeking a better chance and more space. “If hell lay to the west,” one pioneer declared, “Americans would cross heaven to get there.” Millions of Americans crossed the Mississippi River and experienced unrelenting hardships in order to fulfill their “providential destiny” to subdue the entire continent. By 1860 some 4.3 million people had settled in the trans-Mississippi West.

Most of these settlers and adventurers sought to exploit the many economic opportunities afforded by the new land. Trappers and farmers, miners and merchants, hunters, ranchers, teachers, domestics, and prostitutes, among others, headed west seeking their fortune. Others sought religious freedom or new converts to Christianity. Whatever the reason, the pioneers formed an unceasing migratory stream flowing across the Great Plains and the Rocky Mountains. The Indian and Mexican inhabitants of the region soon found themselves swept aside by successive waves of American settlement.

THE TYLER YEARS

When William Henry Harrison took office in 1841, elected, like Andrew Jackson, mainly on the strength of his military record and his lack of a public stand on key issues, the Whig leaders expected him to be a figurehead, a tool in the hands of the era's most prominent—and most cunning—statesmen, Daniel Webster and Henry Clay. Webster became secretary of state. Clay, who preferred to stay in the Senate, tried to fill the cabinet with his friends. Within a few days of the inauguration, signs of strain appeared between Harrison and Clay, whose disappointment at missing the nomination had made him peevish. At one point an exasperated Harrison exploded: "Mr. Clay, you forget that I am the President." But the quarrel never had a chance to develop, for Harrison served the shortest term of any president. At the inauguration, held on a chilly, rainy day, he caught cold after delivering a two-hour speech. On April 4, 1841, exactly one month after the inauguration, he died of pneumonia at age sixty-eight.

Thus John Tyler of Virginia, the first vice president to succeed on the death of a president, served practically all of Harrison's term. And if there was ambiguity about where Harrison stood, there was none about Tyler's convictions. At age fifty-one, the Virginian was the youngest president to date, but he already had a long career behind him as legislator, governor, congressman, and senator, and his opinions on all the important issues had been forcefully stated and were widely known. Although officially a Whig, at an earlier time he might have been called an Old Republican: he was stubbornly opposed to everything associated with Henry Clay's program of economic nationalism—protective tariffs, a national bank, and internal improvements at national expense—and in favor of states' rights and strict construction of the Constitution.

When asked about the concept of nationalism, Tyler replied that he had "no such word in my political vocabulary." Originally a Democrat, he had broken with the party over Andrew Jackson's denial of South Carolina's attempt to nullify federal laws and Jackson's heavyhanded use of executive authority. In 1840 Tyler had been chosen to "balance" the Whig ticket, with no expectation that he would wield power. Acid-tongued John Quincy Adams said that Tyler was "a political sectarian of the slave-driving, Virginian, Jeffersonian school, principled against all improvement, with all the interests and passions and vices of slavery rooted in his moral and political constitution."

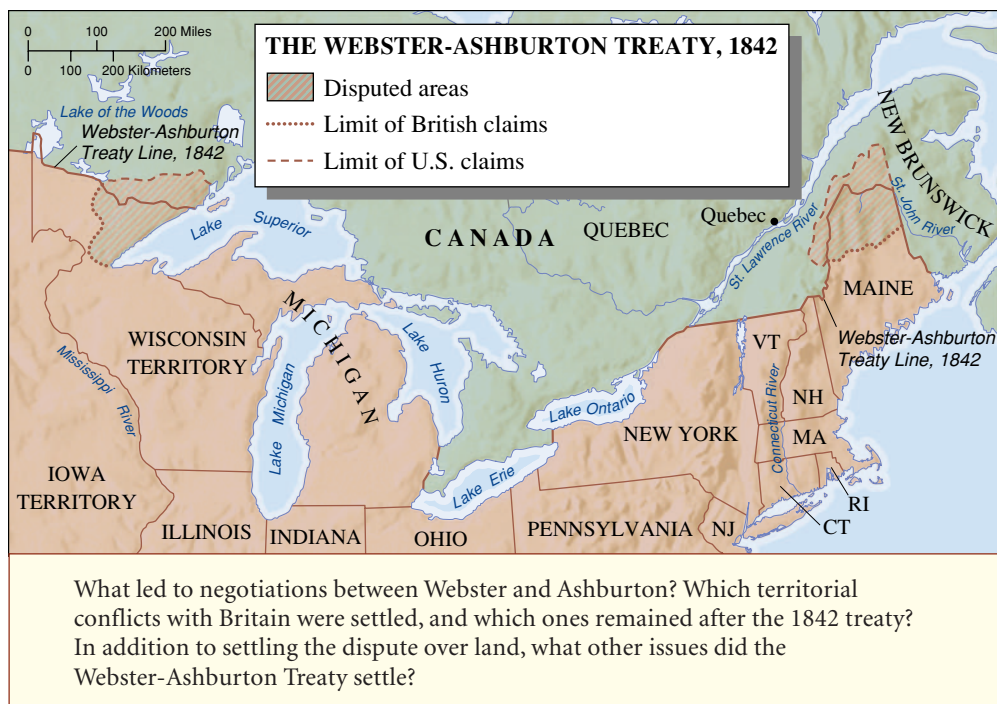

DOMESTIC AFFAIRS Given more finesse on Henry Clay's part, he might have bridged the divisions among the Whigs over financial issues.

But for once, driven by an unrelenting quest to be president, the Great Compromiser lost his instinct for compromise. When Congress met in a special session in 1841, Clay introduced a series of resolutions designed to supply the platform that the party had evaded in the previous election. The chief points were repeal of the Independent Treasury Act, establishment of a third Bank of the United States, distribution to the states of money from federal land sales, and higher tariffs. The “haughty and imperious” Clay then set out to push his program through Congress. “Tyler dares not resist. I will drive him before me,” he said.

Tyler, it turned out, was not easily driven. Although he agreed to allow the repeal of the Independent Treasury Act and signed a higher tariff bill in 1842, Tyler vetoed Clay’s bill for a new national bank. Clay was furious. The domineering leader of the Senate developed a ferocious hatred for Tyler, calling him a traitor who had abandoned his party. Tyler’s veto also prompted his entire cabinet to resign, with the exception of Secretary of State Daniel Webster. Tyler replaced the defectors with anti-Jackson Democrats who, like him, had become Whigs.irate congressional Whigs expelled Tyler from the party, and Democrats viewed him as an untrustworthy renegade. By 1842 Clay’s legislative program was in ruins. Yet by opposing Clay and the Whigs, Tyler had become a president without a party, shunned by both Whigs and Democrats.

FOREIGN AFFAIRS In foreign relations, tensions with Great Britain captured Tyler’s attention. In 1841 British ships patrolling off the coast of Africa threatened to board and search vessels flying the American flag to see if they carried slaves. The U.S. government refused to accept such enforcement. Relations were further strained late in 1841 when slaves on the *Creole*, bound from Hampton Roads, Virginia, to New Orleans, mutinied and sailed into Nassau, in the Bahamas, where the British set them free. Secretary of State Daniel Webster demanded that the slaves be returned as American property, but the British refused.

At this point a new British ministry decided to accept Webster’s overtures for negotiations and sent Lord Ashburton to Washington, D.C. The disputed Maine boundary was settled in what Webster later called “the battle of the maps.” Webster settled for about seven twelfths of the contested land along the Maine boundary, and except for Oregon, which remained under joint occupation, he settled the other border disputes with Great Britain by accepting the existing line between the Connecticut and St. Lawrence rivers and compromising on the line between Lake Superior and Lake of the Woods. The Webster-Ashburton Treaty (1842) also provided for joint naval patrols off Africa to suppress the slave trade.

THE WESTERN FRONTIER

In the early 1840s most Americans were no more stirred by the quarrels of John Tyler and Henry Clay over such issues as the banking system and the tariff policy than students of history would be at a later date. What aroused public interest was the mounting evidence that the “empire of freedom” was hurdling the barriers of the Great American Desert and the Rocky Mountains, reaching out toward the Pacific coast. In 1845 a New York newspaper editor and Democratic-party propagandist named John L. O’Sullivan gave a name to this aggressive spirit of expansion. “Our manifest destiny,” he wrote, “is to overspread the continent allotted by Providence for the free development of our yearly multiplying millions.” God, in other words, felt that the United States should extend itself from the Atlantic to the Pacific—and beyond. At its best this much-trumpeted notion of Manifest Destiny offered a moral justification for expansion, a prescription for what an enlarged United States could and should be. At its worst it was a cluster of flimsy rationalizations for naked greed and imperial ambition. Whatever the case,

settlers began streaming into the Far West in the aftermath of the panic of 1837 and the prolonged economic depression.

WESTERN INDIANS The sprawling territory across the Mississippi River was a new environment as well as a new culture. The Great Plains and the Far West were already occupied by Indians and Mexicans, who had lived in the region for centuries and had established their own distinctive customs and ways of life. Historians estimate that over 325,000 Indians inhabited the Southwest, the Great Plains, California, and the Pacific Northwest in 1840, when the great migration of white settlers began to pour into the region. The Native Americans often competed with and warred against each other. They were divided into more than 200 tribes, each with its own language, religion, economic base, kinship practices, and system of governance. Some were primarily farmers; others were nomadic hunters who preyed upon game animals as well as other Indians.

Some twenty-three tribes resided on the Great Plains, a vast grassland stretching from the Mississippi River west to the Rocky Mountains and from Canada south to Mexico. This region had been virtually devoid of a human presence until the Spaniards introduced the horse and the gun in the late sixteenth century. Horses dramatically increased the mobility of the Plains Indians, enabling them to leave their villages and follow the

Buffalo Hunt, Chasing Back (1860s)

This painting by George Catlin shows a hunter outrunning a buffalo.

migrating buffalo herds. They used buffalo meat for food and transformed the skins into clothing, bedding, and tepee coverings. The bones and horns served as tools and utensils. Buffalo manure could be dried and burned for heat.

Plains Indians such as the Arapaho, Blackfoot, Cheyenne, Kiowa, and Sioux were horse-borne nomads; they migrated across the grasslands, carrying their tepees with them. Quite different Indian tribes lived to the south and west of them. In the arid region including what is today Arizona, New Mexico, and southern Utah were the peaceful Pueblo tribes: Acoma, Hopi, Laguna, Taos, Zia, Zuni. They were sophisticated farmers who lived in adobe villages along rivers that irrigated their crops of corn, beans, and squash. Their rivals were the Apache and the Navajo, warlike hunters who roamed the countryside in small bands and preyed upon the Pueblos. They, in turn, were periodically harassed by their powerful enemies, the Comanches.

To the north, in the Great Basin between the Rocky Mountains and the Sierra Nevadas, Paiutes and Gosiutes struggled to survive in the harsh, arid region of what is today Nevada, Utah, and eastern California. They traveled in family groups and subsisted on berries, pine nuts, insects, and rodents. West of the mountains, along the California coast, Indians lived in small villages. They gathered wild plants and acorns and were adept at fishing in the rivers and bays.

The Indian tribes living in the Northwest—the Nisqually, Spokane, Yakama, Chinook, Klamath, and Nez Perce (Pierced Nose)—enjoyed the most abundant natural resources and the most temperate climate. The ocean and rivers provided bountiful supplies of seafood: whales, seals, salmon, crabs. The lush inland forests harbored game, berries, and nuts. And the majestic stands of fir, redwood, and cedar offered wood for cooking and shelter.

All these Indian tribes eventually felt the unrelenting pressure of white expansion and conquest. Because Indian life on the plains depended upon the buffalo, the influx of white settlers posed a direct threat to the Indians' cultural survival. When federal officials could not coerce, cajole, or confuse Indian leaders into selling the title to their tribal lands, fighting ensued. And after the discovery of gold in California in 1848, the tidal wave of white expansion flowed all the way to the west coast.

In 1851 U.S. officials invited the Indian tribes from the northern plains to a conference in the grassy valley along the North Platte River, near Fort Laramie in what is now southeastern Wyoming. Almost 10,000 Indians—men, women, and children—attended the treaty council. What made the huge gathering even more remarkable is that so many of the tribes were at war with one another. After nearly three weeks of heated discussions during

which the chiefs were presented with a mountain of gifts, federal negotiators and tribal leaders agreed to what became known as the Fort Laramie Treaty. The government promised to provide an annual cash payment to the Indians as compensation for the damage caused by wagon trains traversing their hunting grounds. In exchange the Indians agreed to stop harassing white caravans, to allow federal forts to be built, and to confine themselves to a specified area “of limited extent and well-defined boundaries.”

Several tribes, however, refused to accept the provisions. The most powerful, the Lakota Sioux, reluctantly signed the agreement but thereafter failed to abide by its restrictions. “You have split my lands and I don’t like it,” declared Black Hawk, a Sioux chief at Fort Laramie. “These lands once belonged to the Kiowas and the Crows, but we whipped these nations out of them, and in this we did what the white men do when they want the lands of the Indians.” Despite the dissension the agreement was significant. As the first comprehensive treaty with the Plains Indians, it foreshadowed the “reservation” concept of Indian management.

THE SPANISH WEST AND MEXICAN INDEPENDENCE As settlers moved westward, they also encountered Spanish-speaking peoples. Many whites were as contemptuous of Latinos as they were of Indians. Senator Lewis Cass, the expansionist from Michigan, expressed the sentiment of many Americans during a debate over the annexation of New Mexico. “We do not want the people of Mexico,” he declared, “either as citizens or as subjects. All we want is a portion of territory.” The vast majority of the Spanish-speaking people in what is today the American Southwest resided in New Mexico. Most of them were of mixed Indian and Spanish blood and were ranch hands or small farmers and herders.

The Spanish efforts at colonization had been less successful in Arizona and Texas than in New Mexico and Florida. The Yuma and Apache Indians in Arizona and the Comanches and Apaches in Texas thwarted their efforts to establish Catholic missions. After years of fruitless missionary efforts among the Pueblo Indians, one Spaniard complained that “most [of them] have never forsaken idolatry, and they appear to be Christians more by force than to be Indians who are reduced to the Holy Faith.” By 1790 the Latino population in Texas numbered only 2,510, while in New Mexico it exceeded 20,000.

In 1807 French forces had occupied Spain and imprisoned the king, creating consternation and confusion throughout Spain’s colonial possessions, including Mexico. Miguel Hidalgo y Costilla, a creole priest (born in the New World but of European ancestry), took advantage of the fluid situation

¡Viva El Cura Hidalgo!

This patriotic broadside celebrating Mexican independence shows Father Miguel Hidalgo in an oval medallion.

opened a lucrative commerce in beaver pelts. Wagon trains carrying American settlers began to make their way from St. Louis along the Santa Fe Trail. American entrepreneurs flooded into the western Mexican province of California and soon became a powerful force for change; by 1848 Americans made up half of the non-Indian population. In Texas, American adventurers decided to promote their own independence from a newly independent—and chaotic—Mexican government. Suddenly, it seemed, the Southwest was a ripe new frontier for American exploitation and settlement.

THE ROCKY MOUNTAINS AND OREGON COUNTRY During the early nineteenth century the far Northwest consisted of the Nebraska, Washington, and Oregon territories. Fur traders especially were drawn to the Missouri River, with its many tributaries. By the mid-1820s the “rendezvous system” had developed, in which trappers, traders, and Indians from all over the Rocky Mountain country gathered annually at some designated place, usually in or near the Grand Tetons, to trade pelts and hides. But by 1840 the great days of the western fur trade were over. The streams no longer teemed with beavers.

to organize a revolt of Indians and mestizos against Spanish rule in Mexico. But the poorly organized uprising failed miserably. In 1811 Spanish troops captured Hidalgo and executed him. Other Mexicans, however, continued to yearn for independence. In 1820 Mexican creoles again tried to liberate themselves from Spanish authority. By then the Spanish forces in Mexico had lost much of their cohesion and dedication. Facing a growing revolt, the last Spanish officials withdrew in 1821, and Mexico became an independent nation.

Mexican independence from Spain unleashed tremors throughout the Southwest. American fur traders streamed into New Mexico and Arizona and devel-

Fur Traders Descending the Missouri (1845)

By George Caleb Bingham.

During the 1820s and 1830s the fur trade had inspired a uniquely reckless breed of “mountain men” who deserted civilization for the pursuit of the beaver and reverted to a primitive existence in the wilderness. The rugged trappers lived sometimes in splendid isolation, sometimes in the shelter of primitive forts, and sometimes among Indians. They were the first whites to find their way around the Rocky Mountains, and they pioneered the trails that settlers by the 1840s were beginning to travel as they flooded the Oregon Country and trickled across the border into California.

Beyond the mountains the Oregon Country stretched from the 42nd parallel north to 54°40', a region in which Spain and Russia had given up their rights, leaving Great Britain and the United States as the only claimants. By the Convention of 1818, the two countries had agreed to “joint occupation” of the region. Until the 1830s, however, joint occupation had been a legal technicality, because the only American presence was the occasional mountain man who wandered across the Sierra Nevadas or the infrequent trading vessel from Boston or New York.

Word of Oregon’s fertile soil, plentiful rainfall, and magnificent forests gradually spread eastward. By the late 1830s, during the economic hard times after the panic of 1837, a trickle of emigrants was flowing along the Oregon Trail. Soon, however, “Oregon fever” swept the nation. In 1841 and 1842 the first sizable wagon trains made the trip, and in 1843 the movement became a mass migration. “The Oregon fever has broke out,” wrote a settler in 1843, “and is now raging like any other contagion.” By 1845 there were about 5,000 settlers in Oregon’s Willamette Valley.

THE SETTLEMENT OF CALIFORNIA California was also an alluring attraction for new settlers and entrepreneurs. It first felt the influence of European culture in 1769, when Spain grew concerned about Russian seal traders moving south along the Pacific coast from their base in Alaska. To thwart Russian intentions, Spain sent a naval expedition to settle the region. The Spanish discovered San Francisco Bay and constructed presidios (military garrisons) at San Diego and Monterey. Even more important, Franciscan friars, led by Junípero Serra, established a Catholic mission at San Diego.

Over the next fifty years, Franciscans built twenty more missions, spaced a day's journey apart along the coast from San Diego northward to San Francisco. The mission-centered culture created by the Hispanic settlers who migrated to California from Mexico was quite different from the patterns of conquest and settlement in Texas and New Mexico. In those more settled regions the original missions were converted into secular parishes, and the property was divided among the Indians. In California the missions were much larger, more influential, and longer lasting.

Franciscan missionaries, aided by Spanish soldiers, gathered most of the coastal Indian population in California under their control. They viewed the Indians as ignorant and indolent heathens living in a "free and undisciplined" society. The friars were determined to convert them to Catholicism and make them useful members of the Spanish Empire. Viewing the missions as crucial outposts of their empire, the Spanish government provided military support, annual cash grants, and supplies from Mexico. The Franciscan friars enticed the local Indians into the adobe-walled, tile-roofed missions by offering them gifts or impressing them with their "magical" religious rituals. Once inside the missions, the Indians were baptized Catholics, taught the Spanish language, and stripped of their native heritage. Soldiers living in the mission enforced the will of the friars.

LABOR IN THE MISSIONS The California mission served multiple roles. It was church, fortress, home, town, farm, and imperial agent. The missions were economic as well as religious and cultural institutions: they quickly became substantial agricultural enterprises. Missions produced crops, livestock, clothing, and household goods, both for profit and to supply the neighboring presidios. Indians provided the labor. The Franciscans viewed regimented Indian labor as more than a practical necessity: they saw it as a morally enriching responsibility essential to transforming unproductive Indians into industrious Christians.

Sketch of the Order of San Francisco in the Former Mission of Santa Barbara

From Edward Vischer's collection of reminiscences of California under Spain and Mexico.

The daily routine began at dawn with the ringing of a bell, which summoned the mission community to prayer. Work began an hour later and did not end until an hour before sunset. Indians worked at the missions six days a week; they did not work on Sundays and religious holidays. Children and the elderly were expected to work as well. Most Indian men performed manual labor in the fields. Some were trained in special skills, such as masonry, carpentry, or leatherwork. Women handled domestic chores, such as cooking, sewing, cleaning, and shucking corn. During harvest season everyone was expected to help in the fields. Instead of wages the Indians received clothing, food, housing, and religious instruction.

The Franciscans used overwhelming force to maintain the captive labor system in the missions. Rebellious Indians were whipped or imprisoned. Soldiers hunted down runaways. Mission Indians died at an alarming rate. One Franciscan friar reported that "of every four Indian children born, three die in their first or second year, while those who survive do not reach the age of twenty-five." Infectious disease was the primary threat, but the grueling labor regimen took a high toll as well. The Indian population along the California coast declined from 72,000 in 1769 to 18,000 by 1821. Saving souls cost many lives.

EARLY DEVELOPMENT IN CALIFORNIA For all of its rich natural resources, California remained thinly populated by Indians and mission friars well into the nineteenth century. It was a simple, almost feudal agrarian society without schools, industry, or defenses. In 1821, when Mexico wrested its independence from Spain, Californians took comfort in the fact that

Mexico City was so far away that it would exercise little effective control over its farthest state. During the next two decades, Californians, including many recent American arrivals, staged ten revolts against the Mexican governors dispatched to lord over them.

Yet Mexican rule did produce a dramatic change in California history. In 1824 Mexico passed a colonization act that granted hundreds of huge “rancho” estates to Mexican settlers. With free labor extracted from Indians, who were treated like slaves, the *rancheros* lived a life of self-indulgent luxury and ease, roaming their lands, gambling, horse racing, bull baiting, and dancing. The freebooting *rancheros* soon cast covetous eyes on the vast estates controlled by the Franciscan missions. In 1833–1834 they persuaded the Mexican government to confiscate the California missions, exile the Franciscan friars, release the Indians from church control, and make the mission lands available to new settlement. Within a few years some 700 huge new rancho grants of 4,500 to 50,000 acres were issued along the California coast. Organized like feudal estates, these ranches resembled southern plantations—but the death rate among Indian workers was twice as high as that of enslaved blacks in the Deep South.

Few accounts of life in California took note of the brutalities inflicted upon the Indians, however. Instead, they portrayed the region as a proverbial land of milk and honey, ripe for development. Such a natural paradise could not long remain a secret. By the late 1820s American trappers had wandered in from time to time, and American ships had begun to enter the “hide and tallow” trade: the ranchos of California produced cowhide and beef tallow in large quantities, and both products enjoyed a brisk demand, cowhides mainly for shoes and tallow chiefly for candles.

By the mid-1830s shippers had begun setting up representatives in California to buy the hides and store them until a company ship arrived. One of these agents, Thomas O. Larkin at Monterey, would play a leading role in the acquisition of California by the United States. Larkin stuck pretty much to his trade, operating a retail business on the side, while others branched out and struck it rich in ranching. The most noteworthy of the traders, however, was not American but Swiss. John A. Sutter had abandoned his family in Europe in order to avoid arrest for bankruptcy. He found his way to California and persuaded the Mexican governor to give him land on which to plant a colony of Swiss émigrés.

At the juncture of the Sacramento and American rivers (later the site of Sacramento), Sutter built an enormous enclosure that guarded an entire village of settlers and shops. At New Helvetia (Americans called it Sutter’s Fort), completed in 1843, no Swiss colony materialized, but the baronial

Sutter's Fort in 1847

Renamed Fort Sacramento during the Mexican War.

estate, worked by local Indians, became the mecca for Americans bent on settling the Sacramento country. It stood at the end of what became the most traveled route through the Sierra Nevadas, the California Trail, which forked off the Oregon Trail and led through the mountains near Lake Tahoe. By the start of 1846, there were perhaps 800 Americans in California, along with some 8,000 to 12,000 Californios (settlers of Spanish descent).

MOVING WEST

Most of the western pioneers during the second quarter of the nineteenth century were American-born whites from the upper South and the Midwest. Only a few African Americans joined in the migration. Although some emigrants traveled by sea to California, most went overland. Between 1841 and 1867 some 350,000 men, women, and children made the arduous trek to California or Oregon, while hundreds of thousands of others settled along the way in Colorado, Texas, Arkansas, and other areas.

THE SANTA FE TRAIL After gaining its independence in 1821, the new government of Mexico was much more interested in trade with the United States than Spain had been. In Spanish-controlled Santa Fe, in fact, all commerce with the United States had been banned. After 1821, however, trade flourished. Hundreds of entrepreneurs made the 1,000-mile trek from St. Louis to Santa Fe, forging a route that became known as the Santa Fe Trail. These traders braved deserts, mountains, and possible Indian attacks.

Soon Mexican traders began leading caravans east to Missouri. By the 1830s there was so much commercial activity between Mexico and St. Louis that the Mexican silver peso had become the primary medium of exchange in Missouri.

Thousands of Americans risked their lives along the Santa Fe Trail to exploit the commercial opportunities afforded by trade with the Mexicans. On a good day their wagons might travel twelve to fourteen miles through rough terrain. Water was scarce, as was forage for their livestock. Indians occasionally raided the wagon trains. In 1847 almost fifty pioneers were killed, 330 wagons destroyed, and 6,500 animals stolen by hostile Indians. The traders who survived pioneered more than a new trail. They showed that heavy wagons could cross the plains and the mountains, and they developed the technique of organized caravans for common protection.

THE OVERLAND TRAIL Like those on the Santa Fe Trail, people bound for Oregon and California traveled in wagon caravans. But on the Overland Trails to the West Coast (also known as the Oregon Trail), most of the pioneers were settlers rather than traders. They traveled mostly in family groups and came from all over the United States. The wagon trains headed for Oregon followed the trail west from Independence, Missouri, along the North Platte River into what is now Wyoming, through South Pass down to Fort Bridger (abode of a celebrated mountain man, Jim Bridger), then down the Snake River to the Columbia River and along the Columbia to their goal in Oregon's fertile Willamette Valley. They usually left Missouri in late spring, completing the grueling 2,000-mile trek in six months. Traveling in ox-drawn canvas-covered wagons nicknamed prairie schooners, they jostled their way across the dusty or muddy trails and rugged mountains. By 1845 some 5,000 people were making the arduous journey annually. The discovery of gold in California in 1848 brought some 30,000 pioneers along the Oregon Trail in 1849. By 1850, the peak year of travel along the trail, the annual count had risen to 55,000.

Contrary to popular myth, Indians rarely attacked wagon trains. Less than 4 percent of the fatalities associated with the Overland Trail experience were the result of Indian attacks. More often the Indians either allowed the settlers to pass through their tribal lands unmolested or demanded payment. Many wagon trains never encountered a single Indian, and others received generous aid from Indians who served as guides, advisers, or traders. The Indians, one woman pioneer noted, "proved better than represented." To be sure, as the number of pioneers increased dramatically during the 1850s, disputes between pioneers and Indians over land and water increased, but never to the degree portrayed in Western novels and films.

What did settlers migrating west hope to find? What were the perils of the Santa Fe Trail? Describe the experience of a typical settler traveling on the Overland Trail.

Still, the journey west was extraordinarily difficult. The diary of Amelia Knight, who set out for Oregon in 1853 with her husband and their seven children, reveals the mortal threats along the trail: “Chatfield quite sick with scarlet fever. A calf took sick and died before breakfast. Lost one of our oxen; he dropped dead in the yoke. I could hardly help shedding tears. Yesterday my eighth child was born.” Cholera claimed many lives. On average there was one grave every eighty yards along the trail between the Missouri River and the Willamette Valley.

Initially the pioneers along the Overland Trail adopted the same division of labor used back East. Women cooked, washed, sewed, and monitored the children while men drove the wagons, tended the horses and cattle, and handled the heavy labor. But the unique demands of the trail soon dissolved such neat distinctions and posed new tasks. Women found themselves gathering buffalo dung for fuel, pitching in to help dislodge a wagon mired in mud, helping to construct a makeshift bridge, or participating in a variety of other “unladylike” activities.

The hard labor of the trail understandably provoked tensions within families and powerful yearnings for home. Many a tired pioneer could identify with the following comment in a girl’s journal: “Poor Ma said only this morning, ‘Oh, I wish we had never started.’ She looks so sorrowful and dejected.” Another woman wondered “what had possessed my husband, anyway, that he should have thought of bringing us away out through this God forsaken country.” Some turned back, but most continued on. And once in Oregon or California they set about establishing stable communities. Noted one settler: “Friday, October 27.—Arrived at Oregon City at the falls of the Willamette. Saturday, October 28.—Went to work.”

Gathering Buffalo Chips

Women on the Overland Trail not only cooked and washed and took care of their children but also gathered dried buffalo dung to use as fuel as their wagons crossed the treeless plains.

GREAT PLAINS ECOLOGY

The massive migrations along the Santa Fe and Overland Trails wreaked havoc on the environment of the Great Plains. Hundreds of thousands of settlers and traders brought with them millions of animals—horses, cattle, oxen, and sheep—all of which consumed huge amounts of prairie grass. The wagons and herds trampled vegetation and gouged ruts in the landscape that survive to this day. With the onset of the California gold rush in

Wagon-wheel Ruts near Guernsey, Wyoming

The wheels of thousands of wagon's traveling to Oregon cut into solid rock as oxen strained up hillsides, leaving indentations that are still visible today.

1849, Plains Indians, led by Cheyennes, seized the opportunity to supply buffalo meat and skins to the white pioneers. Tracking and killing buffalo required a great many horses, and the four-legged creatures added to the strain on the prairie grasslands and river bottoms. A major climatic change coincided with the mass migrations sparked by the discovery of gold in California. In 1849 a prolonged drought struck the region west of the Mississippi River and produced widespread suffering. Starving Indians demanded or begged for food from passing wagon trains. Tensions between Native Americans and white travelers brought additional federal cavalry units to the plains, exacerbating the shortage of forage grasses.

THE DONNER PARTY The most tragic story of the Overland Trail involved the party led by George Donner, a prosperous sixty-two-year-old farmer from Illinois, who led his family and a train of other settlers along the Oregon Trail in 1846. They made every mistake possible: they started too late in the year, overloaded their wagons, and took a foolish shortcut to California across the Wasatch Mountains in the Utah Territory. In the Wasatch they were joined by a group of thirteen other pioneers, bringing the total to eighty-seven. Finding themselves lost on their “shortcut,” they backtracked before finally finding their way across the Wasatch and into the desert leading to the Great Salt Lake. Crossing the desert exacted a terrible toll. They lost over 100 oxen and were forced to abandon several wagons and their precious supplies. Tempers flared as the tired and hungry travelers trudged on. One leader of the party killed a young teamster and was expelled, leaving his wife and children to proceed without him.

By the time the Donner party reached Truckee Pass, the last mountain barrier before the Sacramento Valley, the group had grown surly. They knew that they must cross the pass before a major snowfall hemmed them in, but they were too late. A two-week-long snowfall trapped them in two separate camps. By December eighty-one settlers, half of them children, were marooned with only enough meat to last through the end of the month. Seventeen of the strongest members decided to cross the pass on their own, only to be trapped by more snow on the western slope. Two of them died of exposure and starvation. Just before he died, Billy Graves urged his daughters to eat his body. The daughters were appalled by the prospect of cannibalism but a day later saw no other choice. The group struggled on, and when two more died, they, too, were consumed. Only seven lived to reach the Sacramento Valley.

Four search parties were dispatched to save the rest of the Donner party. Back at the main camps, at Alder Creek and Truckee Lake, the survivors had slaughtered and eaten the last of the livestock, then proceeded to boil hides and bones. When the rescue party finally reached them, they discovered a grisly scene. Thirteen people had died, and cannibalism had become commonplace; one pioneer had noted casually in his diary, “Mrs. Murphy said here yesterday that she thought she would commence on Milt and eat him.” As the rescuers led the forty-seven survivors over the pass, George Donner, so weakened that he was unable to walk, stayed behind to die. His wife chose to remain with him.

THE PATHFINDER: JOHN FRÉMONT Despite the hardships and dangers of the overland crossing, the Far West proved an irresistible attraction.

“The Pathfinder”

John Charles Frémont.

The most enthusiastic champion of American settlement of Mexican California and the Far West was John Charles Frémont, “the Pathfinder”—who mainly “found” paths that the mountain men showed him. Born in Savannah and raised in the South, he had a robust love of the outdoors and an exuberant, self-promoting personality. Frémont studied at the College of Charleston before being commissioned a second lieutenant in the U.S. Topographical Corps in 1838. In the early 1840s his new father-in-law, Missouri senator Thomas Hart Benton, arranged the explorations

that made Frémont famous. In 1842 Frémont mapped the Oregon Trail—and met Christopher “Kit” Carson, one of the most knowledgeable of the mountain men, who became his frequent associate. In 1843–1844 Frémont, typically clad in a deerskin shirt, blue army trousers, and moccasins, went on to Oregon, then swept down the eastern slopes of the Sierra Nevadas, headed southward through the central valley of California, bypassed the mountains in the south, and returned via the Great Salt Lake. His excited reports on both expeditions, published together in 1845, gained a wide circulation and helped arouse the interest of easterners.

CALIFORNIA IN TURMOIL American presidents beginning with Andrew Jackson had tried to purchase at least northern California, down to San Francisco Bay, from Mexico. Jackson reasoned that as a free state, California would balance the future admission of Texas as a slave state. But Jackson’s agent had to be recalled after a clumsy effort to bribe Mexican officials. Rumors flourished that the British and the French were scheming to grab California, though neither government actually had such intentions. Political conditions in Mexico left the remote territory in near anarchy much of the time as governors came and went in rapid succession. Amid the chaos many Californios reasoned that they would be better off if they cut ties to Mexico altogether. Some favored an independent state, perhaps under French or British protection. A larger group wanted to join the United States. By the time the Americans were ready to fire the spark of rebellion in California, there was little will in Mexico to resist.

ANNEXING TEXAS

AMERICAN SETTLEMENTS The lust for new land focused on the most accessible of all the Mexican borderlands, Texas. By the 1830s Texas was rapidly turning into a province of the United States, for Mexico initially welcomed American settlers as a means of stabilizing the border.

Foremost among the promoters of American settlement in Texas was Stephen F. Austin, a Missouri resident who gained from Mexico a huge land grant originally given to his father by Spanish authorities. Before Mexican independence from Spain was fully won, Austin had started a colony on the lower Brazos River, in central Texas, late in 1821, and by 1824 more than 2,000 hardy souls had settled on his land. In 1825, under a national colonization law, the Mexican state of Coahuila-Texas offered large tracts to *empresarios* (ranchers) who promised to sponsor immigrants from the United

States and elsewhere. Most of the newcomers were southern farmers drawn to rich new cotton lands selling for only a few cents an acre. By 1830 the coastal region of Texas had about 20,000 white settlers and 1,000 black slaves brought in to work the cotton.

The Mexican government, opposed to slavery, grew alarmed at the flood of strangers engulfing the province and in 1830 forbade further immigration. But illegal immigrants from the United States moved across the long border as easily as illegal Mexican immigrants would later cross in the opposite direction. By 1835 the American population in Texas had grown to around 30,000, about ten times the Mexican population there. Friction mounted in 1832 and 1833 as Americans organized conventions to demand a state of their own. Instead of granting the request, General Antonio López de Santa Anna, who had seized power in Mexico, dissolved the national congress late in 1834, abolished the federal system, and became dictator of a centralized state. White American Texans feared that the Mexicans intended to free “our slaves and to make slaves of us.” In the fall of 1835 Texans rebelled against Santa Anna’s “despotism.” Delegates from all the towns and settlements met in November and drafted a Declaration of Causes explaining the rebellion. It forcefully expressed their grievances against the Mexican government but stopped short of declaring independence. A furious Santa Anna ordered all Americans expelled, all Texans disarmed, and all rebels arrested. As fighting erupted, volunteers from southern states rushed to assist the 30,000 Texans in their revolution against a Mexican nation of 7 million people.

TEXAS INDEPENDENCE At San Antonio the Mexican army assaulted a small garrison of Texans and Southern allies holed up behind the adobe walls of an abandoned mission, the Alamo. Led by Colonel William B. Travis, a hot-tempered young Mississippi lawyer, the troops included not only Tejanos (Texas settlers of Mexican or Spanish descent) but also American volunteers, the most celebrated of whom was Davy Crockett, the Tennessee frontiersman who had fought Indians under Andrew Jackson and served as a congressman. Full of bounce and brag, Crockett was thoroughly expert at killing. As he once told his men, “Pierce the heart of the enemy as you would a feller that spit in your face, knocked down your wife, burnt up your houses, and called your dog a skunk! Cram his pesky carcass full of thunder and lightning like a stuffed sassidge . . . and bite his nose off into the bargain.”

On February 23, 1836, Santa Anna had demanded that the 189 defenders of the Alamo surrender. They answered with a cannon shot. The Mexicans then launched a series of frontal assaults against the outnumbered defenders. For

twelve days the Mexicans were repulsed, suffering fearful losses. Then, on March 6, the defenders of the Alamo were awakened by the sound of Mexican bugles playing the dreaded “Deguello” (“No mercy to the defenders”). Soon thereafter Santa Anna’s men attacked from every side. They were twice repulsed, but on the third try the Mexicans broke through the battered north wall and swarmed through the breach. Colonel Travis was killed by a bullet to the forehead. The frontiersmen used their muskets as clubs, but soon they were all killed or wounded. The notorious slave smuggler, Indian fighter, and inventor of the Bowie knife, James Bowie, his pistols emptied, his famous knife bloodied, and his body riddled with Mexican bullets, lay dead on his cot.

Santa Anna ordered the wounded Americans put to death and their bodies burned with the rest. The only survivors were sixteen women, children, and servants. It was a complete victory for the Mexicans, but a costly one. The defenders of the Alamo gave their lives at the price of 1,544 Mexicans, and their heroic stand inspired the rest of the Americans in Texas to stage a fanatical resistance. While Santa Anna dictated a glorious victory declaration, his aide wrote in his diary, “One more such ‘glorious victory’ and we are finished.”

On March 2, 1836, while the siege of the Alamo continued, delegates from all fifty-nine Texas towns met at the village of Washington-on-the-Brazos and signed a declaration of independence. Over the next seventeen days the delegates drafted a constitution for the Republic of Texas and established an interim government. The delegates then hastily adjourned as Santa Anna’s troops, fresh from their victory at the Alamo, bore down upon them.

The commander in chief of the Texas forces was Sam Houston, a Tennessee frontiersman who had learned war under the tutelage of Andrew Jackson, had later represented the Nashville district in Congress, and had moved to Texas only three years before. After learning of the Texan defeat at the Alamo, Houston beat a strategic retreat eastward from Gonzales, gathering reinforcements as he went, including volunteer recruits from the United States. Just west of the San Jacinto River he paused near the site of the city that later bore his

Sam Houston

Commander-in-chief of the Texas forces.

name and on April 21, 1836, surprised a Mexican encampment there. The Texans charged, yelling “Remember the Alamo,” and overwhelmed the panic-stricken Mexican force. Santa Anna was captured trying to escape. The Mexican dictator bought his freedom by signing a treaty recognizing the independence of Texas, with the Rio Grande as the boundary. The Mexican congress repudiated the treaty and never officially recognized the loss of its northern province, but the war was at an end.

NEGOTIATIONS FOR ANNEXATION The Lone Star Republic drafted a constitution that legalized slavery and banned free blacks, made Sam Houston its first president, and voted for annexation to the United States. The American president then was Houston’s old friend Andrew Jackson, who desperately wanted Texas to join the Union, but even Old Hickory could be discreet when delicacy demanded it. The addition of Texas as a new slave state in 1836 threatened a serious sectional quarrel that might endanger the election of Martin Van Buren, his handpicked successor. Worse than that, it raised the specter of war with Mexico. Jackson delayed official recognition of the Republic of Texas until his last day in office, and Van Buren shied away from the issue of annexation during his term as president.

Rebuffed in Washington, Texans began to talk of expanding their nation to the Pacific, thus rivaling the United States. France and Britain extended formal recognition to the republic and began to develop trade relations. Meanwhile, thousands more Americans poured into Texas. The population grew from 40,000 in 1836 to 150,000 in 1845. Many settlers were attracted by the low land prices. And most brought with them a desire to join the United States.

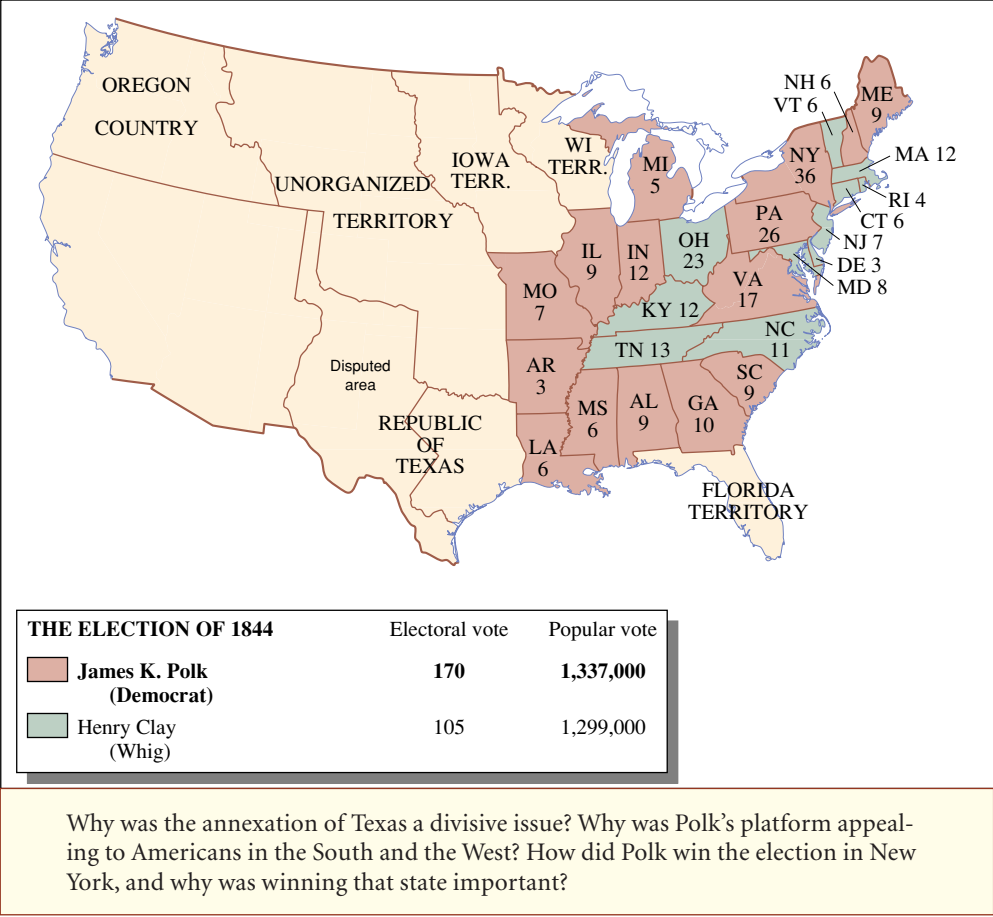

Most Texans never abandoned their hope of annexation, although reports of growing British influence in Texas created anxieties in the U.S. government and among southern slaveholders, who became the chief advocates of annexation. Secret negotiations with Texas began in 1843, and that April, John C. Calhoun, then President Tyler’s secretary of state, completed an annexation treaty that went to the Senate for ratification.

Calhoun chose this moment to send the British minister to the United States a letter instructing him on the blessings of slavery and stating that the annexation of Texas was needed to foil the British abolitionists. Publication of the note fostered the claim that annexation was planned less in the national interest than to promote the expansion of slavery. It was so worded, one observer wrote Andrew Jackson, as to “drive off every northern man from the support of the measure.” Sectional division, plus fear of a war with Mexico, contributed to the Senate’s overwhelming rejection of the Texas annexation treaty. Solid Whig opposition was the most important factor behind its defeat.

POLK'S PRESIDENCY

THE ELECTION OF 1844 Although adding Texas to the Union was an enormously popular idea among the citizenry, prudent leaders in both political parties had hoped to keep the divisive issue out of the 1844 presidential campaign. Whig Henry Clay and Democrat Martin Van Buren, the leading candidates, had reached the same conclusion about pro-slavery Texas: when the annexation treaty was submitted to the Senate, they both wrote letters opposing it for fear that it might spark civil war. The two letters, dated three days apart, appeared in separate Washington newspapers on April 27, 1844. Clay's "Raleigh letter" (written while he was on a southern tour) stated that annexation was "dangerous to the integrity of the Union . . . and not called for by any general expression of public opinion." Clay feared that the furor over Texas would distract the nation from more important issues. Clay worried that John Calhoun and other southern Democrats were using the Texas issue in a deliberate attempt to outflank the Whig party and divide the nation along sectional lines. The outcome of the Whig convention, held in Baltimore, seemed to bear out his view. Party leaders showed no qualms about Clay's stance. The convention nominated him unanimously, and the Whig platform omitted any reference to Texas.

The Democratic convention was a different story. Martin Van Buren's southern supporters, including Andrew Jackson, abandoned him because of his opposition to Texas annexation. Jackson wrote his former vice president a brutally frank letter, conveying his intense disappointment with Van Buren's anti-Texas stance. He told the *New Yorker* that he now had as much chance of being elected as there was to reverse "the current of the Mississippi River." The future president James Buchanan, the head of the Pennsylvania Democrats, declared that Van Buren's principled stance against annexing Texas would cost him the party's nomination. Van Buren was like a "dead cock in the pit." With the convention deadlocked, expansionists, including Andrew Jackson, brought forward James Knox Polk, former Speaker of the House and governor of Tennessee, an ardent expansionist. On the ninth ballot he became the first "dark horse" candidate to win a major-party nomination. The party platform embraced territorial expansion, and to win support in the North and the West as well as in the South, it called for the annexation of both Oregon and Texas. Missouri senator Thomas Hart Benton, a Van Buren supporter, lamented what had taken place at the convention. The single-minded preoccupation with Texas among the southern delegates foreshadowed national disaster. "Under the pretext of getting Texas into the Union," he observed, "the scheme is to get the South out of it."

The Democratic combination of southern and western expansionism offered a winning strategy, one so popular it forced the Whig Henry Clay to alter his position on Texas; now he claimed that he had “no personal objection to the annexation” if it could be achieved “without dishonor, without war, with the common consent of the Union, and upon just and fair terms.” His explanation seemed clear enough, but prudence was no match for spread-eagle oratory and the emotional pull of Manifest Destiny. The net result of Clay’s stand was to turn more anti-slavery votes to the new Liberty party, which increased its count from about 7,000 in 1840 (the year it was founded) to more than 62,000 in 1844. In the western counties of New York, the Liberty party drew enough votes away from the Whigs to give the

state to Polk and the Democrats. Had he carried New York, the overconfident Clay would have won the election by seven electoral votes. Instead, Polk won a narrow plurality of 38,000 popular votes (the first president since John Quincy Adams to win without a majority) but a clear majority of the Electoral College, 170 to 105. Clay had lost his third and last effort to win the presidency he had long coveted. His rival, Daniel Webster, blamed the savagely ambitious Clay for the Whig defeat, declaring that he had behaved as if he were willing to say or do anything to gain the White House, and “his temper was bad—resentful, violent & unforgiving.” Clay never understood why so many people did not trust him.

The humiliated Clay could not understand how a statesman of his stature could have lost to James K. Polk, a “third-rate” politician. Yet Polk had been surprising people his whole career. Born near Charlotte, North Carolina, trained in mathematics and the classics at the University of North Carolina Polk had moved to Tennessee as a young man. A successful lawyer and planter, he had entered politics early, served fourteen years in Congress (four as Speaker of the House) and two as governor of Tennessee. Young Hickory, as his partisans liked to call him, was a short, slender man with a shock of grizzled hair and a seemingly permanent grimace. Humorless and dogmatic, he had none of Andrew Jackson’s charisma but shared Jackson’s opposition to a national bank and other Whig economic policies. Although America’s youngest president up to that time, he worked so hard during his four years in the White House that his health deteriorated, and he died at age fifty-four just three months after leaving office.

POLK’S PROGRAM In domestic affairs, “Young Hickory” Polk hewed to the principle of the older hero, but the new Jacksonians subtly reflected the growing influence of the slaveholding South on the Democratic party. Abolitionism, Polk warned, could destroy the Union. Anti-slavery northerners had already begun to drift away from the Democratic party, which they complained was coming to represent the slaveholding interests. Raised in a family that held slaves, Polk himself had slaves on his Tennessee and Mississippi plantations. Like Andrew Jackson and most Americans of the time, Polk was a racist who sought to avoid any public discussion of slavery.

Polk’s major objectives were tariff reduction, reestablishment of Van Buren’s independent Treasury, settlement of the Oregon boundary dispute with Britain, and acquisition of California from Mexico. He gained them all. The Walker Tariff of 1846, in keeping with Democratic tradition, reduced the tariff rates. In the same year, Polk persuaded Congress to restore the independent Treasury, which the Whigs had eliminated. Twice Polk

vetoed internal-improvement bills. In each case his blows to the economic nationalism of Henry Clay's Whigs satisfied the urges of the slaveholding South, but at the cost of annoying northerners who wanted higher tariffs and westerners who longed for internal improvements in the form of roads and harbors.

THE STATE OF TEXAS Polk's chief concern was geographic expansion. He privately vowed to acquire California and New Mexico as well, preferably by purchase. The acquisition of slaveholding Texas was already under way when Polk took office. In his final months in office, President John Tyler, taking Polk's election as a mandate to act, asked Congress to accomplish annexation by joint resolution, which required only a simple majority in each house and avoided the two-thirds Senate vote needed to ratify a treaty. Congress had read the election returns, too, and after a bitter debate over slavery, the resolution passed by votes of 27 to 25 in the Senate and 120 to 98 in the House. The Whig leader Daniel Webster was aghast. He felt "sick at heart" to see Congress take a step toward civil strife because of "greediness for more slave Territory and for the greater increase of Slavery!" Tyler signed the resolution on March 1, 1845, offering to admit Texas to the Union. A Texas convention accepted the offer, and the voters of Texas ratified the action. The new state formally entered the Union on December 29, 1845. Mexico was furious and dispatched troops to the Rio Grande border.

OREGON Meanwhile, the Oregon boundary issue heated up as expansionists insisted that the newly elected president abandon previous offers to settle with Britain on the 49th parallel and stand by the Democrats' platform pledge ("54°40' or Fight") to take all of Oregon. The expansionists were prepared to risk war with Britain while relations with Mexico were moving toward the breaking point. "All of Oregon or none," the expansionists cried. In his inaugural address, Polk had claimed that the American title to Oregon was "clear and unquestionable," but privately he favored a prudent compromise. War with Mexico was brewing; the territory up to 54°40' seemed of less importance than the Puget Sound or the ports of California, on which the British were also thought to have designs.

Fortunately for Polk the British government had no enthusiasm for war over a remote wilderness territory at the cost of profitable trade relations with the United States. From the British viewpoint the only land in dispute all along had been between the 49th parallel and the Columbia River. But now the region's fur trade was a dying industry. In 1846 the British government submitted a draft treaty that extended the border along the 49th

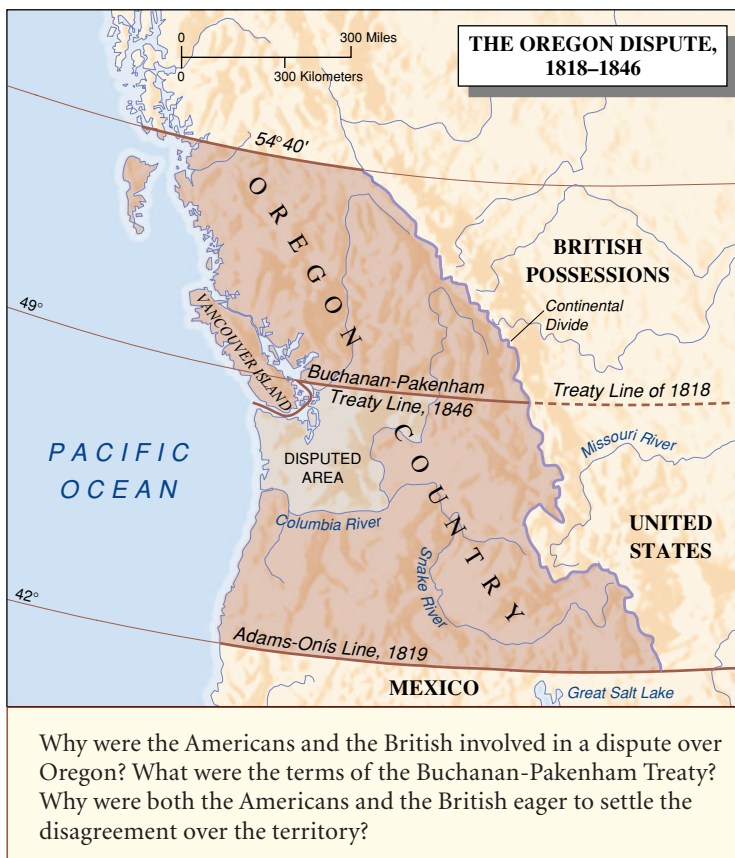

***Polk's Dream* (1846)**

The devil advises Polk to pursue 54° 40' even if "you deluge your country with seas of blood, produce a servile insurrection, and dislocate every joint of this happy and prosperous union."

parallel and through the main channel south of Vancouver Island and kept the right to navigate all of the Columbia River. On June 15 James Buchanan, now Polk's secretary of state, signed it, and three days later it was ratified in the Senate. The only opposition came from a group of expansionists who wanted more. Most of the country was satisfied. Southerners cared less about Oregon than about Texas, and northern business interests valued British trade more than they valued Oregon. Besides, the country by then was at war with Mexico.

THE MEXICAN WAR

THE OUTBREAK OF WAR On March 6, 1845, two days after James Polk took office, the Mexican government broke off relations with the United States to protest the American annexation of Texas. When an effort at negotiation failed, the hard-driving Polk focused his efforts on fostering American intrigues meant to subvert Mexican authority in California. He wrote Consul Thomas O. Larkin in Monterey that he would make no effort to induce the admission of California to the Union, but "if the people should desire to unite their destiny with ours, they would be received as brethren."

Larkin, who could take a hint, began to line up Americans and sympathetic Californios. Meanwhile, Polk ordered U.S. troops under General Zachary Taylor to take up positions around Corpus Christi, near the Rio Grande in Texas. These positions lay in territory that was doubly disputed: Mexico recognized neither the American annexation of Texas nor the Rio Grande boundary.

The last hope for peace died when John Slidell, sent to Mexico City to negotiate a settlement, gave up on his mission in March 1846. Polk then resolved that he could achieve his purposes only by force. He won cabinet approval of a war message to Congress. That very evening, May 9, the news arrived that Mexicans had attacked U.S. soldiers north of the Rio Grande. Eleven Americans were killed, five wounded, and the remainder taken prisoner. Polk's provocative scheme had worked.

In his war message, Polk claimed that his call to arms was a response to Mexican aggression, a recognition that war had been forced upon the United States. Mexico, he reported, “has invaded our territory, and shed American blood upon the American soil.” Congress quickly passed the war resolution, and Polk signed the declaration of war on May 13, 1846. But support for the war was guarded. The House authorized a call for 50,000 volunteers and a war appropriation of \$10 million, but sixty-seven Whigs voted against the measure, a sign of rising opposition, especially in the North, where people assumed that the southerner Polk wanted a war in order to acquire more slave territory.

OPPOSITION TO THE WAR In the Mississippi Valley, where expansion fever ran high, the war with Mexico was immensely popular. In New England, however, there was less enthusiasm for “Mr. Polk’s war.” Whig opinion ranged from lukewarm to hostile. Congressman John Quincy Adams, who voted against participation, called it “a most unrighteous war.” An obscure congressman from Illinois named Abraham Lincoln, upon taking his seat in 1847, began introducing “spot resolutions,” calling on President Polk to name the spot where American blood had been shed on American soil, implying that U.S. troops may, in fact, have been in Mexico when fired upon. The Whig leader Daniel Webster was convinced that the outbreak of war with Mexico was driven by the desire to add more slave states to the Union. The Massachusetts senator worried that an “expensive and bloody war” would end up fragmenting the Union. He was “quite alarmed for the state of the Country.” Many New Englanders denounced the war as the work of pro-slavery southerners seeking new territories. But before the war ended, some anti-slavery leaders had a change of heart. Mexican territory seemed so unsuited to slave-based agriculture that they endorsed expansion in the hope of enlarging the area of free soil. The lure of more land and the idea of “manifest destiny” exerted a potent influence even upon those who opposed the war.

PREPARING FOR BATTLE Both the United States and Mexico approached the war ill prepared. American policy had been incredibly reckless, risking war with both Britain and Mexico while doing nothing to strengthen the armed forces until war came. At the outset of the war, the regular army numbered barely over 7,000, in contrast to the Mexican force of 32,000. Before the war ended, the U.S. military had grown to 78,718 troops, of whom about 31,000 were regular army troops and marines. Most of the new soldiers were six- and twelve-month state volunteers from the West. The volunteer

militia companies, often filled with frontier toughs, lacked uniforms, standard equipment, and discipline. Repeatedly, despite the best efforts of the commanding generals, these undisciplined forces engaged in plunder, rape, and murder.

The motley American troops outmatched larger Mexican forces, which had their own problems with training, discipline, morale, and munitions. Many of the Mexicans were pressed into service or recruited from prisons, and they made less than enthusiastic fighters. Mexican artillery pieces were generally obsolete, and the powder was so faulty that American soldiers could often dodge cannonballs that fell short and bounced ineffectively along the ground.

The United States entered the war without even a tentative plan of action, and politics complicated matters. Polk sought to manage every detail of the conflict. What Polk wanted, Thomas Hart Benton wrote later, was “a small war, just large enough to require a treaty of peace, and not large enough to make military reputations, dangerous for the presidency.” Winfield Scott, general in chief of the army, was a politically ambitious Whig. Nevertheless, Polk at first named him to take charge of the Rio Grande front. When Scott quarreled with Polk’s secretary of war, however, the exasperated president withdrew the appointment.

There now seemed a better choice for commander. General Zachary Taylor’s men had scored two victories over Mexican forces north of the Rio Grande, at Palo Alto (May 8) and Resaca de la Palma (May 9). On May 18 Taylor crossed the river and occupied Matamoros, which a demoralized and bloodied Mexican army had abandoned. These quick victories brought Taylor instant popularity, and the president responded willingly to the demand that he be made commander for the conquest of Mexico. “Old Rough-and-Ready” Taylor impressed Polk as less of a political threat than Scott. Without a major battle he had achieved Polk’s main objective, the conquest of Mexico’s northern provinces.

THE ANNEXATION OF CALIFORNIA Along the Pacific coast, conquest was under way before definitive news of the Mexican War erupting arrived. Near the end of 1845, John C. Frémont brought out a band of sixty frontiersmen, ostensibly on another exploration of California and Oregon. When the Mexican commanding officer at Monterey ordered him out of the Salinas Valley, Frémont at first dug in his heels and refused to go, but he soon changed his mind and headed for Oregon. In 1846 he and his men again moved south, this time into the Sacramento Valley. Americans in the area fell upon Sonoma on June 14, proclaimed the Republic of California, and hoisted

The Battle of the Plains of Mesa

This sketch was made at the battle, which took place just before U.S. forces entered Los Angeles.

the hastily designed flag: a grizzly bear and star painted on white cloth, a version of which would become the state flag.

But the Bear Flag Republic lasted only a month. In July, John D. Sloat, commodore of the Pacific Fleet, having heard of the outbreak of hostilities with Mexico, sent a party ashore to raise the American flag and proclaim California part of the United States. Most Californians of whatever origin welcomed a change that promised order in preference to the confusion of the Bear Flag Republic.

Before the end of July, a new commodore, Robert F. Stockton, began preparations to move against Mexican forces in southern California. Stockton's forces occupied Santa Barbara and Los Angeles. By mid-August, Mexican resistance had dissipated. On August 17 Stockton declared himself governor, with Frémont as military commander in the north. At the same time another expedition was closing on Santa Fe. On August 18 Colonel Stephen Kearny and 1,600 men entered Santa Fe. After naming a civilian governor, Kearny divided his force, leading 300 men west toward California.

In southern California, where most of the poorer Mexicans and Mexicanized Indians resented American rule, a rebellion broke out. By the end of October, the rebels had ousted the token American force. Kearny walked right in to this rebel zone when he arrived. At San Diego he met up with Stockton and joined him in the reconquest of southern California, which they achieved after two brief clashes, entering Los Angeles on January 10, 1847. Rebel forces capitulated three days later.

TAYLOR'S BATTLES Both California and New Mexico had been taken before General Zachary Taylor fought his first major battle in northern Mexico. Having waited for more men and munitions, he finally moved out of his Matamoros base in September 1846 and assaulted the fortified city of Monterrey, which he took after a five-day siege. President Polk, however, was none too happy with the easy terms of surrender to which Taylor agreed, or with Taylor's growing popularity. The whole episode merely confirmed the president's impression that Taylor was too passive to be trusted further with the major campaign. Besides, his victories, if flawed, were leading to talk of General Taylor as the next Whig candidate for president.

Yet Polk's grand strategy was itself flawed. Having never seen the Mexican desert, he wrongly assumed that Taylor's men could live off the country and need not depend upon resupply. Polk therefore misunderstood the general's reluctance to strike out across several hundred miles of barren land just north of Mexico City. On another point the president was simply duped. The old dictator General Antonio López de Santa Anna, forced out of power in 1845, got word to Polk from his exile in Cuba that in return for the right considerations he would bring about a settlement of the war. Polk in turn assured the Mexican leader that the U.S. government would pay well for any territory taken through a settlement. In August 1846, Santa Anna was permitted to pass through the American blockade into Vera Cruz. Soon he was again in command of the Mexican army and was named president once more. Polk's intrigue unintentionally put perhaps the ablest Mexican general back in command of the enemy army, where he busily organized his forces to strike at Taylor.

By then another American front had been opened, and Taylor was ordered to wait in place. In October 1846 Polk and his cabinet decided to move against Mexico City by way of Vera Cruz. Polk named General Winfield Scott to the field command. Taylor, miffed at his reduction to a minor role, disobeyed orders and attacked Mexican forces near the hacienda of Buena Vista. Santa Anna met Taylor's untested volunteers with a large but ill-trained and tired army. The Mexican general invited the outnumbered Americans to surrender. "Tell him to go to hell," Taylor replied. In the hard-fought Battle of Buena Vista (February 22–23, 1847), Taylor's son-in-law, Colonel Jefferson Davis, the future president of the Confederacy, led a regiment that broke up a Mexican cavalry charge. Neither side could claim victory. It was the last major action on the northern front, and Taylor was granted leave to return home. Taylor's growing popularity forced Polk to promote him, despite the president's concerns about the general's political aspirations. In a self-serving moment, Polk recorded in his diary that Taylor was a "hard fighter" but had "none of the other qualities of a great general."

Why did John C. Frémont initially settle in the Salinas Valley before marching north, only to march south to San Francisco? How did Polk's fear of Zachary Taylor's popularity undermine the Americans' military strategy? What was the significance of Winfield Scott's assault on Mexico City?

SCOTT'S TRIUMPH Meanwhile, the long-planned assault on Mexico City had begun on March 9, 1847, when Winfield Scott's army landed on the beaches south of Vera Cruz. It was the first major amphibious operation by U.S. military forces and was carried out without loss. Vera Cruz surrendered on March 27 after a weeklong siege. Scott then set out on the route taken by

Cortés more than 300 years before. Santa Anna tried to set a trap for him at the mountain pass of Cerro Gordo, but Scott's men took more than 3,000 Mexican prisoners.

On May 15 Scott's army entered Puebla, the second-largest Mexican city. There Scott lost about one third of his army because men whose twelve-month enlistments had expired felt free to go home, leaving Scott with about 7,000 troops in all. There was nothing to do but hang on until reinforcements and supplies came up from the coast. Finally, after three months, with his numbers almost doubled, Scott set out on August 7 through the mountain passes into the valley of Mexico, cutting his supply line to the coast.

Scott directed a brilliant flanking operation around the lakes and marshes that guard the eastern approaches to Mexico City. After a series of battles in which they overwhelmed Mexican defenses, U.S. forces entered Mexico City on September 13, 1847. At the national palace a battalion of marines raised the American flag and occupied the "halls of Montezuma." News of the victory led some expansionists to new heights of land lust. The editor John O'Sullivan, who had coined the term *manifest destiny*, shouted, "More, More, More! Why not take all of Mexico?"

THE TREATY OF GUADALUPE HIDALGO After the fall of the capital, Santa Anna resigned and a month later left the country. Meanwhile, Polk had appointed as chief peace negotiator Nicholas P. Trist, chief clerk of the State Department and a Virginia Democrat of impeccably partisan credentials. Formal talks got under way on January 2, 1848, at the village of Guadalupe Hidalgo, just outside the capital, and dragged on through the month. By the Treaty of Guadalupe Hidalgo, signed on February 2, 1848, Mexico gave up all claims to Texas above the Rio Grande and ceded California and New Mexico to the United States. In return the United States agreed to pay Mexico \$15 million and assume the claims of U.S. citizens against Mexico up to a total of \$3.25 million.

Polk submitted the treaty to the Senate. A growing movement to annex all of Mexico briefly excited the president, but as Polk confided in his diary, rejecting the treaty would be too risky. If he should reject a treaty made in accord with his own original terms in order to gain more territory, "the probability is that Congress would not grant either men or money to prosecute the war." In that case he might eventually have to withdraw the army and lose everything. The treaty went to the Senate, which ratified it on March 10, 1848. By the end of July, the last remaining American soldiers had left Mexico.

THE WAR'S LEGACIES The seventeen-month-long Mexican War cost the United States 1,733 killed in battle, 4,152 wounded, and far more—11,550—dead of disease, mostly dysentery and chronic diarrhea (“Montezuma’s revenge”). It remains the deadliest war in American history in terms of the percentage of combatants killed. Out of every 1,000 soldiers in Mexico, some 110 died. The next highest death rate would be in the Civil War, with 65 dead out of every 1,000 participants.

As a result of the Mexican War, the United States acquired more than 500,000 square miles of territory (almost 1 million, counting Texas), including the great Pacific harbors of San Diego, Monterey, and San Francisco. Except for a small addition made by the Gadsden Purchase of 1853, these annexations rounded out the continental United States.

Several important firsts are associated with the Mexican War: the first successful offensive American war, the first occupation of an enemy capital, the first war in which martial law was declared on foreign soil, the first in which West Point graduates played a major role, and the first reported by modern war correspondents. It was also the first significant combat experience for a group of junior officers who would later serve as leading generals during the Civil War: Robert E. Lee, Ulysses S. Grant, Thomas “Stonewall” Jackson, George B. McClellan, George Meade, and others.

Initially the victory in Mexico unleashed a surge of national pride, but as the years passed, the Mexican War was increasingly seen as a war of conquest directed by a president bent on expansion. For a brief season the glory of conquest added luster to the names of Zachary Taylor and Winfield Scott. Despite Polk’s best efforts, he had manufactured the next, and last, two Whig candidates for president. One of them, Taylor, would replace him in the White House, with the storm of sectional conflict already on the horizon.

The acquisition of Oregon, Texas, California, and the new Southwest made the United States a transcontinental nation. Extending authority over this vast new land greatly expanded the scope of the federal government. In 1849, for example, Congress created the Department of the Interior to supervise the distribution of land, the creation of new territories and states, and the “protection” of the Indians and their land. President Polk naively assumed that the dramatic expansion of American territory to the Pacific would strengthen “the bonds of Union.” He was wrong. No sooner was Texas annexed than a violent debate erupted over the extension of slavery into the new territories. That debate would culminate in a civil war that would nearly destroy the Union.

MAKING CONNECTIONS

- This chapter opened with an account of the brief administration of William Henry Harrison, the first Whig president. The collapse of the Whig party is detailed in Chapter 16.
- The West developed quickly after the expansionist policies of the 1840s. Chapter 19 takes the story to the 1890s.
- This chapter ended by noting how expansionism fueled a “debate [that] would culminate in a civil war that would nearly destroy the Union.” Chapter 16’s discussion of “The Crisis of Union” traces the relationship between the Mexican War and the Civil War more explicitly.

For background on Whig programs and ideas, see Michael F. Holt’s *The Rise and Fall of the American Whig Party: Jacksonian Politics and the Onset of the Civil War* (1999). Several works help interpret the expansionist impulse. Frederick Merk’s *Manifest Destiny and Mission in American History* (1963) remains a classic. A more recent treatment of expansionist ideology is Thomas R. Hietala’s *Manifest Design: Anxious Aggrandizement in Late Jacksonian America* (1985).

The best survey of western expansion is Richard White’s *“It’s Your Misfortune and None of My Own”: A New History of the American West* (1991). Robert M. Utley’s *A Life Wild and Perilous: Mountain Men and the Paths to the Pacific* (1997) tells the dramatic story of the rugged pathfinders who discovered corridors over the Rocky Mountains. The movement of settlers to the West is ably documented in John Mack Faragher’s *Women and Men on the Overland Trail* (2001) and David Dary’s *The Santa Fe Trail: Its History, Legends, and Lore* (2000). The best account of the California gold rush is Malcolm J. Rohrbough’s *Days of Gold: The California Gold Rush and the American Nation* (1997).

Gene M. Brack’s *Mexico Views Manifest Destiny, 1821–1846: An Essay on the Origins of the Mexican War* (1975) takes Mexico’s viewpoint on U.S. designs

on the West. On the siege of the Alamo, see William C. Davis's *Three Roads to the Alamo: The Lives and Fortunes of David Crockett, James Bowie, and William Barret Travis* (1998). An excellent biography related to the emergence of Texas is Gregg Cantrell's *Stephen F. Austin: Empresario of Texas* (1999). On James K. Polk, see John H. Schroeder's *Mr. Polk's War: American Opposition and Dissent, 1846–1848* (1973). The best survey of the military conflict is John S. D. Eisenhower's *So Far from God: The U.S. War with Mexico, 1846–1848* (1989). On the diplomatic aspects of Mexican-American relations see David M. Pletcher's *The Diplomacy of Annexation: Texas, Oregon, and the Mexican War* (1973).

Part Four

A
HOUSE
DIVIDED

f all the regions of the United States during the first half of the nineteenth century, the South was the most distinctive. Southern society remained fundamentally rural and agricultural long after the rest of the nation embraced the Industrial Revolution. Likewise, the southern elite's tenacious desire to preserve and expand the institution of slavery muted social-reform impulses in the South and ignited a prolonged political controversy that would end in civil war.

The rapid settlement of the western territories set in motion a ferocious competition between North and South for political influence in the burgeoning West. Would the new states in the West be "slave" or "free"? The issue of allowing slavery into the new territories involved more than humanitarian concern for the plight of enslaved blacks. By the 1840s North and South had developed quite different economic interests. The North wanted high tariffs on imported manufactures to "protect" its infant industries from foreign competition. Southerners, on the other hand, favored free trade because they wanted to import British goods in exchange for the cotton they provided British textile mills.

A series of political compromises glossed over the fundamental differences between the regions during the first half of the nineteenth century. But abolitionists refused to give up their crusade against slavery. Moreover, a new generation of politicians emerged in the 1850s, leaders from both the North and the South who were less willing to seek political compromises. The continuing debate over allowing slavery into the new western territories kept sectional tensions at a fever pitch. By the time Abraham Lincoln was elected president in 1860, many Americans had decided that the nation could not survive half-slave and half-free; something had to give.

In a last-ditch effort to preserve the institution of slavery, eleven southern states seceded from the Union and created a separate confederate nation. That, in turn, prompted northerners such as Lincoln to support a civil war to preserve the Union. No one

realized in 1861 how prolonged and costly the War between the States would become. Over 630,000 soldiers and sailors died of wounds or disease. The colossal carnage caused even the most seasoned observers to blanch in disbelief. As President Lincoln confessed in his second inaugural address, no one expected the war to become so “fundamental and astonishing.”

Nor did anyone envision how sweeping the war’s effects would be on the future of the country. The northern victory in 1865 restored the Union and in the process helped accelerate America’s transformation into a modern nation-state. National power and a national consciousness began to displace the sectional emphases of the antebellum era. A Republican-led Congress pushed through federal legislation to foster industrial and commercial development and western expansion. In the process the United States began to leave behind the Jeffersonian dream of a decentralized agrarian republic.

The Civil War also ended slavery, yet the actual status of the freed blacks remained precarious. How would they fare in a society built upon a slavery maintained by racism? In 1865 the daughter of a Georgia planter expressed her concern about such issues when she wrote in her diary that “there are sad changes in store for both races. I wonder the Yankees do not shudder to behold their work” in trying to “reconstruct” the defeated South.

Former slaves found themselves legally free, but most were without property, homes, education, or training. Although the Fourteenth Amendment (1868) set forth guarantees for the civil rights of African Americans and the Fifteenth Amendment (1870) provided that black men could vote, local authorities found ingenious—and often violent—ways to avoid the spirit and the letter of the new laws.

The restoration of the former Confederate states to the Union did not come easily. Much bitterness and resistance remained among the vanquished. Although Confederate leaders were initially disenfranchised, they continued to exercise considerable authority in political and economic matters. Indeed, in 1877 the last federal troops were removed from the occupied South, and former Confederates declared themselves “redeemed” from the stain of occupation. By the end of the nineteenth century, most states of the former Confederacy had devised a system of legal discrimination that re-created many aspects of slavery.

15

THE OLD SOUTH

FOCUS QUESTIONS

- What were the dominant industries and forms of agriculture in the Old South?
- How did the dependence upon agriculture and slavery shape southern society?
- How did the anti-slavery movement emerge, and what were the South's reactions to it?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

Southerners, a North Carolina editor once wrote, are “a mythological people, created half out of dream and half out of slander, who live in a still legendary land.” Most Americans, including southerners themselves, harbor a cluster of myths and stereotypes about the South. Perhaps the most enduring myths come from such classic movies as *Gone with the Wind* (1939). The South portrayed in romanticized Hollywood productions is a stable agrarian society led by paternalistic white planters and their families, who live in white-columned mansions and represent a “natural” aristocracy of virtue and talent within their communities. In these accounts, southerners are kind to their slaves and devoted to the rural values of independence and chivalric honor, values celebrated by Thomas Jefferson.

By contrast, a much darker myth about the Old South emerged from abolitionist pamphlets and Harriet Beecher Stowe's best-selling novel, *Uncle Tom's Cabin* (1852). Those exposés of southern culture portrayed the planters as arrogant aristocrats who raped enslaved women, brutalized enslaved workers, and lorded over their communities with haughty disdain for the rights and needs of others. They bred slaves like cattle, broke up slave families, and sold slaves "down the river" to certain death in the Louisiana sugar mills and rice plantations.

Such contrasting myths die hard, in large part because each one is rooted in reality. Nonetheless, efforts to get at what really set the Old South apart from the rest of the nation generally pivot on two lines of thought: the impact of the environment (climate and geography) and the effects of human decisions and actions. The South's warm, humid climate was ideal for the cultivation of commercial crops such as tobacco, cotton, rice, and sugarcane. The growth of those lucrative cash crops helped foster the plantation system and slavery. In the end those developments brought about the sectional conflict over the extension of slavery and the civil war that shook the foundations of the Old South.

THE DISTINCTIVENESS OF THE OLD SOUTH

While geography was and is a key determinant of the South's economy and culture, much of southern distinctiveness resulted from the institution of slavery. The resolve of slaveholders to retain control of their socioeconomic order created a sense of racial unity that bridged class divisions among whites. Yet the biracial character of the population exercised an even greater influence over southern culture. In shaping patterns of speech and folklore, music, religion, literature, and recreation, black southerners immeasurably influenced and enriched the region's development.

The South differed from other sections of the country, too, in its high proportion of native-born Americans in its population, both whites and blacks. Despite a great diversity of origins in the colonial population, the South drew few overseas immigrants after the Revolution. One reason was that the main shipping lines went from Europe to northern ports; another, that the prospect of competing with slave labor deterred immigrants. After the Missouri controversy of 1819–1821, the South increasingly became a consciously minority region, its population growth lagging behind that of other sections of the country, its "peculiar institution" of slavery more and more an isolated and

odious phenomenon in Western civilization. Attitudes of defensiveness strongly affected its churches. The religious culture of the white South retreated from the liberalism of the Revolutionary War era into a brittle orthodoxy, which provided one line of defense against new doctrines of any kind, while black southerners found in their own version of Christianity a refuge from their hardships, a promise of release on some future day of Jubilee.

The South also differed from the rest of the nation in its architecture; its penchant for fighting, guns, and the military; and its attachment to an agrarian ideal. The preponderance of farming remained a distinctive regional characteristic, whether pictured as the Jeffersonian small farmer living by the sweat of his brow or the lordly planter dispatching his slave gangs. But in the end what made the South distinctive was its people's belief—and other people's belief—that the region *was* distinctive.

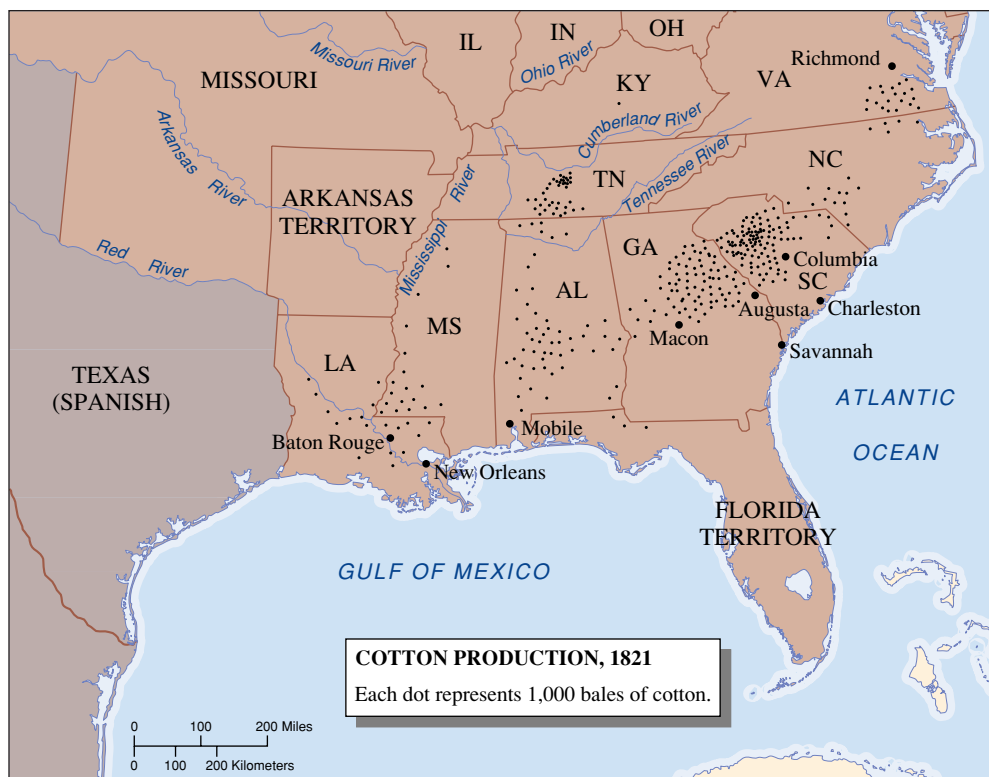

Slavery in the South

Slave quarters on a South Carolina plantation.

STAPLE CROPS The idea of the Cotton Kingdom is itself something of a mythic stereotype. Although cotton was the most important of the “staple,” or most profitable, crops, it was a latecomer. Tobacco, the first staple crop, had been the mainstay of Virginia and Maryland during the colonial era and common in North Carolina. After the Revolution, pioneers carried it over the mountains into Kentucky and as far as Missouri. Indigo, an important crop in colonial South Carolina, vanished with the loss of British bounties for this source of a valuable blue dye, but rice farming continued in a coastal strip that lapped over into North Carolina and Georgia. Rice production was limited to the tidewater areas of South Carolina and Georgia because it required the frequent flooding and draining of fields. Since rice production required substantial capital for floodgates, ditches, and machinery, the plantations that grew rice were large and relatively few in number.

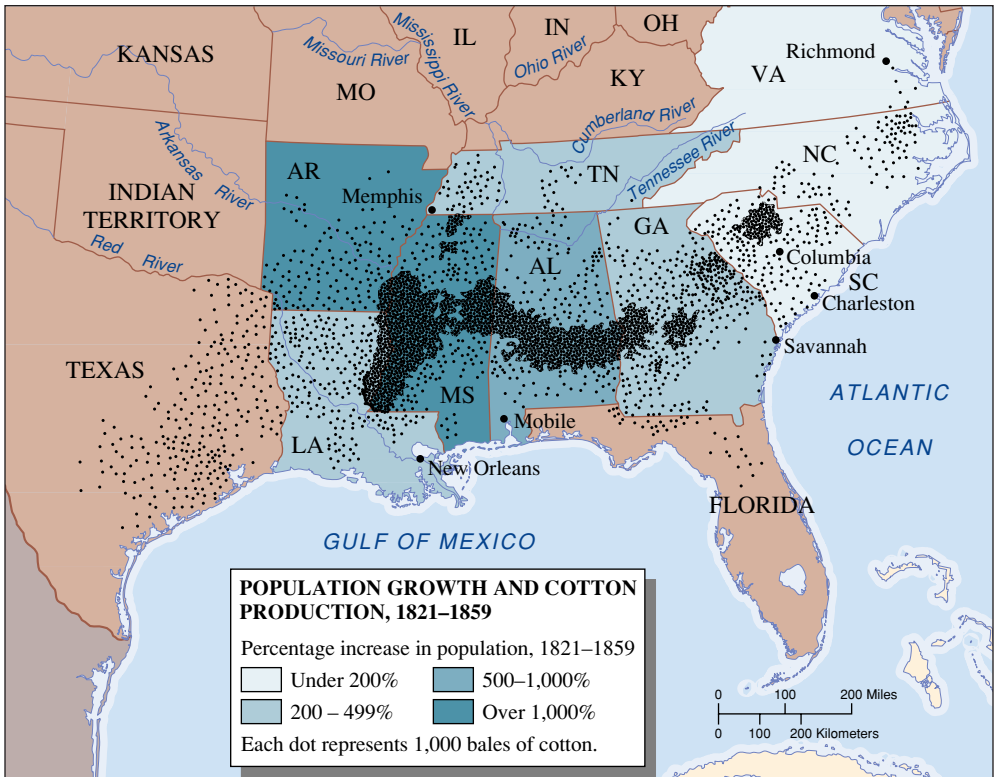

Sugar, like rice, required a heavy capital investment—in machinery to grind the cane—and was limited to the Deep South because cane is susceptible to

Why was cotton an appealing staple crop? What regions produced the most cotton in 1821? Keeping in mind what you read about cotton in Chapter 12, what innovations would you suppose allowed farmers to move inland and produce cotton more efficiently?

frost. Since sugar needed the prop of a protective tariff to enable its farmers to compete with foreign suppliers, it produced the anomaly in southern politics of pro-tariff congressmen from Louisiana. Hemp had something of the same effect in the Kentucky Bluegrass region and in northwestern Missouri. Both flax and hemp were important to backcountry farmers at the end of the colonial era. Homespun clothing was most apt to be linsey-woolsey, a combination of linen and wool. But flax never developed more than a limited commercial market, and that mostly for linseed oil. Hemp, on the other hand, developed commercial possibilities in rope, cotton-baling cloth, and canvas for sails.

Cotton, the last of the major staple crops, eventually outpaced all the others put together. At the end of the War of 1812, annual cotton production

What was the relationship between westward migration and the spread of cotton plantations? Why did cotton plantations cluster in certain regions of the South? What were the environmental and economic consequences of the South's emphasis on cotton?

was estimated at less than 150,000 bales; in 1860 it was reported at 4 million. Two factors accounted for the dramatic growth: the voracious market for American cotton among British and French textile manufacturers and the cultivation of new lands in the Old Southwest (Alabama, Mississippi, Arkansas, and Louisiana). Much of the story of the southern people—white and black—from 1820 to 1860 was their movement from Virginia and the Carolinas to fertile cotton lands farther west. By 1860 the center of the cotton belt stretched from eastern North Carolina, South Carolina, and Georgia, through the fertile Alabama-Mississippi black belts (so called for the color of the soil), through Louisiana on to Texas, and up the Mississippi Valley as far as southern Illinois. Cotton prices fell sharply after the financial

panic of 1837 and remained below 10¢ a pound through most of the 1840s but advanced above 10¢ late in 1855 and stayed there until 1860, reaching 15¢ in 1857.

AGRICULTURAL DIVERSITY The focus on cotton and the other cash crops has obscured the degree to which the antebellum South fed itself from its own fields. With 30 percent of the country's landmass in 1860 and 39 percent of its population, the slave states produced 52 percent of the nation's corn, 29 percent of its wheat, 19 percent of its oats, 19 percent of its rye, 10 percent of its white potatoes, and 94 percent of its sweet potatoes. Livestock added to the diversity of the farm economy. In 1860 the South had half the nation's cattle, over 60 percent of its swine, nearly 45 percent of its horses, 52 percent of its oxen, 90 percent of its mules, and nearly 33 percent of its sheep, the last mostly in the upper South. Plantations and farms commonly raised livestock for home consumption.

Yet the story of the southern economy was hardly one of unbroken prosperity. The South's cash crops quickly exhausted the soil. In low-country South Carolina, Senator Robert Y. Hayne spoke of "fields abandoned; and hospitable mansions of our fathers deserted." The older farming lands had trouble competing with the newer soils farther west. But lands in the Old Southwest, too, began to show wear and tear. By 1855 an Alabama senator

Southern Agriculture

Planting sweet potatoes on James Hopkinson's plantation, Edisto Island, South Carolina, April 1862.

had noted, “Our small planters, after taking the cream off their lands . . . are going further west and south in search of other virgin lands which they may and will despoil and impoverish in like manner.”

So the Southeast and then the Old Southwest faced a growing sense of economic crisis as the nineteenth century advanced. Proposals to deal with the crisis followed two lines. Some argued for agricultural reform and others for economic diversification through industry and trade. Edmund Ruffin of Virginia stands out as perhaps the greatest of the reformers. After studying the chemistry of soils, he reasoned that most of the exhausted fields of the upper South were too acidic. He discovered that marl from a seashell deposit in eastern Virginia could restore the fields’ fertility. Ruffin published the results in his *Essay on Calcareous Manures* (1832). Such publications and farm magazines in general reached but a minority of farmers, however, mostly the larger and more successful planters.

MANUFACTURING AND TRADE By 1840 many thoughtful southerners had concluded that the region desperately needed to develop its own manufacturing and trade. The cotton-growing mania had led the South to become increasingly dependent upon northern industry and commerce: cotton and tobacco were exported mainly in northern vessels; southerners also relied upon northern merchants for imported goods—economically the South had become a kind of colonial dependency of the North. The merchants of northern cities, a southerner said, “export our . . . valuable productions, and import our articles of consumption and from this agency they derive a profit which has enriched them . . . at our expense.”

Southern concerns about dependence upon northern merchants and bankers prompted interest in a more diversified economy to allow native industries to balance agriculture and trade. Southern publicists called attention to the section’s great resources: its raw materials, labor supply, waterpower, wood and coal, and markets. In Richmond the Tredegar Iron Works grew into the single most important manufacturing enterprise in the Old South. It used mostly slave labor to produce cannon, shot, and shell as well as axes, saws, bridge materials, boilers, and steam engines, including locomotives. Yet despite such efforts the region still lagged well behind the North in its industrial development and commercial network.

ECONOMIC DEVELOPMENT During the antebellum years two major explanations were put forward for the lag in southern industrial development. First, blacks were presumed unsuited to factory work. Second, the ruling elite of the Old South had developed a lordly disdain for industrial

Iron Manufacturing

The Tredegar Iron Works in Richmond, Virginia.

production. A certain aristocratic prestige derived from owning land and holding slaves. But any argument that African-American labor was incompatible with industrial work simply flew in the face of the evidence, since factory owners bought or hired enslaved blacks to operate just about every kind of manufacture. Given the opportunity, any number of African Americans displayed managerial skills as overseers.

One should not take at face value the legendary indifference of aristocratic planters to profits. More often than not the successful planter was bent on maximizing profits. While the profitability of slavery has been a long-standing subject of controversy, in recent years economic historians have concluded that slaves on the average supplied about a 10 percent annual return on their cost. At the time that was an enticing profit margin, just as it is now. By a strictly economic calculation, slaves and land on which cotton could be grown were the most profitable investments available in the antebellum South. Some slaveholders, particularly in the newer cotton lands of the Old Southwest, were incredibly rich.

WHITE SOCIETY IN THE SOUTH

If an understanding of the Old South must begin with a knowledge of social myths, it must end with a sense of tragedy. White southerners had won short-term gains at the cost of both long-term development and moral

King Cotton Captured

An engraving showing cotton being trafficked in Louisiana.

isolation in the eyes of the world. The concentration on agriculture and slaves and the paucity of cities and immigrants deprived the South of the most dynamic sources of innovation. The slaveholding South hitched its wagon not to a star but to the (largely British) demand for cotton, which had not slackened since the start of the Industrial Revolution. During the late 1850s southern agricultural prosperity seemed never ending. The South, “safely entrenched behind her cotton bags . . . can defy the world—for the civilized world depends on the cotton of the South,” said a Mississippi newspaper in 1860. “No power on earth dares to make war upon it,” said James H. Hammond of South Carolina. “Cotton is king.” What southern boosters could not perceive was what they could least afford: the imminent slackening of the world demand for cotton. The heyday of expansion in British textiles had ended by 1860, but by then the Deep South was locked into large-scale cotton production for generations to come.

PLANTERS Although there were only a few giant plantations, they set the tone for southern economic and social life. What distinguished the plantation from the farm, in addition to its size, was the use of a large labor force, under separate control and supervision, to grow primarily staple crops (cotton, rice, tobacco, and sugarcane) for profit. A clear-cut distinction between

management and labor set the planter apart from the small slaveholder, who often worked side by side with slaves at the same tasks.

If, to be called a planter, one had to hold 20 slaves, only 1 out of every 30 whites in the South in 1860 was a planter. Fewer than 11,000 held 50 or more slaves, and only 2,300 held over 100. The census listed only 11 planters with 500 slaves and just 1 with as many as 1,000. Yet this privileged elite tended to think of its class interests as the interests of the entire South and to perceive its members as community leaders and “natural aristocrats.” The planter group, making up under 4 percent of the adult white men in the South, held more than half the slaves and produced most of the cotton, tobacco, and hemp and all of the sugar and rice. The number of slaveholders was only 383,637 out of a total white population of 8 million. But assuming that each family numbered five people, then whites with some proprietary interest in slavery came to 1.9 million, or roughly one fourth of the white population. While the preponderance of southern whites belonged to the small-farmer class, they tended to defer to the large planters. After all, many small farmers aspired to become planters themselves.

Often the planter did live in the splendor that legend attributes to him, with the wealth and leisure to cultivate the arts of hospitality, good manners, learning, and politics. More often the scene was less charming. Some of the mansions, on closer inspection, turned out to be modest houses with false fronts. The planter commonly had less leisure than legend would suggest, for he in fact managed a large enterprise. At the same time he often served as the patron to whom workers appealed the actions of their foremen. The quality of life for the enslaved workers was governed far more by the attitude of the master than by the formal slave codes, which were seldom strictly enforced except in times of trouble.

THE PLANTATION MISTRESS The mistress of the plantation, like the master, seldom led a life of idle leisure. She supervised the domestic household in the same way the planter took care of the business, overseeing the supply and preparation of food and linens, the house-cleaning and care of the sick, and a hundred other details. Mary Boykin Chesnut of South Carolina complained that “there is no slave like a wife.” The wives of all but the most wealthy planters were expected to supervise the domestic activities of the household and manage the slaves to boot. The son of a Tennessee slaveholder remembered that his mother and grandmother were “the busiest women I ever saw.”

White women living in a slaveholding culture confronted a double standard in terms of moral and sexual behavior. While they were expected to

behave as exemplars of Christian piety and sexual purity, their husbands, brothers, and sons often followed an unwritten rule of self-indulgent hedonism. “God forgive us,” Mary Chesnut wrote in her diary,

but ours is a monstrous system. Like the patriarchs of old, our men live all in one house with their wives and their [enslaved] concubines; and the mulattoes one sees in every family partly resemble the white children. Any lady is ready to tell you who is the father of all the mulatto children in everybody’s household but her own. Those, she seems to think, drop from the clouds.

Such a double standard both illustrated and reinforced the arrogant authoritarianism displayed by many male planters. Yet for all their private complaints and daily burdens, few plantation mistresses engaged in public criticism of the prevailing social order and racist climate.

THE MIDDLE CLASS Overseers on the largest plantations generally came from the middle class of small farmers or skilled workers or were younger sons of planters. Most aspired to become slaveholders themselves, but others were constantly on the move in search of more lucrative opportunities. Occasionally there were black overseers, but the highest management position to which a slave could aspire was usually that of “driver,” placed in charge of a small group of slaves with the duty of getting them to work without creating dissension.

The most numerous white southerners were the small farmers (yeomen), those who lived with their families in modest two-room cabins rather than columned mansions. They raised a few hogs and chickens, grew some corn and cotton, and traded with neighbors more than they bought from stores. The men in the family focused their energies on outdoor labors. Women worked in the fields during harvest time but spent most of their days attending to domestic chores. Many of these “middling” farmers held a handful of slaves, but most had none.

Southern farmers were typically mobile folk, ever willing to pull up stakes and move west or southwest in pursuit of better land. They tended to be fiercely independent and suspicious of government authority, and they overwhelmingly identified with the Democratic party of Andrew Jackson and the spiritual fervor of evangelical Protestantism. Even though only a minority of the middle-class farmers held slaves, most of them supported the slave system. They feared that the slaves, if freed, would compete with them

for land, and they enjoyed the privileged status that racially based slavery afforded them. As one farmer told a northern traveler, “Now suppose they was free. You see they’d all think themselves as good as we.” Such racist sentiments pervaded the border states as well as the Deep South.

“POOR WHITES” Visitors to the Old South often had trouble telling yeomen apart from the true “poor whites,” a degraded class relegated to the least desirable land, living on the fringes of polite society. The “poor whites,” given over to hunting and fishing, to hound dogs and moonshine whiskey, were characterized by a pronounced lankness and sallowness. Speculation had it that they were descended from indentured servants or convicts transported to the colonies or that they were the weakest of the frontier population, forced to take refuge in the sand land, the pine barrens, and the swamps after having been pushed aside by the more enterprising and the more successful. But the problem was less heredity than environment, the consequence of infections and dietary deficiencies that gave rise to a trilogy of “lazy diseases”: hookworm, malaria, and pellagra, all of which produced an overpowering lethargy. Many “poor whites” displayed a morbid craving to chew clay, from which they got the name dirt eaters; the cause was a dietary deficiency, although a folklore grew up about the nutritional and medicinal qualities of certain clays. Around 1900 modern medicine discovered the causes of and cures for these diseases. By 1930 they had practically disappeared, taking with them many of the stereotypes.

HONOR AND VIOLENCE From colonial times most southern white men prided themselves on adhering to a moral code centered on a prickly sense of honor. Such a preoccupation with masculine honor was common among Germanic and Celtic peoples (the Scottish, Irish, Scotch-Irish, Cornish, and Welsh), from whom most white southerners were descended. It flourished in hierarchical rural societies, where face-to-face relations governed social manners. The dominant ethical code for the southern white elite included a combative sensitivity to slights; loyalty to family, locality, state, and region; deference to elders and social “betters”; and an almost theatrical hospitality. Southern men displayed a fierce defense of female purity and a propensity to magnify personal insults into capital offenses.

The preoccupation of southern white men with a sense of honor steeped in violence found outlets in several popular rituals. Like their Celtic and English ancestors, white southerners hunted, rode, and gambled—over cards, dice, horse racing, and cockfighting. All those activities provided arenas for masculine camaraderie as well as competition.

Southern men of all social classes were preoccupied with an often reckless manliness. Duels constituted the ultimate public expression of personal honor and manly courage. Although not confined to the South, dueling was much more common there than in the rest of the young nation, a fact that gave rise to the observation that southerners would be polite until they were angry enough to kill you. Dueling was outlawed in the northern states after Aaron Burr killed Alexander Hamilton in 1804, and a number of southern states and counties banned the practice as well—but the prohibition was rarely enforced. Amid the fiery antebellum political debates over nullification, abolition, and the fate of slavery in the territories, clashing opinions often ended in duels. Many of the most prominent southern leaders engaged in duels—congressmen, senators, governors, editors, and planters. The roster of participants included Andrew Jackson, Henry Clay, Sam Houston, and Jefferson Davis.

Scene in Washington

This caricature of the prominent Whig newspaper editor James Watson Webb appeared after Webb provoked a duel between two congressmen in 1838. He is shown armed with a sword cane, a musket, a knife, and several pistols and is trailed by a turkey, a symbol of his arrogance.

BLACK SOCIETY IN THE SOUTH

Slavery was one of the fastest growing elements of American life during the first half of the nineteenth century. In 1790 there were fewer than 700,000 enslaved blacks in the United States. By 1830 there were more than 2 million, and by 1860 there were almost 4 million. From its American inception in 1619, the enslavement of Africans was a dynamic, ever-changing institution. Throughout the seventeenth and well into the eighteenth centuries, slavery was largely an uncoded system of forced labor practiced in most New World colonies. Black enslaved workers were treated largely like

white indentured servants. After the Revolution, however, slavery increasingly became a highly regulated institution limited to the South. People referred to it as the peculiar institution because it so flagrantly violated the principle of individual freedom that served as the basis of the Declaration of Independence. During the antebellum era, slavery became such a powerful engine of economic development—for both the southern cotton crop and the New England textile industry—that its mushrooming significance defied domestic and international criticism. By 1860 the dollar value of southern slavery outstripped the value of all banks, railroads, and factories combined. Slavery was the most important force shaping American history in the first half of the nineteenth century. Yet by no means was it monolithic in character, nor was it necessarily inescapable.

“FREE PERSONS OF COLOR” In the Old South free persons of color occupied an uncertain status, balanced somewhere between slavery and freedom, subject to racist legal restrictions not imposed upon whites. Free blacks attained their status in a number of ways. Over the years some slaves were able to purchase their freedom, while some gained freedom as a reward for wartime military service. Others were simply freed by conscientious masters, either in their wills or during their lifetime. By 1860 there were 260,000 free blacks in the slave states.

Yarrow Mamout

Mamout, an African Muslim, was sold into slavery, purchased his freedom, acquired property, and settled in Georgetown (now part of Washington, D.C.). Charles Willson Peale executed this portrait in 1819, when Mamout was over 100 years old.

Among them were a large number of mulattoes, people of mixed racial ancestry. The census of 1860 reported 412,000 persons of mixed parentage in the United States, or about 10 percent of the black population, probably a drastic undercount. In urban centers like Charleston and especially New Orleans, “colored” society became virtually a third caste, a new people who occupied a status somewhere between that of blacks and that of whites. Some mulattoes built substantial fortunes and even became slaveholders. They often operated inns serving a white clientele. Jehu Jones, for instance, was the “colored” proprietor of one of Charleston’s best hotels. In

Louisiana a mulatto, Cyprien Ricard, paid \$250,000 for an estate that had ninety-one slaves. In Natchez, Mississippi, William Johnson, son of a white father and a mulatto mother, operated three barbershops, owned 1,500 acres of land, and held several slaves.

Black slaveholders were few in number, however. The 1830 census revealed that 3,775 free blacks, about 2 percent of the total free black population, held 12,760 slaves. Although most of the black slaveholders were in the South, some lived in Rhode Island, Connecticut, Illinois, New Jersey, New York, and the border states. Some blacks held slaves for humanitarian purposes. One minister, for instance, bought slaves and then enabled them to purchase their freedom from him on easy terms. Most often, black slaveholders were free blacks who bought their own family members with the express purpose of freeing them.

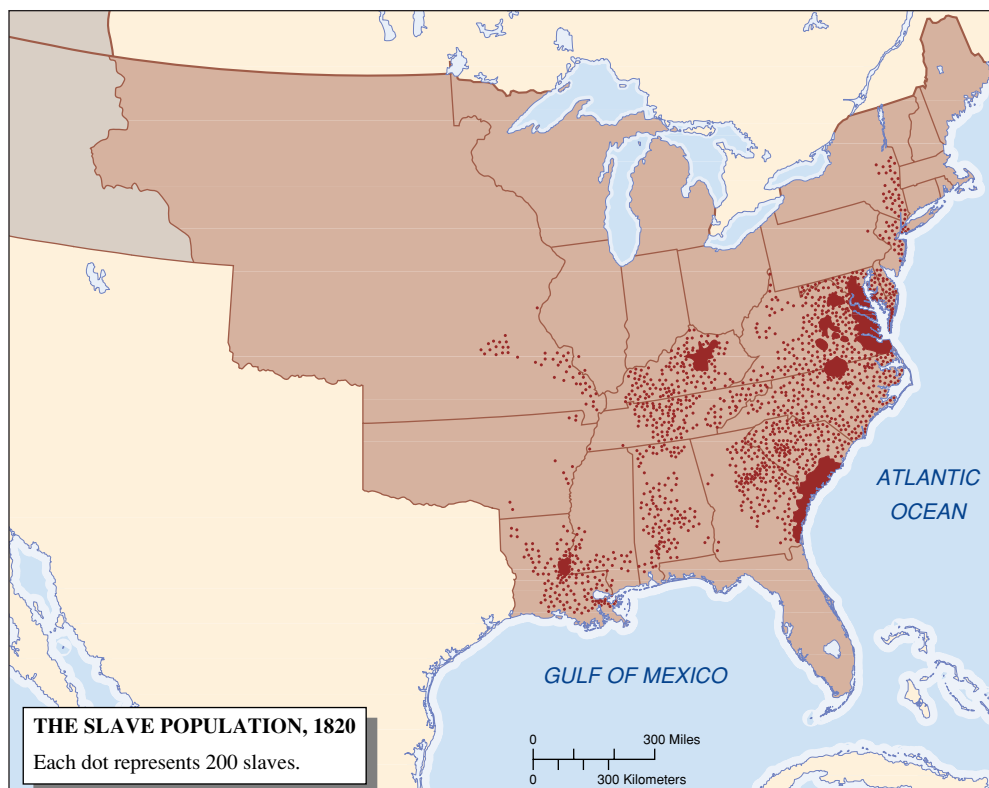

Free Blacks

This badge, issued in Charleston, South Carolina, was worn by a free black so that he would not be mistaken for someone's "property."

THE TRADE IN SLAVES The rise in the slave population occurred mainly through a natural increase, the rate of which was very close to that of whites at the time. When the African slave trade was outlawed in 1808, it seemed to many a step toward the extinction of slavery, but the expansion of the cotton economy, with its voracious appetite for manual workers, soon created such a vested interest in slaves as to dash those hopes. Shutting off the importation of slaves only added to the value of those already present.

The rise in the cash value of enslaved workers brought better treatment. "Massa was purty good," one ex-slave recalled. "He treated us jus' 'bout like you would a good mule." Another said his master "fed us reg'lar on good, 'stantial food, jus' like you'd tend to you hoss, if you had a real good one." Some slaveholders hired wage laborers, often Irish immigrants, for ditching and other dangerous work rather than risk the lives of the more valuable slaves.

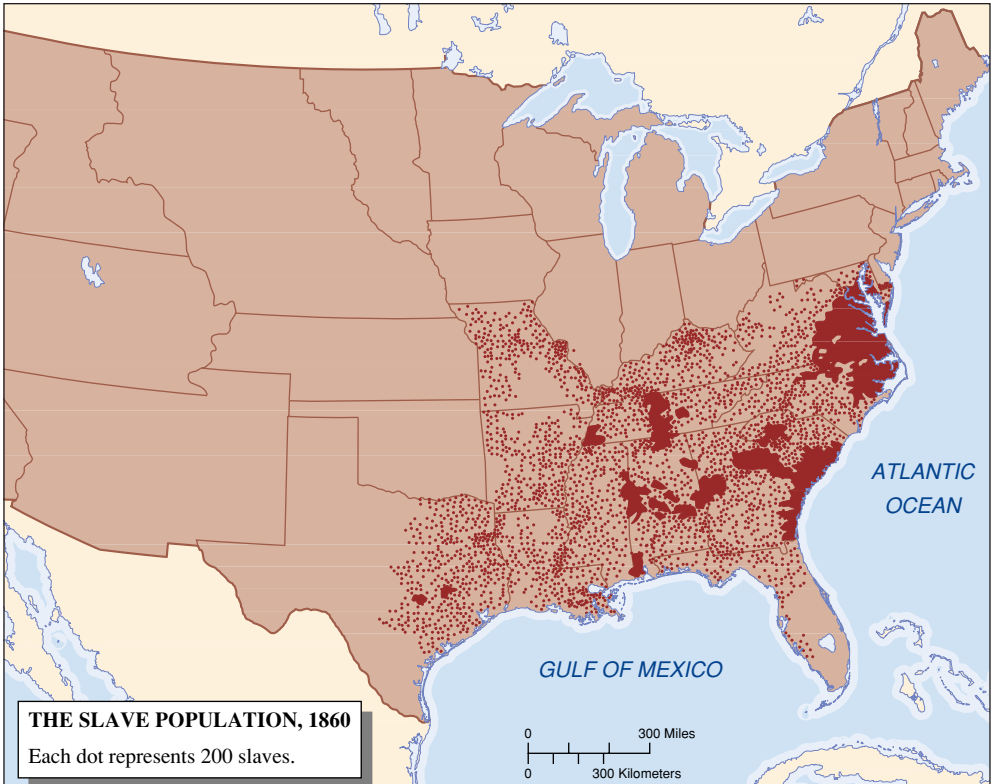

The end of the foreign slave trade gave rise to a flourishing domestic trade, with slaves moving mainly from the used-up lands of the Southeast into the booming new country of the Old Southwest. The slave trade peaked just before 1837, then slacked off, first because of economic depression, then

Consider where the largest populations of slaves were clustered in the South in 1820. Why were most slaves clustered in these regions of the South and not in others? What were the limitations on the spread of slavery? How was the experience of plantation slavery different for men and women?

because agricultural reform and recovery renewed the demand for slaves in the upper South. Many slaves moved south and west with the planters, but there also developed an organized business, with brokers, pens, and auctioneers. The worst aspect of the domestic slave trade was the separation of children from parents and husbands from wives. Only Louisiana and Alabama (from 1852) forbade separating a child under ten from his or her mother, and no state forbade the separation of husband from wife.

PLANTATION SLAVERY Most slaves labored on plantations. The preferred jobs were as household servants and skilled workers, including blacksmiths and carpenters, or a special assignment, such as boatman or cook.

Why did slavery spread west? Compare this map with the map of cotton production on page 535. What patterns do you see? Why would slaves have resisted migrating west?

Field hands were usually housed in one- or two-room wooden shacks with dirt floors, some without windows. A set of clothes was distributed twice a year, but shoes were generally provided only in winter. On larger plantations there was sometimes an infirmary and a regular sick call, but most planters resorted to doctors mainly in cases of severe illness. Based upon detailed records from eleven plantations in the lower South during the antebellum era, scholars have calculated that half of all slave babies died in the first year of life, a mortality rate more than twice that of whites. Field hands worked long hours, from dawn to dusk. The difference between a good owner and a bad one, according to one ex-slave, was the difference between one who did not “whip too much” and one who “whipped till he’s bloodied you and

blistered you.” Over 50,000 slaves a year escaped. Those not caught often headed for Mexico, the northern states, or Canada.

THE EXPERIENCE OF SLAVE WOMEN

Although black men and women often performed similar labors, they did not experience slavery in the same way. Slaveholders had different expectations for the men and women they controlled. During the colonial period male slaves vastly outnumbered females. By the mid-eighteenth century, however, the gender ratio had come into balance. Once slaveholders realized how profitable a fertile female slave could be over time, giving birth every two and a half years to a child who eventually could be sold, they began to encourage repro-

duction through a variety of incentives. Pregnant slaves were given less work to do and more food. Some plantation owners rewarded new mothers with dresses and silver dollars.

But if motherhood endowed enslaved women with stature and benefits, it also entailed exhausting demands. Within days after childbirth, the mother was put to work spinning, weaving, or sewing. A few weeks thereafter mothers were sent back to the fields; breast-feeding mothers were often forced to take their babies to the fields with them. Enslaved women were expected to do “man’s work” outside: they cut trees, hauled logs, plowed fields with mules, dug ditches, spread fertilizer, slaughtered and dressed animals, hoed corn, and picked cotton. As a slave who escaped reported, “Women who do outdoor work are used as bad as men.”

Once women passed their childbearing years, around the age of forty, their workload was increased. Slaveholders put middle-aged women to work full-time in the fields or performing other outdoor labor. On larger plantations elderly women, called grannies, kept the children during the day while their mothers worked outside. Enslaved women of all ages usually worked in sex-segregated gangs, which enabled them to form close bonds with one another. To enslaved African Americans, developing a sense of community and camaraderie meant emotional and psychological survival.

The Business of Slavery

The offices of Price, Birch and Company, dealers in slaves, Alexandria, Virginia.

Unlike enslaved men, enslaved girls and women faced the threat of sexual abuse. Sometimes a white master or overseer would rape a woman in the fields or cabins. Sometimes he would lock a woman in a cabin with a male slave whose task was to impregnate her. Female slaves responded to such sexual abuse in different ways. Some seduced their master away from his wife. Others fiercely resisted the sexual advances—and were usually whipped or even killed for their disobedience. Some women killed their babies rather than see them grow up in slavery.

Women had fewer opportunities than men to escape slavery. Women tended to lack the physical strength and endurance required to run away and stay ahead of relentless pursuers. An even greater impediment was a mother's responsibility to her children. A few enslaved women did escape, but most of them learned to cope and resist within the confines of captivity. For them resistance to slavery took forms other than flight. Some engaged in truancy, hiding for several days at a time. Many feigned illness to avoid work. Others sabotaged food or crops or stole from owners. Several slave women started fires. A few killed their masters, most often by poison.

CELIA Occasionally a single historical incident involving ordinary people can illustrate the web of laws and customs within a society. Such is the case of a teenage girl named Celia. In 1850, fourteen-year-old Celia was purchased

by Robert Newsom, a prosperous, respected Missouri farmer who had six other slaves, all males. Newsom told his daughters that he had bought Celia to work as their domestic servant. In fact, however, the recently widowed Newsom wanted a sexual slave. After purchasing Celia, he raped the girl while taking her back to his farm. For the next five years, Newsom treated Celia as his mistress, even building her a brick cabin fifty yards from his house. During that time she gave birth to two children, presumably his offspring. By 1855 Celia had fallen in love with another slave, George, who demanded that she “quit the old man.” Desperate for relief from her tormentor, Celia appealed to Newsom’s two grown daughters, but they either could not or would not provide assistance.

Soon thereafter, on June 23, 1855, the sixty-five-year-old Newsom entered Celia’s cabin, ignored her frantic appeals, and kept advancing until she struck and killed him with a large stick. When family members and neighbors realized that Newsom had disappeared, they questioned George, who eventually pointed to Celia. She finally confessed but refused to implicate George or anyone else in Newsom’s death.

Celia was not allowed to testify at her trial because she was a slave. Her attorneys, all of them slaveholders, argued that the right of white women to defend themselves against sexual assault should be extended to enslaved women. The prevailing public opinion in the slave states, however, stressed that the white rape of a slave was not a crime. At worst, it was trespassing. But Newsom could not be accused of trespassing upon his own property, so the judge and jury, all white men, agreed with prevailing sentiment; they pronounced Celia guilty. On December 21, 1855, after two months of trials and futile appeals, Celia was hanged.

The grim story of Celia’s brief life and abused condition highlights the skewed power structure in southern society before the Civil War. Celia bore a double burden, that of a slave and that of a woman living in a male-dominated society.

SLAVE REBELLIONS Organized slave resistance was rare in the face of overwhelming white authority and firepower. In the nineteenth century only three major slave insurrections were attempted, two of which were betrayed before they got under way. In 1800 a slave named Gabriel on a plantation near Richmond hatched a plot involving perhaps 1,000 others to seize key points in the city and start a general slaughter of whites. Twenty-five of his conspirators were executed and ten others deported to the West Indies.

The Denmark Vesey plot in Charleston, discovered in 1822, was believed to be a plan of a free black to assault the white population, seize ships in the

harbor, burn the city, and head for Santo Domingo. It never got off the ground. Instead, thirty-five supposed slave rebels were executed and thirty-four were deported. The city also responded by curtailing the liberties of free blacks. In Charleston, blacks outnumbered whites, and the ruling elite was hysterically determined to quash any slave uprising. In the aftermath of the Vesey trial and executions, the South Carolina legislature appropriated funds to build a new arsenal and citadel in Charleston to deter any future unrest.

Only the Nat Turner insurrection of August 1831 in rural Southampton County, Virginia, got beyond the planning stage. Turner, a black overseer, was also a self-anointed religious exhorter who professed a divine mission in leading a slave rebellion. The revolt began when a small group of slaves killed the adults and children in Turner's master's household and set off down the road, repeating the process at other farmhouses, where other slaves joined in. Before it ended, at least fifty-five whites had been killed. The militia killed large numbers of slaves indiscriminately in the process of putting down the rebels. Seventeen slaves were hanged.

Most slaves, however, did not openly rebel or run away. Instead, they more often retaliated against oppression by malingering or engaging in outright sabotage. Yet there were constraints on such behavior, for laborers would likely eat better on a prosperous plantation than on one they had reduced to poverty. And the shrewdest slaveholders knew that they would more likely benefit from offering rewards than from inflicting pain. Plantations based upon the profit motive fostered mutual dependency between slaves and their masters, as well as natural antagonism. And in an agrarian society in which personal relations counted for much, blacks could win concessions that moderated the harshness of slavery, permitting them a certain degree of individual and community development.

FORGING A SLAVE COMMUNITY To generalize about slavery is to miss elements of diversity from place to place and time to time. The experience was as varied as people are. Enslaved African Americans were certainly victims, but to stop at so obvious a perception would be to miss an important story of endurance, resilience, and achievement. If ever there was an effective melting pot in American history, it may have been that in which Africans with a variety of ethnic, linguistic, and tribal origins fused to form a new community and a new culture as African Americans. Slave culture incorporated many African elements, especially in areas with few whites. Among the Gullahs of the South Carolina and Georgia coast, for example, a researcher found as late as the 1940s more than 4,000 words still in use from

the languages of twenty-one African tribes. Elements of African culture have thus survived, adapted, and interacted with those of the other cultures with which they came in contact.

SLAVE RELIGION AND FOLKLORE Among the most important manifestations of slave culture was its dynamic religion, a mixture of African and Christian elements. In religion, slaves found both balm for the soul and release for their emotions. Most Africans brought with them to the Americas a concept of a Creator, or Supreme God, whom they could recognize in the Christian Jehovah, and lesser gods, whom they might identify with Christ, the Holy Ghost, and the saints, thereby reconciling their African beliefs with Christianity. Alongside the church they maintained beliefs in spirits (many of them benign), magic, and conjuring. Belief in magic is in fact a common human response to conditions of danger or helplessness.

Slaves found great comfort in religion. Masters sought to instill lessons of Christian humility and obedience, but African Americans identified their plight with that of the Israelites in Egypt or of the Christ who suffered as they did. And the ultimate hope of a better world gave solace in this one. Some slaveholders encouraged religious meetings among their slaves, many of them believing that an enslaved Christian would be a better slave. "Church was what they called it," one former slave remembered, "but all that [white] preacher talked about was for us slaves to obey our masters and not to lie and steal."

Such a manipulated Christianity alienated many African Americans, and most sought to create a genuine faith that spoke to their own spiritual and human needs. This required many of them to worship in secret, stealing away from their quarters to hold "bush meetings." A slave preacher explained that the "way in which we worshiped is almost indescribable. The singing helped provoke a certain ecstasy of emotion, clapping of hands, tossing of heads, which would continue without cessation about half an hour. The old house partook of the ecstasy; it rang with their jubilant shouts, and shook in all its joints."

Slaves found the Bible edifying in its tributes to the poor and oppressed, and they embraced its promise of salvation through Jesus. Likewise, the lyrics of religious "spirituals" helped slaves endure the strain of field labor and provided them with a musical code with which to express their own desire for freedom on earth. The former slave Frederick Douglass stressed that "slaves sing most when they are most unhappy," and spirituals offered them deliverance from their worldly woes.

African culture influenced a music of rhythmic complexity, forms of dance and body language, spirituals and secular songs, and folk tales. Among

oppressed peoples, humor often becomes a means of psychological release, and there was a lively humor in the adapted West African trickster tales of rabbits, tortoises, and Anansi the spider—relatively weak creatures who outwit stronger animals. African-American folklore tended to be realistic in its images of wish fulfillment. Until after emancipation there were few stories of superhuman heroes in American folklore, except for tales about captive Africans who escaped slavery by flying home across the ocean.

THE SLAVE FAMILY That so many slaves were able to sustain familial bonds is a testament to their resourcefulness and resilience. Slave marriages had no legal status, but slaveholders generally seem to have accepted marriage as a stabilizing influence on the plantation. Sometimes they performed the marriages themselves or had a minister celebrate a formal wedding. Whatever the formalities, the norm for the slave community, as for the white, was the nuclear family, with the father regarded

Plantation of J. J. Smith, Beaufort, South Carolina, 1862

Several generations of a family raised in slavery.

as head of the household. Most slave children were socialized by means of the nuclear family, which afforded some degree of independence from white influence. Childhood was short for slaves. At five or six years of age, children were given work assignments: they collected trash and firewood, picked cotton, scared away crows, weeded, and ran errands. One observer noted that this “army of juveniles are in full training to take the places” of adult workers. By age ten they were full-time field hands. Children were often sold to new masters. In Missouri an enslaved woman saw six of her seven children, aged one to eleven, separated from her and sold to six separate masters.

THE CULTURE OF THE SOUTHERN FRONTIER

There was substantial social and cultural diversity within the South during the three decades before the Civil War. The region known as the Old Southwest, for example, is perhaps the least well known. It includes the states and territories west of Georgia—Alabama, Mississippi, Arkansas, Louisiana, and Texas—as well as the frontier areas of Tennessee, Kentucky, and Florida.

Largely unsettled until the 1820s, this region bridged the South and the West, exhibiting characteristics of both areas. Raw and dynamic, filled with dangers, uncertainties, and opportunities, it served as a powerful magnet, luring thousands of settlers from Virginia, Georgia, and the Carolinas when the seaboard economy faltered during the 1820s and 1830s. The migrating southerners carved out farms, built churches, raised towns, and eventually brought culture and order to a raw frontier. As they took up new lives and occupations, the southern pioneers transplanted many practices and institutions from the coastal states. But they also fashioned a distinct new set of cultural values and social customs.

THE DECISION TO MIGRATE By the late 1820s the agricultural economy of the upper South was suffering from depressed commodity prices and soil exhaustion. Large farm families in particular struggled to provide each child with sufficient land and resources with which to subsist and maintain the family legacy. Thus the dwindling economic opportunities available in the Carolinas and Virginia led many to migrate to the Old Southwest. Like their northern counterparts, restless southern sons of the planter and professional elite wanted to make it on their own, to be “self-made men,” economically self-reliant and socially independent.

Women were underrepresented among migrants to the Old Southwest. Few were interested in relocating to a disease-ridden, violent, and primitive territory. The new region did not offer them independence or adventure. In general, women more than men regretted the loss of kinship ties that migration entailed. To them a stable family life was more important than the prospect of material gain. As a Carolina woman prepared to depart for Alabama, she confided to a friend that “you *cannot* imagine the state of despair that I am in.” Another said that “my heart bleeds within me” at the thought of the “many tender cords [of kinship] that are now severed forever.” Others feared that life on the frontier would produce a “dissipation” of morals. They heard vivid stories of lawlessness, drunkenness, gambling, and miscegenation.

Enslaved blacks had many of the same reservations. Almost 1 million captive blacks were taken to the Old Southwest during the antebellum era, most of them in the 1830s. Like the white women, they feared the harsh working conditions and torpid heat and humidity of the new territory. They were also despondent at the breakup of their family ties.

THE JOURNEY AND SETTLEMENT Most of the migrants to the Old Southwest headed for the fertile lands of Alabama, Mississippi, and central Tennessee. The typical trek was about 500 miles. Once in the new territory the pioneers bought land that had been appropriated from Indians. Parcels of 640 acres sold for as little as \$2 an acre; land in Alabama’s fertile black belt brought higher prices. As cotton prices soared in the 1830s, aspiring planters bought as much land and as many slaves as possible. As a result, the average size of the farms and plantations in the Old Southwest was larger than that in the Carolinas and Virginia. But the Old Southwest was much more unhealthy than the Carolina Piedmont. The hot climate, contaminated water, and poor sanitation spawned an epidemic of disease. Malaria was especially common. Women and slaves in particular found their harsh new surroundings uninviting. Life in tents and rude log cabins made many newcomers yearn for the material comforts they had left behind. A male settler reported that “all the men is very well pleased but the women is not very satisfied.”

A MASCULINE CULTURE The southern frontier environment prompted important changes in sex roles, and relations between men and women became even more inequitable. Young adult men indulged themselves in activities that would have generated disapproval in the more settled seaboard society. They drank, gambled, fought, and gratified their sexual desires. In 1834 a South Carolina migrant urged his brother to move west and

join him because “you can live like a fighting cock with us.” Alcohol consumption hit new heights. Most Old Southwest plantations had their own stills to manufacture whiskey, and alcoholism ravaged frontier families. Violence was also commonplace. A Virginian who settled in Mississippi fought in fourteen duels, killing ten men in the process. The frequency of fights, stabbings, shootings, and murders shocked visitors. So, too, did the propensity of white men to take sexual advantage of enslaved women. An Alabama woman married to a lawyer and politician was outraged by the “bestly passions” of the white men who fathered slave children and then sold them like livestock. She also recorded in her diary instances of men regularly beating their wives. Wives, it seems, had little choice but to endure the mistreatment because, as one woman wrote about a friend whose husband abused her, she was “wholly dependent upon his care.”

ANTI-SLAVERY MOVEMENTS

EARLY OPPOSITION TO SLAVERY Scattered criticism of slavery developed in the North and the South in the decades after the Revolution, but the first organized emancipation movement appeared with the formation, in 1817, of the American Colonization Society, which proposed to return freed slaves to Africa. Its supporters included such prominent figures as James Madison, James Monroe, Henry Clay, John Marshall, and Daniel Webster. Some backed it because of their opposition to slavery, while others saw it as a way to bolster slavery by getting rid of potentially troublesome free blacks. Leaders of the free black community denounced it from the start. America, they stressed, was their native land. Nevertheless, in 1821, agents of the American Colonization Society acquired from local chieftains in West Africa a parcel of land that became the nucleus of a new country. In 1822 the first freed slaves arrived there, and twenty-five years later the society relinquished control to the Free and Independent Republic of Liberia. But given its uncertain purpose, the African colonization movement received only meager support from either anti-slavery or pro-slavery elements. In all only about 15,000 blacks migrated to Africa up to 1860, approximately 12,000 with the help of the Colonization Society. The number was infinitesimal compared with the number of slave births.

FROM GRADUALISM TO ABOLITIONISM Meanwhile, in the early 1830s the anti-slavery movement took a new route. Its initial efforts to promote a gradual end to slavery by prohibiting slavery in the new western

territories and encouraging manumission gave way to demands for immediate abolition everywhere. In 1831 William Lloyd Garrison began publication in Boston of a new anti-slavery newspaper, the *Liberator*. Garrison, who rose from poverty in Newburyport, Massachusetts, had been apprenticed to a newspaper publisher and had edited a number of anti-slavery papers but had grown impatient with the strategy of moderation. In the first issue of the *Liberator*, he renounced “the popular but pernicious doctrine of gradual emancipation” and vowed, “I will be as harsh as truth, and as uncompromising as justice.”

William Lloyd Garrison

Garrison was a vocal abolitionist and advocate for immediate emancipation.

Garrison’s militancy elicited outraged retorts from slaveholders. Their angry defense gave the *Liberator* more exposure than anything the newspaper actually said. In the South literate blacks would more likely encounter Garrison’s ideas in the local newspapers than in the few copies of the *Liberator* that found their way to them. Slaveholders’ outrage mounted after the Nat Turner insurrection in August 1831. Garrison, they assumed, bore a large part of the responsibility for the affair, but there is no evidence that Nat Turner had ever heard of him, and Garrison said that he had not a single subscriber in the South at the time. What is more, however violent his language, Garrison was a pacifist, opposed to the use of force.

During the 1830s Garrison became the nation’s most fervent, principled, and unyielding foe of slavery. In 1831 he and his followers set up the New England Anti-Slavery Society. Two years later two wealthy New York merchants, Arthur and Lewis Tappan, founded the American Anti-Slavery Society with the help of Garrison and others. They hoped to exploit the publicity generated when the British anti-slavery movement, also in 1833, induced Parliament to end slavery, and compensate slaveholders, throughout the British Empire.

The American Anti-Slavery Society sought to convince people “that Slaveholding is a heinous crime in the sight of God, and that the duty, safety, and best interests of all concerned, require its *immediate abandonment*, without expatriation.” The society went beyond the issue of emancipation to argue that blacks should “share an equality with the whites, of civil and religious

privileges.” The group issued a barrage of propaganda for its cause, including periodicals, tracts, agents, lecturers, organizers, and fund-raisers.

A SPLIT IN THE MOVEMENT As the anti-slavery movement spread, debates over tactics intensified. The Garrisonians, mainly New Englanders, were radicals who felt that American society had been corrupted from top to bottom and needed universal reform. Garrison embraced just about every important reform movement of the day: abolition, temperance, pacifism, and women’s rights. He also championed equal social and legal rights for African Americans. He broke with the organized church, which to his mind was in league with slavery. The federal government was all the more so. The Constitution, he said, was “a covenant with death and an agreement with hell.” Garrison therefore refused to vote.

Other reformers were less dogmatic. They saw American society as fundamentally sound and concentrated on purging it of slavery. Garrison struck them as an impractical fanatic. A showdown came in 1840 on the issue of women’s rights. Women had joined the abolition movement from the start, but largely in groups without men. Then the activities of the Grimké sisters brought the issue of women’s rights to center stage.

Sarah and Angelina Grimké, daughters of a prominent South Carolina slaveholding family, had broken with their parents and moved north to embrace Quakerism, abolitionism, feminism, and other reforms. Having attended a New York training conference for anti-slavery activists organized by Theodore Weld (whom Angelina later married), they set out speaking first to audiences of women and eventually to both men and women.

Their behavior inspired the Congregational clergy of Massachusetts to chastise the sisters for engaging in unfeminine activity. The chairman of the Connecticut Anti-Slavery Society declared, “No woman shall speak or vote where I am a moderator.” Catharine Beecher reminded the activist sisters that women occupied “a subordinate relation in society to the other sex” and should therefore limit their activities to the “domestic and social circle.” Angelina Grimké stoutly rejected the conventional arguments. “It is a woman’s right,” she insisted, “to have a voice in all laws and regulations by which she is to be governed, whether in church or in state.”

The debate over the role of women in the anti-slavery movement crackled and simmered until it finally exploded in 1840. At the Anti-Slavery Society’s meeting that year, the Garrisonians insisted on the right of women to participate equally in the organization and carried their point. They did not commit the group to women’s rights in any other way, however. Contrary opinion, mainly from the Tappans’ New York group, ranged from

outright anti-feminism to the fear of scattering shots over too many reforms. The New Yorkers thus broke away to form the American and Foreign Anti-Slavery Society.

BLACK ANTI-SLAVERY ACTIVITY White male abolitionists also balked at granting full recognition to black abolitionists of either sex. Often blindly patronizing, white abolitionists expected free blacks to take a back-seat in the movement. Despite the invitation to form separate groups, African-American leaders were active in the white societies from the beginning. Three attended the organizational meeting of the American Anti-Slavery Society in 1833, and some—notably former slaves, who could speak from firsthand experience—became outstanding agents for the movement. Garrison pronounced such men as Henry Bibb and William Wells Brown, both escapees from Kentucky, and Frederick Douglass, who fled Maryland, “the best qualified to address the public on the subject of slavery.”

Douglass, blessed with an imposing frame and a simple eloquence, became the best-known black man in America. “I appear before the immense assembly this evening as a thief and a robber,” he told a Massachusetts group in 1842. “I stole this head, these limbs, this body from my master, and ran off with them.” Fearful of capture after publishing his *Narrative of the Life of Frederick Douglass* (1845), he left for an extended lecture tour of the British Isles, returning two years later with enough money to purchase his freedom. He then started an abolitionist newspaper for blacks, the *North Star*, in Rochester, New York.

Douglass’s *Narrative* was but the best known among hundreds of such accounts. Escapees often made it out of slavery on their own—Douglass borrowed a pass from a free black seaman—but many were aided by the Underground Railroad, which grew into a vast system that concealed run-aways and spirited them to freedom, often over the Canadian border. Levi Coffin, a North Carolina Quaker who moved to Cincinnati and helped many fugitives, was the reputed president. Actually, there seems to have been more spontaneity than system to the matter, and blacks contributed more than was credited in the legend. A few intrepid refugees actually returned to the slave states to organize escapes. Harriet Tubman, the most celebrated, ventured back nineteen times.

Equally courageous was the black abolitionist Sojourner Truth. Born to slaves in New York in 1797, she was given the name Isabella but renamed herself in 1843 after experiencing a mystical conversation with God, who told her “to travel up and down the land” preaching against the sins of slavery. She did just that, crisscrossing the country during the 1840s and 1850s, exhorting audiences to support abolition and women’s rights. Having been a

Leading abolitionists.

slave until freed by a New York law in 1828, Sojourner Truth was able to speak with conviction and knowledge about the evils of the “peculiar institution” and the inequality of women. As she told a gathering of the Women’s Rights Convention in Ohio in 1851, “I have plowed, and planted, and gathered into barns, and no man could head me—and ar’n’t I a woman? I have borne thirteen children, and seen ’em mos’ all sold off into slavery, and when I cried out with a mother’s grief, none but Jesus heard—and ar’n’t I a woman?”

Through such compelling testimony, Sojourner Truth demonstrated the powerful intersection of abolitionism and women’s rights agitation, and in the process she tapped the distinctive energies that women brought to reformist causes. “If the first woman God ever made was strong enough to turn the world upside down all alone,” she concluded in her address to the Ohio gathering, “these women together ought to be able to turn it back, and get it right side up again!”

REACTIONS TO ABOLITION Even in the North, abolitionists had to face down hostile crowds who disliked blacks or found anti-slavery agitation bad for business. In 1837 a mob in Alton, Illinois, killed the anti-slavery

editor Elijah P. Lovejoy, giving the movement a martyr to the causes of both abolition and freedom of the press.

In the 1830s abolition took a political turn, focusing at first on Congress. One shrewd strategy was to deluge Congress with petitions for abolition in the District of Columbia. Most such petitions were presented by former president John Quincy Adams, elected to the House from Massachusetts in 1830. In 1836, however, the House adopted a rule to lay abolition petitions automatically on the table, in effect ignoring them. Adams, “Old Man Eloquent,” stubbornly fought this “gag rule” as a violation of the First Amendment and hounded its supporters until the rule was finally repealed in 1844.

Meanwhile, in 1840, the year of the schism in the anti-slavery movement, a small group of abolitionists organized a national convention in Albany, New York, and launched the Liberty party, with James G. Birney, onetime slaveholder of Alabama and Kentucky, as its candidate for president. Birney, converted to abolitionism by Theodore Weld, had moved to Ohio and in 1837 had become executive secretary of the American Anti-Slavery Society. In the 1840 election he polled only 7,000 votes, but in 1844 he won 60,000, and from that time forth an anti-slavery party contested every national election until Abraham Lincoln won the presidency in 1860.

THE DEFENSE OF SLAVERY James Birney was but one of several southerners propelled north during the 1830s by the South’s growing hostility to emancipationist ideas. The anti-slavery movement in the upper South had its last stand in 1831–1832, when the Virginia legislature debated a plan of gradual emancipation and African colonization, then rejected it by a vote of seventy-three to fifty-eight. Thereafter leaders of southern thought worked out an elaborate intellectual defense of slavery, presenting it as a positive good.

The evangelical Christian churches, which had widely condemned slavery at one time, gradually turned pro-slavery, at least in the South. Biblical passages were cited to buttress slaveholding. Ministers of all denominations joined in the argument. Had not the patriarchs of the Hebrew Bible held people in bondage? Had not Saint Paul advised servants to obey their masters and told a fugitive servant to return to his master? And had not Jesus remained silent on the subject, at least so far as the Gospels reported his words? In 1843–1844 disputes over slavery split two great denominations along sectional lines and led to the formation of the Southern Baptist Convention and the Methodist Episcopal Church, South. Presbyterians, the only other major denomination to split, did not do so until the Civil War.

A more fundamental feature of the pro-slavery argument stressed the racial inferiority of blacks. Other arguments took a more “practical” view. Not only was slavery profitable, one argument went, but it was also a matter of social necessity. Thomas Jefferson, for instance, in his *Notes on the State of Virginia* (1785), had argued that whites and emancipated slaves could not live together without the risk of a race war triggered by the recollection of past injustices. What is more, it seemed clear to some defenders of slavery that blacks could not be expected to work under conditions of freedom. They were too shiftless and improvident, the argument went, and in freedom would be a danger to themselves as well as to others. White workers, on the other hand, feared the competition for jobs if slaves were freed.

A new argument on behalf of slavery arose in the late 1850s. The Virginian George Fitzhugh and others began to defend slavery as better for workers than freely chosen employment because it provided them with security in sickness and old age, unlike the “wage slavery” of northern industry, which exploited workers for profit and then cast them away. Within one generation such ideas had triumphed in the white South over the post-Revolutionary apology for slavery as an evil bequeathed by the nation’s forefathers. Opponents of the orthodox faith in slavery as a positive good were either silenced or exiled. Freedom of thought in the Old South had become a victim of the region’s growing obsession with the preservation and expansion of slavery—at all costs.

MAKING CONNECTIONS

- The abolition movement never represented the majority of northerners. As Chapter 16 shows, however, by the end of the 1850s most voters in the North supported the idea of limiting the expansion of slavery westward, if not the abolition of it in the southern states.
- The Civil War brought great changes to southerners, both black and white. Chapter 17 describes the effect of the war on southern society.
- There are striking contrasts between the Old South of this chapter and the New South of Chapter 19.

John C. Calhoun of South Carolina and Ralph Waldo Emerson of Massachusetts had little in common, but both men sensed in the Mexican War the omens of a national disaster. Mexico was “the forbidden fruit; the penalty of eating it would be to subject our institutions to political death,” Calhoun warned. “The United States will conquer Mexico,” Emerson conceded, “but it will be as the man swallows the arsenic. . . . Mexico will poison us.” Wars, as both men knew, have a way of corrupting ideals and breeding new wars, often in unforeseen ways. America’s winning of the war with Mexico gave rise to quarrels over newly acquired land, quarrels that set in motion a series of disputes that led to a crisis of union.

SLAVERY IN THE TERRITORIES

THE WILMOT PROVISO The Mexican War was less than three months old when the seeds of a new political conflict began to sprout. On August 8, 1846, a freshman Democratic congressman from Pennsylvania, David Wilmot, delivered a provocative speech to the House in which he endorsed the annexation of Texas as a slave state. But slavery had come to an end in the rest of Mexico, and if new Mexican territory should be acquired, Wilmot declared, “God forbid that we should be the means of planting this institution upon it.” Drawing upon the words of the Northwest Ordinance, he proposed that in any additional land acquired from Mexico, “neither slavery nor involuntary servitude shall ever exist.”

The Wilmot Proviso politicized the festering debate over slavery once and for all. For a generation, since the Missouri controversy of 1819–1821, the issue had been lurking in the wings. Now, for the next two decades, it would never be far from center stage. The House adopted the Wilmot Proviso, but the Senate balked. When Congress reconvened in December 1846, President Polk, who believed a debate over slavery had no place in the conduct of the war in Mexico and dismissed the proviso as “mischievous and foolish,” prevailed upon Wilmot to withhold his amendment to any effort to annex Mexican territory, but by then others were ready to take up the cause. When a New York congressman revived the proviso, he signaled a revolt by the Van Burenite Democrats in concert with the anti-slavery forces of the North. Once again the House approved the amendment; again the Senate refused to do so. In one form or another, however, Wilmot’s idea kept cropping up. Abraham Lincoln later recalled that during his one term as a congressman, in 1847–1849, he voted for it “as good as forty times.”

John Calhoun, meanwhile, devised a thesis to counter the proviso, which he set before the Senate on February 19, 1847. Calhoun began by reasserting his pride in being a slaveholding cotton planter. He made no apologies for holding slaves and insisted that slaveholders had an unassailable right to take their slaves into any territories acquired by the United States. Wilmot’s effort to exclude slaves from Mexican territories, Calhoun declared, would violate the Fifth Amendment, which forbids Congress to deprive any person of life, liberty, or property without due process of the law, and slaves were property. By this clever stroke of logic, Calhoun took that basic guarantee of liberty, the Bill of Rights, and turned it into a basic guarantee of slavery. The irony was not lost on his critics, but the point became established southern

dogma—echoed by his colleagues and formally endorsed by the Virginia legislature.

Senator Thomas Hart Benton of Missouri, himself a slaveholder but also a Jacksonian nationalist eager to calm sectional tensions, found in Calhoun's stance a set of abstractions "leading to no result." Wilmot and Calhoun between them, he said, had fashioned a pair of shears. Neither blade alone would cut very well, but joined together they could sever the ties of union.

POPULAR SOVEREIGNTY Senator Benton and others sought to bypass the brewing conflict over slavery in the new territories. President Polk was among the first to suggest extending the Missouri Compromise, dividing free and slave territory at the latitude of 36°30' all the way to the Pacific Ocean. Senator Lewis Cass of Michigan suggested that the citizens of a territory "regulate their own internal concerns in their own way," like the citizens of a state. Such an approach would combine the merits of expediency and democracy. It would take the contentious issue of slavery in new territories out of the national arena and put it in the hands of those directly affected.

Popular sovereignty, or "squatter sovereignty," as the idea was also called, appealed to many Americans. Without directly challenging the slaveholders' access to the new lands, it promised to open them quickly to non-slaveholding farmers, who would almost surely dominate the territories. With this tacit understanding the idea prospered in the Midwest, where Stephen A. Douglas of Illinois and other prominent Democrats soon endorsed it.

When the Mexican War ended in 1848, the question of slavery in the new territories was no longer hypothetical. Nobody doubted that Oregon would become a free-soil (nonslave) territory, but it, too, was drawn into the growing controversy. Territorial status, pending since 1846, was delayed for Oregon because its provisional government had excluded slavery. To concede that provision would imply an authority drawn from the powers of Congress, since a territory was created by Congress. After much wrangling, an exhausted Congress let Oregon organize without slavery but postponed a decision on the Southwest. President Polk signed the bill on the principle that Oregon was north of 36°30', the latitude that had formed the basis of the Missouri Compromise in 1820.

Polk had promised to serve only one term; exhausted and having accomplished his major goals, he refused to run again. At the 1848 Democratic convention, Lewis Cass won the presidential nomination, but the party refused to

endorse Cass's "squatter sovereignty" plan. Instead, it simply denied the power of Congress to interfere with slavery in the states and criticized all efforts by anti-slavery activists to bring the question before Congress. The Whigs devised an even more artful shift. Once again, as in 1840, they passed over their party leader, Henry Clay, this time for a general, Zachary Taylor, whose fame had grown since the Battle of Buena Vista. Taylor was a resident of Louisiana who held more than 100 slaves, an apolitical figure who had never voted in a national election. Once again, as in 1840, the Whig party adopted no platform at all. Stunned that his party had deserted him in favor of a "wholly incompetent" general with no political experience, the crestfallen yet still vain Henry Clay concluded that the Whigs were on the verge of dissolution.

THE FREE-SOIL COALITION But the anti-slavery impulse was not easily squelched. Congressman David Wilmot had raised a standard for resisting the expansion of slavery, to which a broad coalition could rally. Americans who shied away from abolition could readily endorse the exclusion of slavery from the western territories. The Northwest Ordinance and the Missouri Compromise supplied honored precedents. Free soil in the new territories, therefore, rather than abolition in the slave states, became the rallying point—and also the name of a new political party.

Three major groups entered the free-soil coalition: rebellious northern Democrats, anti-slavery Whigs, and members of the Liberty party, which dated from 1840. Disaffection among the Democrats centered in New York, where the Van Burenite "Barnburners" seized upon the free-soil issue as a moral imperative. Free-soil principles among the Whigs centered in Massachusetts, where a group of "Conscience" Whigs battled the "Cotton" Whigs, a coalition of northern businessmen and southern planters. Conscience Whigs rejected the slaveholding nominee of their party, Zachary Taylor.

In 1848 these groups—Van Burenite Democrats, Conscience Whigs, and followers of the Liberty party—organized the Free-Soil party at a convention at Buffalo, New York, and nominated Martin Van Buren for president. The platform of the Free-Soil party endorsed the Wilmot Proviso's declaration that slavery would not be allowed in the new territories acquired from Mexico. The Free-Soil party entered the campaign with the catchy slogan of "free soil, free speech, free labor, and free men." The new party infuriated the Democrat John Calhoun and other southerners committed to the expansion of slavery. Calhoun called Van Buren a "bold, unscrupulous and vindictive demagogue." Other Democrats, both northern and southern, denounced

Van Buren as a traitor and a hypocrite, while the New Yorker's supporters praised his service as a "champion of freedom."

The impact of the new Free-Soil party on the election was mixed. The Free-Soilers split the Democratic vote enough to throw New York to the Whig Zachary Taylor, and they split the Whig vote enough to give Ohio to the Democrat Lewis Cass, but Van Buren's total of 291,000 votes was far below the totals of 1,361,000 for Taylor and 1,222,000 for Cass. Taylor won with 163 to 127 electoral votes, and both major parties retained a national following. Taylor took eight slave states and seven free; Cass, just the opposite: seven slave and eight free.

THE CALIFORNIA GOLD RUSH Meanwhile, a new dimension had been introduced into the vexing question of the western territories: on January 24, 1848, gold was discovered in California. Word spread quickly, and the California gold rush constituted the greatest mass migration in American history. During 1849 some 80,000 gold seekers reached California,

California News (1850) by William Sidney Mount

During the California gold rush, San Francisco quickly became a cosmopolitan city as the population increased almost fiftyfold in a few months.

half of them Americans, and by 1854 the number would top 300,000. The “forty-niners” included people from every social class and every state and territory, as well as slaves brought by their masters. Most “forty-niners” went overland; the rest, by ship. After touring the gold region, the territorial governor reported that the influx of newcomers had “entirely changed the character of Upper California.” The new Californians quickly reduced the 14,000 Mexicans to a minority, and sporadic conflicts with the Indians of the Sierra Nevada foothills decimated California’s Native Americans.

Unlike the land-hungry pioneers who traversed the overland trails, the miners were mostly unmarried young men representing quite different ethnic and cultural backgrounds. Few were interested in establishing a permanent settlement. They wanted to strike it rich and return home. The mining camps in California’s valleys and canyons and along its creek beds thus sprang up like mushrooms and disappeared almost as rapidly. As soon as rumors of a new strike made the rounds, miners converged on the area, joined soon thereafter by a hodgepodge of merchants and camp followers. When no more gold could be found, they picked up and moved on.

The mining shantytowns were disorderly, unsanitary, and often lawless communities; vigilante justice prevailed, and leisure time revolved around

Gold miners, ca. 1850

Daguerreotype of miners panning for gold at their claim.

saloons and gambling halls. One newcomer reported that “in the short space of twenty-four days, we have had murders, fearful accidents, bloody deaths, a mob, whippings, a hanging, an attempt at suicide, and a fatal duel.” Within six months of arriving in California in 1849, one in every five of the gold seekers was dead. The goldfields and mining towns were so dangerous that insurance companies refused to provide coverage. The town of Marysville had seventeen murders in one week. Seemingly everyone carried weapons—usually pistols or bowie knives. Suicides were common, and disease was rampant. Cholera and scurvy plagued every camp.

Women were as rare in the mining camps as liquor was abundant. In 1850 less than 8 percent of California’s population was female, and even fewer women hazarded life in the camps. Those who did could demand a premium for their work as cooks, laundresses, entertainers, and prostitutes. In the polyglot mining camps white Americans often looked with disdain upon the Latinos and Chinese, who were most often employed as wage laborers to help in the panning process, separating gold from sand and gravel. But the white Americans focused their contempt on the Indians. In the mining culture it was not a crime to kill Indians or work them to death. American miners tried several times to outlaw foreigners in the mining country but had to settle for a tax on foreign miners, which was applied to Mexicans in express violation of the treaty ending the Mexican War.

CALIFORNIA STATEHOOD As civic leaders emerged within the burgeoning California population, they grew increasingly frustrated by the inability of military authorities to maintain law and order. In this context the new president, Zachary Taylor, thought he saw an ideal opportunity to use California statehood to end the stalemate in Congress brought about by the slavery issue.

Born in Virginia and raised in Kentucky, Taylor had been a soldier most of his life. Constantly on the move, he had acquired a home in Louisiana and a plantation in Mississippi. Southern Whigs had rallied to his support, expecting him to uphold the cause of slavery. Instead, he turned out to be a southern man who upheld Union principles and had no use for John Calhoun’s pro-slavery abstractions. Innocent of politics Taylor might be, but Old Rough-and-Ready had a soldier’s practical mind. Slavery should be upheld where it existed, he felt, but he had little patience with abstract theories about slavery in territories where it probably could not exist. Why not make California and New Mexico free states immediately, he reasoned, and bypass the whole issue?

But the Californians, in need of organized government, were ahead of him. By December 1849, without consulting Congress, California had put a free-state government into operation. New Mexico responded more slowly, but by 1850 Americans there had adopted a free-state constitution. The Mormons around Salt Lake, meanwhile, drafted a basic law for the state of Deseret, which embraced most of the Mexican cession, including a slice of the coast from Los Angeles to San Diego. In his annual message on December 4, 1849, President Taylor endorsed immediate statehood for California and enjoined Congress to avoid injecting slavery into the issue of statehood. The new Congress, however, was in no mood for simple solutions.

THE COMPROMISE OF 1850

The spotlight fell on the Senate, where a stellar cast—the triumvirate of Henry Clay, John Calhoun, and Daniel Webster with William Seward, Stephen A. Douglas, Jefferson Davis, and Thomas Hart Benton in supporting roles—enacted one of the great dramas of American politics: the Compromise of 1850. Seventy-three-year-old Henry Clay had become so concerned about the fate of the Union that he had come out of retirement to return to the Senate. After arriving in Washington, D.C., he observed that the “feeling for disunion among some intemperate Southern politicians is stronger than I supposed it could be.” At the end of 1849, southerners fumed over President Taylor’s efforts to bring California and New Mexico into the union as free states. After all, some of them reasoned, southerners had fought disproportionately in the Mexican War; their concerns about the expansion of slavery should be given more weight. Other southerners demanded a federal fugitive slave law that would require northern authorities to arrest and return runaways. For their part anti-slavery Whigs in the North called for the end of the slave trade throughout the United States and the end of slavery itself in the District of Columbia.irate southerners responded by threatening secession. “I avow before this House and country, and in the presence of the living God,” shouted Robert Toombs of Georgia, “that if by your legislation you seek to drive us [slaveholders] from the territories of California and New Mexico . . . and to abolish slavery in this District . . . *I am for disunion.*”

By 1850 the United States was facing its greatest political crisis, and Henry Clay, who for all his compulsive desire to be president, remained at heart devoted to the preservation of the Union and so was willing to alienate southern supporters by once again assuming the role of Great

Compromiser, which he had played in the Missouri and nullification controversies.

THE GREAT DEBATE In January 1850, having gained the support of Daniel Webster, Clay presented to Congress a package of eight resolutions in ways that would settle the “controversy between the free and slave States.” His proposals represented what he called a “great national scheme of compromise and harmony.” He proposed to (1) admit California as a free state, (2) organize the territories of New Mexico and Utah without restrictions on slavery, allowing the residents to decide the issue for themselves, (3) deny Texas its extreme claim to much of New Mexico, (4) compensate Texas by having the federal government pay the pre-annexation Texas debts, (5) uphold slavery in the District of Columbia, but (6) abolish the slave trade across its boundaries, (7) adopt a more effective federal fugitive slave act, and (8) deny congressional authority to interfere with the interstate slave trade. His complex cluster of proposals became in substance the Compromise of 1850, but only after a prolonged debate, the most celebrated, if not the greatest, in the annals of Congress.

On February 5–6 Clay addressed a Senate chamber overflowing with spectators eager to hear the “lion of the day” speak. He did not disappoint the expectant audience. Although desperately ill, he summoned all his eloquence in a defense of the proposed settlement. In the interest of “peace, concord and harmony,” he called for an end to “passion, passion—party, party—and intemperance.” Otherwise, continued sectional bickering would lead to a “furious, bloody” civil war. To avoid such a catastrophe, he stressed, California should be admitted as a free state on the terms that its own citizens had approved. He begged the opposing sides “by all of their love of liberty—by all their veneration for their ancestors—by all their regard for posterity . . . to pause—solemnly to pause—at the edge of the precipice, before the fearful and disastrous leap is taken into the yawning abyss below.” No sooner had Clay finished than a crowd rushed forward to shake his hand and kiss his cheek.

The debate continued sporadically through February, with the Texan Sam Houston rising to the support of Clay’s compromise and Mississippi’s Jefferson Davis defending the slavery cause on every point. President Taylor believed that slavery in the South could best be protected if southerners avoided injecting the issue into the dispute over new territories. Unlike John Calhoun he did not believe the new western territories were suitable for slave-based agriculture. Because in his mind the issue of bringing slaves into the territories was moot, he continued to urge Congress to admit California

and New Mexico without reference to slavery. But few others embraced such a simple solution. In fact, a rising chorus of southern leaders, labeled Ultras, threatened to secede from the Union if slavery were not allowed in California.

On March 4 John Calhoun left his sickbed to sit in the Senate chamber, a gaunt figure draped in a black cloak, as a colleague read his defiant speech. "I have, Senators, believed from the first that the agitation of the subject of slavery would, if not prevented by some timely and effective measure, end in disunion," said James Mason on Calhoun's behalf. Neither Clay's compromise nor Taylor's efforts would serve the Union, he added. The South simply needed an acceptance of its rights: equality of treatment in the territories, the return of fugitive slaves, and some guarantee of "an equilibrium between the sections."

Three days later Calhoun returned to the Senate to hear Daniel Webster. The "Godlike Daniel" no longer possessed the thunderous voice of his youth, nor did his shrinking frame project its once magisterial aura, but he remained a formidable presence. He chose as the central theme of his three-hour speech the preservation of the Union: "I wish to speak today, not as a Massachusetts man, not as a Northern man, but as an American. . . . I speak today for the preservation of the Union." The geographic extent of slavery had already been determined, he insisted, by the Northwest Ordinance, by the Missouri Compromise, and in the new lands by the law of nature. The Wilmot Proviso was superfluous: "I would not take pains to reaffirm an ordinance of nature nor to re-enact the will of God." Both northerners and southerners, to be sure, had legitimate grievances: on the one hand the excesses of "infernal fanatics and abolitionists" in the North and on the other hand southern efforts to expand slavery and heap southern slurs on northern workingmen. But "Secession! Peaceable secession! Sir, your eyes and mine are never destined to see that miracle." Instead of looking into such "caverns of darkness," let "men enjoy the fresh air of liberty and union. Let them look to a more hopeful future."

Webster's March 7 speech was a supreme gesture of conciliation, and the Massachusetts senator had knowingly brought down a storm upon his head. New England anti-slavery leaders lambasted this new "Benedict Arnold" who had betrayed his region. On March 11 William H. Seward, the freshman Whig senator from New York, gave the anti-slavery reply to Webster. He declared that compromise with slavery was "radically wrong and essentially vicious." There was, he said, "a higher law than the Constitution" that demanded the abolition of slavery.

In mid-April a select committee of thirteen senators bundled Clay's suggestions (insofar as they concerned the Mexican cession) into one comprehensive bill, and presented it to the Senate early in May. President Taylor continued to oppose Clay's compromise, and their feud threatened to split the Whig party wide open. As the weeks and months passed, Clay worked tirelessly to convince his opponents that compromise by all parties was essential to preserving the Union. Yet as the stalemate continued and the atmosphere in Congress became more fevered and violent, he grew frustrated and peevish. "Mr. Clay with all his talents," Daniel Webster told a friend, "is not a good leader, for want of temper. He is irritable, impatient, and occasionally overbearing; & he drives people off." Another crisis loomed near the end of June when word came that New Mexico was applying for statehood, with President Taylor's support and on the basis of boundaries that conflicted with the Texas claim to the east bank of the Rio Grande.

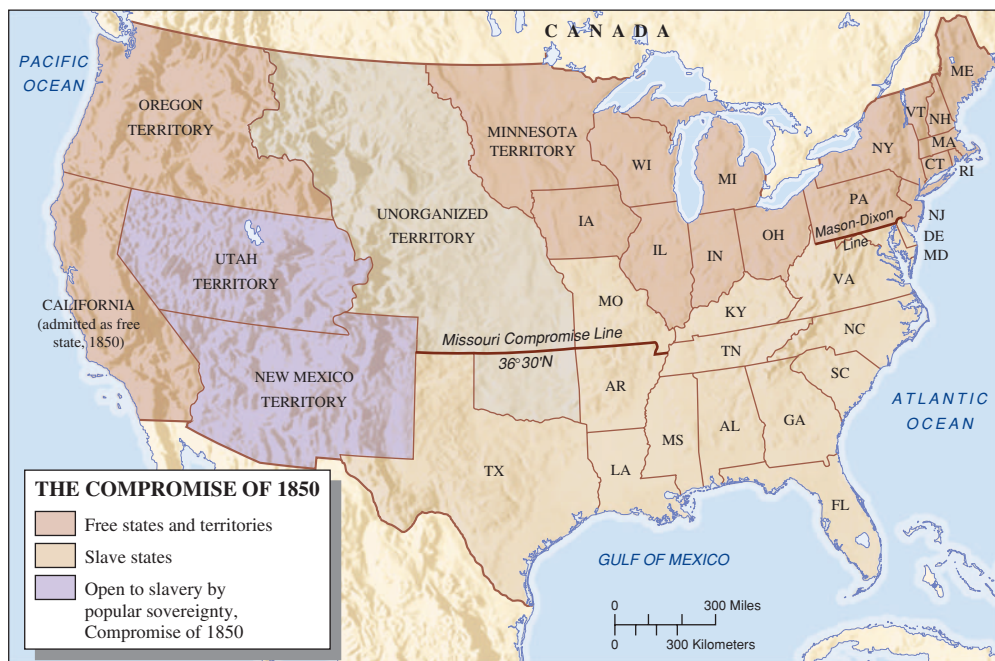

TOWARD A COMPROMISE On July 4, 1850, supporters of the Union staged a grand rally at the base of the unfinished Washington Monument. Zachary Taylor went to hear the speeches, lingering in the hot sun and humid heat. Five days later he died of a gastrointestinal affliction possibly caused by tainted food or water.

Taylor's sudden death strengthened the chances of a congressional compromise. The soldier in the White House was replaced by a politician, Vice President Millard Fillmore. The son of a poor upstate New York farmer, Fillmore had succeeded despite few opportunities or advantages. Largely self-educated, he had made his own way in the profession of law and the rough-and-tumble world of New York politics. Experience had taught him caution, which some interpreted as indecision, but he had made up his mind to support Henry Clay's compromise and had so informed Taylor. It was a strange switch: Taylor, the Louisiana slaveholder, had been ready to make war on his native region; Fillmore, who southerners thought was opposed to slavery, was ready to make peace.

Millard Fillmore

His support of the Compromise of 1850 helped the Union muddle through the crisis.

What events forced the Compromise of 1850? How did Stephen Douglas rescue the compromise? What were its terms?

At this point the young senator Stephen A. Douglas of Illinois, a rising star in the Democratic party, rescued Clay's faltering compromise. Short and stocky, brash and brilliant, Douglas was known as the Little Giant. His strategy was in fact the same one Clay had used to pass the Missouri Compromise thirty years before. Reasoning that nearly everybody objected to one or another provision of Clay's "comprehensive scheme," Douglas worked on the principle of breaking it up into six (later five) separate measures. Few members were prepared to vote for all of them, but from different elements Douglas hoped to mobilize a majority for each.

It worked. By September 20 President Fillmore had signed the last of the measures into law. The Union had muddled through, and the settlement went down in history as the Compromise of 1850. For a time it defused an explosive situation, settled each of the major points at issue, and postponed secession and civil war for ten years.

In its final version, the Compromise of 1850 included the following elements: *First*, California entered the Union as a free state, ending forever the

old balance of free and slave states. *Second*, the Texas–New Mexico Act made New Mexico a territory and set the Texas boundary at its present location. In return for giving up its claims east of the Rio Grande, Texas was paid \$10 million, which secured payment of the state’s debt. *Third*, the Utah Act set up the Utah Territory. The territorial act in each case omitted reference to slavery except to give the territorial legislature authority over “all rightful subjects of legislation” with provision for appeal to the federal courts. For the sake of agreement, the deliberate ambiguity of the statement was its merit. Northern congressmen could assume that the territorial legislatures might act to exclude slavery; southern congressmen assumed that they could not.

Fourth, a new Fugitive Slave Act put the matter of apprehending runaway slaves wholly under federal jurisdiction and stacked the cards in favor of slave catchers. *Fifth*, as a gesture to anti-slavery forces, the slave trade, but not slavery itself, was abolished in the District of Columbia. The spectacle of chained-together slaves passing through the streets of the capital, to be sold at public auctions, was brought to an end.

President Millard Fillmore pronounced the five measures making up the Compromise of 1850 “a final settlement.” Still, doubts lingered that both North and South could be reconciled to the measures permanently. In the South the disputes of 1846–1850 had transformed the abstract doctrine of secession into a movement animated by such “fire-eaters” as Robert Barnwell Rhett of South Carolina, William Lowndes Yancey of Alabama, and Edmund Ruffin of Virginia.

But once the furies aroused by the Wilmot Proviso had been spent, the compromise left little on which to focus pro-slavery agitation. The state of California was an accomplished fact and, ironically, tended to elect pro-slavery men to Congress. New Mexico and Utah were far away and in any case at least hypothetically open to slavery. Both in fact adopted slave codes, but the census of 1860 reported no slaves in New Mexico and only twenty-nine in Utah. The Fugitive Slave Act was something else again. It was the one clear-cut victory for the cause of slavery, but would the North enforce it?

THE FUGITIVE SLAVE ACT Southern insistence on the Fugitive Slave Act presented abolitionists with an emotional new focus for their agitation. The act did more than strengthen the hand of slave catchers; it offered a strong temptation to kidnap free blacks. The law denied alleged fugitives a jury trial and provided that special commissioners get a fee of \$10 when they certified delivery of an alleged slave but only \$5 when they refused

CAUTION!!
COLORED PEOPLE
OF BOSTON, ONE & ALL,
 You are hereby respectfully CAUTIONED and
 advised, to avoid conversing with the
Watchmen and Police Officers
of Boston,
 For since the recent ORDER OF THE MAYOR &
 ALDERMEN, they are empowered to act as
KIDNAPPERS
 AND
Slave Catchers,
 And they have already been actually employed in
 KIDNAPPING, CATCHING, AND KEEPING
 SLAVES. Therefore, if you value your LIBERTY,
 and the Welfare of the Fugitives among you, Shun
 them in every possible manner, as so many HOUNDS
 on the track of the most unfortunate of your race.
Keep a Sharp Look Out for
KIDNAPPERS, and have
TOP EYE open.
APRIL 24, 1851.

Threats to Free Blacks

An 1851 notice to the free blacks of Boston to avoid the “watchmen and police officers . . . empowered to act as kidnappers and slave catchers.”

tive Slave Act had the tremendous effect of deepening the anti-slavery impulse in the North.

UNCLE TOM’S CABIN Anti-slavery forces found their most persuasive appeal not in the Fugitive Slave Act but in the fictional drama of Harriet Beecher Stowe’s *Uncle Tom’s Cabin* (1852). The novel is a combination of unlikely saints and sinners, stereotypes, and melodramatic escapades—and was a smashing commercial success. The long-suffering Uncle Tom, the villainous Simon Legree, the angelic Eva, the desperate Eliza carrying her child to freedom across the icy Ohio River—all became stock characters of the American imagination. Slavery, seen through Stowe’s eyes, was an abominable sin. It took time for the novel to work its effect on public opinion, however. Neither abolitionists nor fire-eaters fought for their sections of the country at the time of its publication. The country was enjoying a surge of prosperity, and the course of the presidential campaign in 1852 reflected a

certification. In addition, federal marshals could require citizens to help in enforcement; violators could be imprisoned for up to six months and fined \$1,000.

“This filthy enactment was made in the nineteenth century, by people who could read and write,” Ralph Waldo Emerson marveled in his journal. He advised neighbors to break the new law “on the earliest occasion.” The occasion soon arose in Detroit, where only military force stopped the rescue of an alleged fugitive by an outraged mob in October 1850.

There were relatively few such incidents, however. In the first six years of the fugitive act, only three fugitives were forcibly rescued from slave catchers. On the other hand, probably fewer than 200 were returned to bondage during the same years. The Fugi-

common desire to lay sectional quarrels to rest.

THE ELECTION OF 1852

In 1852 the Democrats chose Franklin Pierce of New Hampshire as their presidential candidate; their platform pledged them to abide by the measures enacted by the Compromise of 1850. The party's candidates and platform generated a surprising reconciliation of its factions. Pierce rallied both the southern rights' advocates and the Van Burenite Democrats. The third-party Free-Soilers, as a consequence, mustered only 156,000 votes, for John P. Hale, in contrast to the 291,000 they had tallied for Van Buren in 1848.

The Whigs repudiated the lackluster Fillmore, who had faithfully supported the Compromise of 1850, and once again tried to exploit martial glory. It took fifty-three ballots, but the convention finally chose General Winfield Scott, the hero of the Mexican War and a native of Virginia backed mainly by northern Whigs. The Whig convention dutifully endorsed the compromise, but with some opposition from the North. Scott, an able army commander but an inept politician, had gained a reputation for anti-slavery and nativist sentiments, alienating German- and Irish-American voters. In the end, Scott carried only Tennessee, Kentucky, Massachusetts, and Vermont. Pierce overwhelmed him in the Electoral College, 254 to 42, although the popular vote was close: 1.6 million to 1.4 million.

Franklin Pierce, an undistinguished but handsome, engaging figure, a former congressman, senator, and soldier in Mexico, was, like James Polk, touted as another Young Hickory. But the youngest president to date was unable to unite the warring factions of his party. After the election, Pierce wrote a poignant letter to his wife in which he expressed his frustration at the prospect of keeping North and South together. "I can do no right," he sighed. "What am I to do, wife? Stand by me." By the end of Pierce's first year

"The Greatest Book of the Age"

Uncle Tom's Cabin, as this advertisement indicates, was a best seller.

in office, the leaders of his own party had decided he was a failure. By trying to be all things to all people, Pierce looked more and more like a “Northern man with Southern principles.”

FOREIGN ADVENTURES

CUBA During the early 1850s foreign diversions sporadically distracted attention from domestic quarrels. Cuba, one of Spain’s last possessions in the New World, continued to be an object of American desire. In the early 1850s a crisis arose over expeditions launched from American soil and meant to incite Cubans to rebel against Spain. Spanish authorities retaliated by harassing American ships. In response the Pierce administration in 1854 instructed Pierre Soulé, the American minister in Madrid, to make an offer of \$130 million for Cuba, which Spain peremptorily spurned. Soulé then joined the U.S. ministers to France and Britain in drafting the Ostend Manifesto, which declared that if Spain, “actuated by stubborn pride and a false sense of honor refused to sell,” then the United States must ask itself, “Does Cuba, in the possession of Spain, seriously endanger our internal peace and the existence of our cherished Union?” If so, “then, by every law, human and divine, we shall be justified in wresting it from Spain.” Publication of the supposedly confidential dispatch left the administration no choice but to disavow what northern opinion widely regarded as a “slaveholders’ plot.”

DIPLOMATIC GAINS IN THE PACIFIC In the Pacific, U.S. diplomacy scored some important achievements. American trade with China dated from 1784–1785 but was allowed only through the port of Canton (Guangzhou). In 1844 the United States and China signed the Treaty of Wanghsia (Wanxian), which opened four ports, including Shanghai, to American trade. The Treaty of Tientsin (Tianjin, 1858) opened eleven more ports and granted Americans the right to travel and trade throughout China. Protestant missionaries had also developed a keen interest in China. About fifty were already there by 1855, and for nearly a century China remained the most active mission field for Americans.

Japan, meanwhile, had for two centuries remained closed to U.S. trade. Moreover, American whalers wrecked on the shores of Japan had been forbidden to leave the country. Mainly in their interest, President Fillmore entrusted a special Japanese expedition to Commodore Matthew Perry, who arrived in Tokyo in 1853. Negotiations led to the Treaty of Kanagawa (1854).

Japan agreed to allow a U.S. consulate, promised to treat castaways cordially, and permitted American ships to enter certain ports for supplies and repairs. Broader commercial relations came after the first U.S. envoy, Townsend Harris, negotiated the Harris Convention of 1858, which opened five Japanese ports to American trade.

THE KANSAS-NEBRASKA CRISIS

American commercial interests in Asia helped spark a growing desire for a transcontinental railroad line connecting the eastern seaboard with the Pacific coast. During the 1850s the only land added to the United States was a barren stretch of some 30,000 square miles south of the Gila River in present-day New Mexico and Arizona. This Gadsden Purchase of 1853, for which the United States paid Mexico \$10 million, was made to acquire land offering a likely route for a transcontinental railroad. The idea of building a railroad linking the far-flung regions of the new continental domain of the United States reignited sectional rivalries and reopened the slavery issue. Among the many transcontinental routes projected, the four most important were a northern route from Milwaukee to the Columbia River in northern Oregon, a central route from

Expedition to Japan

Stephen Douglas, ca. 1852

Initiator of the Kansas-Nebraska Act.

St. Louis to San Francisco, another from Memphis to Los Angeles, and a more southerly route from Houston to Los Angeles via the Gadsden Purchase.

DOUGLAS'S PROPOSAL In 1852 and 1853 Congress debated and dropped several likely proposals for a transcontinental rail line. For various reasons, including terrain, climate, and sectional interests, Secretary of War Jefferson Davis favored the southern route and encouraged the Gadsden Purchase. Any other route, moreover, would go through the territories granted to Indians which stretched from Texas to the Canadian border.

Senator Stephen Douglas of Illinois had an even better idea: Chicago should be the transcontinental railroad's eastern terminus. Since 1845, therefore, Douglas and his supporters had offered bills for a new territory west of Missouri and Iowa, bearing the Indian name Nebraska. In 1854, as chairman of the Committee on Territories, Senator Douglas proposed yet another Nebraska bill, which became the Kansas-Nebraska Act. Unlike the others this one included the entire unorganized portion of the Louisiana Purchase, extending to the Canadian border. Political necessity then began to transform Douglas's proposal from a railroad bill into a pro-slavery bill, thus reopening

the controversy over the extension of slavery into the territories. To carry his point, Douglas needed the support of southerners, and to win that support he needed to make some concession on slavery in the new territories. This he did by writing the principle of popular sovereignty into the bill, allowing voters in each territory to decide for themselves whether to allow slavery.

It was a clever dodge, since the 1820 Missouri Compromise would exclude slaves until the territorial government had made a decision. Southerners quickly spotted the barrier, and Douglas as quickly made two more concessions. He supported an amendment for repeal of the Missouri Compromise insofar as it excluded slavery north of 36°30', and he agreed to the creation of two territories, Kansas, west of Missouri, and Nebraska, west of Iowa and Minnesota.

Douglas's motives are unclear. Railroads were surely foremost in his mind, but he was also influenced by the desire to win support for his bill in the South, by the hope that his promotion of the principle of "popular sovereignty" would quiet the slavery issue and open the Northwest, or by a chance to split the Whigs. But whatever his reasoning, he had blundered, damaging his presidential chances and setting the country on the road to civil war. In replacing the Missouri Compromise boundary line with the concept of popular sovereignty, enabling territorial residents to decide the issue of slavery for themselves, Douglas fanned the flames of sectional discord and forced moderate political leaders to align with the extremes. In the end the Kansas-Nebraska Act would destroy the Whig party, fragment the Democratic party, and ignite a territorial civil war between pro- and anti-slavery settlers in Kansas.

The tragic flaw in Douglas's reasoning was his failure to appreciate the growing breadth and intensity of anti-slavery sentiment spreading across the country. Douglas himself preferred that the territories vote against slavery. Their climate and geography excluded plantation agriculture, he reasoned, and he could not comprehend how people could get so wrought up over the abstract right of taking their slaves into the territories. Yet he had in fact opened the possibility that slavery might gain a foothold in Kansas.

Douglas's proposal to repeal the long-standing Missouri Compromise was less than a week old when six anti-slavery congressmen published a protest, the "Appeal of the Independent Democrats." Their moral indignation quickly spread among those who opposed Douglas. The document dismissed his bill "as a gross violation of a sacred pledge" and as "part and parcel of an atrocious plot" to create "a dreary region of despotism, inhabited by masters and slaves." The anti-slavery Democrats called upon their fellow citizens to protest this "atrocious crime."

THE KANSAS-NEBRASKA ACT, 1854

- Free states and territories
- Slave states
- Open to slavery by popular sovereignty, Compromise of 1850
- Open to slavery by popular sovereignty, Kansas-Nebraska Act, 1854
- Battle site

What were the terms of the Kansas-Nebraska Act? How did it lead to the creation of the Republican party? What happened at Pottawatomie and Osawatimie?

Across the North, editorials, sermons, speeches, and petitions echoed this indignation. What had been the opinion of a radical minority was fast becoming the common view of northerners. But in Congress, Douglas had the votes for his Kansas-Nebraska Act, and once committed, he forced the issue with tireless energy. President Pierce impulsively added his support. Southerners lined up behind Douglas, with notable exceptions such as Texas senator Sam Houston, who denounced the act's violation of two solemn compacts: the Missouri Compromise and the confirmation of the territory deeded to the Indians "as long as grass shall grow and water run." He was

not the only one concerned about the Indians, however. Federal agents were already busy hoodwinking or bullying Indians into relinquishing their claims. Douglas and Pierce whipped reluctant Democrats into line (though about half the northern Democrats refused to yield), pushing the passage of the Kansas-Nebraska bill by a vote of 37 to 14 in the Senate and 113 to 100 in the House.

Very well, many in the North reasoned, if the Missouri Compromise was not a sacred pledge, then neither was the Fugitive Slave Act that was part of the Compromise of 1850. On June 2, 1854, Boston witnessed the most dramatic demonstration against the act. After several attempts had failed to rescue a fugitive slave named Anthony Burns, soldiers dispatched by President Pierce marched him to a waiting ship through streets lined with people shouting “Kidnappers!” Burns was the last southern slave to be returned from Boston and was soon freed through purchase by the African-American community of Boston. New Englanders blamed Pierce for the sorry episode. One sent a letter to the White House that read: “To the chief slave-catcher of the United States. You damned, infernal scoundrel, if only I had you here in Boston, I would murder you!”

THE EMERGENCE OF THE REPUBLICAN PARTY By the mid-1850s the tensions over slavery were fracturing the nation. What John Calhoun had called the cords holding the Union together had begun to fray. The national organizations of Baptists and Methodists, for instance, had split over slavery by 1845 and formed new northern and southern organizations. The national parties were also beginning to buckle under the strain of slavery. The Democrats managed to postpone disruption for a while, but their congressional delegation lost heavily in the North, enhancing the influence of their southern wing.

The strain of the Kansas-Nebraska Act soon destroyed the Whig party. Southern Whigs now tended to abstain from voting, while northern Whigs gravitated toward two new parties. One was the American (Know-Nothing) party, which had raised the banner of nativism and the hope of serving the patriotic cause of Union. The other, which attracted even more northern Whigs, was formed in 1854 when those Whigs joined with independent Democrats and Free-Soilers to form the Republican party.

BLEEDING KANSAS After passage of the Kansas-Nebraska Act in 1854, attention swung to the plains of Kansas, where opposing elements gathered to stage a rehearsal for civil war. Whereas all agreed that Nebraska would be a free state, Kansas soon exposed the potential for mischief in the idea of

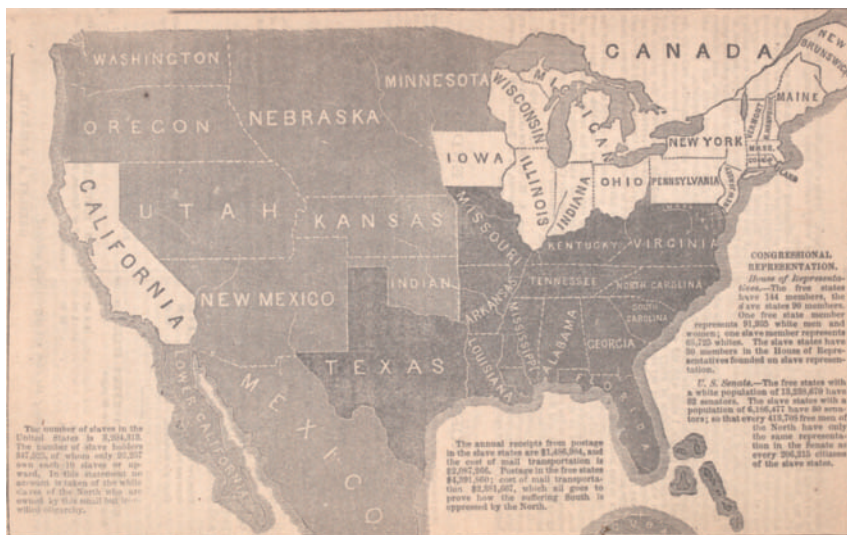

popular sovereignty. The ambiguity of the law, useful to Douglas in getting it passed, only added to the chaos. The people of Kansas were “perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution.” That in itself invited conflicting interpretations, but the law was completely silent as to the time of any decision, adding to each side’s sense of urgency in getting political control of the 50-million-acre territory.

The settlement of Kansas therefore differed from the typical pioneering efforts. Groups sprang up in North and South to hurry right-minded transplants westward. Most of the settlers were from Missouri and its surrounding states. Although few of them held slaves, they were not sympathetic to militant abolitionism; racism was prevalent even among nonslaveholding whites. Many of the Kansas settlers wanted to keep all blacks, enslaved or free, out of the territory. “I kem to Kansas to live in a free state,” declared a minister, “and I don’t want niggers a-trampin’ over my grave.” By 1860 there were only 627 African Americans in the territory.

When Kansas’s first federal governor arrived, in 1854, he found several thousand settlers there. He ordered a census and scheduled an election for a territorial legislature in 1855. When the election took place, several thousand “border ruffians” crossed over from Missouri, illegally swept the polls

The Border Ruffian Code in Kansas (1856)

This pamphlet, published by Horace Greeley’s *New York Tribune*, features a map of the country divided into slave states (dark), free states (white), and those in the middle (gray). It attempts to “prove how the suffering South is oppressed by the North.”

for pro-slavery forces, and vowed to kill every “God-damned abolitionist in the Territory.” The governor denounced the vote as a fraud but did nothing to alter the results, for fear of being killed. The legislature expelled its few anti-slavery members, adopted a drastic slave code, and made it a capital offense to aid a fugitive slave and a felony even to question the legality of slavery in the territory.

Outraged free-state advocates rejected this “bogus” government and moved directly toward application for statehood. In 1855 a constitutional convention, the product of an extralegal election, met in Topeka, drafted a state constitution excluding both slavery and free blacks from Kansas, and applied for admission to the Union. By 1856 a free-state “governor” and “legislature” were functioning in Topeka; thus there were two illegal governments in the Kansas territory. The prospect of getting any government to command general authority seemed dim, and both sides began to arm.

Finally, the tense confrontation began to slip into violent conflict. In May 1856 a pro-slavery mob entered the free-state town of Lawrence, Kansas, destroyed newspaper presses, set fire to the free-state governor’s home, stole property, and demolished the Free State Hotel.

The “sack of Lawrence” resulted in just one casualty, but the excitement aroused a fanatic Free-Soiler named John Brown, who had a history of mental instability. Two days after Lawrence was sacked, Brown set out with four of his sons and three other men for Pottawatomie, site of a pro-slavery settlement, where they dragged five men from their houses and hacked them to death in front of their screaming families.

The Pottawatomie Massacre (May 24–25, 1856) set off a guerilla war in the Kansas Territory that lasted through the fall. On August 30 Missouri ruffians raided the free-state settlement at Osawatimie, Kansas. They looted

The “Sack” of Lawrence

This sheet-music cover for an anti-slavery song portrays the burning of the Free-State Hotel in Lawrence, Kansas, by a proslavery mob in 1856. Shalor Eldridge, the hotel’s owner, rebuilt the hotel in 1857 and again in 1865, after it was destroyed by William Quantrill and his raiders in 1863.

and burned the houses and shot John Brown's son Frederick through the heart. The elder Brown, who barely escaped, looked back at the site being devastated by "Satan's legions" and muttered, "God sees it." He then swore to his surviving sons and followers, "I have only a short time to live—only one death to die, and I will die fighting for this cause." Three years later he would do just that, in a futile uprising that inflamed sentiment in the North and the South. Altogether, by the end of 1856, about 200 settlers had been killed in Kansas and \$2 million in property destroyed during the territorial civil war. Some 1,500 federal troops were dispatched to restore some semblance of order.

VIOLENCE IN THE SENATE Combat in Kansas spilled over into Congress. On May 22, 1856, the day after the sack of Lawrence and two days before the Pottawatomie Massacre, a sudden flash of violence on the Senate floor electrified the whole country. Just two days earlier Senator Charles Sumner of Massachusetts had delivered an inflammatory speech on "The Crime against Kansas." Sumner, elected five years earlier by a coalition of Free-Soilers and Democrats, was a brilliant orator with a sharp tongue. His two-day speech, delivered from memory, was an exercise in studied insult. The pro-slavery Missourians who crossed into Kansas, he charged, were "hirelings picked from the drunken spew and vomit of an uneasy civilization."

"Bully" Brooks's Attack on Charles Sumner

The incident worsened the strains on the Union.

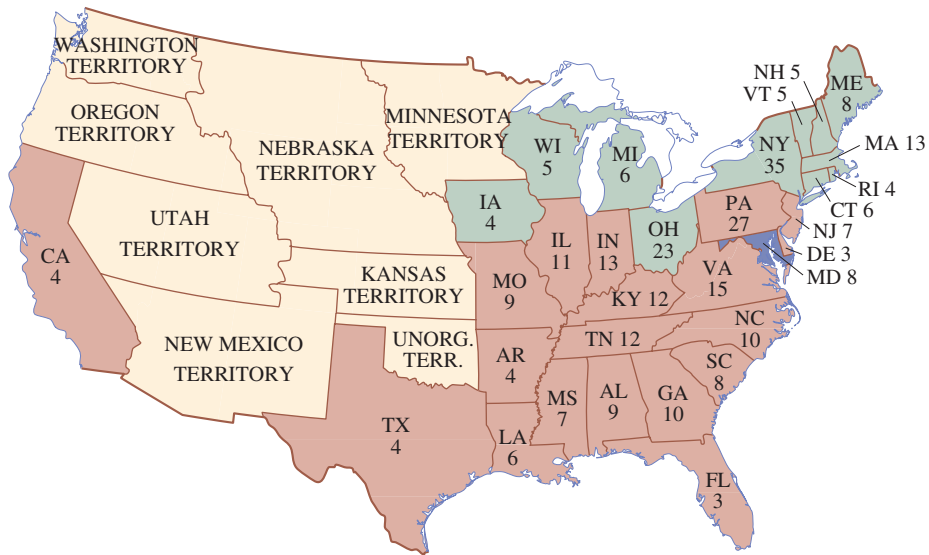

Their treatment of Kansas was “the rape of a virgin territory,” he said, “and it may be clearly traced to a depraved longing for a new slave State, the hideous offspring of such a crime.” Sumner singled out the elderly senator Andrew Pickens Butler of South Carolina for censure. Butler, Sumner charged, had “chosen a mistress . . . who . . . though polluted in the sight of the world, is chaste in his sight—I mean the harlot, Slavery.”

Sumner’s indignant rudeness might well have backfired had it not been for Butler’s kinsman Preston S. Brooks, a fiery-tempered congressman from South Carolina. For two days, Brooks brooded over the insult to his relative, knowing that Sumner would refuse a challenge to a duel. On May 22 he found Sumner writing at his Senate desk after an adjournment, accused him of libel against South Carolina and Butler, and commenced beating him about the head with a cane while stunned colleagues looked on. Sumner, struggling to rise, wrenched the desk from the floor and collapsed. Brooks kept beating the unconscious Sumner until his cane broke.

Brooks had satisfied his rage but in doing so had created a martyr for the anti-slavery cause. For two and a half years, Sumner’s empty Senate seat was a solemn reminder of the violence done to him. When the House censured Brooks, he resigned, only to return after being triumphantly re-elected. His southern admirers presented him with new canes. The editor of the Richmond *Enquirer* urged Brooks to cane Sumner again: “These vulgar abolitionists in the Senate . . . must be lashed into submission.” Northerners hastened to Sumner’s defense. The news of the beating drove John Brown “crazy,” his eldest son remembered, “*crazy*.” People on each side, appalled at the behavior of the other, decided that North and South had developed into different civilizations with incompatible standards of honor. “I do not see,” Ralph Waldo Emerson confessed, “how a barbarous community and a civilized community can constitute one state. We must either get rid of slavery, or get rid of freedom.”

SECTIONAL POLITICS Within the span of five days in May of 1856, “Bleeding Kansas,” “Bleeding Sumner,” and “Bully Brooks” had set the tone for another presidential election. The major parties could no longer evade the slavery issue. Already in February it had split the infant American party wide open. Southern delegates, with help from New York, killed a resolution to restore the Missouri Compromise and nominated Millard Fillmore for president. Later what was left of the Whig party endorsed him as well. But as a friend wrote Fillmore, the “outrageous proceedings in Kansas & the assault on Mr. Sumner have contributed very much to strengthen the [new] Republican Party.”

THE ELECTION OF 1860		Electoral vote
	James Buchanan (Democrat)	174
	John C. Frémont (Republican)	114
	Millard Fillmore (American)	8

What was the platform of the new Republican party? Why did Democrats pick Buchanan? What were the key factors that decided the election?

At its first national convention the Republican party passed over its leading figure, William H. Seward, who was awaiting a better chance in 1860. Following the Whig tradition, the party sought out a military hero, John C. Frémont, the “Pathfinder” who had led the conquest of Mexican California. The Republican platform also owed much to the Whigs. It favored a transcontinental railroad and, in general, more government-financed internal improvements. It condemned the repeal of the Missouri Compromise, the Democratic policy of territorial expansion, and “those twin relics of barbarism—Polygamy and Slavery.” The campaign slogan echoed that of the Free-Soilers: “Free soil, free speech, and Frémont.” It was the first time a major-party platform had taken a stand against slavery.

The Democrats, meeting two weeks earlier in June, had rejected Franklin Pierce, the hapless victim of so much turmoil. Stephen Douglas, too, was left out, because of the damage done by his Kansas-Nebraska Act. The party therefore turned to James Buchanan of Pennsylvania, who had long sought the nomination. The party and its candidate nevertheless supported Pierce's policies. The Democratic platform endorsed the Kansas-Nebraska Act, called for vigorous enforcement of the fugitive slave law, and stressed that Congress should not interfere with slavery in either states or territories. The party reached out to its newly acquired Irish and German voters by condemning nativism and endorsing religious liberty.

The campaign of 1856 resolved itself into a sectional contest in which parties vied for northern or southern votes. The Republicans had few southern supporters and only a handful in the border states, where fears of disunion held many Whigs in line. Buchanan thus went into the campaign as the candidate of the only remaining national party. Frémont swept the northernmost states with 114 electoral votes, but Buchanan added five free states—Pennsylvania, New Jersey, Illinois, Indiana, and California—to his southern majority for a total of 174.

The sixty-five-year-old Buchanan, America's only unmarried president, brought to the White House a portfolio of impressive achievements in politics and diplomacy. His career went back to 1815, when he served as a Federalist legislator in Pennsylvania before switching to Andrew Jackson's party in the 1820s. He had been in Congress for over twenty years, minister to Russia and Britain, and James K. Polk's secretary of state. His long quest for the presidency had been built on his commitment to states' rights and his aggressive promotion of territorial expansion. His political debts reinforced his belief that saving the Union depended upon concessions to the South. Republicans charged that he lacked the backbone to stand up to the southerners who dominated the Democratic majorities in Congress. His choice of four slave-state men and only three free-state men for his cabinet seemed another bad omen.

THE DEEPENING SECTIONAL CRISIS

During James Buchanan's first six months in office, three major events caused his undoing: (1) the Supreme Court decision in the *Dred Scott* case, (2) new troubles in Kansas, and (3) a financial panic that sparked a widespread economic depression. For all of Buchanan's experience as a legislator and diplomat, he failed to handle those and other key issues in a statesman-

like manner. As one historian has recently concluded, the new president proved to be “an abysmal failure as a chief executive.”

THE DRED SCOTT CASE On March 6, 1857, two days after Buchanan’s inauguration, the Supreme Court rendered a decision in the long-pending case of *Dred Scott v. Sandford*. Dred Scott, born a slave in Virginia about 1800, had been taken to St. Louis in 1830 and sold to an army surgeon, who took him to Illinois, then to the Wisconsin Territory (later Minnesota), and finally back to St. Louis in 1842. While in the Wisconsin Territory, Scott had met and married Harriet Robinson, and they eventually had two daughters.

After his master’s death, in 1843, Scott had tried to buy his freedom. In 1846 Harriet Scott persuaded her husband to file suit in the Missouri courts, claiming that residence in Illinois and the Wisconsin Territory had made him free. A jury decided in his favor, but the state supreme court ruled against him. When the case rose on appeal to the Supreme Court, the country anxiously awaited its opinion on whether freedom once granted could be lost by returning to a slave state.

Eight of the nine justices filed separate opinions; one concurred with Chief Justice Roger B. Taney of Maryland. By different lines of reasoning, seven justices ruled that Scott remained a slave. The aging Taney, who wrote the Court’s majority opinion, ruled that Scott lacked legal standing because he lacked citizenship. Taney argued that one became a U.S. citizen either by birth or by naturalization, and both of those methods ruled out any former

Chief Justice Roger B. Taney

Taney played a critical role in the Supreme Court’s decision in the *Dred Scott* case, which fanned the flames of sectional discord.

slave. He then mistakenly argued that no state had ever accorded citizenship to blacks. At the time the Constitution was adopted, Taney further said, blacks “had for more than a century been regarded as . . . so far inferior, that they had no rights which the white man was bound to respect.”

Taney declared that Scott’s residency in a free state had not freed him since, in line with precedent, the decision of the state court governed. This left the question of residency in a free territory. On that point, Taney argued that the Missouri Compromise had deprived citizens of property by prohibiting slavery, an action “not warranted

by the constitution.” He strongly implied, but never said explicitly, that the Missouri Compromise had violated the due-process clause of the Fifth Amendment, as John C. Calhoun had earlier argued.

The upshot was that the Supreme Court had declared an act of Congress unconstitutional for the first time since *Marbury v. Madison* (1803) and had declared a major act of Congress unconstitutional for the first time ever. Congress had repealed the Missouri Compromise in the Kansas-Nebraska Act three years earlier, but the *Dred Scott* decision now challenged popular sovereignty. If Congress itself could not exclude slavery from a territory, then presumably neither could a territorial government created by an act of Congress.

By this decision the Supreme Court had tried to settle a question that Congress had dodged ever since the Wilmot Proviso had surfaced. But far from settling it, Taney’s ruling had fanned the flames of dissension. Little wonder that Republicans protested: the Court had declared their anti-slavery program unconstitutional. It had also reinforced the suspicion that the slaveryocracy was hatching a conspiracy. Were not all but one of the justices who had joined Taney southerners? And President Buchanan had sought to influence the Court’s decision both before and during his inaugural ceremony. Besides, if *Dred Scott* were not a citizen and had no standing in court, there was no case before the Court. The majority ruling was an obiter dictum—a statement not essential to deciding the case and therefore not binding, “entitled to just so much moral weight as would be the judgment of a majority of those congregated in any Washington bar-room.”

Pro-slavery elements of course greeted the Court’s opinion as binding. Now the most militant among them were emboldened to make yet another demand. It was not enough to deny Congress the right to interfere with slavery in the territories; Congress had an obligation to protect the property of slaveholders, making a federal slave code the next step.

THE LECOMPTON CONSTITUTION Out in Kansas, meanwhile, the struggle over slavery continued. Just before Buchanan’s inauguration the pro-slavery legislature called for a constitutional convention. Since no provision was made for a referendum on the constitution, however, the governor vetoed the measure, and then the legislature overrode his veto. The Kansas governor resigned on the day Buchanan took office, and the new president replaced him with Robert J. Walker. A native Pennsylvanian who had made a political career in Mississippi and a former member of Polk’s cabinet, Walker had greater prestige than his predecessors, and he put the Union above slavery. In Kansas he scented a chance to advance the cause of

both the Union and his party. Under popular sovereignty fair elections would produce a state that would be both free and Democratic.

Walker arrived in Kansas in 1857, and with Buchanan's approval the new governor pledged to the free-state Kansans that the new constitution would be submitted to a fair vote. But in spite of his pleas, he arrived too late to persuade free-state men to vote for convention delegates in elections they were sure had been rigged against them. Later, however, Walker did persuade the free-state leaders to vote in the election of a new territorial legislature.

As a result a polarity arose between an anti-slavery legislature and a pro-slavery constitutional convention. The convention, meeting at Lecompton, Kansas, drew up a constitution under which Kansas would become a slave state. Although Kansas had only about 200 slaves at the time, free-state men boycotted the vote on the new constitution on the claim that it, too, was rigged. At this point, President Buchanan took a fateful step. Influenced by southern advisers and politically dependent upon southern congressmen, he decided to renege on his pledge to Governor Walker and support the action of the Lecompton convention. Walker resigned, and the election went according to form: 6,226 for the constitution with slavery, 569 for the constitution without slavery. Meanwhile, the acting governor had convened the antislavery legislature, which called for another election to vote the Lecompton Constitution up or down. Most of the pro-slavery settlers boycotted this election, and the result, on January 4, 1858, was overwhelming: 10,226 against the constitution, 138 for the constitution with slavery, 24 for the constitution without slavery.

The combined results suggested a clear majority against slavery, but pro-southern Buchanan stuck to his support of the Lecompton Constitution, driving another wedge into the Democratic party. Senator Douglas, up for reelection, broke dramatically with the president in a tense confrontation, but Buchanan persisted in trying to get the Lecompton Constitution approved by Congress. In the Senate, administration forces held firm, and in 1858 Lecompton was passed. In the House enough anti-Lecompton Democrats combined to put through an amendment for a new and carefully supervised popular vote in Kansas. Enough senators went along to permit passage of the House bill. Southerners were confident the vote would favor slavery, because to reject slavery the voters would have to reject the constitution, which would postpone statehood until the population reached 90,000. On August 2, 1858, Kansas voters nevertheless rejected Lecompton, 11,300 to 1,788. With that vote, Kansas, now firmly in the hands of its anti-slavery legislature, largely ended its provocative role in the sectional controversy.

THE PANIC OF 1857 The third emergency of Buchanan's first half year in office, a financial crisis, occurred in August 1857. It was brought on by a reduction in foreign demand for American grain, a surge in manufacturing that outran the growth of markets, and the continued weakness and confusion of the state bank-note system. The failure of the Ohio Life Insurance and Trust Company on August 24, 1857, precipitated the panic, which was followed by a depression from which the country did not emerge until 1859.

Everything in those years seemed to get drawn into the vortex of sectional conflict, and business troubles were no exception. Northern businessmen tended to blame the depression on the Democratic tariff of 1857, which had set rates on imports at their lowest level since 1816. The agricultural South weathered the crisis better than the North. Cotton prices fell, but slowly, and world markets for cotton quickly recovered. The result was an exalted notion of King Cotton's importance to the world and apparent confirmation of the growing argument that the southern system of slave-based agriculture was superior to the free-labor system of the North.

DOUGLAS VERSUS LINCOLN Amid the recriminations over the *Dred Scott* decision, Kansas, and the depression, the center could not hold. The Lecompton battle put severe strains on the most substantial cord of union that was left, the Democratic party. To many, Senator Stephen Douglas seemed the best hope for unity and union, one of the few remaining Democratic leaders with support in both the North and the South. But now Douglas was being whipsawed by the extremes. Kansas-Nebraska had cast him in the role of a doughface, a southern sympathizer. Yet his opposition to Lecompton, the fraudulent fruit of popular sovereignty, had alienated him from Buchanan's southern junta. But for all his flexibility and opportunism, Douglas had convinced himself that popular sovereignty was a point of principle, a bulwark of democracy and local self-government. In 1858 he faced reelection to the Senate against the opposition of both Buchanan Democrats and Republicans. The year 1860 would give him a chance for the presidency, but first he had to secure his home base in Illinois.

To oppose him, Illinois Republicans named Abraham Lincoln of Springfield, the lanky, raw-boned former Whig state legislator and one-term congressman, a small-town lawyer. Lincoln's early life had been the hardscrabble existence of the frontier farmer. Born in a Kentucky log cabin in 1809 and raised on farms in Indiana and Illinois, the young Lincoln had worked at various farm tasks, operated a ferry, and made two trips down to New Orleans as a flatboatman. Striking out on his own, he managed a general store

in New Salem, Illinois, learned surveying, served in the Black Hawk War in 1832, won election to the legislature in 1834 (at the age of twenty-five), read law, and was admitted to the bar in 1836. Lincoln stayed in the Illinois legislature until 1842 and in 1846 won a seat in Congress. After a single term he retired from active politics to cultivate his law practice in Springfield.

In 1854 the Kansas-Nebraska debate drew Lincoln back into the political arena. When Douglas appeared in Springfield to defend the idea of popular sovereignty, Lincoln countered from the same platform. Lincoln abhorred slavery but was no abolitionist. He did not believe the two races could coexist as equals, but he did oppose any further extension of slavery into new territories, assuming that over time the institution would die a “natural death.” Slavery, he said in the 1840s, was a vexing but “minor question on its way to extinction.” Now, in 1854 in Peoria, he preached an old but oft-neglected doctrine: hate the sin but not the sinner:

When Southern people tell us they are no more responsible for the origin of slavery, than we, I acknowledge the fact. When it is said that the institution exists; and that it is very difficult to get rid of it, in any satisfactory way, I can understand and appreciate the saying. . . .

But all this, to my judgment, furnishes no more excuses for permitting slavery to go into our own free territory, than it would for reviving the African slave trade by law.

At first Lincoln had held back from the rapidly growing Republican party, but in 1856 he had joined it and had given some fifty speeches for the Frémont ticket in Illinois and nearby states. By 1858, as the obvious choice to oppose Douglas for the Senate seat, he was resorting to the classic ploy of the underdog: he challenged the favorite to debate him. Douglas agreed to meet him in seven places around the state.

Thus the legendary Lincoln-Douglas debates took place, from August 21 to October 15, 1858. As they mounted the platform, the two men could not have presented a more striking contrast. Lincoln was well over six feet tall, sinewy and craggy featured with a singularly long neck and deep-set, brooding eyes. Unassuming in manner, dressed in homely, well-worn clothes, and walking with a shambling gait, he lightened his essentially serious demeanor with a refreshing sense of humor. To sympathetic observers he conveyed an air of simplicity, sincerity, and common sense. Douglas, on the other hand, was short, rotund, stern, and cocky, attired in the finest custom-tailored suits. A man of considerable abilities and even greater ambition, he strutted to the platform with the pugnacious air of a predestined champion.

At the time and since, much attention focused on the second debate, at Freeport, where Lincoln asked Douglas how he could reconcile popular sovereignty with the *Dred Scott* ruling that citizens had the right to carry slaves into any territory. Douglas's answer, thenceforth known as the Freeport Doctrine, was to state the obvious: whatever the Supreme Court might say about slavery, it could not exist anywhere unless supported by local police regulations.

Douglas tried to set some traps of his own. He intimated that Lincoln belonged to the fanatic sect of abolitionists who advocated racial equality. The question was a hot potato, which Lincoln handled with caution. There was, he said, "a physical difference between the white and black races" that would "forever forbid the two races living together on terms of social and political equality." But Lincoln insisted that blacks did have an "equal" right to freedom and the fruits of their labor. The basic difference between the two men, Lincoln insisted, lay in Douglas's professed indifference to the moral question of slavery.

If Lincoln had the better of the argument, at least in the long view, Douglas had the better of the election. Still, according to the Constitution, the voters actually had to choose their state's legislature, which would then elect the senator. Lincoln men won the larger total vote, but the distribution of votes gave Douglas the legislature, fifty-four to forty-one. As the returns trickled in from the 1858 fall elections—there was still no common election date—they recorded one loss after another for candidates aligned with Buchanan. When the elections were over, the Buchanan administration had lost control of the House.

JOHN BROWN'S RAID The gradual return of prosperity in 1859 offered hope that the sectional storms of the 1850s might yet pass. But the slavery issue remained volatile. In October 1859 John Brown once again surfaced, this time in the East. Since the Pottawatomie Massacre in 1856, he had led a furtive existence, engaging in fund-raising and occasional bushwhacking. His commitment to abolish the "wicked curse of slavery," meanwhile, had intensified to a fever pitch. Self-righteous and demanding, he was driven by a sense of crusading zeal. His penetrating gray eyes and

John Brown

Although his anti-slavery efforts were based in Kansas, Brown was a native of Connecticut.

flowing beard and the religious certainty that he was an instrument of God struck fear into supporters and opponents alike.

On October 16, 1859, Brown launched his supreme gesture. From a Maryland farm he crossed the Potomac River with about twenty men, including five blacks. Under cover of darkness, they occupied the federal arsenal in Harpers Ferry, Virginia (now West Virginia). Brown planned to arm the slaves in the area, who he assumed would flock to his cause; then he would set up a black stronghold in the mountains of western Virginia, thus providing a nucleus of support for slave insurrections across the South.

What Brown actually did was to take the arsenal by surprise, seize eleven hostages, and hole up in the fire-engine house, where he was surrounded by militiamen and townspeople. The next morning, Brown sent his son Watson and another supporter out under a white flag, hoping to trade his hostages for his freedom, but the enraged crowd shot them both. Intermittent shooting continued, and another Brown son was wounded. He begged his father to kill him so as to end his suffering, but the righteous Brown lashed out, "If you must die, die like a man." A few minutes later the son was dead.

That night Lieutenant Colonel Robert E. Lee arrived with his aide, Lieutenant J.E.B. Stuart, and a force of marines, having been dispatched from Washington by President Buchanan. The following morning, October 18, Stuart and his troops, with thousands of spectators cheering, broke down the barricaded doors and rushed into the fire-engine house. A young lieutenant found Brown kneeling with his rifle cocked. Before Brown could fire, however, the marine plunged his dress sword into him with such force that the blade bent back double upon striking his breast bone. He then used the hilt to beat Brown unconscious. The siege was over. Altogether Brown's men had killed four people and wounded nine. Of their own force, ten died (including two of Brown's sons), seven were captured, and five escaped.

Brown, who recovered from his wounds, was quickly tried for treason and conspiracy to incite insurrection. He was convicted on October 31 and hanged on December 2. Six others died on the gallows later. If Brown had failed in his purpose—whatever it was—he had achieved two things: he had become a martyr for the anti-slavery cause, and he had set off a panic throughout the slaveholding South. At his sentencing he delivered one of America's classic speeches: "Now, if it is deemed necessary that I should forfeit my life for the furtherance of the ends of justice, and mingle my blood further with the blood of my children and with the blood of millions in this slave country whose rights are disregarded by wicked, cruel, and unjust enactments, I say, let it be done."

When Brown, still unflinching, met his end, there were solemn observances in the North. “That new saint,” Ralph Waldo Emerson said, “will make the gallows as glorious as the cross.” By far the gravest effect of Brown’s raid was to encourage pro-slavery southerners to equate John Brown with the Republican party. All through the fall and winter of 1859–1860, rumors of abolitionist conspiracies and slave insurrections swept through the slave states. Every northern visitor, commercial traveler, or schoolteacher came under suspicion, and many were driven out. “We regard every man in our midst an enemy to the institutions of the South,” said the *Atlanta Confederacy*, “who does not boldly declare that he believes African slavery to be a social, moral, and political blessing.”

THE CENTER COMES APART

THE DEMOCRATS DIVIDE Thus amid emotional hysteria and impossible demands the nation ushered in the year of another presidential election, destined to be the most fateful in its history. In April 1860 the Democrats gathered in Charleston, a pro-slavery hotbed, for their presidential convention. South Carolina itself had chosen a remarkably moderate delegation, but the radical southern states rights’ men held the upper hand in the delegations from the Gulf states.

Illinois senator Stephen Douglas’s supporters at the convention reaffirmed the platform of 1856, which simply promised congressional noninterference with slavery. Southern firebrands, however, demanded federal protection for slavery in the territories. Buchanan supporters, hoping to stop Douglas, encouraged the strategy. The platform debate reached a heady climax when the Alabama extremist William Yancey informed the northern Democrats that their error had been the failure to defend slavery as a positive good. An Ohio senator offered a blunt reply. “Gentlemen of the South,” he said, “you mistake us—you mistake us. We will not do it.”

When the pro-slavery planks lost, Alabama’s delegates walked out of the convention, followed by those representing the other Gulf states as well as Georgia, South Carolina (except for two brave up-country Unionists), and parts of the Arkansas and Delaware delegations. “We say, go your way,” exclaimed a Mississippi delegate to Douglas’s supporters, “and we will go ours.” The convention then decided to leave the overwrought atmosphere of Charleston and reassemble in Baltimore on June 18. The Baltimore convention finally nominated Stephen Douglas and reaffirmed the 1856 platform. The Charleston seceders met first in Richmond and then in Baltimore, where they adopted the slave-code platform defeated in Charleston and

Prospect of a Smash Up (1860)

This cartoon shows the Democratic Party—the last remaining national party—about to be split by sectional differences and the onrush of Republicans, led by Lincoln.

named Vice President John C. Breckinridge of Kentucky as their candidate for president. Thus another cord of union had snapped: the last remaining national party had fragmented.

LINCOLN'S ELECTION The Republicans, meanwhile, gathered in Chicago. There everything suddenly came together for “Honest Abe” Lincoln, the uncommon common man. Lincoln had emerged on the national scene during his unsuccessful Illinois senatorial campaign two years before and had since taken a stance designed to make him available for the nomination. He was strong enough on the containment of slavery to satisfy the abolitionists yet moderate enough to seem less threatening than they were. In 1860 he had gone East to address an audience of influential Republicans at Cooper Union, a newly established art and engineering college in New York City, where he emphasized his view of slavery “as an evil, not to be extended, but to be tolerated and protected only because of and so far as its actual presence among us makes that toleration and protection a necessity.”

At the Chicago Republican Convention, New York's William H. Seward was the early leader among the presidential nominees, but he had been tagged, perhaps wrongly, as an extremist for his earlier statements about a looming “irrepressible conflict” over slavery. On the first ballot, Lincoln finished in second place. On the next ballot he drew almost even with Seward,

and when he came within one and a half votes of a majority on the third count, Ohio quickly switched four votes to put him over the top.

The Republican party platform denounced both the Supreme Court's *Dred Scott* decision allowing slavery in all federal territories and John Brown's raid as "among the gravest of crimes." It also promised "the right of each state to order and control its own domestic institutions." The party reaffirmed its resistance to the extension of slavery and, in an effort to gain broader support, endorsed a higher protective tariff for manufacturers, free federal homesteads for farmers, a more liberal naturalization law for immigrants, and internal improve-

ments, including a transcontinental railroad. With this platform, Republicans made a strong appeal to eastern businessmen, western farmers, and the large immigrant population.

Both major conventions revealed that opinions tended to become more radical in the upper North and the Deep South. Attitude followed latitude. In the border states a sense of moderation aroused the die-hard Whigs to make one more try at reconciliation. Meeting in Baltimore a week before the Republicans met in Chicago, they reorganized into the Constitutional Union party and named John Bell of Tennessee for president. Their only platform was a vague statement promoting "the Constitution of the Country, the Union of the States, and the Enforcement of the Laws."

Of the four candidates not one generated a national following, and the campaign evolved into a choice between Lincoln and Douglas in the North (Lincoln was not even on the ballot in the South), Breckinridge and Bell in the South. One consequence of the separate campaigns was that each section gained a false impression of the other. The South never learned to distinguish Lincoln from the radicals; the North, and especially Lincoln, failed to gauge the force of southern intransigence. Lincoln stubbornly refused to offer the South assurances or to clarify his position, which he said was a matter of public record.

The one man who attempted to break through the veil that was falling between the North and the South was Douglas, who tried to mount the first

Abraham Lincoln

Republican candidate for president,
June 1860.

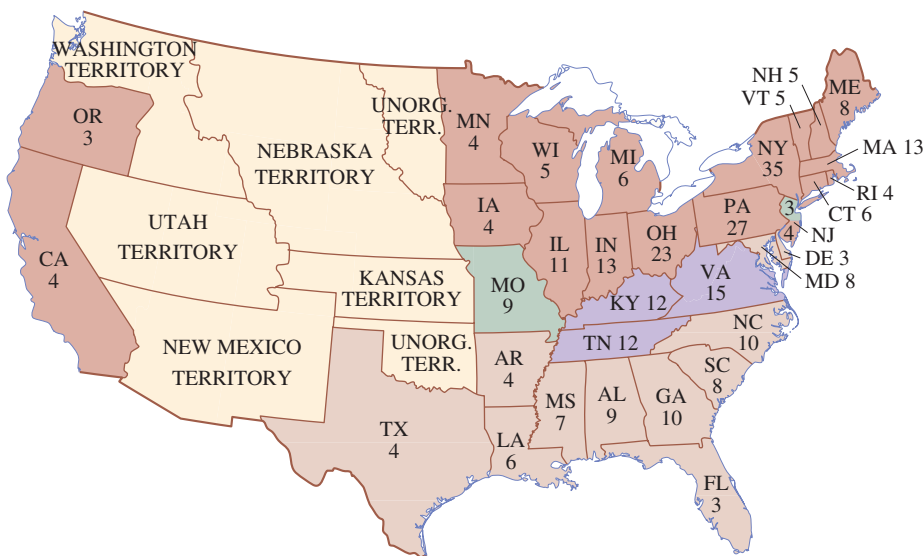

nationwide campaign tour. Only forty-seven but weakened by excessive drink, ill health, and disappointments, he wore himself out in one final glorious campaign. Early in October 1860, at Cedar Rapids, Iowa, he learned of Republican victories in the Pennsylvania and Indiana state legislatures. "Mr. Lincoln is the next President," he said. "We must try to save the Union. I will go South." Down through the hostile states of Tennessee, Georgia, and Alabama, Douglas carried appeals on behalf of the Union. "I do not believe that every Breckinridge man is a disunionist," he said, "but I do believe that every disunionist is a Breckinridge man." He was in Mobile, Alabama, when the presidential election was held.

By midnight on November 6, Lincoln's victory was clear. In the final count he had about 40 percent of the total popular vote but a clear majority, with 180 votes in the Electoral College. He carried every one of the eighteen free states, and by a margin wide enough to elect him even if the votes for the other candidates had been combined. But hidden in the balloting was an ominous development: for the first time a president had been elected by a clear sectional vote. Among all the candidates, only Douglas had won electoral votes from both slave and free states, but his total of 12 was but a pitiful remnant of Democratic unionism. Bell took Virginia, Kentucky, and Tennessee for 39 votes, and Breckinridge swept the other slave states to come in second with 72.

SECESSION OF THE DEEP SOUTH Soon after Lincoln's election, South Carolina held a special election to choose delegates to a state convention. In Charleston on December 20, 1860, the convention unanimously endorsed an Ordinance of Secession, declaring the state's ratification of the Constitution repealed and its union with the other states dissolved. A Declaration of the Causes of Secession reviewed the threats to slavery and asserted that a purely sectional (Republican) party had elected to the presidency a man "whose opinions and purposes are hostile to slavery," who had declared "government cannot endure permanently half slave, half free" and that slavery "is in the course of ultimate extinction."

By February 1, 1861, Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas had also seceded. Three days later a convention of the seven states met in Montgomery, Alabama; on February 7 they adopted a provisional constitution for the Confederate States of America, and two days later they elected Mississippi's Jefferson Davis as president. He was inaugurated February 18, with Alexander Stephens of Georgia as vice president.

In all seven Deep South states a solid majority had voted for secessionist delegates, but their combined vote would not have been a majority of the presidential vote in November. What happened, it seemed, was what often

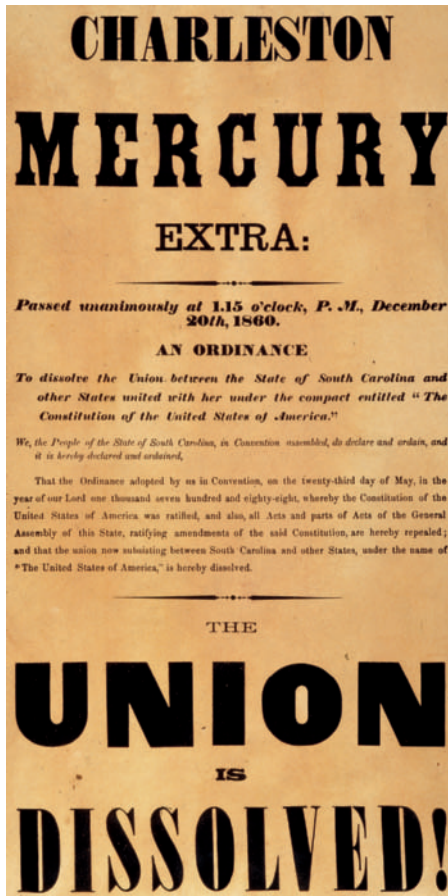

THE ELECTION OF 1860		Electoral vote	Popular vote
 Abraham Lincoln (Republican)		180	1,866,000
 Stephen A. Douglas (Democrat, Northern)		12	1,383,000
 John C. Breckinridge (Democrat, Southern)		72	848,000
 John Bell (Constitutional Union)		39	593,000

What caused the division in the Democratic party? How did Lincoln position himself to win the Republican nomination? What were the major factors that led to Lincoln's electoral victory?

happens in revolutionary situations: a determined minority acted quickly in an emotionally charged climate and carried out its program against a confused and indecisive opposition.

BUCHANAN'S WAITING GAME History is full of might-have-beens. A bold stroke, even a bold statement, by the lame-duck president at this point might have changed the course of events. But James Buchanan lacked boldness. Besides, a bold stroke might simply have hastened the

The Union is Dissolved

A handbill announcing South Carolina's secession from the Union.

conflict. No bold stroke came from Lincoln either, nor would he consult with the Buchanan administration during the months before his inauguration on March 4. He inclined all too strongly to the belief that secession was just another bluff and kept his public silence.

In his annual message on December 3, President Buchanan criticized northern agitators for trying to interfere with "slavery in the southern states." He then declared that secession was illegal but that he lacked the authority to coerce a state back into the Union. The president did reaffirm his duty to "take care that the laws be faithfully executed" insofar as he was able. If the president could enforce the law upon all citizens, he would have no need to "coerce" a state. Indeed, his position became the policy of the Lincoln administration, which ended up fighting a civil war on the theory that individuals but not states were in rebellion.

Buchanan held firmly to his resolve, with some slight stiffening by the end of December 1860, when secession became a fact, but he refrained from taking provocative actions. As the secessionists seized federal property, arsenals, and forts, this policy soon meant holding federal facilities at Fort Pickens in Pensacola Harbor, some remote islands off southern Florida, and Fort Sumter in Charleston Harbor.

Fort Sumter was commanded by Major Robert Anderson, a Kentucky Unionist, when South Carolina secessionists demanded withdrawal of all federal forces. Buchanan sharply rejected the South Carolina ultimatum. He dispatched a steamer, *Star of the West*, to Fort Sumter with reinforcements and provisions. As the ship approached Charleston Harbor, Confederate

batteries opened fire on January 9, 1861, and drove it away. It was in fact an act of war, but Buchanan chose to ignore the challenge. He decided instead to hunker down and ride out the remaining weeks of his term, hoping against hope that one of several compromise efforts would prevail.

FINAL EFFORTS AT COMPROMISE Desperate efforts at compromise continued in Congress. On December 18 Senator John J. Crittenden of Kentucky had proposed a series of amendments and resolutions that allowed for slavery in the territories south of 36°30' and guaranteed to maintain slavery where it already existed. Meanwhile, a peace conference met at Willard's Hotel in Washington, D.C., in February 1861. Twenty-one states sent delegates, and former president John Tyler presided, but the convention's proposal, substantially the same as the Crittenden Compromise, failed to win the support of either house of Congress. The only proposal that met with any success was a constitutional amendment guaranteeing slavery where it existed. Many Republicans, including Lincoln, were prepared to go that far to save the Union, but they were unwilling to repudiate their stand against slavery in the territories. As it happened, after passing the House, the amendment passed the Senate without a vote to spare, by twenty-four to twelve, on the dawn of inauguration day. It would have become the Thirteenth Amendment, with the first use of the word *slavery* in the Constitution, but the states never ratified it. When a Thirteenth Amendment was ratified, in 1865, it did not guarantee slavery—it abolished it.

MAKING CONNECTIONS

- Through the 1850s most of the debate over slavery concerned the expansion of slavery into the territories; with Lincoln's Emancipation Proclamation, discussed in the next chapter, the issue shifted to slavery itself.
- Many of the Radical Republicans who designed Reconstruction (Chapter 18) had been anti-slavery Republicans before the war.
- The proposed transcontinental railroad that had brought about the Kansas-Nebraska crisis would finally be completed in 1869 (Chapter 20).

During the four long months between his election and his inauguration, Abraham Lincoln said little about future policies and less about past positions. “If I thought a repetition would do any good I would make it,” he wrote to an editor in St. Louis. “But my judgment is it would do positive harm. The secessionists per se, believing they had alarmed me, would clamor all the louder.” So he stayed in Illinois until mid-February 1861, biding his time. He then boarded a train for a long, roundabout trip to Washington and began to drop some hints about his shifting outlook to audiences along the way. He told the New Jersey legislature that he was “devoted to peace” but warned that “it may be necessary to put the foot down.” At the end of the journey, reluctantly yielding to rumors of plots against his life, he passed unnoticed on a night train through Baltimore and slipped into Washington, D.C., before daybreak on February 23, 1861.

THE END OF THE WAITING GAME

In early 1861, as the possibility of civil war captured the attention of a divided nation, no one imagined that a conflict of horrendous scope and intensity awaited them. On both sides, people believed that any fighting would be over in little more than a month and that their daily lives would go on as usual.

LINCOLN'S INAUGURATION In his inaugural address, Lincoln repeated his pledge not “to interfere with the institution of slavery in the States where it exists. I believe I have no lawful right to do so, and I have no inclination to do so.” But the immediate question had shifted from slavery to secession, and most of the speech emphasized Lincoln’s view that “the Union of these States is perpetual.” The Union, he asserted, preceded the Constitution itself, dating from the Articles of Association drafted by the Continental Congress in 1774. It was “matured and continued” by the Declaration of Independence and the Articles of Confederation. Yet even if the United States were only a contractual association, “no State upon its own mere motion can lawfully get out of the Union.” Lincoln promised to hold forts in the South belonging to the federal government, collect taxes, and deliver the mail unless repelled, but beyond that “there will be no invasion, no using of force against or among the people anywhere.” In the final paragraph of the speech, Lincoln offered an eloquent appeal for regional harmony:

I am loath to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

Lincoln not only entered office amid the gravest crisis yet faced by a president, but he also confronted unusual problems of transition. Republicans, in power for the first time, crowded Washington, hungry for office. Four of the seven new cabinet members had been rivals for the presidency: William H. Seward at the State Department, Salmon P. Chase at the Treasury Department, Simon Cameron at the War Department, and Edward Bates as attorney general. Four were former Democrats, and three were former Whigs. They formed a group of better-than-average ability, though

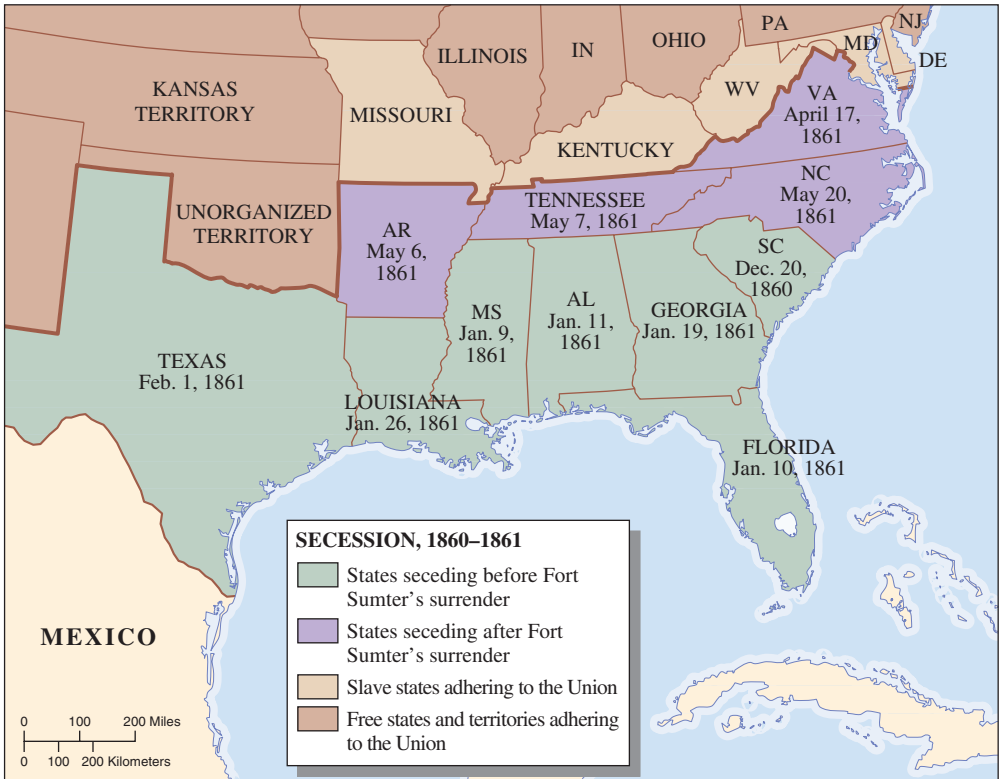

most were so strong-minded they thought themselves better qualified to lead than Lincoln. Only later did they acknowledge with Seward that Lincoln “is the best man among us.”

THE FALL OF FORT SUMTER For the time being, Lincoln’s combination of firmness and moderation differed little from James Buchanan’s stance. The new president’s only other choices were to accept the secession of seven states as an accomplished fact or use force right away. On the day after he took office, however, word arrived from Charleston that time was running out. Major Robert Anderson, in charge of the federal forces at Fort Sumter, had supplies for a month to six weeks, and Confederates were encircling the fort with a “ring of fire.”

Events moved quickly to a climax in the next two weeks. On April 4, 1861, Lincoln decided to resupply the sixty-nine men at Fort Sumter. On April 9 President Jefferson Davis and his Confederate cabinet in Montgomery, Alabama, decided against permitting Lincoln to resupply the fort. On April 11 the Confederate general Pierre G. T. Beauregard, a dapper Louisiana Creole who had studied the use of artillery under Robert Anderson at West Point, demanded a speedy surrender of Fort Sumter. Anderson refused but said his supplies would be used up in three days. With the relief ships approaching, Anderson received an ultimatum to yield. He again refused, and at four-thirty on the morning of April 12 the shelling of Fort Sumter began. After more than thirty hours, his ammunition exhausted, Anderson lowered the flag.

The guns of Charleston signaled the end of the waiting game. On the day after Anderson’s surrender, Lincoln called upon the loyal states to supply 75,000 militiamen to subdue the rebel states. Volunteers rallied around the flag at the recruiting stations. On April 19 Lincoln proclaimed a blockade of southern ports, which, as the Supreme Court later ruled, confirmed the existence of war.

TAKING SIDES Lincoln’s war proclamation swept four more states into the Confederacy. Virginia acted first. Its convention passed an Ordinance of Secession on April 17. The Confederate Congress then chose Richmond, Virginia, as its new capital, and the government moved there in June. Three other states followed Virginia in little over a month: Arkansas on May 6, Tennessee on May 7, and North Carolina on May 20. All four of the holdout states, especially Tennessee and Virginia, had areas (mainly in the mountains) where slaves were scarce and Union support ran strong. In east Tennessee the mountain counties would supply more volunteers to the Union than to the Confederate

Why did South Carolina and six other states secede from the union before the siege at Fort Sumter? Why did secession not win unanimous approval in Tennessee and Virginia? How did Lincoln keep Missouri and Kentucky in the Union?

cause. Unionists in western Virginia, bolstered by a Union army from Ohio under General George B. McClellan, contrived a loyal government of Virginia that formed a new state. In 1863 Congress admitted West Virginia to the Union with a constitution that provided for gradual emancipation of the few slaves there.

Of the other slave states, Delaware remained firmly in the Union, but Maryland, Kentucky, and Missouri went through bitter struggles to decide which side to support. The secession of Maryland would have isolated Washington, D.C., within the Confederacy. To hold on to that state, Lincoln took drastic measures of dubious legality: he suspended the writ of habeas corpus (under which judges could require arresting officers to produce their prisoners and

justify their arrest) and rounded up pro-Confederate leaders and threw them in jail. The fall elections ended the threat of Maryland's secession by returning a solidly Unionist majority in the state.

Kentucky, native state of both Abraham Lincoln and Jefferson Davis, harbored divided loyalties. Its fragile neutrality lasted until September 3, when a Confederate force occupied several towns. General Ulysses S. Grant then moved Union soldiers into Paducah. Thereafter, Kentucky, though divided in allegiance, for the most part remained with the Union. It joined the Confederacy, some have said, only after the war.

Lincoln's effort to hold a middle course in Missouri ran afoul of the maneuvers of less patient men in the state. Elections for a convention brought an overwhelming Union victory, whereas a pro-Confederate militia under the state governor began to gather near St. Louis. In that city, Unionist forces rallied, and on May 10 they surprised and disarmed the rebel militia at its camp. They pursued the pro-Confederate forces into the southwestern part of the state, and after a temporary setback on August 10 the Unionists pushed the Confederates back again, finally breaking their resistance at the Battle of Pea Ridge (March 6–8, 1862), just over the state line in Arkansas. Thereafter border warfare continued in Missouri, pitting against each other rival bands of gunslingers who kept up their feuding and banditry for years after the war was over.

CHOOSING SIDES Robert E. Lee's decision epitomized the agonizing choice facing many residents of the border states. Son of "Light-Horse Harry" Lee, a Revolutionary War hero, and married to a descendant of Martha Washington's, Lee had served in the U.S. Army for thirty years. When Fort Sumter was attacked, he was summoned by General Winfield Scott, another Virginian, and offered command of the Federal forces. After a sleepless night spent pacing the floor, Lee told Scott that he could not go against his "country," meaning Virginia. Although Lee failed to "see the good of secession," he could not "raise my hand against my birthplace, my home, my children." Lee resigned his army commission, retired to his estate, and soon answered a call to the Virginia—later the Confederate—service.

Many southerners made great sacrifices to remain loyal to the Union. Some left their native region once the fighting began. Others who remained in the South found ways to support the Union. In every Confederate state except South Carolina, whole regiments were organized to fight for the Union. Some 100,000 men from the southern states fought against the Confederacy. One out of every five soldiers from Arkansas killed in the war fought on the Union side.

THE BALANCE OF FORCE

Shrouded in an ever-thickening mist of larger-than-life mythology, the Union triumph in the Civil War has acquired an aura of inevitability. The Confederacy's fight for independence, on the other hand, has taken on the aura of a romantic lost cause, doomed from the start by the region's sparse industrial development, smaller pool of able-bodied men, paucity of capital resources and warships, and spotty transportation network.

But in 1861 the military situation seemed by no means so clear-cut. For all of the South's obvious disadvantages, it initially enjoyed a captive labor force and the benefits of fighting a defensive campaign on familiar territory. Jefferson Davis and other Confederate leaders were genuinely confident that their cause would prevail on the battlefield. The outcome of the Civil War was not inevitable: it was determined as much by human decisions and human willpower as by physical resources.

ECONOMIC ADVANTAGES The South seceded in part out of a growing awareness of its minority status in the nation; a balance sheet of the sections in 1861 shows the accuracy of that perception. The Union held twenty-three states, including four border slave states, while the Confederacy had eleven.

Union Soldiers at Harpers Ferry, Virginia, in 1862

Neither side in the Civil War was prepared for the magnitude of this first “modern” war.

The population count was about 22 million in the Union to 9 million in the Confederacy, and about 4 million of the latter were enslaved. The Union therefore had an edge of about four to one in potential human resources. To help redress the imbalance, the Confederacy mobilized 80 percent of its military-age white men, one third of whom would die during the prolonged war.

An even greater advantage for the North was its industrial development. The states that joined the Confederacy produced just 7 percent of the nation's manufactures on the eve of the war. The Union states produced 97 percent of the firearms and 96 percent of the railroad equipment. They had most of the trained mechanics, most of the shipping and mercantile firms, and the bulk of the banking and financial resources. The North's advantage in transportation weighed heavily as the war went on. The Union had more wagons, horses, and ships than the Confederacy and an impressive edge in railroads.

As the Civil War began, the Confederacy enjoyed a major geographic advantage: it could fight a defensive war on its own territory. In addition, the South had more experienced military leaders. Some of those advantages were soon countered, however, by the Union navy's effective blockade of the major southern ports. On the inland waters navy gunboats and transports played an even more direct role in securing the Union's control of the Mississippi River and its larger tributaries, which provided easy invasion routes into the center of the Confederacy.

The U.S. Watervliet Arsenal in Watervliet, New York

The North had an advantage in industrial development, and its foundries turned out most of the nation's firearms.

THE WAR'S EARLY COURSE

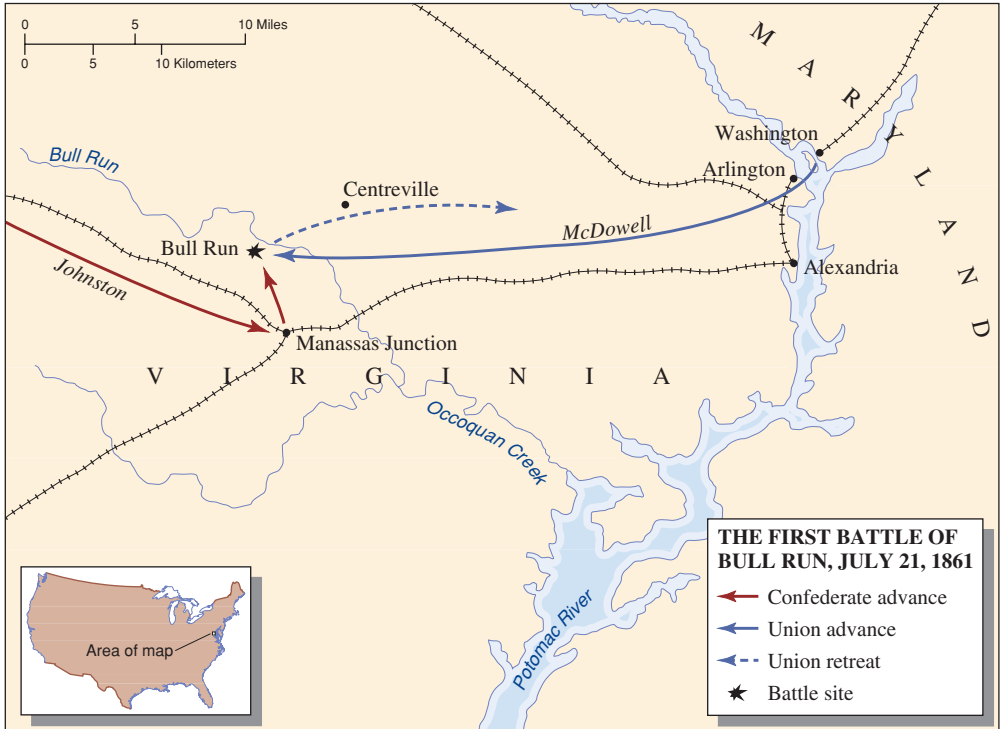

After the fall of Fort Sumter, partisans on both sides hoped that the war might end with one sudden bold stroke, the capture of Washington or the fall of Richmond. Nowhere was this naive optimism more clearly displayed than at the First Battle of Bull Run (or Manassas).^{*} An eager public pressured both sides to strike quickly and decisively. Jefferson Davis allowed the battle-hungry General P.G.T. Beauregard to hurry the main Confederate army to the railroad center at Manassas Junction, Virginia, about twenty-five miles west of Washington. Lincoln decided that General Irvin McDowell's hastily assembled Union army of some 37,000 might overrun the outnumbered Confederates and quickly march on to Richmond, the Confederate capital.

It was a hot, dry day on July 21, 1861, when McDowell's raw recruits encountered Beauregard's army dug in behind a meandering little stream called Bull Run. The two generals, former classmates at West Point, adopted markedly similar plans: each would try to turn the other's left flank. The Federals almost achieved their purpose early in the afternoon, but Confederate reinforcements, led by General Joseph E. Johnston, poured in to check the Union offensive. Amid the fury a South Carolina officer rallied his men by pointing to Thomas Jackson's brigade of Virginians: "Look, there is Jackson with his Virginians, standing like a stone wall." The reference thereafter served as Jackson's nickname.

After McDowell's last assault faltered, his army's frantic retreat turned into a panic as fleeing soldiers and terrified civilians clogged the Washington road. An Ohio congressman and several colleagues tried to rally the frenzied soldiers. "We called them cowards, denounced them in the most offensive terms, pulled out our heavy revolvers and threatened to shoot them, but in vain; a cruel, crazy, mad, hopeless panic possessed them." But the Confederates were about as disorganized and exhausted by the battle as the Yankees were, and they failed to give chase. It would have been futile anyway, for the next day a summer downpour turned roads into quagmires.

The Battle of Bull Run was a sobering experience for both sides. Much of the romance—the splendid uniforms, bright flags, rousing songs—gave way

^{*}The Federals most often named battles for natural features; the Confederates, for nearby towns—thus Bull Run (Manassas), Antietam (Sharpsburg), Stones River (Murfreesboro), and the like.

Why did the Confederate and Union armies rush to battle before they were ready? How did Beauregard win the first Battle of Bull Run? Why did Jackson not pursue the Union army?

to the agonizing realization that this would be a long and costly struggle. *Harper's Weekly* bluntly warned: "From the fearful day at Bull Run dates war. Not polite war, not incredulous war, but war that breaks hearts and blights homes." The sobering Union defeat "will teach us in the first place . . . that this war must be prosecuted on scientific principles."

THE WAR'S EARLY PHASE The Battle of Bull Run demonstrated that the war would not be decided with one sudden stroke. General Winfield Scott, the seventy-five-year-old commander of the Union armies, had predicted as much, and now Lincoln fell back upon Scott's three-pronged "anaconda" strategy. It called first for the Army of the Potomac to defend Washington, D.C., and exert constant pressure on the Confederate capital at Richmond.

At the same time the navy would blockade the southern ports and dry up the Confederacy's access to foreign goods and weapons. The final component of the plan would divide the Confederacy by invading the South along the main water routes: the Mississippi, Tennessee, and Cumberland rivers. This strategy would slowly entwine and crush the southern resistance.

The Confederate strategy was simpler. If the Union forces could be stalemated, Jefferson Davis and others hoped, then the cotton-hungry British or French might be persuaded to join their cause, or perhaps public sentiment in the North would force Lincoln to seek a negotiated settlement. So at the same time that armies were forming in the South, Confederate diplomats were seeking assistance in London and Paris, and Confederate sympathizers in the North were urging an end to the North's war effort.

NAVAL ACTIONS After Bull Run, for the rest of 1861 and into early 1862, the most important military actions involved a naval war and blockade. The one great threat to the Union navy's blockade of southern ports proved to be short-lived. The Confederates in Norfolk, Virginia, fashioned an ironclad ship from an abandoned Union steam frigate, the *Merrimack*. Rechristened the *Virginia*, it ventured out on March 8, 1862, and began attacking Union ships. But as luck would have it, a new Union ironclad, the *Monitor*, arrived from New York in time to engage the *Virginia* on the next day. They fought to a draw, and the *Virginia* returned to port, where the Confederates destroyed it when they had to give up Norfolk soon afterward.

Thereafter the Union navy tightened its grip on the South. In late 1861 a Federal flotilla appeared at Port Royal, South Carolina, pounded the fortifications into submission, and seized the port and nearby sea islands. The navy extended its bases farther down the Carolina coast in the late summer and fall of 1862. From there its progress extended southward along the Georgia-Florida coast. In the spring of 1862, Admiral David Farragut forced open the lower Mississippi near its mouth and surprised the Confederate defenders of New Orleans.

FORMING ARMIES Once the fighting began, the Federal Congress recruited 500,000 more men and after the Battle of Bull Run added another 500,000. By the end of 1861, the first half million had enlisted. This rapid mobilization left the army with a large number of "political" officers, commissioned by state governors or elected by the recruits.

The nineteenth-century army often organized its units along community and ethnic lines. The Union army, for example, included a Scandinavian regiment (the 15th Wisconsin Infantry), a Scottish Highlander unit (the

79th New York Infantry), a French regiment (the 55th New York Infantry), and a mixed unit of Poles, Hungarians, Germans, Spaniards, and Italians (the 39th New York Infantry).

In the Confederacy, Jefferson Davis initially called up 100,000 twelve-month volunteers. Once the fighting started, he was authorized to raise up to 400,000 three-year volunteers “without the delay of a formal call upon the respective states.” Thus by early 1862 most of the veteran Confederate soldiers were nearing the end of their enlistment without having encountered much significant action. They were also resisting the incentives of bonuses and furloughs for reenlistment. The Confederate government thus turned to conscription. By an act passed on April 16, 1862, all white male citizens aged eighteen to thirty-five were declared members of the army for three years, and those already in service were required to serve out three years. In 1862 the upper age was raised to forty-five, and in 1864 the age limit was further extended from seventeen to fifty, with those under eighteen and over forty-five reserved for state defense.

The conscription law included two loopholes, however. First, a draftee might escape service either by providing an able-bodied substitute who was not of draft age or by paying \$500 in cash. Second, exemptions, designed to protect key civilian work, were subject to abuse by men seeking “bombproof” jobs. The

exemption of one white man for each plantation with twenty or more slaves led to bitter complaints about “a rich man’s war and a poor man’s fight.”

The Union took nearly another year to force men into service. In 1863 the government began to draft men aged twenty to forty-five. Exemptions were granted to specified federal and state officeholders and to others on medical or compassionate grounds. For \$300 one could avoid service. In both the North and the South, conscription spurred men to volunteer, either to collect bounties or to avoid the disgrace of being drafted.

The Civil War draft flouted an American tradition of voluntary service and was widely held to be arbitrary and unconstitutional. Widespread public opposition impeded its enforcement in both the North and the South. In New York City the announcement of a draft lottery on July 11, 1863, incited a week of rioting in which roving bands of working-class toughs, many of them Irish Catholic immigrants, took control of the streets. Although provoked by feelings that the draft loopholes catered to the wealthy, the riots also exposed racial and ethnic tensions. The mobs set upon conscription offices, factories, docks, and the homes of prominent Republicans. But they directed their wrath most furiously at African Americans. They blamed blacks for causing the war and for threatening to take their own unskilled jobs. The violence ran completely out of control; over 100 people were killed before five regiments of battle-weary soldiers brought from Gettysburg restored order.

CONFEDERATE DIPLOMACY While the Union and the Confederate armies mobilized, Confederate diplomacy focused on gaining foreign supplies, diplomatic recognition, and perhaps even military intervention. The Confederates indulged the pathetic hope that official diplomatic recognition by England and France would prove decisive, when in fact it more likely would have followed a decisive victory in the field, which never came. An equally fragile illusion was the conviction that King Cotton would lure military aid and political sympathy from countries around the world dependent upon the fiber.

The first Confederate emissaries to England and France took hope when the British foreign minister received them informally after their arrival in London in 1861; they even won a promise from France’s Napoléon III to recognize the Confederacy if Britain would lead the way. But the British foreign minister refused to receive the Confederates again, partly in response to Union pressure and partly out of British self-interest.

One incident early in the war threatened to upset British neutrality. In November 1861 a Union warship stopped a British ship, the *Trent*, and took into custody two Confederate agents, James M. Mason and John Slidell. Celebrated as a heroic deed by a northern public still starved for victories, the

Trent affair roused a storm of protest in Britain. The British government sent Lincoln an ultimatum for the captives' release. To interfere with a neutral ship on the high seas violated a long-settled American principle, and federal officials finally decided to release the two agents, much to their own chagrin. Mason and Slidell were more useful as martyrs to their own cause than they could ever be in London and Paris.

Confederate agents in Europe were far more successful in getting supplies than in gaining official government recognition of the Confederacy as a sovereign nation. The most spectacular feat was the purchase of raiding ships designed to attack Union vessels around the world. Although British law forbade the sale of warships to belligerents, a Confederate commissioner contrived to have ships built and then, on trial runs, escape to the Azores or elsewhere to be outfitted with guns. In all, eighteen such ships were activated and saw action in the Atlantic, Pacific, and Indian oceans, where they sank hundreds of Yankee ships and terrified the rest. The most spectacular of the Confederate raiders were the first two, the *Florida* and the *Alabama*, which captured thirty-eight and sixty-four Union ships, respectively.

THE WEST AND THE CIVIL WAR During the Civil War western settlement continued unabated. New discoveries of gold and silver along the eastern slopes of the Sierra Nevadas and in Montana and Colorado lured thousands of prospectors and their suppliers. New transportation and communication networks emerged to serve the growing population in the West. Telegraph lines sprouted above the plains, and stagecoach lines fanned out to serve the new communities. Dakota, Colorado, and Nevada gained territorial status in 1861, Idaho and Arizona in 1863, and Montana in 1864. Silver-rich Nevada gained statehood in 1864.

With the firing on Fort Sumter, many of the regular army units assigned to frontier outposts in the West began to head east to meet the Confederate threat. In Texas, the Indian Territory (Oklahoma), and southern New Mexico, Union soldiers left altogether. Elsewhere they left behind skeleton units. Texas was the only western state to join the Confederacy. For the most part, the federal government maintained its control of the other western territories during the war. But it was not easy. Fighting in Kansas and the Indian Territory was widespread and furious. By 1862 Lincoln had been forced to dispatch new volunteer units to the West. He had two primary concerns: to protect the shipments of gold and silver and to win over western political support for the war and his presidency.

The most intense fighting in the West occurred along the Kansas-Missouri border. There the disputes between the pro-slavery and anti-slavery settlers

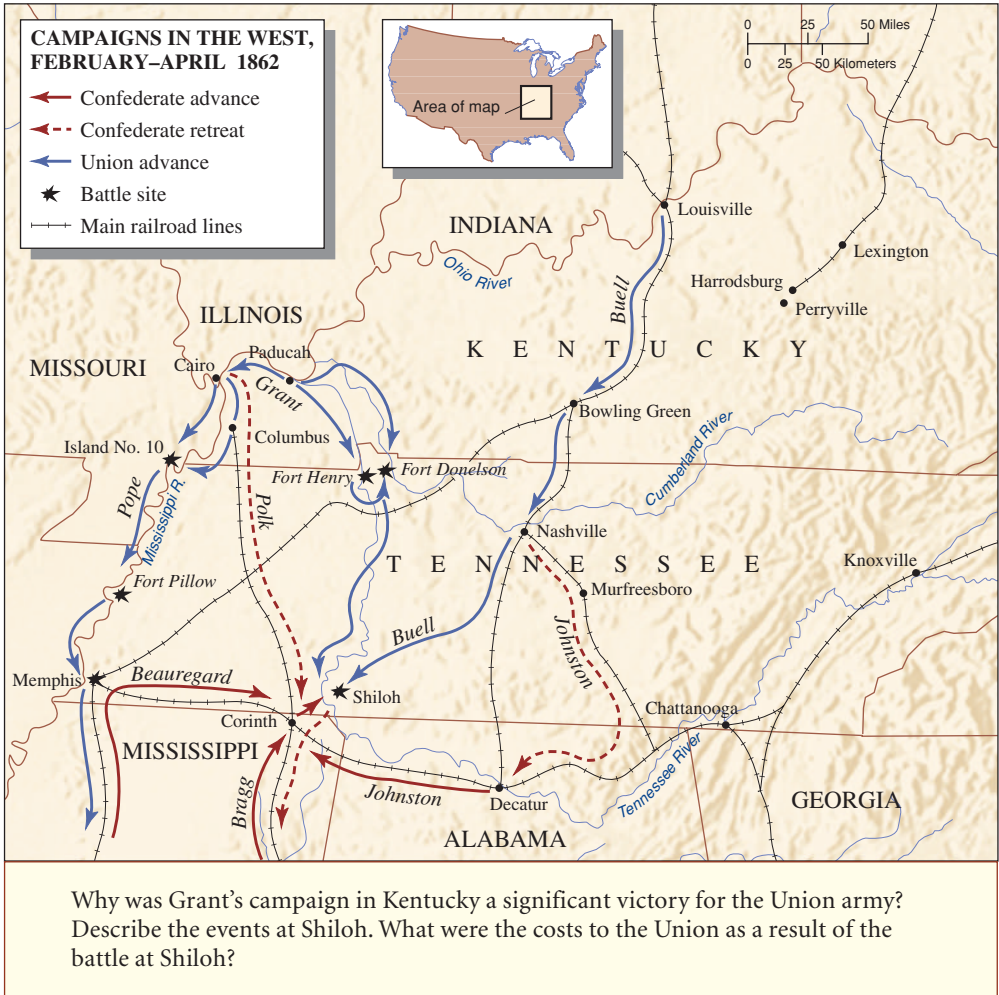

of the 1850s turned into brutal guerrilla warfare. The most prominent pro-Confederate leader in the area was William Quantrill. He and his pro-slavery followers, mostly teenagers, fought under a black flag, meaning that they gave no quarter. In destroying Lawrence, Kansas, in 1863, Quantrill ordered his forces to “kill every male and burn every house.” By the end of the day, 182 boys and men had been killed. Their opponents, the Jayhawkers, responded in kind. They tortured and hanged pro-Confederate prisoners, burned houses, and destroyed livestock.

Many Indian tribes found themselves caught up in the war. Indian regiments fought on both sides, and in Oklahoma they fought against each other. Indians among the “Five Civilized Tribes” held black slaves and felt a natural bond with southern whites. Oklahoma’s proximity to Texas influenced the Choctaws and Chickasaws to support the Confederacy. The Cherokees, Creeks, and Seminoles were more divided in their loyalties. For those tribes the Civil War served as a wedge that fractured their unity. The Cherokees, for example, split in two, some supporting the Union and others supporting the South.

ACTIONS IN THE WESTERN THEATER Little happened of military significance in the eastern theater (east of the Appalachians) before May 1862. On the other hand, the western theater (from the mountains to the Mississippi River) flared up with several encounters and an important penetration of the Confederate states. In western Kentucky, the Confederate general Albert Sidney Johnston had perhaps 40,000 men stretched over some 150 miles.

Early in 1862 General Ulysses S. Grant made the first Union thrust against the weak center of Johnston’s overextended lines. Moving out of Cairo, Illinois, and Paducah, Kentucky, with a gunboat flotilla, he swung southward up the Tennessee River and captured Fort Henry on February 6. Grant then moved quickly overland to attack nearby Fort Donelson. On February 16 a force of 12,000 Confederates surrendered.

SHILOH After suffering defeats in Kentucky and Tennessee, General Albert Johnston regrouped the Confederate forces and moved to Corinth, in northern Mississippi, near the Tennessee border. Ulysses Grant, meanwhile, moved his Union army southward along the Tennessee River during the early spring of 1862. Grant then made a costly mistake. While planning his attack on Corinth, he exposed his 42,000 troops on a rolling plateau between two creeks flowing into the Tennessee River and failed to dig defensive trenches. Johnston shrewdly recognized Grant’s oversight, and on the morning of April 6 the Kentuckian ordered an attack on the vulnerable Federals,

urging his men to be “worthy of your race and lineage; worthy of the women of the South.”

The 44,000 Confederates struck suddenly at Shiloh, the site of a log church in the center of the Union camp in southwestern Tennessee. They found most of Grant's troops still sleeping or eating breakfast; many died in their bedrolls. After a day of carnage and confusion, the Union soldiers were pinned against the river. At the height of the battle, a wounded Union soldier was told to leave his rifle and go to the rear. He soon returned, saying, “Gimme another gun. This blame fight ain't got any rear.” The Union army might well have been

totally defeated had the Confederate commander, General Johnston, not been mortally wounded at the peak of the battle; his second in command called off the attack. Bolstered by reinforcements, Grant took the offensive the next day, and the Confederates glumly withdrew to Corinth, leaving the Union army too battered to pursue. Casualties on both sides totaled over 20,000.

Shiloh, a Hebrew word meaning “Place of Peace,” was the costliest battle in which Americans had ever engaged, although worse was yet to come. Grant observed that the ground was “so covered with dead one could walk across the field without touching the ground.” Like so many battles thereafter, Shiloh was a story of missed opportunities and debated turning points punctuated by lucky incidents and accidents. Throughout the Civil War winning armies would fail to pursue their retreating foes, thus allowing the wounded opponent to slip away and fight again.

After the battle at Shiloh, General Henry Halleck, already jealous of Grant’s success, spread the false rumor that Grant had been drinking during the battle. Some called upon Lincoln to fire Grant, but the president refused: “I can’t spare this man; he fights.” Halleck, however, took Grant’s place as field commander, and as a result the Union thrust southward ground to a halt. For the remainder of 1862, the chief action in the western theater was a series of inconclusive maneuvers punctuated by sharp engagements.

MC CLELLAN’S PENINSULAR CAMPAIGN The eastern theater remained fairly quiet for nine months after Bull Run. In the wake of the Union defeat, Lincoln had replaced McDowell with General George B. McClellan, Stonewall Jackson’s classmate at West Point. As head of the Army of the Potomac, McClellan set about building a powerful, well-trained army that would be ready for its next battle. When General Winfield Scott retired in November, Lincoln appointed McClellan general in chief. McClellan exuded confidence and poise. Yet for all his organizational ability and dramatic flair, his innate caution would prove crippling.

Time passed, and McClellan kept building and training his army to meet the superior numbers he claimed the Confederates were deploying. Lincoln wanted the army to move directly toward Richmond, but McClellan, who dismissed the president as a “well-meaning baboon,” sought to enter Richmond by the side door, so to speak, up the neck of land between the York and James rivers, site of Jamestown, Williamsburg, and Yorktown.

In mid-March 1862 McClellan’s army finally moved down the Potomac River and Chesapeake Bay to the Virginia peninsula southeast of Richmond.

Camp Winfield Scott

McClellan's headquarters during the siege of Yorktown, 1862.

This bold move put the Union forces within sixty miles of the Confederate capital. Thousands of Richmond residents fled the city in panic, but McClellan waited to strike, failing to capitalize on his advantages.

President Jefferson Davis, at the urging of his adviser Robert E. Lee, sent Stonewall Jackson's army into the Shenandoah Valley on what proved to be a brilliant diversionary action. From March 23 to June 9, Jackson's 18,000 men pinned down two separate Union armies with more than twice their numbers in the western Virginia mountains. While the Union army under General McDowell braced to defend Washington, Jackson hastened back to defend Richmond against McClellan.

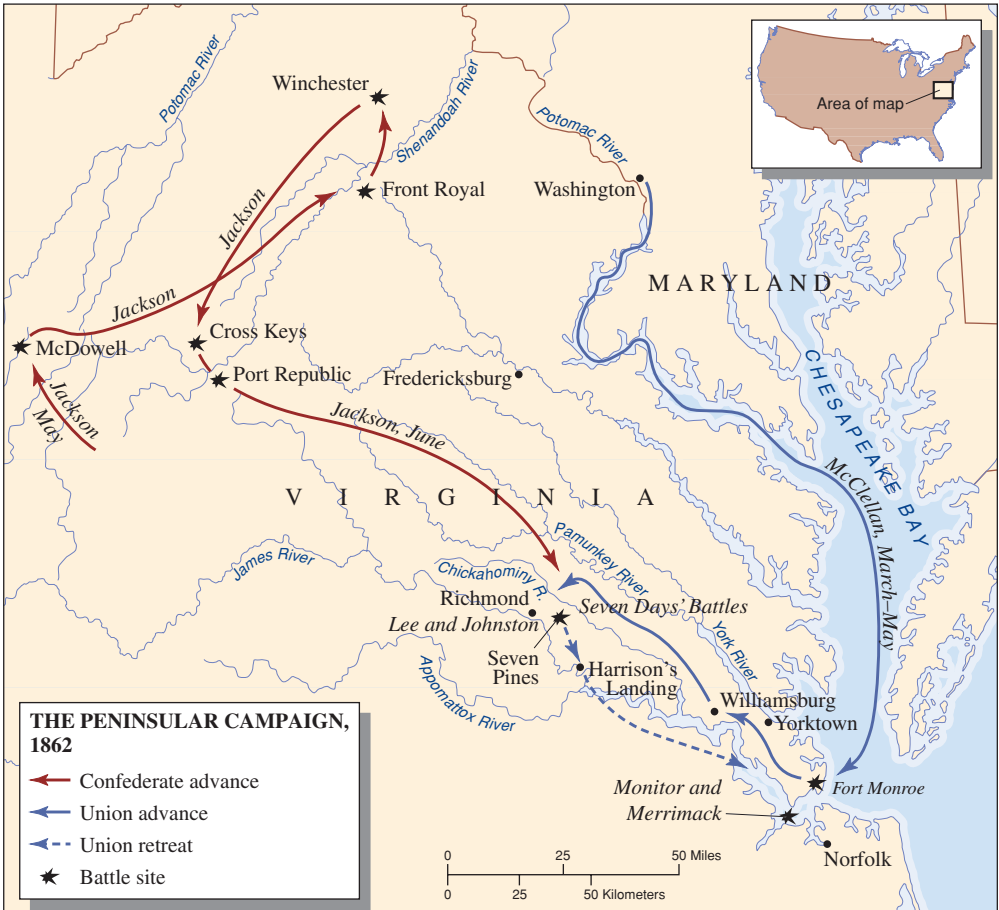

On May 31 the Confederate general Joseph E. Johnston struck at McClellan's forces along the Chickahominy River. In the Battle of Seven Pines (Fair Oaks), only the arrival of federal reinforcements, who somehow crossed the swollen river, prevented a disastrous Union defeat. Both sides took heavy casualties, and General Johnston was severely wounded.

At this point, Robert E. Lee assumed command of the Army of Northern Virginia, a development that changed the course of the war. Tall, erect, and broad shouldered, Lee projected a commanding presence. At the start of the Civil War, the West Point graduate was considered the most promising army

officer in the United States. Dignified yet fiery, Lee was an audacious commander. He led by example, and his men loved him. Unlike Johnston, Lee enjoyed Jefferson Davis's trust. More important, he knew how to use the talents of his superb field commanders: Stonewall Jackson, the pious, fearless mathematics professor from the Virginia Military Institute; James Longstreet, Lee's deliberate but tireless "warhorse"; sharp-tongued D.H. Hill, the former engineering professor at Davidson College; Ambrose P. Hill, the consummate fighter who challenged one commander to a duel and feuded with Stonewall Jackson; and J.E.B. Stuart, the colorful young cavalryman who once said, "All I ask of fate is that I may be killed leading a cavalry charge." He would get his wish.

Once in command, Lee attacked the Union lines east of Richmond but failed to dislodge the Union forces. McClellan's army was still near Richmond. On July 9, when Lincoln visited McClellan's headquarters, the general complained that the administration had failed to support him adequately and instructed the president at length on war policies. It was ample reason to remove McClellan. Lincoln returned to Washington and on July 11 called Henry Halleck from the West to take charge as general in chief. Miffed at his demotion, McClellan angrily dismissed Halleck as an officer "whom I know to be my inferior."

SECOND BULL RUN Lincoln and Halleck ordered McClellan to leave the peninsula and join the Washington defense force, now under the command of the bombastic John Pope, who had been called back from the West for a new overland assault on Richmond. In a letter to his wife, McClellan predicted that "Pope will be thrashed and disposed of" by Lee. As McClellan's Army of the Potomac began to pull out of the Tidewater, Lee moved northward to strike Pope before McClellan's troops arrived. Dividing his forces, Lee sent Jackson's "foot cavalry" around Pope's right flank to attack his supply lines. At Cedar Mountain, Virginia, Jackson pushed back an advance party of Federals and went on to seize and destroy the Federal supply base at Manassas Junction. At the Second Battle of Bull Run (or Manassas), fought on almost the same site as the earlier battle, Pope assumed that he faced only Jackson, but Lee's main army by that time had joined in. On August 30 a crushing attack on Pope's flank drove the Federals from the field. In the next few days the Union forces pulled back to the fortifications around Washington, where McClellan once again took command and reorganized. He displayed his unflagging egotism in a letter to his wife: "Again I have been called upon to save the country." The disgraced Pope was dispatched to Minnesota to fight Indians.

What was McClellan's strategy for attacking Richmond? How did Jackson divert the attention of the Union army? Why did Lincoln demote McClellan after the Peninsular campaigns?

ANTIETAM Still on the offensive, Lee decided to invade the North and perhaps thereby gain foreign recognition and military supplies for the Confederacy. He and his battle-tested troops pushed into western Maryland in September 1862, headed for Pennsylvania. But Lee's bold strategy was uncovered when a Union soldier picked up a bundle of cigars and discovered a secret order from Lee wrapped around them. The paper revealed that Lee had again divided his army, sending Stonewall Jackson off to take Harpers Ferry, Virginia. McClellan boasted upon seeing the captured document,

“Here is a paper with which, if I cannot whip Bobby Lee, I will be willing to go home.” Instead of seizing his unexpected opportunity, however, he delayed for sixteen crucial hours, still worried—as always—about enemy strength, and Lee was thereby able to reassemble most of his tired army behind Antietam Creek. Still, McClellan was optimistic, and Lincoln, too, relished the

chance for a truly decisive blow. “God bless you and all with you,” he wired McClellan. “Destroy the rebel army if possible.”

On September 17, 1862, McClellan’s forces attacked Confederate units near Sharpsburg, Maryland, along Antietam Creek, commencing the furious Battle of Antietam (Sharpsburg). With the Confederate lines ready to break, Ambrose P. Hill’s division arrived from Harpers Ferry, having marched sixteen miles to the battlefield. Bone weary and footsore, they nevertheless plunged immediately into the fray, battering the Union army’s left flank. Still outnumbered more than two to one, the Confederates forced a standoff in the most costly day of the Civil War, a day participants thought would never end. The next day the battered Confederates slipped south across the Potomac River to the safety of Virginia. General Lee’s northern invasion had failed. The Battle of Antietam was the bloodiest single day in American history. Some 6,400 soldiers on both sides were killed and another 15,000 wounded. Surveying the battlefield afterward, a Union officer counted “hundreds of dead bodies lying in rows and in piles.” The scene was “sickening, harrowing, horrible. O what a terrible sight!”

The vainglorious McClellan insisted that he had “fought the battle splendidly” and that “our victory was complete,” but Lincoln thought otherwise. Disgusted by McClellan’s failure to gain a truly decisive victory, the

president sent a curt message to the general: “I have just read your dispatch about sore-tongued and fatigued horses. Will you pardon me for asking what the horses of your army have done . . . that fatigues anything?” Failing to receive a satisfactory answer, Lincoln removed McClellan from command and assigned him to recruiting duty in New Jersey. Never again would he command troops.

FREDERICKSBURG The Battle of Antietam was the turning point in the war. It revived sagging Northern morale, emboldened Abraham Lincoln to issue the Emancipation Proclamation, freeing all slaves in the Confederate states, and dashed the Confederacy’s hopes of foreign recognition. Yet the war was far from over. In his search for a fighting general, Lincoln now made the worst choice of all. He turned to Ambrose E. Burnside, who had twice before turned down the job on the grounds that he felt unfit for so large a command. But if the White House wanted him to fight, he would attack, even in the face of the oncoming winter.

On December 13, 1862, Burnside sent the Army of the Potomac across the icy Rappahannock River to assault Lee’s forces, who were well entrenched on ridges and behind stone walls west of Fredericksburg, Virginia. Confederate artillery and muskets chewed up the blue columns as they crossed a mile of open land outside the town. It was, a Federal general sighed, “a great slaughter-pen.” The scene was both awful and awesome, prompting Lee to remark, “It is well that war is so terrible—we should grow too fond of it.” After taking more than 12,000 casualties, compared with fewer than 6,000 for the Confederates, Burnside wept as he gave the order to withdraw.

The year 1862 ended with forces in the East deadlocked and the Union advance in the West stalled since midyear. Union morale plummeted: northern Democrats were calling for a negotiated peace. At the same time, Lincoln was under pressure from the so-called Radical Republicans, who were pushing for more stringent war measures and questioning the president’s competence. General Burnside, too, was under fire, with some of his own officers ready to testify publicly to his shortcomings.

But amid the dissension the deeper currents of the war were turning in favor of the Union: in the lengthening war its superior resources began to tell. In both the eastern and the western theaters the Confederate counterattack had been repulsed. And while the armies clashed, Lincoln by the stroke of a pen changed the conflict from a war to restore the Union into a revolutionary struggle for the abolition of slavery. On January 1, 1863, he signed the Emancipation Proclamation.

EMANCIPATION

At the war's outset, Lincoln had promised to restore the Union but maintain slavery where it existed. Congress, too, endorsed that position. Once fighting began, the need to hold the border states in the Union dictated caution on the volatile issue of emancipation. Beyond that, several other considerations deterred action. For one, Lincoln had to cope with a deep-seated racial prejudice in the North. Whereas most abolitionists promoted both complete emancipation and the social integration of the races, many anti-slavery activists wanted slavery prohibited only in the new western territories and states. They were willing to allow slavery to continue in the South and were uneasy about racial integration. Lincoln himself harbored doubts about his authority to emancipate slaves so long as he clung to the view that the rebellious states remained legally in the Union. The only way around the problem would be to justify emancipation as a military necessity.

A MEASURE OF WAR The expanding war forced the issue. As Federal forces pushed into the Confederacy, fugitive slaves began to turn up in Union army camps, and generals did not know whether or not to declare them free. Some put the “contrabands” to work building fortifications; others set them free. Lincoln, meanwhile, began to edge toward emancipation. In March 1862 he proposed that federal compensation be offered any state

Contrabands

Former slaves on a farm in Cumberland Landing, Virginia, 1862.

that began gradual emancipation. The plan failed in Congress because of border-state opposition, but on April 16, 1862, Lincoln signed an act that abolished slavery in the District of Columbia; on June 19 another act excluded slavery from the territories, without offering owners compensation. A Second Confiscation Act, passed on July 17, liberated the slaves of all persons aiding the rebellion. Still another act forbade the army to help return runaways to their border-state owners.

To save the Union, Lincoln finally decided, emancipation of Confederate slaves would be required for several reasons: slave labor bolstered the Rebel war effort, sagging morale in the North needed the boost of a moral cause, and public opinion was swinging toward emancipation as the war dragged on. Proclaiming a war on slavery, moreover, would end forever any chance that France or Britain would support the Confederacy. In July 1862 Lincoln first confided to his cabinet that he was considering issuing a proclamation that under his war powers would free the slaves of the enemy. At the time, Secretary of State William Seward advised him to wait for a Union victory in order to avoid any semblance of desperation.

The time to act finally came after the Battle of Antietam. On September 22, 1862, Lincoln issued a preliminary Emancipation Proclamation, in which he repeated that his object was mainly to restore the Union and that he favored proposals for paying slaveholders for their losses. But the main burden of the document was his warning that on January 1, 1863, “all persons held as slaves within any state, or designated part of a state, the people whereof shall be in rebellion against the United States, shall be then, thenceforward and forever free.” On January 1, 1863, Lincoln signed the second Emancipation Proclamation, again emphasizing that this was a war measure based upon his war powers. He also urged blacks to abstain from violence except in self-defense, and he added that free blacks would now be received into the armed services of the United States. As he wrote his name on the document, Lincoln said, “I never, in my life, felt more certain that I was doing the right thing than I do in signing this paper.”

REACTIONS TO EMANCIPATION

Among the Confederate states, Tennessee and the Union-controlled parts of Virginia and Louisiana were exempted from the Emancipation Proclamation. Thus no slaves who were within Union lines at the time were freed. But many enslaved African Americans in those areas claimed

Two Views of the Emancipation Proclamation

their freedom anyway. “In a document proclaiming liberty,” wrote the historian Benjamin Quarles, “the unfree never bother to read the fine print.”

BLACKS IN THE MILITARY

Lincoln’s Emancipation Proclamation sparked new efforts to organize all-black Union military units, to be led by white officers. Massachusetts organized the first all-black unit, the 54th Massachusetts Regiment under Colonel Robert Gould Shaw. Rhode Island and other states soon followed suit. In May 1863 the War Department authorized general recruitment of African Americans across the country. This was a momentous decision, for it changed a war to preserve the Union into a revolution to transform the social, economic, and racial status quo in the South.

By mid-1863 African-American units were involved in significant action in both the eastern and the western theaters. On July 18, 1863, Colonel Shaw, a Harvard graduate and the son of a prominent abolitionist, led his troops in a

The 107th U.S. Colored Infantry

From early in the war, Union commanders found “contrabands” useful as informants and guides to unfamiliar terrain.

courageous assault against Fort Wagner, a massive earthwork barrier guarding Charleston, South Carolina. During the battle almost half the members of the 54th Regiment were killed, including Colonel Shaw. The courageous performance of the 54th Regiment did much to win acceptance for both black soldiers and emancipation. Commenting on Union victories at Port Hudson and Milliken's Bend, Louisiana, Lincoln reported that "some of our commanders . . . believe that . . . the use of colored troops constitutes the heaviest blow yet dealt to the rebels, and that at least one of these important successes could not have been achieved . . . but for the aid of black soldiers."

By the end of the war, almost 180,000 African Americans had served in the regiments of the U.S. Colored Troops, providing around 10 percent of the Union army total. Some 80 percent of the "colored troops" were former slaves or free blacks from the South. Some 38,000 gave their lives. In the navy, blacks accounted for about one fourth of all enlistments; of these more than 2,800 died.

As the war entered its final months, freedom emerged more fully as a legal reality. Three major steps occurred in January 1865, when both Missouri and Tennessee abolished slavery by state action and the U.S. House of Representatives passed an abolition amendment. Upon ratification by three fourths of the reunited states, the Thirteenth Amendment became part of the Constitution on December 18, 1865, and removed any lingering doubts about the legality of emancipation. By then, in fact, slavery remained only in the border states of Kentucky and Delaware.

"Drummer" Jackson

This photograph of a former slave who served in the 79th U.S. Colored Troops, was used to encourage African Americans to enlist.

WOMEN AND THE WAR

While breaking the bonds of slavery, the Civil War also loosened traditional restraints on female activity. “No conflict in history,” a journalist wrote at the time, “was such a woman’s war as the Civil War.” Women on both sides played prominent roles in the conflict. They sewed uniforms, composed uplifting poems and songs, and raised money and supplies. Thousands of northern women worked with the U.S. Sanitary Commission, which organized medical relief and other services for soldiers. Others, black and white, supported the freedmen’s aid movement to help impoverished freed slaves.

In the North alone, some 20,000 women served as nurses or other health-related volunteers. A nurse working at a Maryland hospital recorded that she and her peers “endured the cold without sufficient bedding for our hard beds, and with no provision made for our fires. On bitter mornings we rose shivering, broke the ice in our pails, and washed our numb hands and faces, then

Nursing and the War

Clara Barton oversaw the distribution of medicines to Union troops and later helped found the American Red Cross. Instead of accepting an assignment to a general hospital during the war, she followed the troops on her own, working in makeshift field hospitals.

went out into the raw air, up to our mess room, also without fire, thence to the wards.” The most famous nurses were Dorothea Dix and Clara Barton, both untiring volunteers in service to the wounded and dying. Dix, the veteran reformer of the nation’s insane asylums, became the Union army’s first superintendent of women nurses. She soon found herself flooded with applications from around the country. Dix explained that nurses should be “sober, earnest, self-sacrificing, and self-sustained” women between the ages of thirty-five and fifty who could “bear the presence of suffering and exercise entire self control” and who could be “calm, gentle, quiet, active, and steadfast in duty.”

The departure of hundreds of thousands of men for the battlefield forced women to assume the public and private roles the men left behind. In many southern towns and counties

the home front became a world of white women, children, and slaves. A resident of Lexington, Virginia, reported in 1862 that there were “no men left” in town by mid-1862. Women suddenly found themselves farmers or plantation managers, clerks, munitions-plant workers, and schoolteachers. Some 400 women disguised themselves as men and fought in the war; dozens served as spies; others traveled with the armies, cooking meals, writing letters, and assisting with amputations.

The war’s unrelenting carnage took a terrible toll on the nation’s women. A North Carolina mother lost seven sons in the fighting; another lost four. Women who bore such losses or who witnessed daily suffering while serving as nurses were permanently altered by the experience. The number of widows, spinsters, and orphans mushroomed. Many bereaved women on both sides came to look upon the war with what the poet Emily Dickinson called a “chastened stare.”

GOVERNMENT DURING THE WAR

Freeing 4 million slaves and loosening the restraints on female activity constituted a momentous social and economic revolution. But an even broader revolution began as power in Congress shifted from South to North. Before the war southern congressmen exercised a great deal of influence, but once the secessionists had abandoned Congress to the Republicans, a dramatic change occurred. Several projects that had been stalled by sectional controversy were adopted before the end of 1862. A new protective tariff was passed. A transcontinental railroad was approved, to run through Omaha, Nebraska, to Sacramento, California. A homestead act granted 160 acres to settlers who agreed to work the land for five years. The National Banking Act followed in 1863. Two other key pieces of legislation were the Morrill Land Grant Act (1862), which provided federal aid to state colleges of “agriculture and mechanic arts,” and the Contract Labor Act (1864), which encouraged the importation of immigrant labor. All of these had long-term significance for the expansion of the national economy—and the federal government.

UNION FINANCES Congress focused on three options to finance the war: raising taxes, printing paper money, and borrowing. The taxes came chiefly in the form of the Morrill tariff on imports and excise taxes on manufactures and nearly every profession. A butcher, for example, had to pay 30¢ for every head of beef he slaughtered, 10¢ for every hog, 5¢ for every

sheep. On top of the excises came an income tax. In 1862 Congress passed the Internal Revenue Act, which created an Internal Revenue Service.

But federal tax revenues trickled in so slowly—in the end they would meet only 21 percent of wartime expenditures—that Congress in 1862 resorted to printing paper money. Beginning with the Legal Tender Act of 1862, Congress ultimately authorized \$450 million in paper currency, which soon became known as greenbacks because of the bills' color. The congressional decision to allow the Treasury to print paper money was a profoundly important development for the U.S. economy, then and since. Unlike previous paper currencies issued by local banks, the federal greenbacks could not be exchanged for gold or silver. Instead, their value relied upon public trust in the government. Many bankers were outraged by the advent of the greenbacks. "Gold and silver are the only true measure of value," one financier declared. "These metals were prepared by the Almighty." But the crisis of the Union and the desperate need to finance the expanding war demanded such a solution. As the months passed, the greenbacks helped ease the Union's financial crisis without causing the ruinous inflation that the unlimited issue of paper money caused in the Confederacy.

The federal government also relied upon the sale of bonds. A Philadelphia banker named Jay Cooke (sometimes tagged the Financier of the Civil War) mobilized a nationwide campaign to sell government bonds to private investors. Eventually bonds generated \$2 billion in federal revenue.

For many businessmen, war-related ventures brought quick riches. Some suppliers and financiers bilked the government or provided shoddy goods. Not all the wartime fortunes were made dishonestly, however. And the war-related expenditures by the Union helped promote the capital accumulation with which businesses fueled later expansion. Wartime business thus laid the groundwork for the postwar economic boom and for the fortunes of tycoons such as J. P. Morgan, John D. Rockefeller, Andrew Mellon, and Andrew Carnegie.

CONFEDERATE FINANCES Confederate finances were a disaster from the start. In the first year of its existence, the Confederacy levied export and import duties, but exports and imports were too low to generate much revenue. It then enacted a tax of one half of 1 percent on most forms of property, which should have yielded a hefty income, but the Confederacy farmed out its collection of the taxes to the states. The result was chaos. In 1863 the desperate Confederate Congress began taxing nearly everything. Enforcement of the taxes was poor and evasion easy. Altogether taxes covered no more than 5 percent of Confederate costs; bond issues accounted

for less than 33 percent; and Treasury notes (paper money), for more than 66 percent. Altogether the Confederacy turned out more than \$1 billion in paper money and sparked a steep inflation. By 1864 a turkey sold in the Richmond market for \$100, flour brought \$425 a barrel, and bacon was \$10 a pound.

UNION POLITICS AND CIVIL LIBERTIES On the home fronts, the crisis of war brought no moratorium on partisan politics, northern or southern. Within his own party, Lincoln faced a Radical wing composed mainly of prewar abolitionists. Led by House members such as Thaddeus Stevens and George Washington Julian and senators such as Charles Sumner, Benjamin Franklin Wade, and Zachariah Chandler, the Radical Republicans pushed for confiscation of plantations, immediate emancipation of slaves, and a more vigorous prosecution of the war. The majority of Republicans, however, continued to back Lincoln's more cautious approach. The party was generally united on economic policy.

The Democratic party suffered the loss of its southern wing and the death of its leader, Stephen A. Douglas, in June 1861. By and large, northern Democrats supported a war for the "Union as it was" before 1860, giving reluctant support to Lincoln's policies but opposing restraints on civil liberties and the new economic legislation. "War Democrats," such as Tennessee Senator Andrew Johnson and Secretary of War Edwin M. Stanton fully supported Lincoln's policies, while a peace wing of the party preferred an end to the fighting, even if that meant risking the Union. An extreme fringe of the peace wing even flirted with outright disloyalty. The Copperheads, as they were called, were strongest in states such as Ohio, Indiana, and Illinois, all leavened with native southerners, some of whom were pro-Confederate.

Such open sympathy for the enemy provoked Lincoln to crack down hard. Early in the war he assumed emergency powers, including the power to suspend the writ of habeas corpus, which guarantees arrested citizens a speedy hearing. The Constitution states that habeas corpus may be suspended only in cases of rebellion or invasion, but congressional leaders argued that Congress alone had the authority to take such action. By the Habeas Corpus Act of 1863, Congress authorized the president to suspend the writ.

There were probably more than 14,000 arrests made without recourse to a writ of habeas corpus. Most of those arrested were Confederate citizens accused of slipping vessels through the Union blockade, or they were foreign nationals. But Union citizens were also detained. One celebrated case arose in 1863 when Federal soldiers hustled the Democrat Clement L. Vallandigham out of his home in Dayton, Ohio; a military court condemned Ohio's most

prominent Confederate sympathizer to confinement for the duration of the war. The muzzling of a political opponent proved such an embarrassment to Lincoln that he commuted the sentence, but only by another irregular device: banishment behind Confederate lines. Vallandigham eventually found his way to Canada.

At their 1864 national convention in Chicago, the Democrats called for an immediate end to the war, to be followed by a national convention that would restore the Union. They named General George B. McClellan as their candidate, but McClellan distanced himself from the peace platform by declaring that agreement on Union would have to precede peace.

Radical Republicans, who still regarded Lincoln as soft on treason, tried to thwart his nomination for a second term, but he outmaneuvered them at every turn. Lincoln promoted the vice-presidential nomination of Andrew Johnson, a “war Democrat” from Tennessee, on the “National Union” ticket, so named to minimize partisanship. As the war dragged on through 1864,

Abraham's Dream

This cartoon depicts Lincoln having a nightmare about the election of 1864. Lady Liberty brandishes the severed head of a black man at the door of the White House as General McClellan walks up the steps and Lincoln runs away.

however, with Grant's army taking heavy losses in Virginia, Lincoln fully expected to lose the 1864 election. Then Admiral David Farragut's capture of Mobile in August and General William Tecumseh Sherman's capture of Atlanta on September 2, 1864, turned the tide. McClellan carried only New Jersey, Delaware, and Kentucky, with 21 electoral votes to Lincoln's 212, and he won only 1.8 million popular votes (45 percent) to Lincoln's 2.2 million (55 percent).

CONFEDERATE POLITICS Unlike Lincoln, Jefferson Davis never had to face a presidential contest. He and his vice president, Alexander Stephens, were elected without opposition in 1861 for a six-year term. But discontent flourished as the war dragged on. Food grew scarce, and prices skyrocketed. A bread riot in Richmond on April 2, 1863, ended only when Davis himself threatened to shoot the protesters (mostly women). After the Confederate congressional elections of 1863, about one third of the legislators were ardent critics of Davis. Although parties as such did not figure in the elections, it was noteworthy that many ex-Whigs and other opponents of secession were chosen.

Davis's greatest challenge came from the politicians who had embraced secession and then guarded states' rights against the central government of the Confederacy as zealously as they had against the Union. Georgia and, to a lesser degree, North Carolina were strongholds of such sentiments. The states' rights advocates challenged, among other things, the legality of the military draft, taxes on farm produce, and above all the suspension of habeas corpus. Vice President Alexander Stephens carried on a running battle against Davis's effort to establish "military despotism," and he eventually left Richmond to sulk at his Georgia home for eighteen months.

Among other fatal flaws the Confederacy suffered from an excess of dogma. Where Lincoln was the consummate pragmatist, Davis was a brittle ideologue with a waspish temper. Once he made a decision, nothing could change his mind. One southern politician said that Davis was "as stubborn as a mule." Davis could never

Jefferson Davis

President of the Confederacy.

find it in himself to admit that he had made a mistake. Such a personality was ill suited to the chief executive of an infant—and fractious—nation.

THE CIVIL WAR AND THE ENVIRONMENT Wars not only kill and maim people; they also transform the environment. The Civil War devastated the ecology of the South. While well over a half million soldiers died of wounds, disease, or accidents, equally appalling numbers of animals, especially horses and mules but also cattle and pigs, were killed in battle or for food. During the final year of the war, nearly 500 horses a day died of shell fire, starvation, overwork, or disease. Pork was the staple of the southern diet before the Civil War, and the region produced enough hogs to feed itself. After the war, however, the southern hog population was so decimated that the region had to import pigs and pork from the Midwest. Because midwestern hogs were bred for weight, their high fat content contributed to higher rates of heart disease and strokes in the postwar South.

Fighting during the Civil War also destroyed much of the landscape. In 1864 a Confederate major wrote that near Chickamauga, Georgia, just south of Chattanooga, Tennessee, the road was “covered with the skeletons of horses, and every tree bears the mark of battle. Many strong trunks were broken down by artillery fire.” Hundreds of bridges and levees were also destroyed during the war, as were endless miles of fences, which foraging soldiers used for firewood. The loss of levees caused massive flooding; the loss of fencing meant that much of the postwar South would revert to open-range grazing. Craters gouged out by cannonballs pockmarked the landscape and provided breeding grounds for mosquitoes. The loss of so many animals meant that the mosquitoes focused on humans for their blood meal, thus increasing the spread of malaria. Hundreds of miles of trenches dug for military defense scarred the land and accelerated erosion. All told, the environment was as much a victim of the warfare as were the soldiers, and it would take years to heal nature’s wounds across the South.

THE FALTERING CONFEDERACY

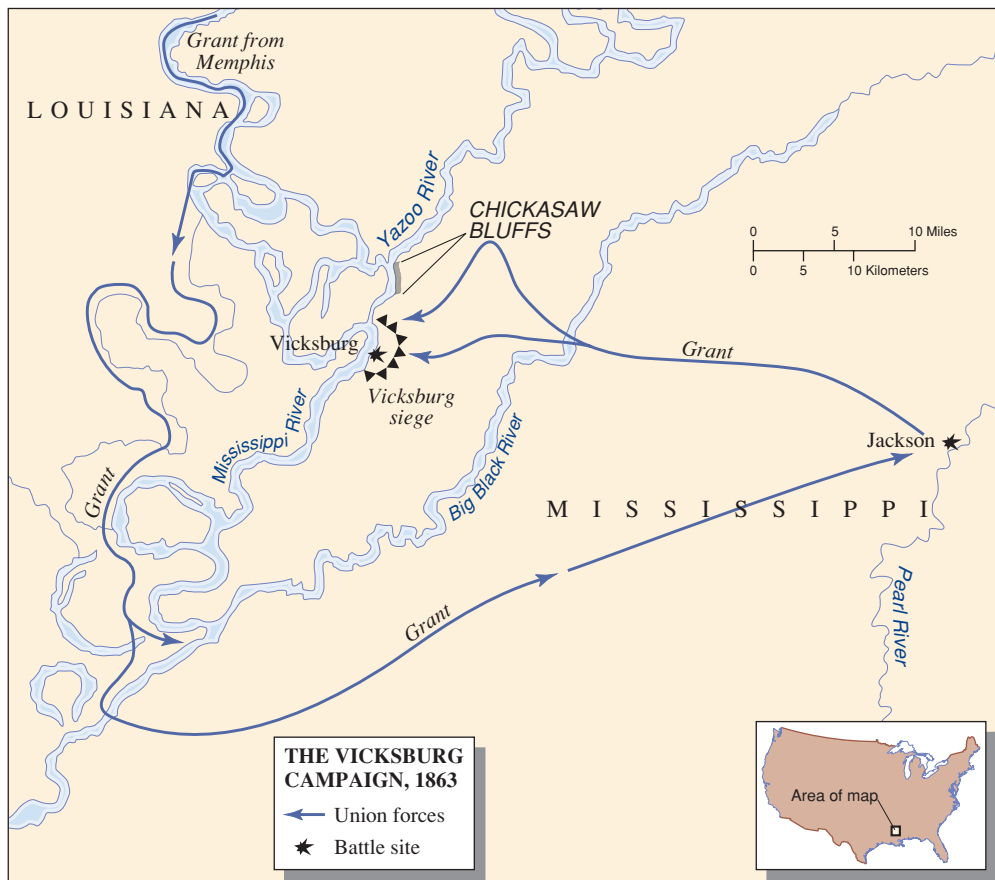

CHANCELLORSVILLE After the Union disaster at Fredericksburg at the end of 1862, Lincoln’s search for a capable general had turned to one of Burnside’s disgruntled lieutenants, Joseph Hooker, whose pugnacity had earned him the nickname Fighting Joe. With a force of 130,000 men, the largest Union army yet gathered, and a brilliant plan, Hooker failed his leadership test at Chancellorsville, Virginia, on May 1–5, 1863. Robert E. Lee,

with perhaps half that number of troops, staged what became a textbook example of daring and maneuver. Hooker's plan was to leave his base, opposite Fredericksburg, on a sweeping movement upstream across the Rappahannock and Rapidan rivers to flank Lee's position. A diversionary force was to cross below the town. Lee, however, sniffed out the ruse and pulled his main forces back to meet Hooker. The Union general lost sight of his opponent and panicked. At Chancellorsville, after a preliminary skirmish, Lee divided his army again, sending Stonewall Jackson's famous foot soldiers on a long march to hit the enemy's exposed right flank.

On May 2, toward evening, Jackson surprised the Federals at the edge of a densely wooded area called the Wilderness, but the fighting died out in confusion as darkness fell. General Jackson rode out beyond the skirmish line to locate the Union forces. Fighting erupted in the darkness, and nervous Confederates mistakenly opened fire on Jackson, who was struck by three bullets that shattered his left arm and right hand. The next day a surgeon amputated his arm. The indispensable Jackson seemed to be recovering well but then contracted the dreaded pneumonia and died. Jackson had been an utterly fearless general famous for leading rapid marches, bold flanking movements, and furious assaults. "I have lost my right arm," Lee lamented, and "I do not know how to replace him." The next day, Lee forced Hooker's army back across the Rappahannock. It was the peak of Lee's career, but Chancellorsville was his last significant victory.

VICKSBURG While Lee's army held the Federals at bay in the East, Ulysses Grant, his command reinstated, had been inching his army down the Mississippi River toward the Confederate stronghold of Vicksburg, in western Mississippi. If Union forces could gain control of the Mississippi River, they could split the Confederacy in two. Grant marched his army into Louisiana, and while the navy ran gunboats and transports past the Confederate batteries along the river at Vicksburg, he moved south to meet them at the end of April 1863. From there Grant swept eastward on a campaign that Lincoln later called "one of the most brilliant in the world," taking Jackson, Mississippi, where he seized or destroyed supplies, and then turning westward and on May 18 pinning the 30,000 Confederates inside Vicksburg. He resolved to wear them down by bombarding and starving them.

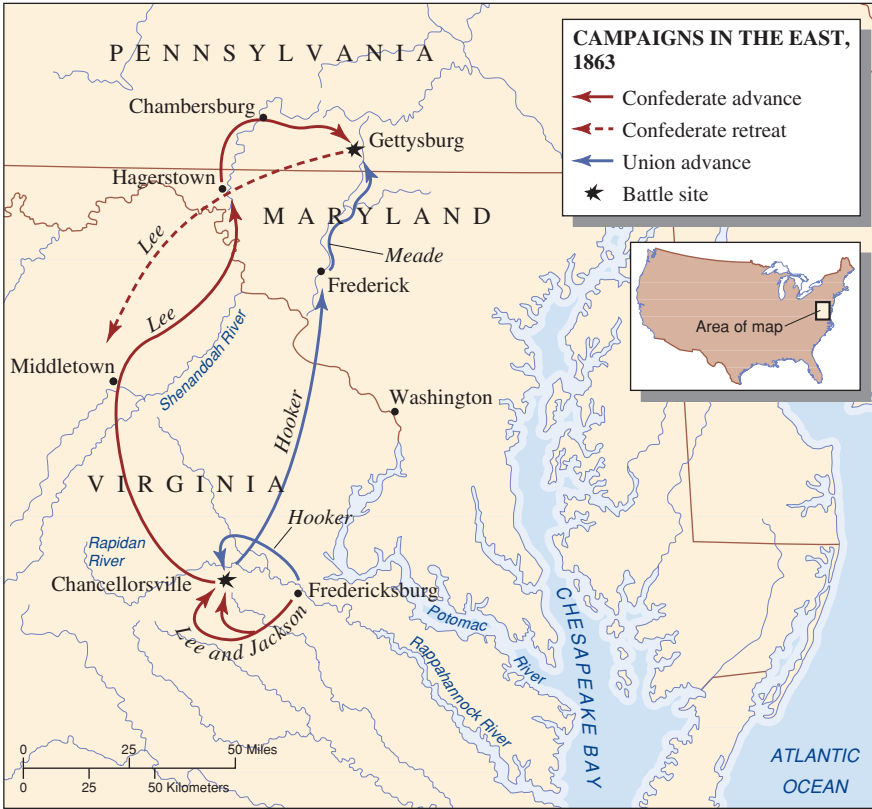

GETTYSBURG The plight of besieged Vicksburg put the Confederate high command in a quandary. Joseph E. Johnston, now in charge of the

Why was the capture of Vicksburg an important strategic victory? Why was Vicksburg difficult to seize from the Confederacy? How did Lee hope to save Vicksburg from the Union siege?

western Confederate forces, wanted to lure Grant's army into Tennessee and thereby relieve the siege of Vicksburg. Lee had another idea for a diversion. If he could win a major battle on northern soil, he might do more than save Vicksburg; he might also persuade northern public opinion to end the war. In June he again moved his army northward across Maryland.

Neither side chose Gettysburg, Pennsylvania, as the site for the war's climactic battle, but a Confederate scavenging party entered the town in search of shoes and encountered units of Union cavalry on June 30, 1863. The main forces quickly converged on that point. On July 1 the Confederates pushed

Why was Gettysburg a major turning point of the war? What were Lee's goals for marching north? Why did his plan at Cemetery Ridge fail?

the Federals out of the town, but into stronger positions on high ground to the south. The new Union commander, General George Meade, hastened reinforcements to his new lines along the heights. On July 2 Confederate units assaulted the extreme left and right flanks of Meade's army, but in vain.

The next day, July 3, Lee staked everything on one final assault on the Union center at Cemetery Ridge. At about two in the afternoon, General George Pickett's 15,000 Confederate troops emerged from the woods into the brilliant sunlight, formed neat ranks, and began their suicidal advance uphill across open ground commanded by Union artillery. The few Confederates who got within range of hand-to-hand combat were quickly overwhelmed. At the head of Pickett's division were the University Greys, thirty-one college

students from Mississippi. Within an hour after their assault, every one of them was killed or wounded. As he watched the few survivors returning from the bloody field, General Lee muttered, "All this has been my fault." He then ordered Pickett to regroup his division to repulse a possible counterattack, only to have Pickett tartly reply, "General Lee, I have no division now." Pickett never forgave Lee. Years later he charged, "That old man had my division slaughtered."

With nothing left to do but retreat, on July 4 Lee's dejected and mangled army, with about one third of its number gone, began to slog south through a driving rain. They had failed in all their purposes, not the least being to relieve the pressure on Vicksburg. On that same July 4, the Confederate commander at Vicksburg surrendered his entire garrison after a forty-seven-day siege. The Confederacy was now split in two. Had Meade pursued Lee, he might have delivered the coup de grâce before the Rebels could get back across the flooded Potomac River, but yet again the winning army failed to capitalize on its victory.

After the fighting at Gettysburg had ended, a group of northern states funded a military cemetery for the 6,000 soldiers killed in the battle. On November 19, 1863, the new cemetery was officially dedicated. In his brief remarks, since known as the Gettysburg Address, President Lincoln eloquently expressed the pain and sorrow of the brutal civil war. The prolonged conflict

Harvest of Death

Timothy H. O'Sullivan's grim photograph of the dead at Gettysburg.

was testing whether a nation “dedicated to the proposition that all men are created equal . . . can long endure.” Lincoln declared that all living Americans must ensure that the “honored dead” had not “died in vain.” In stirring words that continue to inspire, Lincoln predicted that “this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, and for the people, shall not perish from the earth.”

CHATTANOOGA The third great Union victory of 1863 occurred in fighting around Chattanooga, the railhead of eastern Tennessee and gateway to northern Georgia. In the late summer a Union army led by General William Rosecrans took Chattanooga and then rashly pursued General Braxton Bragg’s Rebel forces into Georgia, where they met at Chickamauga. The battle (September 19–20) had the makings of a Union disaster, since it was one of the few times the Confederates had a numerical advantage (about 70,000 to 56,000). Only the stubborn stand of Union troops under George H. Thomas (thenceforth dubbed the Rock of Chickamauga) prevented a rout. The battered Union forces fell back into Chattanooga while Bragg held the city virtually under siege from the heights to the south and the east.

Rosecrans seemed stunned and apathetic, but Lincoln urged him to hang on: “If we can hold Chattanooga, and East Tennessee, I think rebellion must dwindle and die.” The Union command sent reinforcements. General Grant, given overall command of the western theater of operations, replaced Rosecrans with Thomas. On November 24 the Federal troops took Lookout Mountain in what was mainly a feat of mountaineering. The next day Union forces dislodged the Rebels atop Missionary Ridge.

Bragg was unable to regroup his Confederates until they were many miles to the south, and the Battle of Chattanooga was the end of his active career. Jefferson Davis reluctantly replaced Bragg with Joseph E. Johnston. The Union victory at Missionary Ridge confirmed the impression of Grant’s genius. Lincoln had at last found his general. In 1864 Grant arrived in Washington to assume the rank of lieutenant general and a new position as general in chief.

THE CONFEDERACY’S DEFEAT

During the winter of 1863–1864, Confederates began to despair of victory. A War Department official in Richmond noted in his diary a spreading “sense of hopelessness.” At the same time, Mary Chesnut of South Carolina reported that “gloom and despondency hang like a pall everywhere.” Union

Ulysses S. Grant

At his headquarters in City Point (now Hopewell), Virginia.

his predecessors had hoped for the climactic single battle, he adopted a policy of attrition. Grant's military strategy was brutally simple: "Find out where your enemy is. Get at him as soon as you can. Strike him as hard as you can and as often as you can, and keep moving on." The Union general's unimpressive physical appearance belied his greatness. Although short and stocky, slouching and grubby, he was coolly efficient and unflappable. Like Lincoln he had an indomitable will to fight and an unblinking focus on essentials. Grant's unyielding faith that the Union armies were destined for victory enabled him to impose his tenacious will upon his troops; his violent and unflappable calmness in the face of adversity and danger inspired his troops, enabling them to survive defeats and endure savage losses. With the benefit of far more soldiers and better supplies than Lee, Grant planned to attack, attack, attack, keeping the pressure on the Confederates, grinding down their numbers and their will to fight. As he ordered Meade, "Wherever Lee goes, there you will go also." Grant would wage total war, confiscating or destroying civilian property of use to the military. It was a brutal and costly—but effective—plan.

leaders, sensing the momentum swinging their way, stepped up their pressure on Confederate forces.

The Union command's main targets now were Lee's army in Virginia and General Joseph Johnston's forces in Georgia. Grant personally would accompany George Meade, who retained direct command over the Army of the Potomac; operations in the West were entrusted to Grant's longtime lieutenant, William T. Sherman. As Sherman put it later, Grant "was to go for Lee, and I was to go for Joe Johnston."

Grant brought with him a new strategy against Lee. Where all

GRANT'S PURSUIT OF LEE In May 1864 Grant's Army of the Potomac, numbering about 115,000 to Lee's 65,000, moved south across the Rappahannock and Rapidan rivers into the Wilderness of eastern Virginia,

Sheridan's Ride

This sketch, attributed to Alfred Waud, depicts General Philip Sheridan's ride at the Battle of Cedar Creek, Virginia, October 19, 1864. Artists traveling with the soldiers rendered quick, accurate sketches of battle scenes.

where Hooker had come to grief in the Battle of Chancellorsville. In the nightmarish Battle of the Wilderness (May 5–6), the armies fought blindly through the woods, the horror and suffering of the scene heightened by crackling brushfires. Grant's men suffered heavier casualties than the Confederates, but the Rebels were running out of replacements. Always before when bloodied by Lee's troops, Union forces had pulled back to nurse their wounds, but Grant slid off to his left and continued to push southward, engaging Lee's men near Spotsylvania Court House. "Whatever happens," he assured Lincoln, "we will not retreat."

Again Grant's forces slid off to the left of Lee's army and kept moving. Along the banks of the Chickahominy River, the two sides clashed again at Cold Harbor (June 1–3), ten miles east of Richmond. Grant ordered his troops to assault the heavily entrenched Confederate lines. As the Confederates had discovered at Gettysburg, such a frontal assault was murder. The Union army was massacred at Cold Harbor: in twenty minutes almost 7,000 attacking Federals were killed or wounded. Grant later admitted that the attack was his greatest mistake. Critics called him the Butcher after Cold Harbor. Yet the relentless Grant brilliantly maneuvered his battered forces around Lee and headed for Petersburg, south of Richmond, where the major railroads converged.

The Tattered Colors of the 56th and 36th Massachusetts Regiments

Union soldiers march through Virginia in 1864.

The two armies then dug in for a siege along lines that extended for twenty-five miles above and below Petersburg. Grant telegraphed Lincoln that he intended “to fight it out on this line if it takes all summer.” Lincoln replied, “Hold on with a bulldog grip, and chew and choke as much as possible.” For nine months the two armies faced each other down while Grant kept pushing toward his left flank to break the railroad arteries that were Lee’s lifeline. During that time, Grant’s troops, twice as numerous as the Confederate army, were generously supplied by Union vessels moving up the James River while Lee’s forces, beset by hunger, cold, and desertion, wasted away. Petersburg had become Lee’s prison while disasters piled up for the Confederacy elsewhere.

SHERMAN’S MARCH When Grant headed south, so did General William T. Sherman—toward the railroad hub of Atlanta, with 90,000 men against Joseph Johnston’s 60,000. Johnston’s skillful defensive tactics caused an impatient President Jefferson Davis to replace him with the reckless John B. Hood, a natural fighter but an inept strategist who did not know the meaning of retreat. Having had an arm crippled by a bullet at Gettysburg and most of one leg shot off at Chickamauga, he had to be strapped to his horse.

How were Grant's tactics in the Battle of the Wilderness different from the Union's previous encounters with Lee's army? Why did Grant have the advantage at Petersburg? How did Grant eventually force Lee to surrender?

Three times in eight days, Hood's Confederate army lashed out at the Union lines, each time meeting a bloody rebuff. Sherman at first resorted to a siege of Atlanta, then slid off to the right again, cutting the rail lines below the city. Hood evacuated the city on September 1 but kept his army intact.

Sherman now laid plans for a march through central Georgia, where no organized Confederate armies remained. His intention was to "whip the rebels, to humble their pride, to follow them into their inmost recesses, and make them fear and dread us." Hood, meanwhile, had hatched an equally audacious plan: he would slip out of Georgia into northern Alabama and push

William Tecumseh Sherman

Sherman's campaign developed into a war of maneuver, but without the pitched battles of Grant's campaign.

waves broke against the Union lines, leaving the ground strewn with Confederate dead. A Confederate captain from Texas, scarred by the battle's senseless butchery, wrote that the "wails and cries of the widows and orphans made at Franklin, Tennessee will heat up the fires of the bottomless pit to burn the soul of General J. B. Hood for murdering their husbands and fathers." With what he had left, Hood dared not attack Nashville, nor did he dare withdraw for fear of final disintegration. Finally, in the Battle of Nashville (December 15–16), the Federals broke and scattered what was left of the Confederate Army of Tennessee. The Confederate front west of the Appalachians had collapsed.

During all this William T. Sherman's Union army was marching through Georgia, waging war against the people's resources and their will to resist. In his effort to demoralize the civilian populace, Sherman was determined to "make Georgia howl." The Union army moved southeast from Atlanta, living off the land and destroying any provisions that might serve Confederate forces. Bands of stragglers and deserters from both armies joined in looting along the flanks while Union cavalry destroyed Rebel supplies to keep them out of enemy hands.

More than any other Civil War general, Sherman recognized the connection between the South's economy, its morale, and its ability to wage war. He explained that "we are not only fighting hostile armies, but a hostile people" who must be made to "feel the hard hand of war." He wanted the Rebels to

on into Tennessee, forcing Sherman into pursuit. Sherman refused to take the bait, although he did send a Union force, led by General George Thomas, back to Tennessee to keep watch. So unfolded the curious spectacle of the main armies' moving off in opposite directions. But it was a measure of the Confederates' plight that Sherman could cut a swath of destruction across Georgia with impunity while Hood's army was soon outnumbered again, this time in Tennessee.

In the Battle of Franklin (November 30), Hood sent his army across two miles of open ground defended by entrenched Union troops backed by massed artillery. It was suicide. Six

Ruins of Depot, Blown Up on Sherman's Departure (1864)

In the wake of Sherman's march, abandoned locomotives and twisted rails marked Atlanta's destruction.

"fear and dread us." When, after a month of ravaging the Georgia countryside, Sherman's army arrived in Savannah, on the coast, his forces had destroyed over \$100 million in property, freed over 40,000 slaves, and burned many plantations. A Macon, Georgia, newspaper wrote that Sherman was a "demon" willing to plumb the "depths of depravity" in wreaking his campaign of vengeance. Yet Sherman scoffed at such criticism. "Those people made war on us, defied and dared us to come south to their country, where they boasted they would kill us and do all manner of terrible things. We accepted their challenge, and now for them to whine and complain of the natural and necessary results is beneath contempt." Sherman's troops, in fact, rarely committed the atrocities later attributed to them. To be sure, they confiscated food and livestock, destroyed railroads and mills, and burned plantations, but most houses were left untouched, and Union soldiers committed few serious crimes against individuals. Sherman's goal was to defeat Confederate morale and reunite the nation, not destroy Georgia or the South physically. After the war a Confederate officer acknowledged that Sherman's march through Georgia was in fact well conceived and well managed. "I don't think there was ever an army in the world that would have behaved better, in a similar expedition, in an enemy country. Our army certainly wouldn't."

What was Sherman's goal as he marched across Georgia? How much damage did Sherman do in Georgia and South Carolina? How did this affect the Confederate war effort?

Pushing across the Savannah River into South Carolina, that “hell-hole of secession,” Sherman's men wrought even greater destruction. More than a dozen towns were burned in whole or part, including the state capital of Columbia, captured on February 17, 1865. Meanwhile, Charleston's defenders abandoned the city and headed north to join a ragtag Rebel army that Joseph E. Johnston was desperately pulling together in North Carolina. Johnston mounted one final attack on Sherman's army at Bentonville (March 19–20), but that would be his last major battle.

During the late winter and early spring of 1865, the Confederacy found itself besieged on all sides. Defeat was in the air. Some Rebel leaders argued that it was time to negotiate a peace settlement. Confederate secretary of war John C. Breckinridge, a Kentuckian who had served as vice president under James Buchanan and had run for president in 1860, urged Robert E. Lee to negotiate an honorable end to the war. “This has been a magnificent epic,” he

said. "In God's name, let it not terminate in a farce." But Jefferson Davis dismissed any talk of surrender. If the Confederate armies should be defeated, he wanted the soldiers to disperse and fight a guerrilla war. "The war came and now it must go on," he stubbornly insisted, "till the last man of this generation falls in his tracks, and his children seize his musket and fight our battle."

While Confederate forces made their last stands, Abraham Lincoln prepared for his second term as president. He was the first president since Andrew Jackson to have been reelected. The weary commander in chief had weathered constant criticism during his first term, but with the war nearing its end, Lincoln now garnered deserved praise. The *Chicago Tribune* observed that the president "has slowly and steadily risen in the respect, confidence, and admiration of the people."

On March 4, 1865, amid rumors of a Confederate attempt to abduct or assassinate the president, the six-foot-four-inch, rawboned Lincoln, dressed in a black suit and stovepipe hat, his face weathered by prairie wind and political worry, delivered his brief but eloquent second inaugural address on the East Portico of the Capitol. Not a hundred feet away, looking down on Lincoln from the Capitol porch, was a twenty-six-year-old actor named John Wilkes Booth, who five weeks later would kill the president in a desperate attempt to do something "heroic" for his beloved South.

The nation's capital had long before become an armed camp and a massive military hospital. Sick and wounded soldiers were scattered everywhere: in hotels, warehouses, schools, businesses, and private homes. Thousands of Confederate deserters roamed the streets. After a morning of torrential rains, the sun broke through the clouds just as Lincoln began to speak to the mud-spattered audience of some 35,000, half of whom were African Americans. While managing a terrible civil war, the president had experienced personal tragedy (the loss of a second child and a wife plagued by mental instability) and chronic depression. What kept him from unraveling was a principled pragmatism and godly foundation that endowed his life with purpose.

Lincoln's address was more a sermon than a speech, the reflections of a somber statesman still struggling to understand the relation between divine will and human endeavor. Rather than detailing the progress of the war effort or indulging in self-congratulatory celebration, Lincoln focused on the origins and paradoxes of the war. Slavery, he said, had "somehow" caused the war, and everyone bore some guilt for the national shame of racial injustice and its bloody expiation. Both sides had known before the fighting began that war was to be avoided at all costs, but "one of them would *make* war rather than let the nation survive; and the other would *accept* war rather than let it perish."

The weary but resolute commander in chief longed for peace. “Fondly do we hope—ferverently do we pray—that this mighty scourge of war may speedily pass away.” He wondered aloud why the war had lasted so long and had been so brutal. “The Almighty,” he acknowledged, “has His own purposes.” Lincoln noted the paradoxical irony of both sides in this civil war reading the same Bible, praying to the same God, and appealing for divine support in its fight against the other. The God of Judgment, however, would not be misled or denied. If God willed that the war continue until “every drop of blood drawn with the lash, shall be paid with another drawn by the sword, as was said three thousand years ago, so still it must be said ‘the judgments of the Lord are true and righteous altogether.’” After four years of escalating combat, the war had grown “incomprehensible” in its scope and horrors. Now the president, looking gaunt and tired, urged the Union forces “to finish the work we are in,” bolstered with “firmness in the right insofar as God gives us to see the right.”

As Lincoln looked ahead to the end of the fighting and a “just and lasting peace,” he stressed the need to “bind up the nation’s wounds” by exercising the Christian virtues of forgiveness and mercy. Vengeance must be avoided at all costs. Reconciliation must be pursued “with malice toward none; with charity for all.” Those eight words marvelously captured Lincoln’s hopes for a restored Union. His simple but powerful and profound speech, only 700 words long, endures because it manifests the extraordinary humility and complex faith of a president too humane to be vengeful or partisan. Redemption was his goal; victory was less important than peace. The sublime majesty of Lincoln’s brief speech revealed how the rigors of war had transformed and elevated him from the obscure congressman who had entered the White House in 1861. The abolitionist leader Frederick Douglass proclaimed Lincoln’s second inaugural address “a sacred effort.”

APPOMATTOX During the spring of 1865, General Grant’s army kept pushing, probing, and battering the entrenched Rebels around Petersburg, Virginia, twenty miles south of Richmond. The badly outnumbered Confederates were slowly starving. Their trenches were filled with rats and lice; scurvy and dysentery were rampant. News of Sherman’s progress through Georgia and South Carolina added to the gloom and heightened the impulse of weary Rebels to desert. Lee began to lay plans for his starving forces to escape and join Johnston’s army in North Carolina. On April 2, 1865, Lee’s army abandoned Richmond and Petersburg in a desperate flight southwest toward Lynchburg and railroads leading south. President Davis, exhausted but still defiant, too stubborn and vain to concede, gathered what archives and treasure he could and fled by train ahead of the advancing Federals, only to be

captured in Georgia by Union cavalry on May 10.

By then the Confederacy was dead. Lee had moved out of Petersburg with Grant in hot pursuit and soon found his escape route cut off. Lee recognized that there was no need to prolong the inevitable. As he told the Union officer who delivered the terms of a proposed surrender, “There is nothing left for me to do but go and see General Grant, and I would rather die a thousand deaths.” On April 9 (Palm Sunday) the tall, stately Lee donned a crisp dress uniform and met the mud-spattered Grant in the parlor of Wilmer McLean’s home at Appomattox Court House to tender his surrender. Grant, at Lee’s request, let the Rebel officers keep their sidearms and permitted soldiers to keep their personal horses and mules. As the gaunt,

hungry Confederate troops formed ranks for the last time, Joshua Chamberlain, the Union general in charge of the surrender ceremony, ordered his Federal soldiers to salute their foes as they paraded past. His Confederate counterpart signaled his men to do likewise. General Chamberlain remembered that there was not a sound—no trumpets or drums, no cheers or jeers, simply an “awed stillness . . . as if it were the passing of the dead.” On April 18 General Joseph Johnston surrendered his Confederate army to General Sherman near Durham, North Carolina. The remaining Confederate forces surrendered during May.

Mathew Brady took this photograph in Richmond eleven days after Lee’s surrender at Appomattox.

A MODERN WAR

The Civil War was in many respects the first modern war. Its scope was unprecedented. One out of every twelve adult American men served in the

war, and few families were unaffected by the event. Over 620,000 Americans died in the conflict from wounds or disease, 50 percent more than in World War II. Because battlefield surgeons were constantly overworked and frequently lacked equipment, supplies, and knowledge, almost any stomach or head wound proved fatal, and gangrene was rampant. Of the survivors, 50,000 returned home with one or more limbs amputated. Disease, however, was the greatest threat to soldiers, killing twice as many as were lost in battle.

The Civil War was also modern in that much of the killing was distant, impersonal, and mechanical. The opposing forces used an array of new weapons and instruments of war: artillery with “rifled,” or grooved, barrels for greater accuracy, repeating rifles, ironclad ships, observation balloons, and wire entanglements. Men were killed without knowing who had fired the shot that felled them.

Historians have provided conflicting assessments of the reasons for the Union victory. Some have focused on the inherent weaknesses of the Confederacy: its lack of industry, the fractious relations between the states and the central government in Richmond, poor political and military leadership, faulty coordination and communication, the burden of slavery, and the disparities in population and resources compared with those of the North. Still others have highlighted the erosion of Confederate morale in the face of chronic food shortages and horrific human losses. The debate over why the North won and the South lost the Civil War will probably never end, but as in other modern wars, firepower and manpower were essential factors. Robert E. Lee’s own explanation of the Confederate defeat retains an enduring legitimacy: “After four years of arduous service marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources.”

MAKING CONNECTIONS

- Certain fiscal measures enacted during the Civil War (when southerners were not in Congress to block them) helped fuel the postwar economic growth (discussed in Chapter 20).
- The Confederacy’s defeat had a tremendous impact on all dimensions of life in the South, as Chapter 19 (on the New South) demonstrates.

RECONSTRUCTION: NORTH AND SOUTH

FOCUS QUESTIONS

- What were the different approaches to Reconstruction?
- How did Congress try to reshape southern society?
- What was the role of African Americans in the postwar South?
- What were the main issues in national politics in the 1870s?

To answer these questions and access additional review material, please visit www.wwnorton.com/studyspace.

In the spring of 1865, the Civil War was over. At a frightful cost of 620,000 lives and the destruction of the southern economy and much of its landscape, American nationalism had emerged triumphant, and some 4 million enslaved Americans had seized their freedom. Ratification of the Thirteenth Amendment in December 1865 abolished slavery throughout the Union. Now the nation faced the task of reuniting, coming to terms with the abolition of slavery, and “reconstructing” a ravaged and resentful South.

THE WAR’S AFTERMATH

In the war’s aftermath important questions faced the victors: Should the Confederate leaders be tried for treason? How should new governments be formed? How and at whose expense was the South’s economy to be rebuilt?

Should debts incurred by the Confederate state governments be honored? Who should pay to rebuild the South's railroads and public buildings, dredge the clogged southern harbors, and restore damaged levees? What was to be done for the freed slaves? Were they to be given land? social equality? education? voting rights? Such complex questions required sober reflection and careful planning, but policy makers did not have the luxury of time or the benefits of consensus. Some wanted the former Confederate states returned to the Union with little or no changes in the region's social, political, and economic life. Others wanted southern society punished and transformed. The editors of the nation's foremost magazine, *Harper's Weekly*, expressed the vengeful attitude when they declared at the end of 1865 that "the forgive-and-forget policy . . . is mere political insanity and suicide."

DEVELOPMENT IN THE NORTH To some Americans the Civil War had been more truly a social revolution than the War of Independence, for it reduced the once-dominant power of the South's planter elite in national politics and elevated the power of the northern "captains of industry." Government, both federal, and state, became more friendly to business leaders and more unfriendly to those who would probe into their activities. The wartime Republican Congress had delivered on the major platform promises of 1860, which had cemented the allegiance of northeastern businessmen and western farmers to the party of free labor.

In the absence of southern members, Congress during the war had centralized national power and enacted the Republican economic agenda. It passed the Morrill tariff, which doubled the average level of import duties. The National Banking Act created a uniform system of banking and bank-note currency and helped finance the war. Congress also passed legislation guaranteeing that the first transcontinental railroad would run along a north-central route, from Omaha, Nebraska, to Sacramento, California, and it donated public land and public bonds to ensure its financing. In the Homestead Act of 1862, moreover, Congress voted free federal homesteads of 160 acres to settlers, who had only to occupy the land for five years to gain title. No cash was needed. The Morrill Land Grant Act of the same year conveyed to each state 30,000 acres of federal land per member of Congress from the state. The sale of some of the land provided funds to create colleges of "agriculture and mechanic arts." Such measures helped stimulate the North's economy in the years after the Civil War.

DEVASTATION IN THE SOUTH The postwar South offered a sharp contrast to the victorious North. Along the path of General William T. Sherman's army, one observer reported in 1866, the countryside "looked for many miles like a broad black streak of ruin and desolation." Columbia, South Carolina, said another witness, was "a wilderness of ruins," Charleston a place of "vacant houses, of widowed women, of rotting wharves, of deserted warehouses, of weed-wild gardens, of miles of grass-grown streets, of acres of pitiful and voiceless barrenness."

Throughout the South, property values had collapsed. Confederate bonds and paper money were worthless; most railroads were damaged or destroyed. Cotton that had escaped destruction was seized by federal troops. Emancipation wiped out \$4 billion invested in human flesh and left the labor system in disarray. The great age of expansion in the cotton market was over. Not until 1879 would the cotton crop again equal the record harvest of 1860; tobacco production did not regain its prewar level until 1880; the sugar crop of Louisiana not until 1893; and the old rice industry of the Tidewater and the hemp industry of the Kentucky Bluegrass never regained their prewar status.

A Street in the "Burned District"

Ruins of Richmond, Virginia, spring 1865.

A TRANSFORMED SOUTH The defeat of the Confederacy transformed much of southern society. The freeing of slaves, the destruction of property, and the collapse of land values left many planters destitute and homeless. Amanda Worthington, a planter's wife from Mississippi, saw her whole world destroyed. In the fall of 1865, she assessed the damage: "None of us can realize that we are no longer wealthy—yet thanks to the yankees, the cause of all unhappiness, such is the case."

After the Civil War many former Confederates were so embittered that they abandoned their native region rather than submit to "Yankee rule." Some migrated to Canada, Europe, Mexico, South America, or Asia. Others preferred the western territories and states. Still others settled in northern and midwestern cities on the assumption that educational and economic opportunities would be better among the victors.

Those who remained in the South found old social roles reversed. One Confederate army captain reported that on his father's plantation "our negroes are living in great comfort. They were delighted to see me with overflowing affection. They waited on me as before, gave me breakfast, splendid dinners, etc. But they firmly and respectfully informed me: 'We own this land now. Put it out of your head that it will ever be yours again.'"

Union troops who fanned out across the defeated South to impose order were cursed and spat upon. A Virginia woman expressed a spirited defiance common among her circle of friends: "Every day, every hour, that I live increases my hatred and detestation, and loathing of that race. They [Yankees] disgrace our common humanity. As a people I consider them vastly inferior to the better classes of our slaves." Fervent southern nationalists, both men and women, implanted in their children a similar hatred of Yankees and a defiance of northern rule. One mother said that she trained her children to "fear God, love the South, and live to avenge her."

LEGALLY FREE, SOCIALLY BOUND In the former Confederate states the newly freed slaves suffered most of all. According to the African-American abolitionist Frederick Douglass, the former slave remained dependent: "He had neither money, property, nor friends. He was free from the old plantation, but he had nothing but the dusty road under his feet. . . . He was turned loose, naked, hungry, and destitute to the open sky." A few northerners argued that what the ex-slaves needed most was their own land. But even dedicated abolitionists shrank from proposals to confiscate white-owned land and distribute it to the freed slaves. Citizenship and

Freedmen in Richmond, Virginia

According to a former Confederate general, freed blacks had “nothing but freedom.”

legal rights were one thing, wholesale confiscation of property and land redistribution quite another. Nonetheless, discussions of land distribution fueled false rumors that freed slaves would get “forty acres and a mule,” a slogan that swept the South at the end of the war. Instead of land or material help, the freed slaves more often got advice about proper behavior.

THE FREEDMEN’S BUREAU On March 3, 1865, while the war was still raging, Congress set up within the War Department the Bureau of Refugees, Freedmen, and Abandoned Lands to provide “such issues of provisions, clothing, and fuel” as might be needed to relieve “destitute and suffering refugees and freedmen and their wives and children.” Agents of the Freedmen’s Bureau were entrusted with negotiating labor contracts (something new for both blacks and planters), providing medical care, and setting up schools, often in cooperation with such northern agencies as the American Missionary Association and the Freedmen’s Aid Society. The bureau had its own courts to deal with labor disputes and land titles, and its agents were authorized to supervise trials involving blacks in other courts.

White intransigence and the failure to grasp the intensity of racial prejudice increasingly thwarted the efforts of Freedmen’s Bureau agents to protect and

Freedmen's School in Virginia

Throughout the former Confederate states the Freedmen's Bureau set up schools such as this one.

assist the former slaves. Congress was not willing to strengthen the powers of the bureau to reflect those problems. Beyond temporary relief measures, no program of Reconstruction ever incorporated much more than constitutional and legal rights for freedmen. These were important in themselves, of course, but the extent to which even they should go was very uncertain, to be settled more by the course of events than by any clear-cut commitment to social and economic equality.

THE BATTLE OVER RECONSTRUCTION

The problem of reconstructing the South politically centered on deciding what governments would constitute authority in the defeated states. This problem arose first in Virginia at the very beginning of the Civil War, when the state's thirty-five western counties refused to go along with secession. In 1861 a loyal state government of Virginia was proclaimed at Wheeling, and that government in turn formed a new state, called West Virginia, which was

admitted to the Union in 1863. As Union forces advanced into the South, President Lincoln in 1862 named military governors for Tennessee, Arkansas, and Louisiana. By the end of the following year, he had formulated a plan for regular governments in those states and any others that might be liberated from Confederate rule.

LINCOLN'S PLAN AND CONGRESS'S RESPONSE In late 1863, President Lincoln had issued a Proclamation of Amnesty and Reconstruction, under which any rebel state could form a Union government whenever a number equal to 10 percent of those who had voted in 1860 took an oath of allegiance to the Constitution and the Union and had received a presidential pardon. Participants also had to swear support for laws and proclamations dealing with emancipation. Certain groups, however, were excluded from the pardon: civil and diplomatic officers of the Confederacy; senior officers of the Confederate army and navy; judges, congressmen, and military officers of the United States who had left their federal posts to aid the rebellion; and those accused of failure to treat captured black soldiers and their officers as prisoners of war.

Under this plan, governments loyal to the Union appeared in Tennessee, Arkansas, and Louisiana, but Congress recognized them neither in terms of representation nor in counting the electoral votes of 1864. In the absence of specific provisions for Reconstruction in the Constitution, politicians disagreed as to where authority properly rested. Lincoln claimed the right to direct Reconstruction under the clause that set forth the presidential power to grant pardons and under the constitutional obligation of the United States to guarantee each state a republican form of government. Republican congressmen, however, argued that this obligation implied that Congress, not the president, should supervise Reconstruction.

A few conservative and most moderate Republicans supported Lincoln's program of immediate restoration. The small but influential group of Radical Republicans, however, favored a sweeping transformation of southern society based upon granting freed slaves full-fledged citizenship. The Radicals hoped to reconstruct southern society so as to dismantle the old planter class and the Democratic party.

The Radicals were talented, earnest men who insisted that Congress control the Reconstruction program. To this end in 1864 they helped pass the Wade-Davis bill, sponsored by Senator Benjamin Wade of Ohio and Representative Henry Winter Davis of Maryland. In contrast to Lincoln's 10 percent plan, the Wade-Davis bill required that a majority of white male citizens declare their allegiance and that only those who could take an "ironclad" oath (required of

federal officials since 1862) attesting to their *past* loyalty could vote or serve in the state constitutional conventions. The conventions, moreover, would have to abolish slavery, exclude from political rights high-ranking civil and military officers of the Confederacy, and repudiate debts incurred during the conflict.

Passed during the closing day of the session, the Wade-Davis bill never became law: Lincoln vetoed it. In retaliation furious Republicans penned the Wade-Davis Manifesto, which accused the president of usurping power and attempting to use readmitted states to ensure his reelection, among other sins. Lincoln offered his last view of Reconstruction in his final public address, on April 11, 1865. Speaking from the White House balcony, he pronounced that the Confederate states had never left the Union. Those states were simply “out of their proper practical relation with the Union,” and the object was to get them “into their proper practical relation.” At a cabinet meeting, Lincoln proposed the creation of new southern state governments before Congress met in December. He shunned the vindictiveness of the Radicals. He wanted “no persecution, no bloody work,” no radical restructuring of southern social and economic life.

THE ASSASSINATION OF LINCOLN On the evening of April 14, Lincoln went to Ford’s Theater and his rendezvous with death. With his trusted bodyguard called away to Richmond and the policeman assigned to his box away from his post, watching the play, Lincoln was helpless as John Wilkes Booth slipped into the unguarded presidential box. Booth, a crazed actor and Confederate zealot, fired his derringer point-blank at the president’s head. He then stabbed Lincoln’s aide and jumped from the box onto the stage, crying “*Sic semper tyrannis*” (Thus always to tyrants), the motto of Virginia. The president died nine hours later. Accomplices of Booth had also targeted Vice President Andrew Johnson and Secretary of State William Seward. Seward and four others, including his son, were victims of severe but not fatal stab wounds. Johnson escaped injury, however, because his would-be assassin got cold feet and wound up tipsy in the barroom of the vice president’s hotel.

The nation extracted a full measure of vengeance from the conspirators. Booth was pursued into Virginia and killed in a burning barn. Three of his collaborators were convicted by a military court and hanged, along with the woman at whose boardinghouse they had plotted. Three others got life sentences, including a Maryland doctor who set the leg Booth had broken when he jumped to the stage. President Johnson eventually pardoned them all, except one who died in prison. Apart from those cases, however, there was only one other execution in the aftermath of war: that of the Confederate Henry Wirz, who commanded the infamous prison at Andersonville, Georgia.

Presidential Assassination

The funeral procession for President Lincoln.

JOHNSON'S PLAN Lincoln's death elevated to the White House Andrew Johnson of Tennessee, a man who lacked most presidential virtues. When General Ulysses Grant learned that Lincoln had died and Johnson was president, he said that he "dreaded the change" because the new commander in chief was vindictive toward his native South. Essentially illiterate, Johnson was provincial and bigoted—he harbored fierce prejudices. He was also short-tempered and lacking in self-control. At the inaugural ceremonies in early 1865, he had delivered his address in a state of slurring drunkenness that embarrassed Lincoln and the nation. Johnson was a war (pro-Union) Democrat who had been put on the Union ticket in 1864 as a gesture of unity. Of origins as humble as Lincoln's, Johnson had moved as a youth from his birthplace in Raleigh, North Carolina, to Greeneville, Tennessee, where he became the proprietor of a tailor shop. Self-educated with the help of his wife, he had served as mayor, congressman, governor, and senator, then as military governor of Tennessee before he became vice president. In the process he had become an advocate of the small farmers in opposition to the privileges of the large planters—"a bloated, corrupted aristocracy." He also

Andrew Johnson

A pro-Union Democrat from Tennessee.

shared the racist attitudes of most white yeomen. “Damn the negroes,” he exclaimed to a friend during the war, “I am fighting those traitorous aristocrats, their masters.”

Some of the Radicals at first thought Johnson, unlike Lincoln, to be one of them. Johnson had, for example, once asserted that treason “must be made infamous and traitors must be impoverished.” Senator Benjamin Wade loved such vengeful language. “Johnson, we have faith in you,” he promised. “By the gods, there will be no trouble now in running this government.” But Wade would soon find Johnson as unsympathetic as Lincoln, if for different reasons.

Johnson’s loyalty to the Union sprang from a strict adherence to the Constitution and a fervent belief in limited government. When discussing what to do with the former Confederate states, Johnson preferred the term *restoration* to *reconstruction*. He held that the rebellious states should be quickly brought back into their proper relation to the Union because the states and the Union were indestructible. In 1865 Johnson declared that “there is no such thing as reconstruction. Those States have not gone out of the Union. Therefore reconstruction is unnecessary.” Like many other whites he found it hard to accept the growing Radical sentiment to grant the vote to blacks.

Johnson’s plan to restore the Union thus closely resembled Lincoln’s. A new Proclamation of Amnesty (May 1865) excluded not only those Lincoln had excluded from pardon but also everybody with taxable property worth more than \$20,000. Those wealthy planters, bankers, and merchants were the people Johnson believed had led the South to secede. Those in the excluded groups might make special applications for pardon directly to the president, and before the year was out Johnson had issued some 13,000 pardons.

Johnson followed up his amnesty proclamation with his own plan for readmitting the former Confederate states. In each state a native Unionist became provisional governor with authority to call a convention of men elected by loyal voters. Lincoln’s 10 percent requirement was omitted. Johnson called upon the state conventions to invalidate the secession ordinances, abolish slavery, and repudiate all debts incurred to aid the Confederacy. Each

state, moreover, was to ratify the Thirteenth Amendment. Lincoln had privately advised the governor of Louisiana to consider giving the vote to some blacks, “the very intelligent and those who have fought gallantly in our ranks.” In his final public address he had also endorsed a limited black suffrage. Johnson repeated Lincoln’s advice. He reminded the provisional governor of Mississippi, for example, that the state conventions might “with perfect safety” extend suffrage to blacks with education or with military service so as to “disarm the adversary,” the adversary being “radicals who are wild upon” giving all blacks the right to vote.

The state conventions for the most part met Johnson’s requirements. But Carl Schurz, a German immigrant and war hero who became a prominent Missouri politician, found during his visit to the South “an *utter absence of national feeling* . . . and a desire to preserve slavery . . . as much and as long as possible.” Southern whites had accepted the situation because they thought so little had changed after all. Emboldened by Johnson’s indulgence, they ignored his pleas for moderation and conciliation. Suggestions of black suffrage were scarcely raised in the state conventions and promptly squelched when they were.

SOUTHERN INTRANSIGENCE When Congress met in December 1865, for the first time since the end of the war, it faced the fact that the new state governments in the postwar South were remarkably like the old ones. Southern voters had acted with extreme disregard for northern feelings. Among the new members presenting themselves to Congress were Georgia’s Alexander Stephens, former vice president of the Confederacy, now claiming a seat in the Senate, four Confederate generals, eight colonels, and six cabinet members. The Congress forthwith denied seats to all members from the eleven former Confederate states. It was too much to expect, after four bloody years, that the Unionists in Congress would welcome back ex-Confederates.

Furthermore, the new southern state legislatures, in passing repressive “black codes” restricting the freedom of African Americans, demonstrated that they intended to preserve slavery as nearly as possible. As one white southerner stressed, “The ex-slave was not a free man; he was a free Negro,” and the black codes were intended to highlight the distinction.

The black codes varied from state to state, but some provisions were common. Existing marriages, including common-law marriages, were recognized (although interracial marriages were prohibited), and testimony of blacks was accepted in legal cases involving blacks—and in six states in all cases. Blacks could own property. They could sue and be sued in the courts. On the other hand, they could not own farmland in Mississippi or city lots in South Carolina; they were required to buy special licenses to practice certain trades

(?) Slavery Is Dead (?)

Thomas Nast's cartoon suggests that in 1866 slavery was dead only legally.

in Mississippi. They were required to enter into annual labor contracts. Unemployed (“vagrant”) blacks were punished with severe fines, and if unable to pay, they were forced to labor in the fields of those who paid the courts for this source of cheap labor. Aspects of slavery were simply being restored in another guise. The new Mississippi penal code virtually said so: “All penal and criminal laws now in force describing the mode of punishment of crimes and misdemeanors committed by slaves, free negroes, or mulattoes are hereby reenacted, and decreed to be in full force.”

Faced with such blatant evidence of southern intransigence, moderate Republicans in Congress drifted toward the Radicals' views. Having excluded the “reconstructed” southern members, the new Congress set up a Joint Committee on Reconstruction, with nine members from the House and six from the Senate, to gather evidence of southern efforts to thwart Reconstruction. Initiative fell to determined Radical Republicans who knew what they wanted: Benjamin Wade of Ohio, George Julian of Indiana, and—most conspicuously of all—Thaddeus Stevens of Pennsylvania and Charles Sumner of Massachusetts.

THE RADICAL REPUBLICANS Most Radical Republicans had been connected with the anti-slavery cause for decades. In addition, few could

escape the bitterness bred by the long and bloody war or remain unaware of the partisan advantage that would come to the Republican party from black suffrage. The Republicans needed African-American votes to maintain their control of Congress and the White House. They also needed to disenfranchise former Confederates to keep them from helping to elect Democrats who would restore the old southern ruling class to power. In public, however, the Radical Republicans rarely disclosed such partisan self-interest. Instead, they asserted that the Republicans, the party

Senator Charles Sumner

A leading Radical Republican.

of Union and freedom, could best guarantee the fruits of victory and that extending voting rights to blacks would be the best way to promote their welfare.

The growing conflict of opinion over Reconstruction policy brought about an inversion in constitutional reasoning. Secessionists—and Andrew Johnson—were now arguing that the Rebel states had in fact remained in the Union, and some Radical Republicans were contriving arguments that they had left the Union after all. Thaddeus Stevens argued that the Confederate states were now conquered provinces, subject to the absolute will of the victors, and that the “whole fabric of southern society must be changed.” Charles Sumner maintained that the southern states, by their pretended acts of secession, had reverted to the status of unorganized territories and thus were subject to the will of Congress. Most Republicans, however, converged instead on the “forfeited-rights theory,” later embodied in the report of the Joint Committee on Reconstruction. This held that the states as entities continued to exist, but by the acts of secession and war they had forfeited “all civil and political rights under the Constitution.” And Congress, not the president, was the proper authority to determine how and when such rights might be restored.

JOHNSON’S BATTLE WITH CONGRESS A long year of political battling remained, however, before this idea triumphed. By the end of 1865, the Radical Republicans’ views had gained a majority in Congress, if one not yet large enough to override presidential vetoes. But the critical year of 1866 saw the gradual waning of Andrew Johnson’s power and influence, much of which was self-induced. Johnson first challenged Congress in 1866, when he

vetoed a bill to extend the life of the Freedmen's Bureau. The measure, he said, assumed that wartime conditions still existed, whereas the country had returned "to a state of peace and industry." Because it was no longer valid as a war measure, the bill violated the Constitution in several ways, he declared: it made the federal government responsible for the care of indigents, it was passed by a Congress in which eleven states had been denied seats, and it used vague language in defining the "civil rights and immunities" of blacks. For the time being, Johnson's prestige remained sufficiently intact that the Senate upheld his veto.

Three days after the veto, however, during an impromptu speech, Johnson undermined his already weakening authority with a fiery assault upon Radical Republican leaders. From that point forward, moderate Republicans backed away from a president who had opened himself to counterattack. The Radical Republicans took the offensive. Johnson was "an alien enemy of a foreign state," Stevens declared. Sumner called him "an insolent drunken brute"—and Johnson was open to the charge because of his behavior at the 1865 inauguration. Weakened by illness, he had taken a belt of brandy to get through the ceremony and, under the influence of fever and alcohol, had been incoherent.

In mid-March 1866 the Radical-led Congress passed the Civil Rights Act. A response to the black codes created by unrepentant southern state legislatures,

this bill declared that "all persons born in the United States and not subject to any foreign power, excluding Indians not taxed," were citizens entitled to "full and equal benefit of all laws." The granting of citizenship to native-born blacks, Johnson fumed, exceeded the scope of federal power. It would, moreover, "foment discord among the races." Johnson vetoed the bill, but this time, on April 9, Congress overrode the presidential veto. On July 16 it enacted a revised Freedmen's Bureau bill, again overriding a veto. From that point on, Johnson steadily lost both public and political support.

The Cruel Uncle

A cartoon depicting Andrew Johnson leading two children, "Civil Rights" and "the Freedmen's Bureau," into the "Veto Wood."

THE FOURTEENTH AMENDMENT To remove all doubt about the constitutionality of the new Civil Rights Act, the joint committee recommended a new constitutional amendment, which passed Congress on June 16, 1866, and was declared by Congress to have been ratified by the states on July 28, 1868. The Fourteenth Amendment went far beyond the Civil Rights Act, however. It reaffirmed the state and federal citizenship of persons born or naturalized in the United States, and it forbade any state (the word *state* would be important in later litigation) to “abridge the privileges or immunities of citizens,” to deprive any *person* (again an important term) “of life, liberty, or property, without due process of law,” or to “deny any person . . . the equal protection of the laws.” These three clauses have been the subject of many lawsuits, resulting in applications not widely, if at all, foreseen at the time. The “due-process clause” has come to mean that state as well as federal power is subject to the Bill of Rights, and it has been used to protect corporations, as legal “persons,” from “unreasonable” regulation by the states. Other provisions of the amendment have had less far-reaching effects. One section specified that the debt of the United States “shall not be questioned” by the former Confederate states and declared “illegal and void” all debts contracted in aid of the rebellion. The final sentence specified the power of Congress to pass laws enforcing the amendment.

Johnson’s home state was among the first to ratify the Fourteenth Amendment. In Tennessee, which had harbored more Unionists than any other Confederate state, the government had fallen under Radical Republican control. The state’s governor, in reporting the results to the secretary of the Senate, added, “Give my respects to the dead dog of the White House.” His words illustrate the growing acrimony on both sides of the Reconstruction debates. In May and July, race riots in Memphis and New Orleans added fuel to the flames. Both incidents involved indiscriminate massacres of blacks by local police and white mobs. The carnage, Radical Republicans argued, was the natural fruit of Johnson’s policy. “Witness Memphis, witness New Orleans,” Senator Charles Sumner cried. “Who can doubt that the President is the author of these tragedies?”

RECONSTRUCTING THE SOUTH

THE TRIUMPH OF CONGRESSIONAL RECONSTRUCTION As 1866 drew to an end, the congressional elections promised to be a referendum on the growing split between Andrew Johnson and the Radical Republicans. Johnson sought to influence voters with a speaking tour of the Midwest, a

“swing around the circle,” which turned into an undignified shouting contest between Andrew Johnson and his critics. In Cleveland he described the Radical Republicans as “factious, domineering, tyrannical” men, and he foolishly exchanged hot-tempered insults with a heckler. At another stop, while Johnson was speaking from an observation car, the engineer mistakenly pulled the train out of the station, making the president appear quite the fool. Such incidents tended to confirm his image as a “ludicrous boor” and a “drunken imbecile,” which Radical Republicans promoted. In the 1866 congressional elections the Republicans won more than a two-thirds majority in each house, a comfortable margin with which to override presidential vetoes.

Congress in fact enacted a new program even before the new members took office. Two acts passed in 1867 extended the suffrage to African Americans in the District of Columbia and the territories. Another law provided that the new Congress would convene on March 4 instead of the following December, depriving Johnson of a breathing spell. On March 2, 1867, two days before the old Congress expired, it passed over Johnson’s vetoes three basic laws promoting congressional Reconstruction: the Military Reconstruction Act, the Command of the Army Act (an amendment to an army appropriation), and the Tenure of Office Act.

The first of the three acts prescribed conditions under which the formation of southern state governments should begin all over again. The other two sought to block any effort by the president to obstruct the process. The Command of the Army Act required that all orders from the commander in chief go through the headquarters of the general of the army, then Ulysses Grant. The Radical Republicans trusted Grant, who was already leaning their way. The Tenure of Office Act required Senate permission for the president to remove any officeholder whose appointment the Senate had confirmed. The purpose of at least some congressmen was to retain Secretary of War Edwin Stanton, the one Radical Republican sympathizer in Johnson’s cabinet. But an ambiguity crept into the wording of the act. Cabinet officers, it said, should serve during the term of the president who appointed them—and Lincoln had appointed Stanton, although, to be sure, Johnson was serving out Lincoln’s term.

The Military Reconstruction Act was hailed—or denounced—as the triumphant victory of “Radical” Reconstruction. The act declared that “no legal state governments or adequate protection for life and property now exists in the rebel States.” One state, Tennessee, which had ratified the Fourteenth Amendment, was exempted from the application of the new act. The other ten states were divided into five military districts, and the commanding officer of each was authorized to keep order and protect the “rights of persons

and property.” The Johnson governments remained intact for the time being, but new constitutions were to be framed “in conformity with the Constitution of the United States,” in conventions elected by male citizens aged twenty-one and older “of whatever race, color, or previous condition.” Each state constitution had to provide the same universal male suffrage. Then, once the constitution was ratified by a majority of voters and accepted by Congress, other criteria had to be met. The state legislature had to ratify the Fourteenth Amendment, and once the amendment became part of the Constitution, any given state would be entitled to representation in Congress. Persons excluded from officeholding by the proposed amendment were also excluded from participation in the process.

Johnson reluctantly appointed military commanders under the act, but the situation remained uncertain for a time. Some people expected the Supreme Court to strike down the act, and no machinery existed at the time for the new elections. Congress quickly remedied that on March 23, 1867, with the Second Reconstruction Act, which directed the army commanders to register all adult men who swore they were qualified. A Third Reconstruction Act, passed on July 19, directed registrars to go beyond the loyalty oath and determine each person’s eligibility to take it and authorized district army commanders to remove and replace officeholders of any existing “so-called state” or division thereof. Before the end of 1867, new elections had been held in all the states but Texas.

Having clipped the president’s wings, the Republican Congress moved a year later to safeguard its southern program from possible interference by the Supreme Court. On March 27, 1868, Congress simply removed the power of the Supreme Court to review cases arising under the Military Reconstruction Act, which Congress clearly had the right to do under its power to define the Court’s appellate jurisdiction. The Court accepted this curtailment of its authority on the same day it affirmed the principle of an “indestructible union” in *Texas v. White* (1869). In that case the Court also asserted the right of Congress to reframe state governments, thus endorsing the Radical Republican point of view.

THE IMPEACHMENT AND TRIAL OF JOHNSON By 1868 Radical Republicans were convinced not only that the power of the Supreme Court and the president needed to be curtailed but also that Andrew Johnson himself had to be removed from office. Horace Greeley, the prominent editor of the *New York Tribune*, called Johnson “an aching tooth in the national jaw, a screeching infant in a crowded lecture room. There can be no peace or comfort till he is out.”

Johnson, though hostile to the congressional Reconstruction program, had gone through the motions required of him. He continued, however, to pardon former Confederates and transferred several of the district military commanders who had displayed Radical sympathies. Johnson was revealing himself to be a man of limited ability and narrow vision. He lacked Lincoln's resilience and pragmatism. He also allowed his temper to get the better of his judgment. He castigated the Radical Republicans as "a gang of cormorants and bloodsuckers who have been fattening upon the country." During 1867 newspapers had reported that the differences between Johnson and the Republicans had become irreconcilable.

The Republicans unsuccessfully tried to impeach Johnson early in 1867, alleging a variety of flimsy charges, none of which represented an indictable crime. Then Johnson himself provided the occasion for impeachment when he deliberately violated the Tenure of Office Act in order to test its constitutionality. Secretary of War Edwin Stanton had become a thorn in the president's side, refusing to resign despite his disagreements with Johnson's Reconstruction policy. On August 12, 1867, during a congressional recess, Johnson suspended Stanton and named General Ulysses S. Grant in his place. When the Senate refused to confirm Johnson's action, however, Grant returned the office to Stanton.

The Radical Republicans now saw their chance to remove the president. As Charles Sumner declared, "Impeachment is a political proceeding before a political body with a political purpose." The debate in the House was vicious. One congressman said Johnson had dragged the robes of his office through the "filth of treason." Another denounced the president as "an ungrateful, despicable, besotted traitorous man—an incubus." Still another called Johnson's advisers "the worst men that ever crawled like filthy reptiles at the footstool of power." On February 24, 1868, the Republican-dominated House passed eleven articles of impeachment by a party-line vote of 126 to 47.

Of the eleven articles of impeachment, eight focused on the charge that Johnson had unlawfully removed Stanton. Article 9 accused the president of issuing orders in violation of the Command of the Army Act. The last two articles in effect charged him with criticizing Congress by "inflammatory and scandalous harangues." Article 11 also accused him of "unlawfully devising and contriving" to violate the Reconstruction Acts, contrary to his obligation to execute the laws. At the very least, it stated, Johnson had tried to obstruct Congress's will while observing the letter of the law.

The Senate trial began on March 5, 1868, and continued until May 26, with Chief Justice Salmon P. Chase presiding. It was a great spectacle before a packed gallery. Witnesses were called, speeches made, and rules of order

The Trial of Andrew Johnson

House of Representatives managers of the impeachment proceedings. Among them were Benjamin Franklin Butler (Republican of Massachusetts, seated left) and Thaddeus Stevens (Republican of Pennsylvania, seated with cane).

debated. Johnson wanted to plead his case in person, but his attorneys refused, fearing that his short temper might erupt and hurt his cause. The president thereupon worked behind the scenes to win over undecided Republican senators, offering them a variety of political incentives.

As the weeks passed, the trial grew tedious. Senators slept during the proceedings, spectators passed out in the unventilated room, and poor acoustics prompted repeated cries of “We can’t hear.” Debate eventually focused on Stanton’s removal, the most substantive impeachment charge. Johnson’s lawyers argued that Lincoln, not Johnson, had appointed Stanton, so the Tenure of Office Act did not apply to him. At the same time they claimed (correctly, as it turned out) that the law was unconstitutional.

As the five-week trial ended and the voting began in May 1868, the Senate Republicans could afford only six defections from their ranks to ensure the two-thirds majority needed to convict. In the end seven moderate Republicans and all twelve Democrats voted to acquit. The final tally was thirty-five to nineteen for conviction, one vote short of the two thirds needed for removal from office. The renegade Republicans offered two primary reasons for their controversial votes: they feared damage to the separation of powers among the branches of government if Johnson were removed, and they were assured by Johnson’s attorneys that he would stop obstructing congressional policy in the South.

Although the Senate failed to remove Johnson, the trial crippled his already weak presidency. During the remaining ten months of his term, he initiated no other clashes with Congress. In 1868 Johnson sought the Democratic presidential nomination but lost to New York governor Horatio Seymour, who then lost to Republican Ulysses Grant in the general election. A bitter Johnson refused to attend Grant's inauguration. His final act as president was to issue a pardon to former Confederate president Jefferson Davis. In 1874, after failed bids for the Senate and the House, Johnson won a measure of vindication with election to the Senate, the only former president ever to do so, but he died a few months later. He was buried with a copy of the Constitution tucked under his head.

As for the impeachment trial, only two weeks after it ended, a Boston newspaper reported that Americans were amazed at how quickly "the whole subject of impeachment seems to have been thrown into the background and dwarfed in importance" by other events. Moreover, the impeachment of Johnson was in the end a great political mistake, for the failure to remove the president damaged Radical Republican morale and support. Nevertheless, the Radical cause did gain something. To blunt the opposition, Johnson agreed not to obstruct the process of Reconstruction, and thereafter Radical Reconstruction began in earnest.

REPUBLICAN RULE IN THE SOUTH In June 1868 Congress agreed that seven southern states had met the conditions for readmission to the Union, all but Virginia, Mississippi, and Texas. Congress rescinded Georgia's admission, however, when the state legislature expelled twenty-eight African-American members and seated former Confederate leaders. The federal military commander in Georgia then forced the legislature to reseal the black members and remove the Confederates, and the state was compelled to ratify the Fifteenth Amendment before being admitted in July 1870. Mississippi, Texas, and Virginia had returned earlier in 1870, under the added requirement that they, too, ratify the Fifteenth Amendment. That amendment, submitted to the states in 1869, and ratified in 1870, forbade the states to deny any person the vote on grounds of "race, color, or previous condition of servitude."

Long before the new governments had been established, Republican groups began to spring up in the South, chiefly sponsored by the Union League, founded in Philadelphia in 1862 to promote support for the Union. League recruiters enrolled African Americans and loyal whites, initiated them into the secrets and rituals of the order, and instructed them "in their rights and duties." Their recruiting efforts were so successful that

in 1867, on the eve of South Carolina's choice of convention delegates, the league reported eighty-eight chapters, which claimed to have enrolled almost every adult black male in the state.

THE RECONSTRUCTED SOUTH

THE FREED SLAVES To focus solely on what white Republicans did to reconstruct the defeated South creates the false impression that the freed slaves were simply pawns in the hands of others. In fact, however, southern blacks were active agents in affecting the course of Reconstruction. It was not an easy road, though. Many former Confederates continued to harbor deeply ingrained racial prejudices. They resisted and resented federally imposed changes in southern society. During the era of Reconstruction, whites used terror, intimidation, and violence to suppress black efforts to gain social and economic equality. In July 1866, for instance, a black woman in Clinch County, Georgia, was arrested and given sixty-five lashes for "using abusive language" during an encounter with a white woman. A month later another black woman suffered the same punishment. The Civil War had brought freedom to enslaved African Americans, but it did not bring them protection against exploitation or abuse. Many former slaves found themselves liberated but destitute after the fighting ended. The mere promise of freedom, however, raised their hopes of achieving a biracial democracy, equal justice, and economic opportunity. "Most anyone ought to know that a man is better off free than as a slave, even if he did not have anything," said the Reverend E. P. Holmes, a black Georgia preacher and former domestic servant. "I would rather be free and have my liberty."

Participation in the Union army or navy had provided many freedmen with training in leadership. Black military veterans would form the core of the first generation of African-American political leaders in the postwar South. Military service provided many former slaves with the first opportunities to learn to read and write. Army life also alerted them to new opportunities for economic advancement and social respectability. Fighting for the Union cause also instilled a fervent sense of nationalism. A Virginia freedman explained that the United States was "now *our* country—made emphatically so by the blood of our brethren."

Former slaves established independent churches after the war, and such churches quickly formed the foundation of African-American community life. Blacks preferred the Baptist denomination, in part because of the decentralized structure that allowed each congregation to worship in its own way.

The First African Church

Richmond, Virginia, 1874.

By 1890 there were over 1.3 million black Baptists in the South, nearly three times as many as any other black denomination. In addition to forming viable new congregations, freed blacks organized thousands of fraternal, benevolent, and mutual-aid societies, clubs, lodges, and associations. Memphis, for example, had over 200 such organizations; Richmond boasted twice that number.

The freed slaves also hastened to reestablish their families. Marriages that had been prohibited during slavery were now legitimized through the assistance of the Freedmen's Bureau. By 1870 a preponderant majority of former slaves were living in two-parent households. One white editor in Georgia, lamenting the difficulty of finding black women to serve as house servants, reported that "every negro woman wants to set up house keeping" for herself and her family. With little money or technical training, freed slaves faced the prospect of becoming wage laborers. Yet in order to retain as much autonomy as possible over their productive energies and those of their children on a daily and a seasonal basis, many husbands and wives chose sharecropping, in which the crop produced was divided between the tenant and the landowner. This choice enabled mothers and wives to devote more of their time to domestic needs while still contributing to the family's income.

African-American communities in the postwar South also sought to establish schools. The antebellum planter elite had denied education to

blacks because they feared that literate slaves would organize uprisings. After the war the white elite worried that education programs would encourage poor whites and poor blacks to leave the South in search of better social and economic opportunities. Economic leaders wanted to protect the competitive advantage afforded by the region's low-wage labor market. "They didn't want us to learn nothin'," one former slave recalled. "The only thing we had to learn was how to work." White opposition to education for blacks made it all the more important to African Americans. South Carolina's Mary McLeod Bethune, the fifteenth child of former slaves and one of the first children in the household born after the Civil War, reveled in the opportunity to gain an education: "The whole world opened to me when I learned to read." She walked five miles to school as a child, earned a scholarship to college, and went on to become the first black woman to found a school that became a four-year college, Bethune-Cookman, in Daytona Beach, Florida.

The general resistance among the former slaveholding class to new education initiatives forced the freed slaves to rely on northern assistance or take their own initiative. A Mississippi Freedmen's Bureau agent noted in 1865 that when he told a gathering of some 3,000 former slaves that they "were to have the advantages of schools and education, their joy knew no bounds. They fairly jumped and shouted in gladness." African-American churches and individuals helped raise the money and often built the schools and paid the teachers. Soldiers who had acquired some literacy skills often served as the teachers, and the students included adults as well as children.

BLACKS IN SOUTHERN POLITICS In the postwar South the new role of African Americans in politics caused the most controversy. If largely illiterate and inexperienced in the rudiments of politics, southern blacks were little different from the millions of propertyless whites or immigrants. Some freedmen frankly confessed their disadvantages. Beverly Nash, a black delegate to the South Carolina convention of 1868, told his colleagues: "I believe, my friends and fellow-citizens, we are not prepared for this suffrage. But we can learn. Give a man tools and let him commence to use them, and in time he will learn a trade. So it is with voting."

Several hundred African-American delegates participated in the statewide political conventions. Most had been selected by local political meetings or by churches, fraternal societies, Union Leagues, or black army units from the North, although a few simply appointed themselves. The African-American delegates "ranged all colors and apparently all conditions," but free mulattoes

Freedmen Voting in New Orleans

The Fifteenth Amendment, passed in 1870, guaranteed at the federal level the right of citizens to vote regardless of “race, color, or previous condition of servitude.” But former slaves had been registering to vote—and voting in large numbers—in state elections since 1867, as in this scene.

from the cities played the most prominent roles. At Louisiana’s Republican state convention, for instance, nineteen of the twenty black delegates had been born free.

By 1867, however, former slaves began to gain political influence and vote in large numbers, and this development revealed emerging tensions within the African-American community. Some southern blacks resented the presence of northern brethren who moved south after the war, while others complained that few ex-slaves were represented in black leadership positions. Northern blacks and the southern free black elite, most of whom were urban dwellers, opposed efforts to redistribute land to the rural freedmen, and many insisted that political equality did not mean social equality. As an Alabama black leader stressed, “We do not ask that the ignorant and degraded shall be put on a social equality with the refined and intelligent.” In general, however, unity rather than dissension prevailed, and blacks focused on common concerns such as full equality under the law.

Brought suddenly into politics in times that tried the most skilled of statesmen, many African Americans served with distinction. Nonetheless, the derisive label “black Reconstruction” used by later critics exaggerates

African-American Political Figures of the Reconstruction

African-American political influence, which was limited mainly to voting, and overlooks the political clout of the large number of white Republicans, especially in the mountain areas of the upper South, who also favored the Radical plan for Reconstruction. Only one of the new state conventions, South Carolina's, had a black majority, seventy-six to forty-one. Louisiana's was evenly divided racially, and in only two other conventions were more than 20 percent of the members black: Florida's, with 40 percent, and Virginia's, with 24 percent. The Texas convention was only 10 percent black, and North Carolina's was 11 percent—but that did not stop a white newspaper from calling it a body consisting of “baboons, monkeys, mules . . . and other jackasses.”

In the new state governments any African-American participation was a novelty. Although some 600 blacks—most of them former slaves—served as state legislators, no black man was ever elected governor, and only a few served as judges. In Louisiana, however, Pinckney Pinchback, a northern black and former Union soldier, won the office of lieutenant governor and served as acting governor when the white governor was indicted for corruption. Several

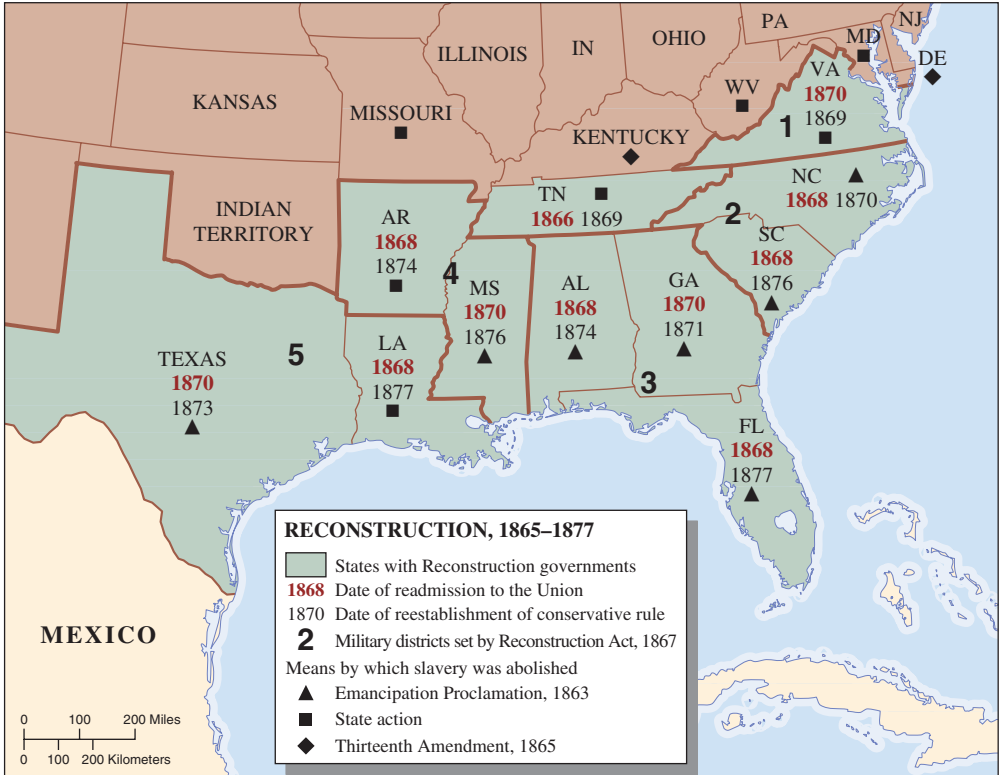

blacks were elected lieutenant governor, state treasurer, or secretary of state. There were two black senators in Congress, Hiram Revels and Blanche K. Bruce, both Mississippi natives who had been educated in the North, and fourteen black members of the House of Representatives during Reconstruction.

CARPETBAGGERS AND SCALAWAGS The top positions in southern state governments went for the most part to white Republicans, whom the opposition whites soon labeled carpetbaggers and scalawags, depending upon their place of birth. The northern opportunists who allegedly rushed South with all their belongings in carpetbags to grab the political spoils were more often than not Union veterans who had arrived as early as 1865 or 1866, drawn South by the hope of economic opportunity and other attractions that many of them had seen in their Union service. Many other so-called carpetbaggers were teachers, social workers, or preachers animated by a missionary impulse.

The “scalawags,” or native white Republicans, were even more reviled and misrepresented. A Nashville editor called them the “merest trash that could be collected in a civilized community, of no personal credit or social responsibility.” Most “scalawags” had opposed secession, forming a Unionist majority in many mountain counties as far south as Georgia and Alabama, and especially in the hills of eastern Tennessee. Among the “scalawags” were several distinguished figures, including the former Confederate general James Longstreet, who decided after Appomattox that the Old South must change its ways. He became a successful cotton broker in New Orleans, joined the Republican party, and supported the Radical Reconstruction program. Other “scalawags” were former Whigs attracted by the Republican party’s economic program of industrial and commercial expansion.

THE RADICAL REPUBLICAN RECORD Former Confederates also resented the new state constitutions because of their provisions allowing for black suffrage and civil rights. Yet most remained in effect for some years after the end of Radical Republican control, and later constitutions incorporated many of their features. Conspicuous among Radical innovations were such steps toward greater democracy as requiring universal manhood suffrage, reapportioning legislatures more nearly according to population, and making more state offices elective.

Given the hostile circumstances under which the Radical governments operated, their achievements are remarkable. They constructed an extensive

How did the Military Reconstruction Act reorganize government in the South in the late 1860s and 1870s? What did the former Confederate states have to do to be readmitted to the Union? Why did “Conservative” parties gradually regain control of the South from the Republicans in the 1870s?

railroad network and established state school systems. Some 600,000 black pupils were enrolled in southern schools by 1877. State governments under the Radicals also gave more attention to the poor and to orphanages, asylums, and institutions for the deaf and the blind of both races. Public roads, bridges, and buildings were repaired or rebuilt. Blacks achieved new rights and opportunities that would never again be taken away, at least in principle: equality before the law and the rights to own property, carry on business, enter professions, attend schools, and learn to read and write.

Yet several of these Republican state regimes also engaged in corrupt practices. Bids for contracts were accepted at absurdly high prices, and public officials took their cut. Public money and public credit were often awarded to privately owned corporations, notably railroads, under conditions that invited

influence peddling. Corruption was not invented by the Radical Republican regimes, nor did it die with them. Louisiana's "carpetbag" governor recognized as much. "Why," he said, "down here everybody is demoralized. Corruption is the fashion."

THE GRANT YEARS

THE ELECTION OF 1868 Ulysses S. Grant, who presided during the collapse of Republican rule in the South, brought to the White House little political experience. But in 1868 northern voters supported "the Lion of Vicksburg" because of his record as the Union army commander. He was the most popular man in the nation. Both parties wooed him, but his falling-out with President Johnson pushed him toward the Republicans and built trust in

him among the Radicals. They were, as Thaddeus Stevens said, ready to "let him into the church."

The Republican platform of 1868 endorsed congressional Reconstruction. One plank cautiously defended black suffrage as a necessity in the South but a matter each northern state should settle for itself. Another urged payment of the national debt "in the utmost good faith to all creditors," which meant in gold. More important than the platform were the great expectations of a soldier-president and his slogan, "Let us have peace."

The Democrats took opposite positions on both Reconstruction and the debt. The Republican Congress, the Democratic platform charged, instead of restoring the Union had "so far as in its power, dissolved it, and subjected ten states, in the time of profound peace, to military despotism and

The Working-Man's Banner

This campaign banner makes reference to the working-class origins of Ulysses S. Grant and his vice-presidential candidate, Henry Wilson, by depicting Grant as a tanner and Wilson as a shoemaker.

Negro supremacy.” As for the federal debt, the party endorsed Representative George H. Pendleton’s “Ohio idea” that, since most war bonds had been bought with depreciated greenbacks, they should be paid off in greenbacks. With no conspicuously available candidate in sight, the Democratic convention turned to Horatio Seymour, war governor of New York and chairman of the convention. His friends had to hustle him out of the hall to prevent his withdrawal. Seymour neither sought nor embraced the nomination, leading opponents to call him “the Great Decliner.” Yet the Democrats made a closer race of it than the electoral vote revealed. Eight states, including New York and New Jersey, went for Seymour. While Grant swept the Electoral College by 214 to 80, his popular majority was only 307,000 out of a total of over 5.7 million votes. More than 500,000 African-American voters accounted for Grant’s margin of victory.

Grant had proved himself a great leader in the war, but as the youngest president ever (forty-six years old at the time of his inauguration), he was blind to the political forces and influence peddlers around him. He was awestruck by men of wealth and unaccountably loyal to some who betrayed his trust, and he passively followed the lead of Congress. This approach at first endeared him to Republican party leaders, but it at last left him ineffective and left others disillusioned with his leadership.

At the outset, Grant consulted nobody on his seven cabinet appointments. Some of his choices indulged personal whims; others simply displayed bad judgment. In some cases, appointees learned of their nomination from the newspapers. As time went by, Grant betrayed a fatal gift for losing men of talent and integrity from his cabinet. Secretary of State Hamilton Fish of New York turned out to be a happy exception; Fish guided foreign policy throughout the Grant presidency. Other than Fish, however, the Grant cabinet overflowed with incompetents.

THE GOVERNMENT DEBT Financial issues dominated Grant’s presidency. After the war the Treasury had assumed that the \$432 million worth of greenbacks issued during the conflict would be retired from circulation and that the nation would revert to a “hard-money” currency—gold coins. Many agrarian and debtor groups resisted any contraction of the money supply resulting from the elimination of greenbacks, believing that it would mean lower prices for their crops and would make it harder for them to repay long-term debts. They were joined by a large number of Radical Republicans who thought a combination of high tariffs and inflation would generate more rapid economic growth. As Senator John Sherman explained, “I prefer gold to paper money. But there is no other resort. We must have

money or a fractured government.” In 1868 congressional supporters of such a “soft-money” policy halted the retirement of greenbacks. There matters stood when Grant took office.

The “sound,” or hard-money, advocates, mostly bankers and merchants, claimed that Grant’s election was a mandate to save the country from the Democrats’ “Ohio idea” of using greenbacks to repay government bonds. Quite influential in Republican circles, the sound-money advocates also had the benefit of agreeing with the deeply ingrained popular assumption that hard money was morally preferable to paper currency. Grant agreed as well, and in his inaugural address he endorsed payment of the national debt in gold as a point of national honor. On March 18, 1869, the Public Credit Act, which endorsed that principle, became the first act of Congress that Grant signed. Under the Refunding Act of 1870, the Treasury was able to replace 6 percent Civil War bonds with a new bond issue promising purchasers a return of 4 to 5 percent in gold.

SCANDALS The complexities of the “money question” exasperated Grant, but that was the least of his worries, for his administration soon fell into a cesspool of scandal. In the summer of 1869, two financial buccaneers, the crafty Jay Gould and the flamboyant con man James Fisk, connived with the president’s brother-in-law to corner the nation’s gold market. That is, they would create a public craze for gold by purchasing massive quantities of the yellow metal and convincing traders and the general public that the price would keep climbing. As more buyers joined the frenzy, the value of gold would soar. The only danger to the scheme was the federal Treasury’s selling large amounts of gold. Gould concocted an argument that the government should refrain from selling gold on the market because the resulting rise in gold prices would raise temporarily depressed farm prices. Grant apparently smelled a rat from the start, but he was seen in public with the speculators. As the rumor spread on Wall Street that the president had bought the argument, gold rose from \$132 to \$163 an ounce. When Grant finally persuaded his brother-in-law to pull out of the deal, Gould began quietly selling out. Finally, on “Black Friday,” September 24, 1869, Grant ordered the Treasury to sell a large quantity of gold, and the bubble burst. Fisk got out by repudiating his agreements and hiring thugs to intimidate his creditors. “Nothing is lost save honor,” he said.

The plot to corner the gold market was only the first of several scandals that rocked the Grant administration. During the campaign of 1872, the public first learned about the financial crookery of the *Crédit Mobilier*, a sham construction company composed of directors of the Union Pacific Railroad

who had milked the Union Pacific for exorbitant fees in order to line the pockets of the insiders who controlled both firms. Union Pacific shareholders were left holding the bag. The schemers bought political support by giving congressmen stock in the enterprise. This chicanery had transpired before Grant's election in 1868, but it now touched a number of prominent Republicans. The beneficiaries had included Speaker of the House Schuyler Colfax, later vice president, and Representative James A. Garfield, later president. Of the thirteen members of Congress involved, only two were censured.

Even more odious disclosures soon followed, some involving the president's cabinet. The secretary of war, it turned out, had accepted bribes from merchants who traded with Indians at army posts in the West. He was impeached, but he resigned in time to elude a Senate trial. Post-office contracts, it was revealed, went to carriers who offered the highest kickbacks. The Secretary of the Treasury had awarded a political friend a commission of 50 percent for the collection of overdue taxes. In St. Louis a "whiskey ring" bribed tax collectors to bilk the government of millions of dollars in revenue. Grant's private secretary was enmeshed in that scheme, taking large sums of money and other valuables in return for inside information. There is no evidence that Grant himself was ever involved in, or personally profited from, any of the fraud, but his poor choice of associates and his gullibility earned him widespread criticism.

WHITE TERROR President Grant initially fought hard to enforce the federal efforts to reconstruct the postwar South. By the time he became president, southern resistance had turned violent. In Grayson County, Texas, three whites murdered three freed slaves because they felt the need to "thin the niggers out and drive them to their holes."

The prototype of all the terrorist groups was the Ku Klux Klan (KKK), first organized in 1866 by some young men of Pulaski, Tennessee, as a social club, with the costumes and secret rituals common to fraternal groups. At first a

Worse Than Slavery

This Thomas Nast cartoon chides the Ku Klux Klan and the White League for promoting conditions "worse than slavery" for southern blacks after the Civil War.

group of pranksters, its members soon turned to intimidation of blacks and white Republicans, and the KKK and its imitators, like Louisiana's Knights of the White Camelia, spread rapidly across the South in answer to the Republican party's Union League. Klansmen rode about the countryside, hiding behind masks and under robes, spreading horrendous rumors, issuing threats, harassing African Americans, and occasionally wreaking violence and destruction.

Klansmen focused their terror on prominent Republicans, black and white. In Mississippi they killed a black Republican leader in front of his family. Three white "scalawag" Republicans were murdered in Georgia in 1870. That same year an armed mob of whites assaulted a Republican political rally in Alabama, killing four blacks and wounding fifty-four. In South Carolina the Klan was especially active. Virtually the entire white male population of York County joined the organization, and they were responsible for eleven murders and hundreds of whippings. In 1871 some 500 masked men laid siege to the Union County jail and eventually lynched eight black prisoners.

At the urging of President Grant, Congress struck back with three Enforcement Acts (1870–1871) to protect black voters. The first of these measures levied penalties on persons who interfered with any citizen's right to vote. A second placed the election of congressmen under surveillance by federal election supervisors and marshals. The third (the Ku Klux Klan Act) outlawed the characteristic activities of the Klan—forming conspiracies, wearing disguises, resisting officers, and intimidating officials—and authorized the president to suspend habeas corpus where necessary to suppress "armed combinations." In 1871 the federal government singled out nine counties in up-country South Carolina as an example, suspended habeas corpus, and pursued mass prosecutions. In general, however, the federal Enforcement Acts suffered from weak and inconsistent execution. As time passed, President Grant vacillated between clamping down on the Klan and capitulating to racial intimidation. The strong tradition of states' rights and local autonomy in the South resisted federal force.

CONSERVATIVE RESURGENCE The Klan's impact on southern politics varied from state to state. In the upper South it played only a modest role in facilitating a Democratic resurgence. But in the Deep South, Klan violence and intimidation had more substantial effects. In overwhelmingly black Yazoo County, Mississippi, vengeful whites used violence to reverse the political balance of power. In the 1873 elections the Republicans cast 2,449 votes and the Democrats 638; two years later the Democrats polled

4,049 votes, the Republicans 7. Throughout the South the activities of the Klan weakened black and Republican morale, and in the North they encouraged a growing weariness with the whole southern question. “The plain truth is,” noted the *New York Herald*, “the North has got tired of the Negro.”

The erosion of northern interest in civil rights resulted from more than weariness, however. Western expansion, Indian wars, new economic opportunities, and political controversy over the tariff and the currency distracted attention from southern outrages against Republican rule and black rights. In addition, after a business panic that occurred in 1873 and an ensuing depression, desperate economic circumstances in the North and the South created new racial tensions that helped undermine already inconsistent federal efforts to promote racial justice in the former Confederacy. Republican control in the South gradually loosened as “Conservative” parties—a name used by Democrats to mollify former Whigs—mobilized the white vote. Prewar political leaders reemerged to promote the antebellum Democratic goals of limited government, states’ rights, and free trade. They politicized the race issue to excite the white electorate and intimidate black voters. The Republicans in the South became increasingly an organization limited to blacks and federal officials. Many “scalawags” and carpetbaggers drifted away from the Radical Republican ranks under pressure from their white neighbors. Few of them had joined the Republicans out of concern for black rights in the first place. And where persuasion failed to work, Democrats were willing to use chicanery. As one enthusiastic Democrat boasted, “The white and black Republicans may outvote us, but we can outcount them.”

Republican political control collapsed in Virginia and Tennessee as early as 1869; in Georgia and North Carolina it collapsed in 1870, although North Carolina had a Republican governor until 1876. Reconstruction lasted longest in the Deep South states with the largest black population, where whites abandoned Klan masks for barefaced intimidation in paramilitary groups such as the Mississippi Rifle Club and the South Carolina Red Shirts. By 1876 Radical Republican regimes survived only in Louisiana, South Carolina, and Florida, and those collapsed after the elections of that year.

REFORM AND THE ELECTION OF 1872 Long before Grant’s first term ended, a reaction against Radical Reconstruction and incompetence and corruption in the administration had incited mutiny within the Republican ranks. A new faction, called Liberal Republicans, favored free trade, the redemption of greenbacks with gold, a stable currency, an end to federal Reconstruction efforts in the South, the restoration of the rights of former

What I Know about Raising the Devil

With the tail and cloven hoof of the devil, Horace Greeley (center) leads a small band of Liberal Republicans in pursuit of incumbent president Ulysses S. Grant and his supporters in this 1872 cartoon.

Confederates, and civil service reform. Open revolt first broke out in Missouri, where Carl Schurz led a group of Liberal Republicans who elected a governor with Democratic help in 1870 and sent Schurz to the Senate. In 1872 the Liberal Republicans held their own national convention at Cincinnati, which produced a compromise platform condemning the Republicans' Reconstruction policy and favoring civil service reform but remained silent on the protective tariff. The delegates embraced a quixotic presidential candidate: Horace Greeley, the prominent editor of the *New York Tribune*, a long-time champion of just about every reform available. Greeley's image as a visionary eccentric was complemented by his record of hostility to the Democrats, whose support the Liberals needed. The Democrats nevertheless swallowed the pill and gave their nomination to Greeley as the only hope of beating Grant.

The result was a foregone conclusion. Republican regulars duly endorsed Radical Reconstruction and the protective tariff. Grant still had seven southern carpetbag states in his pocket, generous contributions from business and banking interests, and the stalwart support of the Radical Republicans. Above all, he still evoked the imperishable glory of the Union victory in the war. Greeley, despite an exhausting tour of the country—still unusual for a

presidential candidate—carried only six southern and border states and none in the North. Grant won by 3,598,235 votes to Greeley's 2,834,761.

PANIC AND REDEMPTION Economic distress followed close upon the public scandals besetting the Grant administration. Such developments help explain why northerners lost interest in Reconstruction. A contraction of the nation's money supply resulting from the withdrawal of greenbacks and investments in new railroads made investors cautious and helped precipitate a financial crisis. During 1873 the market for railroad bonds turned sour as some twenty-five railroads defaulted on their interest payments. The prestigious investment bank of Jay Cooke and Company went bankrupt on September 18, 1873. The ensuing stampede of investors eager to exchange securities for cash forced the stock market to close for ten days. The panic of 1873 set off a depression that lasted six years, the longest and most severe that Americans had yet suffered. Thousands of businesses went bankrupt, millions of people lost their jobs, and as usually occurs, voters blamed the party in power for their economic woes.

Hard times and political scandals hurt Republicans in the midterm elections of 1874. The Democrats won control of the House of Representatives and gained seats in the Senate. The new Democratic House immediately launched inquiries into the scandals and unearthed further evidence of corruption in high places. The financial panic, meanwhile, focused attention once more on greenback currency.

Since the value of greenbacks was lower than that of gold, greenbacks had become the chief circulating medium. Most people spent greenbacks first and held their gold or used it to settle foreign accounts, thereby draining much gold out of the country. The postwar reduction of greenbacks in circulation, from \$432 million to \$356 million, had made for tight money. To relieve the currency shortage and stimulate business expansion, the Treasury reissued \$26 million in greenbacks that had previously been withdrawn. As usually happened during economic hard times in the nineteenth century, debtors, the people hurt most by depression, called upon the federal government to inflate the money supply so as to make it easier for them to pay their obligations.

For a time the advocates of paper money were riding high. But in 1874 Grant vetoed a bill to issue more greenbacks. Then, in his annual message, he called for the gradual resumption of specie payments—that is, the redemption of greenbacks in gold, making greenbacks “good as gold” and raising their value to a par with that of the gold dollar. Congress obliged by passing the Specie Resumption Act of 1875. The payment in gold to people

who turned in their paper money began on January 1, 1879, after the Treasury had built a gold reserve for that purpose and reduced the value of the greenbacks in circulation. This act infuriated those promoting an inflationary monetary policy and prompted the formation of the Greenback party, which elected fourteen congressmen in 1878. The much-debated and very complex “money question” was destined to remain one of the most divisive issues in American politics.

THE COMPROMISE OF 1877 President Grant, despite the controversies swirling around him, wanted to run again in 1876, but many Republicans were not enthusiastic about the prospect of Grant as the nation’s first three-term president. After all, the Democrats had devastated the Republicans in the 1874 congressional elections: the decisive Republican majority in the House had evaporated, and the Democrats had taken control. In the summer of 1875, Grant acknowledged the growing opposition to his renomination and announced his retirement. James G. Blaine of Maine, former Speaker of the House and one of the nation’s favorite orators, emerged as the Republican front-runner, but he, too, bore the taint of scandal. Letters in the possession of James Mulligan of Boston linked Blaine to some dubious railroad dealings, and the “Mulligan letters” found their way into print.

The Republican convention therefore eliminated Blaine and several other hopefuls in favor of Ohio’s favorite son, Rutherford B. Hayes. Three times elected governor of Ohio, most recently as an advocate of hard money, Hayes had also made a name as a civil service reformer. But his chief virtue was that he offended neither Radicals nor reformers. As a journalist put it, he was “a third rate nonentity, whose only recommendation is that he is obnoxious to no one.”

The Democratic Convention was abnormally harmonious from the start. The nomination went on the second ballot to Samuel J. Tilden, a millionaire corporation lawyer and reform governor of New York who had directed a campaign to overthrow the notorious Tweed ring controlling New York City politics and the canal ring in Albany, which had bilked the state of millions.

The 1876 campaign generated no burning issues. Both candidates favored the trend toward relaxing federal authority and restoring white conservative rule in the South. In the absence of strong differences, Democrats aired the Republicans’ dirty linen. In response, Republicans waved the “bloody shirt,” which is to say that they engaged in verbal assaults on former Confederates, linking the Democratic party to secession and the

outrages committed against Republicans in the South. As one Republican speaker insisted, "Every man that tried to destroy this nation was a Democrat. . . . The man that assassinated Abraham Lincoln was a Democrat. . . . Soldiers, every scar you have on your heroic bodies was given you by a Democrat!"

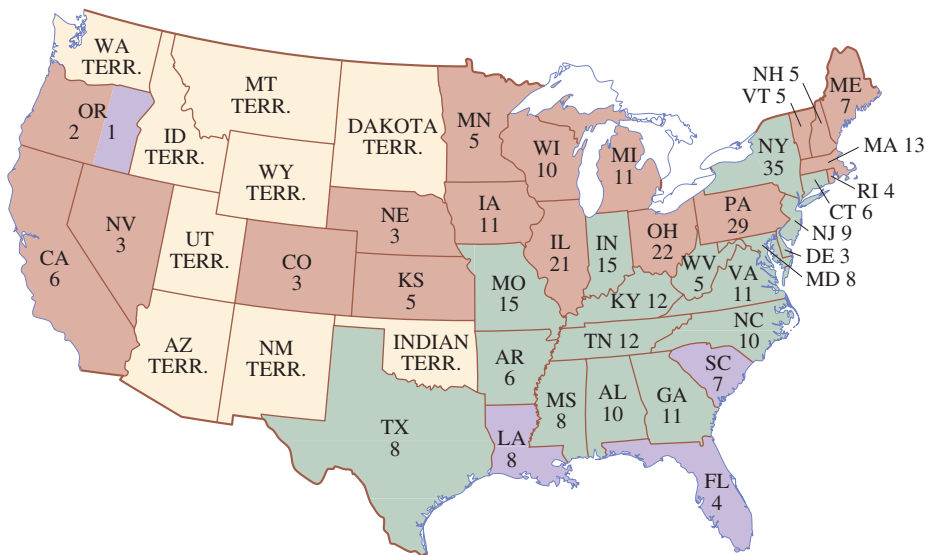

Early election returns pointed to a Tilden victory. Tilden enjoyed a 254,000-vote edge in the balloting and had won 184 electoral votes, just one short of a majority. Hayes had 165 electoral votes, but the Republicans also claimed 19 doubtful votes from Florida, Louisiana, and South Carolina. The Democrats laid a counterclaim to 1 electoral vote from Oregon, but the Republicans had clearly carried that state. In the South the outcome was less certain, and given the fraud and intimidation perpetrated on both sides, nobody will ever know what might have happened if, to use a slogan of the day, "a free ballot and a fair count" had prevailed.

In all three of the disputed southern states, rival canvassing boards sent in different returns. In Florida, Republicans conceded the state election, but in Louisiana and South Carolina rival state governments appeared. The Constitution offered no guidance in this unprecedented situation. Even if Congress were empowered to sort things out, the Democratic House and the Republican Senate proved unable to reach an agreement.

Finally, on January 29, 1877, the two houses decided to set up a special Electoral Commission with fifteen members, five each from the House, the Senate, and the Supreme Court. Members were chosen such that there were seven from each major party, with Justice David Davis of Illinois as the swing vote. Davis, though appointed to the Court by Lincoln, was no party regular and was in fact thought to be leaning toward the Democrats. Thus, the panel appeared to be stacked in favor of Tilden.

But as it turned out, the panel got restacked the other way. Short-sighted Democrats in the Illinois legislature teamed up with minority Greenbackers to name Davis their senator. Davis accepted, no doubt with a sense of relief. From the remaining justices, all Republicans, the panel chose Joseph P. Bradley to fill the vacancy. The decision on each state went by a vote of eight to seven along party lines, in favor of Hayes. After much bluster and the threat of a filibuster by the Democrats, the House voted on March 2 to accept the report and declared Hayes elected by an electoral vote of 185 to 184.

Critical to this outcome was the defection of southern Democrats, who, seeing the way the wind was blowing in the composition of the Electoral Commission, had made several informal agreements with the Republicans. On February 26, 1877, prominent Ohio Republicans (including James A.

THE ELECTION OF 1876		
	Electoral vote	Popular vote
<div></div> Rutherford B. Hayes (Republican)	185	4,036,000
<div></div> Disputed; assigned to Hayes by Congressional Commission		
<div></div> Samuel J. Tilden (Democrat)	184	4,301,000

Why did the Republicans pick Hayes as their presidential candidate? Why were the electoral votes of several states disputed? What was the Compromise of 1877?

Garfield) and powerful southern Democrats struck a bargain at Wormley’s Hotel in Washington. The Republicans promised that if elected, Hayes would withdraw the last federal troops from Louisiana and South Carolina, letting the Republican governments there collapse. In return, the Democrats promised to withdraw their opposition to Hayes, accept in good faith the Reconstruction amendments (including civil rights for blacks), and refrain from partisan reprisals against Republicans in the South.

Southern Democrats could now justify deserting Tilden because this so-called Compromise of 1877 brought a final “redemption” from the Radicals and a return to “home rule,” which actually meant rule by white Democrats. As a former slave observed in 1877, “The whole South—every state in the South—has got [back] into the hands of the very men that held us as slaves.” Other, more informal promises, less noticed by the public, bolstered the “Wormley Conference.” Hayes’s friends pledged more support for rebuilding Mississippi River levees and other internal improvements, including a federal subsidy for a transcontinental railroad along a southern route. Southerners extracted a further promise that Hayes would name a white southerner as postmaster general, the cabinet position with the most patronage jobs at hand. In return, southerners would let the Republicans make James Garfield the Speaker of the new House. Such a deal illustrates the relative weakness of the presidency compared with Congress during the postwar era.

THE END OF RECONSTRUCTION In 1877 President Hayes withdrew federal troops from Louisiana and South Carolina, and the Republican governments there collapsed soon thereafter—along with much of Hayes’s claim to legitimacy. Hayes chose a Tennessean and former Confederate as postmaster general. But after southern Democrats failed to permit the choice of James Garfield as Speaker of the House, Hayes expressed doubt about any further subsidy for railroad building, and none was voted. Most of the other Wormley Conference promises were either renounced or forgotten.

As for southern promises regarding the civil rights of blacks, only a few Democratic leaders, such as the new governors of South Carolina and Louisiana, remembered them for long. Over the next three decades the protection of black civil rights crumbled under the pressure of restored white rule in the South and the force of Supreme Court decisions narrowing the application of the Reconstruction amendments. Radical Reconstruction never offered more than an uncertain commitment to black civil rights and social equality. Yet it left an enduring legacy, the Thirteenth, Fourteenth, and Fifteenth Amendments—not dead but dormant, waiting to be awakened. If Reconstruction did not provide social equality or substantial economic opportunities for African Americans, it did create the foundation for future advances. It was a revolution, sighed former governor of North Carolina Jonathan Worth, and “nobody can anticipate the action of revolutions.”

MAKING CONNECTIONS

- The political, economic, and racial policies of the conservatives who overthrew the Republican governments in the southern states are described in Chapter 19.
- Several of the political scandals mentioned in this chapter were related to the railroads, a topic discussed in greater detail in Chapter 20.
- This chapter ended with the election of Rutherford B. Hayes; for a discussion of Hayes's administration, see Chapter 22.

FURTHER READING

The most comprehensive treatment of Reconstruction is Eric Foner's *Reconstruction: America's Unfinished Revolution, 1863–1877* (1988). On Andrew Johnson, see Hans L. Trefousse's *Andrew Johnson: A Biography* (1989). An excellent brief biography of Grant is Josiah Bunting III's *Ulysses S. Grant* (2004).

Scholars have been fairly sympathetic to the aims and motives of the Radical Republicans. See, for instance, Herman Belz's *Reconstructing the Union: Theory and Policy during the Civil War* (1969) and Richard Nelson Current's *Those Terrible Carpetbaggers: A Reinterpretation* (1988). The ideology of the Radicals is explored in Michael Les Benedict's *A Compromise of Principle: Congressional Republicans and Reconstruction, 1863–1869* (1974).

The intransigence of southern white attitudes is examined in Michael Perman's *Reunion without Compromise* (1973) and Dan T. Carter's *When the War Was Over: The Failure of Self-Reconstruction in the South, 1865–1867* (1985). Allen W. Trelease's *White Terror: The Ku Klux Klan and Southern Reconstruction* (1971) covers the various organizations that practiced vigilante tactics. The difficulties former slaves had in adjusting to the new labor system are documented in James L. Roark's *Masters without Slaves: Southern Planters in the Civil War and Reconstruction* (1977). Books on southern politics during Reconstruction include Michael Perman's *The Road to Redemption: Southern Politics, 1869–1879* (1984), Terry L. Seip's *The South Returns to Congress: Men, Economic Measures, and Intersectional Relationships, 1868–1879* (1983), and Mark W. Summer's *Railroads, Reconstruction, and the Gospel of Prosperity: Aid under the Radical Republicans, 1865–1877* (1984).

Numerous works study the freed blacks' experience in the South. Start with Leon F. Litwack's *Been in the Storm So Long: The Aftermath of Slavery* (1979). Joel Williamson's *After Slavery: The Negro in South Carolina during Reconstruction, 1861–1877* (1965) argues that South Carolina blacks took an active role in pursuing their political and economic rights. The Freedmen's Bureau is explored in William S. McFeely's *Yankee Stepfather: General O. O. Howard and the Freedmen* (1968). The situation of freed slave women is discussed in Jacqueline Jones's *Labor of Love, Labor of Sorrow: Black Women, Work, and the Family, from Slavery to the Present* (1985).

The politics of corruption outside the South is depicted in William S. McFeely's *Grant: A Biography* (1981). The political maneuvers of the election of 1876 and the resultant crisis and compromise are explained in C. Vann Woodward's *Reunion and Reaction: The Compromise of 1877 and the End of Reconstruction* (1951) and William Gillette's *Retreat from Reconstruction, 1869–1879* (1979).

GLOSSARY

Agricultural Adjustment Act (1933) New Deal legislation that established the Agricultural Adjustment Administration (AAA) to improve agricultural prices by limiting market supplies; declared unconstitutional in *United States v. Butler* (1936).

Alamo, Battle of the Siege in the Texas War for Independence, 1836, in which the San Antonio mission fell to the Mexicans, and Davy Crockett and Jim Bowie died.

***Alexander v. Holmes County Board of Education* (1969)** Case fifteen years after the *Brown* decision in which the U.S. Supreme Court ordered an immediate end to segregation in public schools.

Alien and Sedition Acts (1798) Four measures passed during the undeclared war with France that limited the freedoms of speech and press and restricted the liberty of noncitizens.

America First Committee Largely midwestern isolationist organization supported by many prominent citizens, 1940–41.

American Anti-Slavery Society National abolitionist organization founded in 1833 by New York philanthropists Arthur and Lewis Tappan, propagandist Theodore Dwight Weld, and others.

American Colonization Society Organized in 1816 to encourage colonization of free blacks to Africa; West African nation of Liberia founded in 1822 to serve as a homeland for them.

American Federation of Labor Founded in 1881 as a federation of trade unions, the AFL under president Samuel Gompers successfully pushed for the eight-hour workday.

American Protective Association Nativist, anti-Catholic secret society founded in Iowa in 1887 and active until the end of the century.

American System Program of internal improvements and protective tariffs promoted by Speaker of the House Henry Clay in his presidential campaign of 1824; his proposals formed the core of Whig ideology in the 1830s and 1840s.

Antietam, Battle of (Battle of Sharpsburg) One of the bloodiest battles of the Civil War, fought to a standoff on September 17, 1862, in western Maryland.

Anti-Federalists Forerunners of Thomas Jefferson's Democratic-Republican party; opposed the Constitution as a limitation on individual and states' rights, which led to the addition of a Bill of Rights to the document.

Appomattox Court House, Virginia Site of the surrender of Confederate general Robert E. Lee to Union general Ulysses S. Grant on April 9, 1865, marking the end of the Civil War.

Army-McCarthy hearings Televised U.S. Senate hearings in 1954 on Senator Joseph McCarthy's charges of disloyalty in the Army; his tactics contributed to his censure by the Senate.

Atlanta Compromise Speech to the Cotton States and International Exposition in 1895 by educator Booker T. Washington, the leading black spokesman of the day; black scholar W. E. B. Du Bois gave the speech its derisive name and criticized Washington for encouraging blacks to accommodate segregation and disenfranchisement.

Atlantic Charter Issued August 12, 1941, following meetings in Newfoundland between President Franklin D. Roosevelt and British prime minister Winston Churchill, the charter signaled the allies' cooperation and stated their war aims.

Atomic Energy Commission Created in 1946 to supervise peacetime uses of atomic energy.

Axis powers In World War II, the nations of Germany, Italy, and Japan.

Aztec Mesoamerican people who were conquered by the Spanish under Hernando Cortés, 1519–28.

baby boom Markedly higher birth rate in the years following World War II; led to the biggest demographic "bubble" in American history.

Bacon's Rebellion Unsuccessful 1676 revolt led by planter Nathaniel Bacon against Virginia governor William Berkeley's administration because it had failed to protect settlers from Indian raids.

Bakke v. Board of Regents of California (1978) Case in which the U.S. Supreme Court ruled against the California university system's use of racial quotas in admissions.

balance of trade Ratio of imports to exports.

Bank of the United States Proposed by the first secretary of the treasury, Alexander Hamilton, the bank opened in 1791 and operated until 1811 to issue a uniform currency, make business loans, and collect tax monies. The Second Bank of the United States was chartered in 1816 but was not renewed by President Andrew Jackson twenty years later.

barbary pirates Plundering pirates off the Mediterranean coast of Africa; President Thomas Jefferson's refusal to pay them tribute to protect American ships sparked an undeclared naval war with North African nations, 1801–1805.

barbed wire First practical fencing material for the Great Plains was invented in 1873 and rapidly spelled the end of the open range.

Battle of the Currents Conflict in the late 1880s between inventors Thomas Edison and George Westinghouse over direct versus alternating electric current; Westinghouse's alternating current (AC), the winner, allowed electricity to travel over long distances.

Bay of Pigs Invasion Hoping to inspire a revolt against Fidel Castro, the CIA sent 1,500 Cuban exiles to invade their homeland on April 17, 1961, but the mission was a spectacular failure.

Bill of Rights First ten amendments to the U.S. Constitution, adopted in 1791 to guarantee individual rights and to help secure ratification of the Constitution by the states.

Black Codes (1865–66) Laws passed in southern states to restrict the rights of former slaves; to combat the codes, Congress passed the Civil Rights Act of 1866 and the Fourteenth Amendment and set up military governments in southern states that refused to ratify the amendment.

Black Power Post-1966 rallying cry of a more militant civil rights movement.

Bland-Allison Act (1878) Passed over President Rutherford B. Hayes's veto, the inflationary measure authorized the purchase each month of 2 to 4 million dollars' worth of silver for coinage.

"Bleeding" Kansas Violence between pro- and antislavery settlers in the Kansas Territory, 1856.

Bloody Shirt, Waving the Republican references to Reconstruction-era violence in the South, used effectively in northern political campaigns against Democrats.

Bonus Expeditionary Force Thousands of World War I veterans, who insisted on immediate payment of their bonus certificates, marched on Washington in 1932; violence ensued when President Herbert Hoover ordered their tent villages cleared.

Boston Massacre Clash between British soldiers and a Boston mob, March 5, 1770, in which five colonists were killed.

Boston Tea Party On December 16, 1773, the Sons of Liberty, dressed as Indians, dumped hundreds of chests of tea into Boston harbor to protest the Tea Act of 1773, under which the British exported to the colonies millions of pounds of cheap—but still taxed—tea, thereby undercutting the price of smuggled tea and forcing payment of the tea duty.

Boxer Rebellion Chinese nationalist protest against Western commercial domination and cultural influence, 1900; a coalition of American, European, and Japanese forces put down the rebellion and reclaimed captured embassies in Peking (Beijing) within the year.

brain trust Group of advisers—many of them academics—that Franklin D. Roosevelt assembled to recommend New Deal policies during the early months of his presidency.

Branch Davidians Religious cult that lived communally near Waco, Texas, and was involved in a fiery 1993 confrontation with federal authorities in which dozens of cult members died.

Brook Farm Transcendentalist commune in West Roxbury, Massachusetts, populated from 1841 to 1847 principally by writers (Nathaniel Hawthorne, for one) and other intellectuals.

Brown v. Board of Education of Topeka (1954) U.S. Supreme Court decision that struck down racial segregation in public education and declared "separate but equal" unconstitutional.

Budget and Accounting Act of 1921 Created the Bureau of the Budget and the General Accounting Office.

Bull Run, Battles of (First and Second Manassas) First land engagement of the Civil War took place on July 21, 1861, at Manassas Junction, Virginia, at which surprised Union troops quickly retreated; one year later, on August 29–30, Confederates captured the federal supply depot and forced Union troops back to Washington.

Bunker Hill, Battle of First major battle of the Revolutionary War; it actually took place at nearby Breed's Hill, Massachusetts, on June 17, 1775.

“Burned-Over District” Area of western New York strongly influenced by the revivalist fervor of the Second Great Awakening; Disciples of Christ and Mormons are among the many sects that trace their roots to the phenomenon.

Burr conspiracy Scheme by Vice-President Aaron Burr to lead the secession of the Louisiana Territory from the United States; captured in 1807 and charged with treason, Burr was acquitted by the U.S. Supreme Court.

***Bush v. Gore* (2000)** U.S. Supreme Court case that determined the winner of the disputed 2000 presidential election.

Calhoun Resolutions In making the proslavery response to the Wilmot Proviso, Senator John C. Calhoun argued that barring slavery in Mexican acquisitions would violate the Fifth Amendment to the Constitution by depriving slaveholding settlers of their property.

Calvinism Doctrine of predestination expounded by Swiss theologian John Calvin in 1536; influenced the Puritan, Presbyterian, German and Dutch Reformed, and Huguenot churches in the colonies.

Camp David Accords Peace agreement between Israeli prime minister Menachem Begin and Egyptian president Anwar Sadat, brokered by President Jimmy Carter in 1978.

carpetbaggers Northern emigrants who participated in the Republican governments of the Reconstruction South.

Chancellorsville, Battle of Confederate general Robert E. Lee won his last major victory and General “Stonewall” Jackson died in this Civil War battle in northern Virginia on May 1–4, 1863.

Chattanooga, Battle of Union victory in eastern Tennessee on November 23–25, 1863; gave the North control of important rail lines and cleared the way for General William T. Sherman's march into Georgia.

Chinese Exclusion Act (1882) Halted Chinese immigration to the United States.

Civil Rights Act of 1866 Along with the Fourteenth Amendment, guaranteed the rights of citizenship to freedmen.

Civil Rights Act of 1957 First federal civil rights law since Reconstruction; established the Civil Rights Commission and the Civil Rights Division of the Department of Justice.

Civil Rights Act of 1964 Outlawed discrimination in public accommodations and employment.

clipper ships Superior oceangoing sailing ships of the 1840s to 1860s that cut travel time in half; the clipper ship route around Cape Horn was the fastest way to travel between the coasts of the United States.

closed shop Hiring requirement that all workers in a business must be union members.

Coercive Acts/Intolerable Acts (1774) Four parliamentary measures in reaction to the Boston Tea Party that forced payment for the tea, disallowed colonial trials of British soldiers, forced their quartering in private homes, and set up a military government.

cold war Term for tensions, 1945–89, between the Soviet Union and the United States, the two major world powers after World War II.

***Commonwealth v. Hunt* (1842)** Landmark ruling of the Massachusetts supreme court establishing the legality of labor unions.

Compromise of 1850 Complex compromise mediated by Senator Henry Clay that headed off southern secession over California statehood; to appease the South it included a stronger fugitive slave law and delayed determination of the slave status of the New Mexico and Utah territories.

Compromise of 1877 Deal made by a special congressional commission on March 2, 1877, to resolve the disputed presidential election of 1876; Republican Rutherford B. Hayes, who had lost the popular vote, was declared the winner in exchange for the withdrawal of federal troops from the South, marking the end of Reconstruction.

Congress of Industrial Organizations (CIO) Umbrella organization of semi-skilled industrial unions, formed in 1935 as the Committee for Industrial Organization and renamed in 1938.

Congress of Racial Equality (CORE) Civil rights organization started in 1944 and best known for its “freedom rides,” bus journeys challenging racial segregation in the South in 1961.

conspicuous consumption Phrase referring to extravagant spending to raise social standing, coined by Thorstein Veblen in *The Theory of the Leisure Class* (1899).

Constitutional Convention Meeting in Philadelphia, May 25–September 17, 1787, of representatives from twelve colonies—excepting Rhode Island—to revise the existing Articles of Confederation; convention soon resolved to produce an entirely new constitution.

containment General U.S. strategy in the cold war that called for containing Soviet expansion; originally devised in 1947 by U.S. diplomat George F. Kennan.

Continental Army Army authorized by the Continental Congress, 1775–84, to fight the British; commanded by General George Washington.

Continental Congress Representatives of a loose confederation of colonies met first in Philadelphia in 1774 to formulate actions against British policies; the Second Continental Congress (1775–89) conducted the war and adopted the Declaration of Independence and the Articles of Confederation.

convict leasing System developed in the post–Civil War South that generated income for the states and satisfied planters’ need for cheap labor by renting prisoners out; the convicts, however, were often treated poorly.

Copperheads Northerners opposed to the Civil War.

Coral Sea, Battle of the Fought on May 7–8, 1942, near the eastern coast of Australia, it was the first U.S. naval victory over Japan in World War II.

cotton gin Invented by Eli Whitney in 1793, the machine separated cotton seed from cotton fiber, speeding cotton processing and making profitable the cultivation of the more hardy, but difficult to clean, short-staple cotton; led directly to the dramatic nineteenth-century expansion of slavery in the South.

counterculture “Hippie” youth culture of the 1960s, which rejected the values of the dominant culture in favor of illicit drugs, communes, free sex, and rock music.

court-packing plan President Franklin D. Roosevelt’s failed 1937 attempt to increase the number of U.S. Supreme Court justices from nine to fifteen in order to save his Second New Deal programs from constitutional challenges.

Credit Mobilier scandal Millions of dollars in overcharges for building the Union Pacific Railroad were exposed; high officials of the Ulysses S. Grant administration were implicated but never charged.

Cuban missile crisis Caused when the United States discovered Soviet offensive missile sites in Cuba in October 1962; the U.S.-Soviet confrontation was the cold war’s closest brush with nuclear war.

crop-lien system Merchants extended credit to tenants based on their future crops, but high interest rates and the uncertainties of farming often led to inescapable debts (debt peonage).

D-Day June 6, 1944, when an Allied amphibious assault landed on the Normandy coast and established a foothold in Europe from which Hitler’s defenses could not recover.

***Dartmouth College v. Woodward* (1819)** U.S. Supreme Court upheld the original charter of the college against New Hampshire’s attempt to alter the board of trustees; set precedent of support of contracts against state interference.

Declaration of Independence Document adopted on July 4, 1776, that made the break with Britain official; drafted by a committee of the Second Continental Congress including principal writer Thomas Jefferson.

Deism Enlightenment thought applied to religion; emphasized reason, morality, and natural law.

Department of Homeland Security Created to coordinate federal antiterrorist activity following the 2001 terrorist attacks on the World Trade Center and Pentagon.

Depression of 1893 Worst depression of the century, set off by a railroad failure, too much speculation on Wall Street, and low agricultural prices.

Dixiecrats Deep South delegates who walked out of the 1948 Democratic National Convention in protest of the party's support for civil rights legislation and later formed the States' Rights (Dixiecrat) party, which nominated Strom Thurmond of South Carolina for president.

Dominion of New England Consolidation into a single colony of the New England colonies—and later New York and New Jersey—by royal governor Edmund Andros in 1686; dominion reverted to individual colonial governments three years later.

Donner Party Forty-seven surviving members of a group of migrants to California were forced to resort to cannibalism to survive a brutal winter trapped in the Sierra Nevadas, 1846–47; highest death toll of any group traveling the Overland Trail.

***Dred Scott v. Sandford* (1857)** U.S. Supreme Court decision in which Chief Justice Roger B. Taney ruled that slaves could not sue for freedom and that Congress could not prohibit slavery in the territories, on the grounds that such a prohibition would violate the Fifth Amendment rights of slaveholders.

due-process clause Clause in the Fifth and the Fourteenth amendments to the U.S. Constitution guaranteeing that states could not “deprive any person of life, liberty, or property, without due process of law.”

Dust Bowl Great Plains counties where millions of tons of topsoil were blown away from parched farmland in the 1930s; massive migration of farm families followed.

Eighteenth Amendment (1919) Prohibition amendment that made illegal the manufacture, sale, or transportation of alcoholic beverages.

Ellis Island Reception center in New York Harbor through which most European immigrants to America were processed from 1892 to 1954.

Emancipation Proclamation (1863) President Abraham Lincoln issued a preliminary proclamation on September 22, 1862, freeing the slaves in the Confederate states as of January 1, 1863, the date of the final proclamation.

Embargo Act of 1807 Attempt to exert economic pressure instead of waging war in reaction to continued British impressment of American sailors; smugglers easily circumvented the embargo, and it was repealed two years later.

Emergency Banking Relief Act (1933) First New Deal measure that provided for reopening the banks under strict conditions and took the United States off the gold standard.

Emergency Immigration Act of 1921 Limited U.S. immigration to 3 percent of each foreign-born nationality in the 1910 census; three years later Congress restricted immigration even further.

encomienda System under which officers of the Spanish conquistadores gained ownership of Indian land.

ENIAC Electronic Numerical Integrator and Computer, built in 1944, the early, cumbersome ancestor of the modern computer.

Enlightenment Revolution in thought begun in the seventeenth century that emphasized reason and science over the authority of traditional religion.

Enola Gay American B-29 bomber that dropped the atomic bomb on Hiroshima, Japan, on August 6, 1945.

Environmental Protection Agency (EPA) Created in 1970 during the first administration of President Richard M. Nixon to oversee federal pollution control efforts.

Equal Rights Amendment Amendment to guarantee equal rights for women, introduced in 1923 but not passed by Congress until 1972; it failed to be ratified by the states.

Era of Good Feelings Contemporary characterization of the administration of popular Democratic-Republican president James Monroe, 1817–25.

Erie Canal Most important and profitable of the barge canals of the 1820s and 1830s; stretched from Buffalo to Albany, New York, connecting the Great Lakes to the East Coast and making New York City the nation's largest port.

Espionage and Sedition Acts (1917–18) Limited criticism of government leaders and policies by imposing fines and prison terms on those who acted out in opposition to in the First World War; the most repressive measures passed up to that time.

Fair Deal Domestic reform proposals of the second Truman administration (1949–53); included civil rights legislation and repeal of the Taft-Hartley Act, but only extensions of some New Deal programs were enacted.

Fair Employment Practices Commission Created in 1941 by executive order, the FEPC sought to eliminate racial discrimination in jobs; it possessed little power but represented a step toward civil rights for African Americans.

Family and Medical Leave Act (1993) Allowed certain workers to take twelve weeks of unpaid leave each year for family health problems, including birth or adoption of a child.

Farmers' Alliance Two separate organizations (Northwestern and Southern) of the 1880s and 1890s that took the place of the Grange, worked for similar causes, and attracted landless, as well as landed, farmers to their membership.

Federal Trade Commission Act (1914) Established the Federal Trade Commission to enforce existing antitrust laws that prohibited business combinations in restraint of trade.

The Federalist Collection of eighty-five essays that appeared in the New York press in 1787–88 in support of the Constitution; written by Alexander Hamilton, James Madison, and John Jay but published under the pseudonym “Publius.”

Federalist party One of the two first national political parties, it favored a strong central government.

Fence-Cutters' War Violent conflict in Texas, 1883–84, between large and small cattle ranchers over access to grazing land.

“Fifty-four forty or fight” Democratic campaign slogan in the presidential election of 1844, urging that the northern border of Oregon be fixed at 54°40′ north latitude.

Fletcher v. Peck (1810) U.S. Supreme Court decision in which Chief Justice John Marshall upheld the initial fraudulent sale contracts in the Yazoo Fraud cases; Congress paid \$4.2 million to the original speculators in 1814.

Fort Laramie Treaty (1851) Restricted the Plains Indians from using the Overland Trail and permitted the building of government forts.

Fort McHenry Fort in Baltimore Harbor unsuccessfully bombarded by the British in September 1814; Francis Scott Key, a witness to the battle, was moved to write the words to “The Star-Spangled Banner.”

Fort Sumter First battle of the Civil War, in which the federal fort in Charleston (South Carolina) Harbor was captured by the Confederates on April 14, 1861, after two days of shelling.

“forty-niners” Speculators who went to northern California following the discovery of gold in 1848; the first of several years of large-scale migration was 1849.

Fourteen Points President Woodrow Wilson’s 1918 plan for peace after World War I; at the Versailles peace conference, however, he failed to incorporate all of the points into the treaty.

Fourteenth Amendment (1868) Guaranteed rights of citizenship to former slaves, in words similar to those of the Civil Rights Act of 1866.

franchise The right to vote.

“free person of color” Negro or mulatto person not held in slavery; immediately before the Civil War, there were nearly a half million in the United States, split almost evenly between North and South.

Free Soil party Formed in 1848 to oppose slavery in the territory acquired in the Mexican War; nominated Martin Van Buren for president in 1848, but by 1854 most of the party’s members had joined the Republican party.

Free Speech Movement Founded in 1964 at the University of California at Berkeley by student radicals protesting restrictions on their right to demonstrate.

Freedmen’s Bureau Reconstruction agency established in 1865 to protect the legal rights of former slaves and to assist with their education, jobs, health care, and landowning.

French and Indian War Known in Europe as the Seven Years’ War, the last (1755–63) of four colonial wars fought between England and France for control of North America east of the Mississippi River.

Fugitive Slave Act of 1850 Gave federal government authority in cases involving runaway slaves; so much more punitive and prejudiced in favor of slaveholders than the 1793 Fugitive Slave Act had been that Harriet Beecher Stowe was inspired to write *Uncle Tom’s Cabin* in protest; the new law was part of the Compromise of 1850, included to appease the South over the admission of California as a free state.

Fundamentalism Anti-modernist Protestant movement started in the early twentieth century that proclaimed the literal truth of the Bible; the name came from *The Fundamentals*, published by conservative leaders.

Gadsden Purchase (1853) Thirty thousand square miles in present-day Arizona and New Mexico bought by Congress from Mexico primarily for the Southern Pacific Railroad's transcontinental route.

Gentlemen's Agreement (1907) United States would not exclude Japanese immigrants if Japan would voluntarily limit the number of immigrants coming to the United States.

Gettysburg, Battle of Fought in southern Pennsylvania, July 1–3, 1863; the Confederate defeat and the simultaneous loss at Vicksburg spelled the end of the South's chances in the Civil War.

Gibbons v. Ogden (1824) U.S. Supreme Court decision reinforcing the "commerce clause" (the federal government's right to regulate interstate commerce) of the Constitution; Chief Justice John Marshall ruled against the State of New York's granting of steamboat monopolies.

Gideon v. Wainwright (1963) U.S. Supreme Court decision guaranteeing legal counsel for indigent felony defendants.

The Gilded Age Mark Twain and Charles Dudley Warner's 1873 novel, the title of which became the popular name for the period from the end of the Civil War to the turn of the century.

Glass-Owen Federal Reserve Act (1913) Created a Federal Reserve System of regional banks and a Federal Reserve Board to stabilize the economy by regulating the supply of currency and controlling credit.

Glass-Steagall Act (Banking Act of 1933) Established the Federal Deposit Insurance Corporation and included banking reforms, some designed to control speculation. A banking act of the Hoover administration, passed in 1932 and also known as the Glass-Steagall Act, was designed to expand credit.

Good Neighbor Policy Proclaimed by President Franklin D. Roosevelt in his first inaugural address in 1933, it sought improved diplomatic relations between the United States and its Latin American neighbors.

grandfather clause Loophole created by southern disfranchising legislatures of the 1890s for illiterate white males whose grandfathers had been eligible to vote in 1867.

Granger movement Political movement that grew out of the Patrons of Husbandry, an educational and social organization for farmers founded in 1867; the Grange had its greatest success in the Midwest of the 1870s, lobbying for government control of railroad and grain elevator rates and establishing farmers' cooperatives.

Great Awakening Fervent religious revival movement in the 1720s through the 1740s that was spread throughout the colonies by ministers like New England Congregationalist Jonathan Edwards and English revivalist George Whitefield.

Great Compromise (Connecticut Compromise) Mediated the differences between the New Jersey and Virginia delegations to the Constitutional Convention by providing for a bicameral legislature, the upper house of which would have equal representation and the lower house of which would be apportioned by population.

Great Depression Worst economic depression in American history; it was spurred by the stock market crash of 1929 and lasted until World War II.

Great Migration Large-scale migration of southern blacks during and after World War I to the North, where jobs had become available during the labor shortage of the war years.

Great Society Term coined by President Lyndon B. Johnson in his 1965 State of the Union address, in which he proposed legislation to address problems of voting rights, poverty, diseases, education, immigration, and the environment.

Greenback party Formed in 1876 in reaction to economic depression, the party favored issuance of unsecured paper money to help farmers repay debts; the movement for free coinage of silver took the place of the greenback movement by the 1880s.

habeas corpus, writ of An essential component of English common law and of the U.S. Constitution that guarantees that citizens may not be imprisoned without due process of law; literally means, "you must have the body."

Half-Breeds During the presidency of Rutherford B. Hayes, 1877–81, a moderate Republican party faction led by Senator James G. Blaine that favored some reforms of the civil service system and a restrained policy toward the defeated South.

Harlem Renaissance African-American literary and artistic movement of the 1920s and 1930s centered in New York City's Harlem district; writers Langston Hughes, Jean Toomer, Zora Neale Hurston, and Countee Cullen were among those active in the movement.

Harpers Ferry, Virginia Site of abolitionist John Brown's failed raid on the federal arsenal, October 16–17, 1859; he intended to arm the slaves, but ten of his compatriots were killed, and Brown became a martyr to his cause after his capture and execution.

Hartford Convention Meeting of New England Federalists on December 15, 1814, to protest the War of 1812; proposed seven constitutional amendments (limiting embargoes and changing requirements for officeholding, declaration of war, and admission of new states), but the war ended before Congress could respond.

Hawley-Smoot Tariff Act (1930) Raised tariffs to an unprecedented level and worsened the depression by raising prices and discouraging foreign trade.

Haymarket Affair Riot during an anarchist protest at Haymarket Square in Chicago on May 4, 1886, over violence during the McCormick Harvesting Company strike; the deaths of eleven, including seven policemen, helped hasten the demise of the Knights of Labor, even though they were not responsible for the riot.

Hessians German soldiers, most from Hesse-Cassel principality (hence the name), paid to fight for the British in the Revolutionary War.

holding company Investment company that holds controlling interest in the securities of other companies.

Homestead Act (1862) Authorized Congress to grant 160 acres of public land to a western settler, who had only to live on the land for five years to establish title.

Homestead Strike Violent strike at the Carnegie Steel Company near Pittsburgh in 1892 that culminated in the disintegration of the Amalgamated Association of Iron and Steel Workers, the first steelworkers' union.

House Un-American Activities Committee (HUAC) Formed in 1938 to investigate subversives in the government; best-known investigations were of Hollywood no tables and of former State Department official Alger Hiss, who was accused in 1948 of espionage and Communist party membership.

Hundred Days Extraordinarily productive first three months of President Franklin D. Roosevelt's administration in which a special session of Congress enacted fifteen of his New Deal proposals.

impeachment Bringing charges against a public official; for example, the House of Representatives can impeach a president for "treason, bribery, or other high crimes and misdemeanors" by majority vote, and after the trial the Senate can remove the president by a vote of two-thirds.

implied powers Federal powers beyond those specifically enumerated in the U.S. Constitution; the Federalists argued that the "elastic clause" of Article I, Section 8, of the Constitution implicitly gave the federal government broad powers, while the Antifederalists held that the federal government's powers were explicitly limited by the Constitution.

"In God We Trust" Phrase placed on all new U.S. currency as of 1954.

indentured servant Settler who signed on for a temporary period of servitude to a master in exchange for passage to the New World; Virginia and Pennsylvania were largely peopled in the seventeenth and eighteenth centuries by English indentured servants.

Independent Treasury Act (1840) Promoted by President Martin Van Buren, the measure sought to stabilize the economy by preventing state banks from printing unsecured paper currency and establishing an independent treasury based on specie.

Indian Peace Commission Established in 1867 to end the Indian wars in the West, the commission's solution was to contain the Indians in a system of reservations.

Indian Removal Act (1830) Signed by President Andrew Jackson, the law permitted the negotiation of treaties to obtain the Indians' lands in exchange for their relocation to what would become Oklahoma.

Industrial Workers of the World Radical union organized in Chicago in 1905 and nicknamed the Wobblies; its opposition to World War I led

to its destruction by the federal government under the Espionage Act.

internal improvements In the early national period the phrase referred to road building and the development of water transportation.

Interstate Commerce Commission Reacting to the U.S. Supreme Court's ruling in *Wabash Railroad v. Illinois* (1886), Congress established the ICC to curb abuses in the railroad industry by regulating rates.

Iran-Contra affair Scandal of the second Reagan administration involving sale of arms to Iran in partial exchange for release of hostages in Lebanon and use of the arms money to aid the Contras in Nicaragua, which had been expressly forbidden by Congress.

Iron Curtain Term coined by Winston Churchill to describe the cold war divide between western Europe and the Soviet Union's eastern European satellites.

Irreconcilables Group of isolationist U.S. senators who fought ratification of the Treaty of Versailles, 1919–20, because of their opposition to American membership in the League of Nations.

Jamestown, Virginia Site in 1607 of the first permanent English settlement in the New World.

Jay's Treaty Treaty with Britain negotiated in 1794 by Chief Justice John Jay; Britain agreed to vacate forts in the Northwest Territories, and festering disagreements (border with Canada, prewar debts, shipping claims) would be settled by commission.

Jim Crow Minstrel show character whose name became synonymous with post-Reconstruction laws revoking civil rights for freedmen and with racial segregation generally.

Judiciary Act of 1801 Enacted by the lame duck Congress to allow the Federalists, the losing party in the presidential election, to reorganize the judiciary and fill the open judgeships with Federalists.

Kansas-Nebraska Act (1854) Law sponsored by Illinois senator Stephen A. Douglas to allow settlers in newly organized territories north of the Missouri border to decide the slavery issue for themselves; fury over

the resulting nullification of the Missouri Compromise of 1820 led to violence in Kansas and to the formation of the Republican party.

Kellogg-Briand Pact Representatives of sixty-two nations in 1928 signed the pact (also called the Pact of Paris) to outlaw war.

Kentucky and Virginia Resolutions (1798–99) Passed in response to the Alien and Sedition Acts, the resolutions advanced the state-compact theory that held states could nullify an act of Congress if they deemed it unconstitutional.

King William's War (War of the League of Augsburg) First (1689–97) of four colonial wars between England and France.

King's Mountain, Battle of Upcountry South Carolina irregulars defeated British troops under Patrick Ferguson on October 7, 1780, in what proved to be the turning point of the Revolutionary War in the South.

Knights of Labor Founded in 1869, the first national union picked up many members after the disastrous 1877 railroad strike but lasted, under the leadership of Terence V. Powderly, only into the 1890s; supplanted by the American Federation of Labor.

Know-Nothing (American) party Nativist, anti-Catholic third party organized in 1854 in reaction to large-scale German and Irish immigration; the party's only presidential candidate was Millard Fillmore in 1856.

Korean War Conflict touched off in 1950 when Communist North Korea invaded South Korea, which had been under U.S. control since the end of World War II; fighting largely by U.S. forces continued until 1953.

Ku Klux Klan Organized in Pulaski, Tennessee, in 1866 to terrorize former slaves who voted and held political offices during Reconstruction; a revived organization in the 1910s and 1920s stressed white, Anglo-Saxon, fundamentalist Protestant supremacy; the Klan revived a third time to fight the civil rights movement of the 1950s and 1960s in the South.

Land Ordinance of 1785 Directed surveying of the Northwest Territory into townships of thirty-six sections (square miles) each, the sale of the sixteenth section of which was to be used to finance public education.

League of Nations Organization of nations to mediate disputes and avoid war established after World War I as part of the Treaty of Versailles; President Woodrow Wilson's "Fourteen Points" speech to Congress in 1918 proposed the formation of the league.

Lecompton Constitution Controversial constitution drawn up in 1857 by proslavery Kansas delegates seeking statehood; rejected in 1858 by an overwhelmingly antislavery electorate.

Legal Tender Act (1862) Helped the U.S. government pay for the Civil War by authorizing the printing of paper currency.

Lend-Lease Act (1941) Permitted the United States to lend or lease arms and other supplies to the Allies, signifying increasing likelihood of American involvement in World War II.

Levittown Low-cost, mass-produced development of suburban tract housing built by William Levitt on Long Island in 1947.

Lexington and Concord, Battle of The first shots fired in the Revolutionary War, on April 19, 1775, near Boston; approximately 100 minutemen and 250 British soldiers were killed.

Leyte Gulf, Battle of Largest sea battle in history, fought on October 25, 1944, and won by the United States off the Philippine island of Leyte; Japanese losses were so great that they could not rebound.

Liberty party Abolitionist political party that nominated James G. Birney for president in 1840 and 1844; merged with the Free Soil party in 1848.

Lincoln-Douglas debates Series of senatorial campaign debates in 1858 focusing on the issue of slavery in the territories; held in Illinois between Republican Abraham Lincoln, who made a national reputation for himself, and incumbent Democratic senator Stephen A. Douglas, who managed to hold onto his seat.

Little Bighorn, Battle of Most famous battle of the Great Sioux War took place in 1876 in the Montana Territory; combined Sioux and Cheyenne warriors massacred a vastly outnumbered U.S. Cavalry commanded by Lieutenant Colonel George Armstrong Custer.

Lost Colony English expedition of 117 settlers, including Virginia Dare, the first English child born in the New World; colony disappeared from Roanoke Island in the Outer Banks sometime between 1587 and 1590.

Louisiana Purchase President Thomas Jefferson's 1803 purchase from France of the important port of New Orleans and 828,000 square miles west of the Mississippi River to the Rocky Mountains; it more than doubled the territory of the United States at a cost of only \$15 million.

Lusitania British passenger liner sunk by a German U-boat, May 7, 1915, creating a diplomatic crisis and public outrage at the loss of 128 Americans (roughly 10 percent of the total aboard); Germany agreed to pay reparations, and the United States waited two more years to enter World War I.

Lyceum movement Founded in 1826, the movement promoted adult public education through lectures and performances.

maize Indian corn, native to the New World.

Manhattan Project Secret American plan during World War II to develop an atomic bomb; J. Robert Oppenheimer led the team of physicists at Los Alamos, New Mexico.

Manifest Destiny Imperialist phrase first used in 1845 to urge annexation of Texas; used thereafter to encourage American settlement of European colonial and Indian lands in the Great Plains and Far West.

***Marbury v. Madison* (1803)** First U.S. Supreme Court decision to declare a federal law—the Judiciary Act of 1801—unconstitutional; President John Adams's "midnight appointment" of Federalist judges prompted the suit.

March on Washington Civil rights demonstration on August 28, 1963, where the Reverend Martin Luther King, Jr., gave his "I Have a Dream" speech on the steps of the Lincoln Memorial.

Marshall Plan U.S. program for the reconstruction of post–World War II Europe through massive aid to former enemy nations as well as allies; proposed by General George C. Marshall in 1947.

massive resistance In reaction to the *Brown* decision of 1954, U.S. senator Harry Byrd encouraged southern states to defy federally mandated school integration.

Maya Pre-Columbian society in Mesoamerica before about A.D. 900.

Mayflower Compact Signed in 1620 aboard the *Mayflower* before the Pilgrims landed at Plymouth, the document committed the group to majority-rule government; remained in effect until 1691.

Maysville Road Bill Federal funding for a Kentucky road, vetoed by President Andrew Jackson in 1830.

McCarran Internal Security Act (1950) Passed over President Harry S. Truman's veto, the law required registration of American Communist party members, denied them passports, and allowed them to be detained as suspected subversives.

McCulloch v. Maryland (1819) U.S. Supreme Court decision in which Chief Justice John Marshall, holding that Maryland could not tax the Second Bank of the United States, supported the authority of the federal government versus the states.

McNary-Haugen Bill Vetoed by President Calvin Coolidge in 1927 and 1928, the bill to aid farmers would have artificially raised agricultural prices by selling surpluses overseas for low prices and selling the reduced supply in the United States for higher prices.

Meat Inspection Act (1906) Passed largely in reaction to Upton Sinclair's *The Jungle*, the law set strict standards of cleanliness in the meat-packing industry.

mercantilism Limitation and exploitation of colonial trade by an imperial power.

Mestizo Person of mixed Native American and European ancestry.

Mexican War Controversial war with Mexico for control of California and New Mexico, 1846–48; the Treaty of Guadalupe Hidalgo fixed the border at the Rio Grande and extended the United States to the Pacific coast, annexing more than a half-million square miles of potential slave territory.

Midway, Battle of Decisive American victory near Midway Island in the South Pacific on June 4, 1942; the Japanese navy never recovered its superiority over the U.S. navy.

Military Reconstruction Act (1867) Established military governments in ten Confederate states—excepting Tennessee—and required that the states ratify the Fourteenth Amendment and permit freedmen to vote.

minstrel show Blackface vaudeville entertainment popular in the decades surrounding the Civil War.

***Miranda v. Arizona* (1966)** U.S. Supreme Court decision required police to advise persons in custody of their rights to legal counsel and against self-incrimination.

Missouri Compromise Deal proposed by Kentucky senator Henry Clay to resolve the slave/free imbalance in Congress that would result from Missouri's admission as a slave state; in the compromise of March 20, 1820, Maine's admission as a free state offset Missouri, and slavery was prohibited in the remainder of the Louisiana Territory north of the southern border of Missouri.

Molly Maguires Secret organization of Irish coal miners that used violence to intimidate mine officials in the 1870s.

Monitor and Merrimack, Battle of the First engagement between ironclad ships; fought at Hampton Roads, Virginia, on March 9, 1862.

Monroe Doctrine President James Monroe's declaration to Congress on December 2, 1823, that the American continents would be thenceforth closed to colonization but that the United States would honor existing colonies of European nations.

Moral Majority Televangelist Jerry Falwell's political lobbying organization, the name of which became synonymous with the religious right—conservative evangelical Protestants who helped ensure President Ronald Reagan's 1980 victory.

Mormons Founded in 1830 by Joseph Smith, the sect (officially, the Church of Jesus Christ of Latter-Day Saints) was a product of the intense revivalism of the "Burned-Over District" of New York; Smith's successor Brigham Young led 15,000 followers to Utah in 1847 to escape persecution.

Montgomery bus boycott Sparked by Rosa Parks's arrest on December 1, 1955, a successful year-long boycott protesting segregation on city buses; led by the Reverend Martin Luther King.

Muckrakers Writers who exposed corruption and abuses in politics, business, meat-packing, child labor, and more, primarily in the first decade of the twentieth century; their popular books and magazine articles spurred public interest in progressive reform.

Mugwumps Reform wing of the Republican party which supported Democrat Grover Cleveland for president in 1884 over Republican James G. Blaine, whose influence peddling had been revealed in the Mulligan letters of 1876.

***Munn v. Illinois* (1877)** U.S. Supreme Court ruling that upheld a Granger law allowing the state to regulate grain elevators.

NAFTA Approved in 1993, the North American Free Trade Agreement with Canada and Mexico allowed goods to travel across their borders free of tariffs; critics argued that American workers would lose their jobs to cheaper Mexican labor.

National Aeronautics and Space Administration (NASA) In response to the Soviet Union's launching of *Sputnik*, Congress created this federal agency in 1957 to coordinate research and administer the space program.

National Association for the Advancement of Colored People (NAACP) Founded in 1910, this civil rights organization brought lawsuits against discriminatory practices and published *The Crisis*, a journal edited by African-American scholar W. E. B. Du Bois.

National Defense Education Act (1958) Passed in reaction to America's perceived inferiority in the space race, the appropriation encouraged education in science and modern languages through student loans, university research grants, and aid to public schools.

National Industrial Recovery Act (1933) Passed on the last of the Hundred Days, it created public-works jobs through the Federal Emergency Relief Administration and established a system of self-regulation for industry through the National Recovery Administration, which was ruled unconstitutional in 1935.

National Organization for Women Founded in 1966 by writer Betty Friedan and other feminists, NOW pushed for abortion rights and nondiscrimination in the workplace, but within a decade it became radicalized and lost much of its constituency.

National Road First federal interstate road, built between 1811 and 1838 and stretching from Cumberland, Maryland, to Vandalia, Illinois.

National Security Act (1947) Authorized the reorganization of government to coordinate military branches and security agencies; created the

National Security Council, the Central Intelligence Agency, and the National Military Establishment (later renamed the Department of Defense).

National Youth Administration Created in 1935 as part of the Works Progress Administration, it employed millions of youths who had left school.

nativism Anti-immigrant and anti-Catholic feeling in the 1830s through the 1850s; the largest group was New York's Order of the Star-Spangled Banner, which expanded into the American, or Know-Nothing, party in 1854.

naval stores Tar, pitch, and turpentine made from pine resin and used in shipbuilding; an important industry in the southern colonies, especially North Carolina.

Navigation Acts Passed by the English Parliament to control colonial trade and bolster the mercantile system, 1650–1775; enforcement of the acts led to growing resentment by colonists.

Neutrality Acts Series of laws passed between 1935 and 1939 to keep the United States from becoming involved in war by prohibiting American trade and travel to warring nations.

New Deal Franklin D. Roosevelt's campaign promise, in his speech to the Democratic National Convention of 1932, to combat the Great Depression with a "new deal for the American people"; the phrase became a catchword for his ambitious plan of economic programs.

New England Anti-Slavery Society Abolitionist organization founded in 1832 by William Lloyd Garrison of Massachusetts, publisher of the *Liberator*.

New Freedom Democrat Woodrow Wilson's political slogan in the presidential campaign of 1912; Wilson wanted to improve the banking system, lower tariffs, and, by breaking up monopolies, give small businesses freedom to compete.

New Frontier John F. Kennedy's program, stymied by a Republican Congress and his abbreviated term; his successor Lyndon B. Johnson had greater success with many of the same concepts.

New Harmony Founded in Indiana by British industrialist Robert Owen in 1825, the short-lived New Harmony Community of Equality was one

of the few nineteenth-century communal experiments not based on religious ideology.

New Left Radical youth protest movement of the 1960s, named by leader Tom Hayden to distinguish it from the Old (Marxist-Leninist) Left of the 1930s.

New Nationalism Platform of the Progressive party and slogan of former president Theodore Roosevelt in the presidential campaign of 1912; stressed government activism, including regulation of trusts, conservation, and recall of state court decisions that had nullified progressive programs.

New Orleans, Battle of Last battle of the War of 1812, fought on January 8, 1815, weeks after the peace treaty was signed but prior to its ratification; General Andrew Jackson led the victorious American troops.

New South *Atlanta Constitution* editor Henry W. Grady's 1886 term for the prosperous post-Civil War South he envisioned: democratic, industrial, urban, and free of nostalgia for the defeated plantation South.

Nineteenth Amendment (1920) Granted women the right to vote.

Nisei Japanese Americans; literally, "second generation."

normalcy Word coined by future president Warren G. Harding as part of a 1920 campaign speech—"not nostrums, but normalcy"—signifying his awareness that the public was tired of progressivism, war, and sacrifice.

North Atlantic Treaty Organization (NATO) Defensive alliance founded in 1949 by ten western European nations, the United States, and Canada to deter Soviet expansion in Europe.

Northwest Ordinance of 1787 Created the Northwest Territory (area north of the Ohio River and west of Pennsylvania), established conditions for self-government and statehood, included a Bill of Rights, and permanently prohibited slavery.

nullification Concept of invalidation of a federal law within the borders of a state; first expounded in the Kentucky and Virginia Resolutions (1798), cited by South Carolina in its Ordinance of Nullification (1832) of the Tariff of Abominations, used by southern states to explain their secession from the Union (1861), and cited again by southern states to oppose the *Brown v. Board of Education* decision (1954).

Nullification Proclamation President Andrew Jackson's strong criticism of South Carolina's Ordinance of Nullification (1832) as disunionist and potentially treasonous.

Office of Price Administration Created in 1941 to control wartime inflation and price fixing resulting from shortages of many consumer goods, the OPA imposed wage and price freezes and administered a rationing system.

Okies Displaced farm families from the Oklahoma dust bowl who migrated to California during the 1930s in search of jobs.

Old Southwest In the antebellum period, the states of Alabama, Mississippi, Louisiana, Texas, Arkansas, and parts of Tennessee, Kentucky, and Florida.

Oneida Community Utopian community founded in 1848; the Perfectionist religious group practiced universal marriage until leader John Humphrey Noyes, fearing prosecution, escaped to Canada in 1879.

OPEC Organization of Petroleum Exporting Countries.

Open Door Policy In hopes of protecting the Chinese market for U.S. exports, Secretary of State John Hay unilaterally announced in 1899 that Chinese trade would be open to all nations.

Operation Desert Storm Multinational allied force that defeated Iraq in the Gulf War of January 1991.

Operation Dixie CIO's largely ineffective post–World War II campaign to unionize southern workers.

Oregon fever Enthusiasm for emigration to the Oregon Country in the late 1830s and early 1840s.

Ostend Manifesto Memorandum written in 1854 from Ostend, Belgium, by the U.S. ministers to England, France, and Spain recommending purchase or seizure of Cuba in order to increase the United States' slaveholding territory.

Overland (Oregon) Trail Route of wagon trains bearing settlers from Independence, Missouri, to the Oregon Country in the 1840s through the 1860s.

overseer Manager of slave labor on a plantation.

Panic of 1819 Financial collapse brought on by sharply falling cotton prices, declining demand for American exports, and reckless western land speculation.

Panic of 1837 Major economic depression lasting about six years; touched off by a British financial crisis and made worse by falling cotton prices, credit and currency problems, and speculation in land, canals, and railroads.

Panic of 1857 Economic depression lasting about two years and brought on by falling grain prices and a weak financial system; the South was largely protected by international demand for its cotton.

Panic of 1873 Severe six-year depression marked by bank failures and railroad and insurance bankruptcies.

Peace of Paris Signed on September 3, 1783, the treaty ending the Revolutionary War and recognizing American independence from Britain also established the border between Canada and the United States, fixed the western border at the Mississippi River, and ceded Florida to Spain.

Pendleton Civil Service Act (1883) Established the Civil Service Commission and marked the end of the spoils system.

Pentagon Papers Informal name for the Defense Department's secret history of the Vietnam conflict; leaked to the press by former official Daniel Ellsberg and published in the *New York Times* in 1971.

Pequot War Massacre in 1637 and subsequent dissolution of the Pequot Nation by Puritan settlers, who seized the Indians' lands.

Personal Responsibility and Work Opportunity Act (1996) Welfare reform measure that mandated state administration of federal aid to the poor.

Philippine Sea, Battle of the Costly Japanese defeat of June 19–20, 1944; led to the resignation of Premier Tojo and his cabinet.

Pilgrims Puritan Separatists who broke completely with the Church of England and sailed to the New World aboard the *Mayflower*, founding Plymouth Colony on Cape Cod in 1620.

Pinckney's Treaty Treaty with Spain negotiated by Thomas Pinckney in 1795; established United States boundaries at the Mississippi River and the thirty-first parallel and allowed open transportation on the Mississippi.

planter In the antebellum South, the owner of a large farm worked by twenty or more slaves.

Platt Amendment (1901) Reserved the United States' right to intervene in Cuban affairs and forced newly independent Cuba to host American naval bases on the island.

***Plessy v. Ferguson* (1896)** U.S. Supreme Court decision supporting the legality of Jim Crow laws that permitted or required "separate but equal" facilities for blacks and whites.

poll tax Tax that must be paid in order to be eligible to vote; used as an effective means of disenfranchising black citizens after Reconstruction, since they often could not afford even a modest fee.

popular sovereignty Allowed settlers in a disputed territory to decide the slavery issue for themselves.

Populist party Political success of Farmers' Alliance candidates encouraged the formation in 1892 of the National People's party (later renamed the Populist party); active until 1912, it advocated a variety of reform issues, including free coinage of silver, income tax, postal savings, regulation of railroads, and direct election of U.S. senators.

Pottawatomie Massacre Murder of five proslavery settlers in eastern Kansas led by abolitionist John Brown on May 24–25, 1856.

Potsdam Conference Last meeting of the major Allied powers, the conference took place outside Berlin from July 17 to August 2, 1945; United States president Harry Truman, Soviet dictator Joseph Stalin, and British prime minister Clement Atlee finalized plans begun at Yalta.

Proclamation of Amnesty and Reconstruction President Lincoln's plan for reconstruction, issued in 1863, allowed southern states to rejoin the Union if 10 percent of the 1860 electorate signed loyalty pledges, accepted emancipation, and had received presidential pardons.

Proclamation of 1763 Royal directive issued after the French and Indian War prohibiting settlement, surveys, and land grants west of the Appalachian Mountains; although it was soon overridden by treaties, colonists continued to harbor resentment.

Progressive party Created when former president Theodore Roosevelt broke away from the Republican party to run for president again in

1912; the party supported progressive reforms similar to the Democrats but stopped short of seeking to eliminate trusts.

Progressivism Broad-based reform movement, 1900–17, that sought governmental help in solving problems in many areas of American life, including education, public health, the economy, the environment, labor, transportation, and politics.

Protestant Reformation Reform movement that resulted in the establishment of Protestant denominations; begun by German monk Martin Luther when he posted his “Ninety-five Theses” (complaints of abuses in the Catholic church) in 1517.

Pullman Strike Strike against the Pullman Palace Car Company in the company town of Pullman, Illinois, on May 11, 1894, by the American Railway Union under Eugene V. Debs; the strike was crushed by court injunctions and federal troops two months later.

Pure Food and Drug Act (1906) First law to regulate manufacturing of food and medicines; prohibited dangerous additives and inaccurate labeling.

Puritans English religious group that sought to purify the Church of England; founded the Massachusetts Bay Colony under John Winthrop in 1630.

Quartering Act (1765) Parliamentary act requiring colonies to house and provision British troops.

Radical Republicans Senators and congressmen who, strictly identifying the Civil War with the abolitionist cause, sought swift emancipation of the slaves, punishment of the rebels, and tight controls over the former Confederate states after the war.

Railroad Strike of 1877 Violent but ultimately unsuccessful interstate strike, which resulted in extensive property damage and many deaths.

Reaganomics Popular name for President Ronald Reagan’s philosophy of “supply side” economics, which combined tax cuts, less government spending, and a balanced budget with an unregulated marketplace.

Reconstruction Finance Corporation Federal program established in 1932 under President Herbert Hoover to loan money to banks and other institutions to help them avert bankruptcy.

Red Scare Fear among many Americans after World War I of Communists in particular and noncitizens in general, a reaction to the Russian Revolution, mail bombs, strikes, and riots.

Redcoats Nickname for British soldiers, after their red uniform jackets.

Redeemers/Bourbons Conservative white Democrats, many of whom had been planters or businessmen before the Civil War, who reclaimed control of the South following the end of Reconstruction.

Regulators Groups of backcountry Carolina settlers who protested colonial policies; North Carolina royal governor William Tryon retaliated at the Battle of Alamance on May 17, 1771.

Report on Manufactures First secretary of the treasury Alexander Hamilton's 1791 analysis that accurately foretold the future of American industry and proposed tariffs and subsidies to promote it.

Republican party Organized in 1854 by antislavery Whigs, Democrats, and Free Soilers in response to the passage of the Kansas-Nebraska Act; nominated John C. Frémont for president in 1856 and Abraham Lincoln in 1860.

Republicans Political faction that succeeded the Anti-Federalists after ratification of the Constitution; led by Thomas Jefferson and James Madison, it soon developed into the Democratic-Republican party.

Reservationists Group of U.S. senators led by Majority Leader Henry Cabot Lodge who would only agree to ratification of the Treaty of Versailles subject to certain reservations, most notably the removal of Article X of the League of Nations Covenant.

Revolution of 1800 First time that an American political party surrendered power to the opposition party; Jefferson, a Democratic-Republican, had defeated incumbent Adams, a Federalist, for president.

right-to-work State laws enacted to prevent imposition of the closed shop; any worker, whether or not a union member, could be hired.

Roe v. Wade (1973) U.S. Supreme Court decision requiring states to permit first-trimester abortions.

Roosevelt Corollary (1904) President Theodore Roosevelt announced in what was essentially a corollary to the Monroe Doctrine that the United States could intervene militarily to prevent interference from European powers in the Western Hemisphere.

Romanticism Philosophical, literary, and artistic movement of the nineteenth century that was largely a reaction to the rationalism of the previous century; romantics valued emotion, mysticism, and individualism.

Rough Riders The 1st U.S. Volunteer Cavalry, led in battle in the Spanish-American War by Theodore Roosevelt; they were victorious in their only battle near Santiago, Cuba, and Roosevelt used the notoriety to aid his political career.

Santa Fe Trail Beginning in the 1820s, a major trade route from St. Louis, Missouri, to Santa Fe, New Mexico Territory.

Saratoga, Battle of Major defeat of British general John Burgoyne and more than 5,000 British troops at Saratoga, New York, on October 17, 1777.

Scalawags Southern white Republicans—some former Unionists—who served in Reconstruction governments.

***Schenck v. U.S.* (1919)** U.S. Supreme Court decision upholding the wartime Espionage and Sedition Acts; in the opinion he wrote for the case, Justice Oliver Wendell Holmes set the now-familiar “clear and present danger” standard.

scientific management Analysis of worker efficiency using measurements like “time and motion” studies to achieve greater productivity; introduced by Frederick Winslow Taylor in 1911.

Scottsboro case (1931) In overturning verdicts against nine black youths accused of raping two white women, the U.S. Supreme Court established precedents in *Powell v. Alabama* (1932), that adequate counsel must be appointed in capital cases, and in *Norris v. Alabama* (1935), that African Americans cannot be excluded from juries.

Second Great Awakening Religious revival movement of the early decades of the nineteenth century, in reaction to the growth of secularism and rationalist religion; began the predominance of the Baptist and Methodist churches.

Second Red Scare Post–World War II Red Scare focused on the fear of Communists in U.S. government positions; peaked during the Korean War and declined soon thereafter, when the U.S. Senate censured Joseph McCarthy, who had been a major instigator of the hysteria.

Seneca Falls Convention First women’s rights meeting and the genesis of the women’s suffrage movement; held in July 1848 in a church in Seneca Falls, New York, by Elizabeth Cady Stanton and Lucretia Coffin Mott.

“separate but equal” Principle underlying legal racial segregation, which was upheld in *Plessy v. Ferguson* (1896) and struck down in *Brown v. Board of Education* (1954).

Servicemen’s Readjustment Act (1944) The “GI Bill of Rights” provided money for education and other benefits to military personnel returning from World War II.

settlement houses Product of the late nineteenth-century movement to offer a broad array of social services in urban immigrant neighborhoods; Chicago’s Hull House was one of hundreds of settlement houses that operated by the early twentieth century.

Seventeenth Amendment (1913) Progressive reform that required U.S. senators to be elected directly by voters; previously, senators were chosen by state legislatures.

Seward’s Folly Secretary of State William H. Seward’s negotiation of the purchase of Alaska from Russia in 1867.

Shakers Founded by Mother Ann Lee Stanley in England, the United Society of Believers in Christ’s Second Appearing settled in Watervliet, New York, in 1774 and subsequently established eighteen additional communes in the Northeast, Indiana, and Kentucky.

sharecropping Type of farm tenancy that developed after the Civil War in which landless workers—often former slaves—farmed land in exchange for farm supplies and a share of the crop; differed from tenancy in that the terms were generally less favorable.

Shays’s Rebellion Massachusetts farmer Daniel Shays and 1,200 compatriots, seeking debt relief through issuance of paper currency and lower taxes, stormed the federal arsenal at Springfield in the winter of 1787 but were quickly repulsed.

Sherman Anti-Trust Act (1890) First law to restrict monopolistic trusts and business combinations; extended by the Clayton Anti-Trust Act of 1914.

Sherman Silver Purchase Act (1890) In replacing and extending the provisions of the Bland-Allison Act of 1878, it increased the amount of silver periodically bought for coinage.

Shiloh, Battle of At the time it was fought (April 6–7, 1862), Shiloh, in western Tennessee, was the bloodiest battle in American history; afterward, General Ulysses S. Grant was temporarily removed from command.

single tax Concept of taxing only landowners as a remedy for poverty, promulgated by Henry George in *Progress and Poverty* (1879).

Sixteenth Amendment (1913) Legalized the federal income tax.

Smith-Connally War Labor Disputes Act (1943) Outlawed labor strikes in wartime and allowed the president to take over industries threatened by labor disputes.

***Smith v. Allwright* (1944)** U.S. Supreme Court decision that outlawed all-white Democratic party primaries in Texas.

Social Darwinism Application of Charles Darwin's theory of natural selection to society; used the concept of the "survival of the fittest" to justify class distinctions and to explain poverty.

social gospel Preached by liberal Protestant clergymen in the late nineteenth and early twentieth centuries; advocated the application of Christian principles to social problems generated by industrialization.

Social Security Act (1935) Created the Social Security system with provisions for a retirement pension, unemployment insurance, disability insurance, and public assistance (welfare).

Sons of Liberty Secret organizations formed by Samuel Adams, John Hancock, and other radicals in response to the Stamp Act; they impeded British officials and planned such harassments as the Boston Tea Party.

South Carolina Exposition and Protest Written in 1828 by Vice-President John C. Calhoun of South Carolina to protest the so-called Tariff of Abominations, which seemed to favor northern industry; introduced the concept of state interposition and became the basis for South Carolina's Nullification Doctrine of 1833.

Southeast Asia Treaty Organization (SEATO) Pact among mostly western nations signed in 1954; designed to deter Communist expansion and cited as a justification for U.S. involvement in Vietnam.

Southern Christian Leadership Conference (SCLC) Civil rights organization founded in 1957 by the Reverend Martin Luther King, Jr., and other civil rights leaders.

Southern renaissance Literary movement of the 1920s and 1930s that included such writers as William Faulkner, Thomas Wolfe, and Robert Penn Warren.

Spanish flu Unprecedentedly lethal influenza epidemic of 1918 that killed more than 22 million people worldwide.

spoils system The term—meaning the filling of federal government jobs with persons loyal to the party of the president—originated in Andrew Jackson's first term; the system was replaced in the Progressive Era by civil service.

Sputnik First artificial satellite to orbit the earth; launched October 4, 1957, by the Soviet Union.

Stalwarts Conservative Republican party faction during the presidency of Rutherford B. Hayes, 1877–81; led by Senator Roscoe B. Conkling of New York, Stalwarts opposed civil service reform and favored a third term for President Ulysses S. Grant.

Stamp Act (1765) Parliament required that revenue stamps be affixed to all colonial printed matter, documents, dice, and playing cards; the Stamp Act Congress met to formulate a response, and the act was repealed the following year.

Standard Oil Company Founded in 1870 by John D. Rockefeller in Cleveland, Ohio, it soon grew into the nation's first industry-dominating trust; the Sherman Anti-Trust Act (1890) was enacted in part to combat abuses by Standard Oil.

staple crop Important cash crop, for example, cotton or tobacco.

steamboats Paddlewheelers that could travel both up- and down-river in deep or shallow waters; they became commercially viable early in the nineteenth century and soon developed into America's first inland freight and passenger service network.

Stimson Doctrine In reaction to Japan's 1932 occupation of Manchuria, Secretary of State Henry Stimson declared that the United States would not recognize territories acquired by force.

Strategic Defense Initiative ("Star Wars") Defense Department's plan during the Reagan administration to build a system to destroy incoming missiles in space.

Student Non-violent Coordinating Committee Founded in 1960 to coordinate civil rights sit-ins and other forms of grassroots protest.

Students for a Democratic Society (SDS) Major organization of the New Left, founded at the University of Michigan in 1960 by Tom Hayden and Al Haber.

Sugar Act (Revenue Act of 1764) Parliament's tax on refined sugar and many other colonial products; the first tax designed solely to raise revenue for Britain.

Taft-Hartley Act (1947) Passed over President Harry Truman's veto, the law contained a number of provisions to control labor unions, including the banning of closed shops.

tariff Federal tax on imported goods.

Tariff of Abominations (Tariff of 1828) Taxed imported goods at a very high rate; the South hated the tariff because it feared it would provoke Britain to reject American cotton.

Tariff of 1816 First true protective tariff, intended strictly to protect American goods against foreign competition.

Tax Reform Act (1986) Lowered federal income tax rates to 1920s levels and eliminated many loopholes.

Teapot Dome Harding administration scandal in which Secretary of the Interior Albert B. Fall profited from secret leasing to private oil companies of government oil reserves at Teapot Dome, Wyoming, and Elk Hills, California.

tenancy Renting of farmland by workers who owned their own equipment; tenant farmers kept a larger percentage of the crop than did sharecroppers.

Tennessee Valley Authority Created in 1933 to control flooding in the Tennessee River Valley, provide work for the region's unemployed, and produce inexpensive electric power for the region.

Tenure of Office Act (1867) Required the president to obtain Senate approval to remove any official whose appointment had also required Senate approval; President Andrew Johnson's violation of the law by firing Secretary of War Edwin Stanton led to the Radical Republicans retaliating with Johnson's impeachment.

Tertium Quid Literally, the "third something": states' rights and strict constructionist Republicans under John Randolph who broke with President Thomas Jefferson but never managed to form a third political party.

Tet Offensive Surprise attack by the Viet Cong and North Vietnamese during the Vietnamese New Year of 1968; turned American public opinion strongly against the war in Vietnam.

Tippecanoe, Battle of On November 7, 1811, Indiana governor William Henry Harrison (later president) defeated the Shawnee Indians at the Tippecanoe River in northern Indiana; victory fomented war fever against the British, who were believed to be aiding the Indians.

Title IX Part of the Educational Amendments Act of 1972 that required colleges to engage in "affirmative action" for women.

Tonkin Gulf Resolution (1964) Passed by Congress in reaction to supposedly unprovoked attacks on American warships off the coast of North Vietnam; it gave the president unlimited authority to defend U.S. forces and members of SEATO.

Tories Term used by Patriots to refer to Loyalists, or colonists who supported the Crown after the Declaration of Independence.

Townshend Acts (1767) Parliamentary measures (named for the chancellor of the exchequer) that punished the New York Assembly for failing to house British soldiers, taxed tea and other commodities, and established a Board of Customs Commissioners and colonial vice-admiralty courts.

Trail of Tears Cherokees' own term for their forced march, 1838–39, from the southern Appalachians to Indian lands (later Oklahoma); of 15,000 forced to march, 4,000 died on the way.

Transcendentalism Philosophy of a small group of mid-nineteenth-century New England writers and thinkers, including Ralph Waldo Emerson, Henry David Thoreau, and Margaret Fuller; they stressed “plain living and high thinking.”

Transcontinental railroad First line across the continent from Omaha, Nebraska, to Sacramento, California, established in 1869 with the linkage of the Union Pacific and Central Pacific railroads at Promontory, Utah.

Truman Doctrine President Harry S. Truman’s program of post–World War II aid to European countries—particularly Greece and Turkey—in danger of being undermined by communism.

trust Companies combined to control competition.

Twenty-first Amendment (1933) Repealed prohibition on the manufacture, sale, and transportation of alcoholic beverages, effectively nullifying the Eighteenth Amendment.

Twenty-second Amendment (1951) Limited presidents to two full terms of office or two terms plus two years of an assumed term; passed in reaction to President Franklin D. Roosevelt’s unprecedented four elected terms.

Twenty-sixth Amendment (1971) Lowered the voting age from twenty-one to eighteen.

U.S.S. *Maine* Battleship that exploded in Havana Harbor on February 15, 1898, resulting in 266 deaths; the American public, assuming that the Spanish had mined the ship, clamored for war, and the Spanish-American War was declared two months later.

Uncle Tom’s Cabin Harriet Beecher Stowe’s 1852 antislavery novel popularized the abolitionist position.

Underground Railroad Operating in the decades before the Civil War, the “railroad” was a clandestine system of routes and safehouses through which slaves were led to freedom in the North.

Understanding clause Added to state constitutions in the late nineteenth century, it allowed illiterate whites to circumvent literacy tests for voting by demonstrating that they understood a passage in the Constitution; black citizens would be judged by white registrars to have failed.

Underwood-Simmons Tariff (1913) In addition to lowering and even eliminating some tariffs, it included provisions for the first federal income tax, made legal the same year by the ratification of the Sixteenth Amendment.

Unitarianism Late eighteenth-century liberal offshoot of the New England Congregationalist church; rejecting the Trinity, Unitarianism professed the oneness of God and the goodness of rational man.

United Farm Workers Union for the predominantly Mexican-American migrant laborers of the Southwest, organized by César Chavez in 1962.

United Nations Organization of nations to maintain world peace, established in 1945 and headquartered in New York.

Universal Negro Improvement Association Black nationalist movement active in the United States from 1916 to 1923, when its leader Marcus Garvey went to prison for mail fraud.

Universalism Similar to Unitarianism, but putting more stress on the importance of social action, Universalism also originated in Massachusetts in the late eighteenth century.

V-E Day May 8, 1945, the day World War II officially ended in Europe.

vertical integration Company's avoidance of middlemen by producing its own supplies and providing for distribution of its product.

veto President's constitutional power to reject legislation passed by Congress; a two-thirds vote in both houses of Congress can override a veto.

Vicksburg, Battle of The fall of Vicksburg, Mississippi, to General Ulysses S. Grant's army on July 4, 1863, after two months of siege was a turning point in the war because it gave the Union control of the Mississippi River.

Virginia and New Jersey Plans Differing opinions of delegations to the Constitutional Convention: New Jersey wanted one legislative body with equal representation for each state; Virginia's plan called for a strong central government and a two-house legislature apportioned by population.

Volstead Act (1919) Enforced the prohibition amendment, beginning January 1920.

Voting Rights Act of 1965 Passed in the wake of Martin Luther King's Selma to Montgomery March, it authorized federal protection of the

right to vote and permitted federal enforcement of minority voting rights in individual counties, mostly in the South.

Wabash Railroad v. Illinois (1886) Reversing the U.S. Supreme Court's ruling in *Munn v. Illinois*, the decision disallowed state regulation of interstate commerce.

Wade-Davis Bill (1864) Radical Republicans' plan for reconstruction that required loyalty oaths, abolition of slavery, repudiation of war debts, and denial of political rights to high-ranking Confederate officials; President Lincoln refused to sign the bill.

Wagner Act (National Labor Relations Act of 1935) Established the National Labor Relations Board and facilitated unionization by regulating employment and bargaining practices.

War Industries Board Run by financier Bernard Baruch, the board planned production and allocation of war materiel, supervised purchasing, and fixed prices, 1917–19.

War of 1812 Fought with Britain, 1812–14, over lingering conflicts that included impressment of American sailors, interference with shipping, and collusion with Northwest Territory Indians; settled by the Treaty of Ghent in 1814.

War on Poverty Announced by President Lyndon B. Johnson in his 1964 State of the Union address; under the Economic Opportunity Bill signed later that year, Head Start, VISTA, and the Jobs Corps were created, and grants and loans were extended to students, farmers, and businesses in efforts to eliminate poverty.

War Production Board Created in 1942 to coordinate industrial efforts in World War II; similar to the War Industries Board in World War I.

War Relocation Camps Internment camps where Japanese Americans were held against their will from 1942 to 1945.

Warren Court The U.S. Supreme Court under Chief Justice Earl Warren, 1953–69, decided such landmark cases as *Brown v. Board of Education* (school desegregation), *Baker v. Carr* (legislative redistricting), and *Gideon v. Wainwright* and *Miranda v. Arizona* (rights of criminal defendants).

Washington Armaments Conference Leaders of nine world powers met in 1921–22 to discuss the naval race; resulting treaties limited to a specific ratio the carrier and battleship tonnage of each nation (Five-Power Naval Treaty), formally ratified the Open Door to China (Nine-Power Treaty), and agreed to respect each other's Pacific territories (Four-Power Treaty).

Watergate Washington office and apartment complex that lent its name to the 1972–74 scandal of the Nixon administration; when his knowledge of the break-in at the Watergate and subsequent coverup was revealed, Nixon resigned the presidency under threat of impeachment.

Webster-Ashburton Treaty Settlement in 1842 of U.S.-Canadian border disputes in Maine, New York, Vermont, and in the Wisconsin Territory (now northern Minnesota).

Webster-Hayne debate U.S. Senate debate of January 1830 between Daniel Webster of Massachusetts and Robert Hayne of South Carolina over nullification and states' rights.

Whig Party Founded in 1834 to unite factions opposed to President Andrew Jackson, the party favored federal responsibility for internal improvements; the party ceased to exist by the late 1850s, when party members divided over the slavery issue.

Whigs Another name for revolutionary Patriots.

Whiskey Rebellion Violent protest by western Pennsylvania farmers against the federal excise tax on corn whiskey, 1794.

Whitewater Development Corporation Failed Arkansas real estate investment that kept President Bill Clinton and his wife Hillary under investigation by Independent Counsel Kenneth Starr throughout the Clinton presidency; no charges were ever brought against either of the Clintons.

Wilderness, Battle of the Second battle fought in the thickly wooded Wilderness area near Chancellorsville, Virginia; in the battle of May 5–6, 1864, no clear victor emerged, but the battle served to deplete the Army of Northern Virginia.

Wilderness Road Originally an Indian path through the Cumberland Gap, it was used by over 300,000 settlers who migrated westward to Kentucky in the last quarter of the eighteenth century.

Wilmot Proviso Proposal to prohibit slavery in any land acquired in the Mexican War, but southern senators, led by John C. Calhoun of South Carolina, defeated the measure in 1846 and 1847.

Works Progress Administration (WPA) Part of the Second New Deal, it provided jobs for millions of the unemployed on construction and arts projects.

Wounded Knee, Battle of Last incident of the Indians Wars took place in 1890 in the Dakota Territory, where the U.S. Cavalry killed over 200 Sioux men, women, and children who were in the process of surrender.

writs of assistance One of the colonies' main complaints against Britain, the writs allowed unlimited search warrants without cause to look for evidence of smuggling.

XYZ Affair French foreign minister Tallyrand's three anonymous agents demanded payments to stop French plundering of American ships in 1797; refusal to pay the bribe led to two years of sea war with France (1798–1800).

Yalta Conference Meeting of Franklin D. Roosevelt, Winston Churchill, and Joseph Stalin at a Crimean resort to discuss the postwar world on February 4–11, 1945; Soviet leader Joseph Stalin claimed large areas in eastern Europe for Soviet domination.

Yazoo Fraud Illegal sale of the Yazoo lands (much of present-day Alabama and Mississippi) by Georgia legislators; by 1802 it had become a tangle of conflicting claims that the U.S. Supreme Court settled in *Fletcher v. Peck* (1810).

yellow journalism Sensationalism in newspaper publishing that reached a peak in the circulation war between Joseph Pulitzer's *New York World* and William Randolph Hearst's *New York Journal* in the 1890s; the papers' accounts of events in Havana Harbor in 1898 led directly to the Spanish-American War.

yeoman farmers Small landowners (the majority of white families in the South) who farmed their own land and usually did not own slaves.

Yorktown, Battle of Last battle of the Revolutionary War; General Lord Charles Cornwallis along with over 7,000 British troops surrendered at Yorktown, Virginia, on October 17, 1781.

Zimmermann telegram From the German foreign secretary to the German minister in Mexico, February 1917, instructing him to offer to recover Texas, New Mexico, and Arizona for Mexico if it would fight the United States to divert attention from Germany in case of war.

APPENDIX

THE DECLARATION OF INDEPENDENCE

WHEN IN THE COURSE OF HUMAN EVENTS, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume the Powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are Life, Liberty, and the pursuit of Happiness. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved Representative Houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected; whereby the Legislative powers, incapable of Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all dangers of invasion from without, and convulsions within.

He has endeavoured to prevent the population of these States; for that purpose obstructing the Laws of Naturalization of Foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new Appropriations of Lands.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our People, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.

He has affected to render the Military independent of and superior to the Civil Power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing taxes on us without our Consent:

For depriving us of many cases, of the benefits of Trial by jury:

For transporting us beyond Seas to be tried for pretended offences:

For abolishing the free System of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its

Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislatures, and declaring themselves in vested with Power to legislate for us in all cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to compleat the works of death, desolation, and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these Oppressions We have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people.

Nor have We been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and correspondence. They too must have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends.

WE, THEREFORE, the Representatives of the UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the

British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

The foregoing Declaration was, by order of Congress, engrossed, and signed by the following members:

John Hancock

Resolved, that copies of the declaration be sent to the several assemblies, conventions, and committees, or councils of safety, and to the several commanding officers of the continental troops; that it be proclaimed in each of the united states, at the head of the army.

ARTICLES OF CONFEDERATION

TO ALL TO WHOM these Presents shall come, we the undersigned Delegates of the States affixed to our Names send greeting.

Whereas the Delegates of the United States of America in Congress assembled did on the fifteenth day of November in the Year of our Lord One Thousand Seven Hundred and Seventy-seven, and in the Second Year of the Independence of America agree to certain articles of Confederation and perpetual Union between the States of Newhampshire, Massachusetts-bay, Rhodeisland and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Georgia in the Words following, viz.

Articles of Confederation and perpetual Union between the States of Newhampshire, Massachusetts-bay, Rhodeisland and Providence Plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Georgia.

ARTICLE I. The stile of this confederacy shall be “The United States of America.”

ARTICLE II. Each State retains its sovereignty, freedom and independence, and every power, jurisdiction and right, which is not by this confederation expressly delegated to the United States, in Congress assembled.

ARTICLE III. The said States hereby severally enter into a firm league of friendship with each other, for their common defence, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other, against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade or any other pretence whatever.

ARTICLE IV. The better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States; and the people of each State shall have free ingress and regress to and from any other State, and shall enjoy therein all the privileges of trade and commerce, subject to the same duties, impositions and restrictions as the inhabitants thereof respectively, provided that such restrictions shall not extend so far as to prevent the removal of property imported into any State, to any other State of which the owner is an inhabitant; provided also that no imposition, duties or restriction shall be laid by any State, on the property of the United States, or either of them.

If any person guilty of, or charged with treason, felony, or other high misdemeanor in any State, shall flee from justice, and be found in any of the United States, he shall upon demand of the Governor or Executive power, of the State from which he fled, be delivered up and removed to the State having jurisdiction of his offence.

Full faith and credit shall be given in each of these States to the records, acts and judicial proceedings of the courts and magistrates of every other State.

ARTICLE V. For the more convenient management of the general interests of the United States, delegates shall be annually appointed in such manner as the legislature of each State shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each State, to recall its delegates, or any of them, at any time within the year, and to send others in their stead, for the remainder of the year.

No State shall be represented in Congress by less than two, nor by more than seven members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of holding any office under the United States, for which he, or another for his benefit receives any salary, fees or emolument of any kind.

Each State shall maintain its own delegates in a meeting of the States, and while they act as members of the committee of the States.

In determining questions in the United States, in Congress assembled, each State shall have one vote.

Freedom of speech and debate in Congress shall not be impeached or questioned in any court, or place out of Congress, and the members of Congress shall be protected in their persons from arrests and imprisonments,

during the time of their going to and from, and attendance on Congress, except for treason, felony, or breach of the peace.

ARTICLE VI. No State without the consent of the United States in Congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference, agreement, alliance or treaty with any king, prince or state; nor shall any person holding any office of profit or trust under the United States, or any of them, accept of any present, emolument, office or title of any kind whatever from any king, prince or foreign state; nor shall the United States in Congress assembled, or any of them, grant any title of nobility.

No two or more States shall enter into any treaty, confederation or alliance whatever between them, without the consent of the United States in Congress assembled, specifying accurately the purposes for which the same is to be entered into, and how long it shall continue.

No State shall lay any imposts or duties, which may interfere with any stipulations in treaties, entered into by the United States in Congress assembled, with any king, prince or state, in pursuance of any treaties already proposed by Congress, to the courts of France and Spain.

No vessels of war shall be kept up in time of peace by any State, except such number only, as shall be deemed necessary by the United States in Congress assembled, for the defence of such State, or its trade; nor shall any body of forces be kept up by any State, in time of peace, except such number only, as in the judgment of the United States, in Congress assembled, shall be deemed requisite to garrison the forts necessary for the defence of such State; but every State shall always keep up a well regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use, in public stores, a due number of field pieces and tents, and a proper quantity of arms, ammunition and camp equipage.

No State shall engage in any war without the consent of the United States in Congress assembled, unless such State be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such State, and the danger is so imminent as not to admit of a delay, till the United States in Congress assembled can be consulted: nor shall any State grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the United States in Congress assembled, and then only against the kingdom or state and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the United States in Congress assembled, unless such State be infested by pirates, in which case

vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the United States in Congress assembled shall determine otherwise.

ARTICLE VII. When land-forces are raised by any State of the common defence, all officers of or under the rank of colonel, shall be appointed by the Legislature of each State respectively by whom such forces shall be raised, or in such manner as such State shall direct, and all vacancies shall be filled up by the State which first made the appointment.

ARTICLE VIII. All charges of war, and all other expenses that shall be incurred for the common defence or general welfare, and allowed by the United States in Congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several States, in proportion to the value of all land within each State, granted to or surveyed for any person, as such land and the buildings and improvements thereon shall be estimated according to such mode as the United States in Congress assembled, shall from time to time direct and appoint.

The taxes for paying that proportion shall be laid and levied by the authority and direction of the Legislatures of the several States within the time agreed upon by the United States in Congress assembled.

ARTICLE IX. The United States in Congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth article—of sending and receiving ambassadors—entering into treaties and alliances, provided that no treaty of commerce shall be made whereby the legislative power of the respective States shall be restrained from imposing such imposts and duties on foreigners, as their own people are subjected to, or from prohibiting the exportation or importation of and species of goods or commodities whatsoever—of establishing rules for deciding in all cases, what captures on land or water shall be legal, and in what manner prizes taken by land or naval forces in the service of the United States shall be divided or appropriated—of granting letters of marque and reprisal in times of peace—appointing courts for the trial of piracies and felonies committed on the high seas and establishing courts for receiving and determining finally appeals in all cases of captures, provided that no member of Congress shall be appointed a judge of any of the said courts.

The United States in Congress assembled shall also be the last resort on appeal in all disputes and differences now subsisting or that hereafter may arise

between two or more States concerning boundary, jurisdiction or any other cause whatever; which authority shall always be exercised in the manner following. Whenever the legislative or executive authority or lawful agent of any State in controversy with another shall present a petition to Congress, stating the matter in question and praying for a hearing, notice thereof shall be given by order of Congress to the legislative or executive authority of the other State in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint by joint consent, commissioners or judges to constitute a court for hearing and determining the matter in question: but if they cannot agree, Congress shall name three persons out of each of the United States, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven, nor more than nine names as Congress shall direct, shall in the presence of Congress be drawn out by lot, and the persons whose names shall be so drawn or any five of them, shall be commissioners or judges, to hear and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination: and if either party shall neglect to attend at the day appointed, without reasons, which Congress shall judge sufficient, or being present shall refuse to strike, the Congress shall proceed to nominate three persons out of each State, and the Secretary of Congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court to be appointed, in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence, or judgment, which shall in like manner be final and decisive, the judgment or sentence and other proceedings being in either case transmitted to Congress, and lodged among the acts of Congress for the security of the parties concerned: provided that every commissioner, before he sits in judgment, shall take an oath to be administered by one of the judges of the supreme or superior court of the State where the case shall be tried, “well and truly to hear and determine the matter in question, according to the best of his judgment, without favour, affection or hope of reward:” provided also that no State shall be deprived of territory for the benefit of the United States.

All controversies concerning the private right of soil claimed under different grants of two or more States, whose jurisdiction as they may respect such lands, and the states which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall on the petition of either

party to the Congress of the United States, be finally determined as near as may be in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different States.

The United States in Congress assembled shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective States—fixing the standard of weights and measures throughout the United States—regulating the trade and managing all affairs with the Indians, not members of any of the States, provided that the legislative right of any State within its own limits be not infringed or violated—establishing and regulating post-offices from one State to another, throughout all of the United States, and exacting such postage on the papers passing thro’ the same as may be requisite to defray the expenses of the said office—appointing all officers of the land forces, in the service of the United States, excepting regimental officers—appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the United States—making rules for the government and regulation of the said land and naval forces, and directing their operations.

The United States in Congress assembled shall have authority to appoint a committee, to sit in the recess of Congress, to be denominated “a Committee of the States,” and to consist of one delegate from each State; and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the United States under their direction—to appoint one of their number to preside, provided that no person be allowed to serve in the office of president more than one year in any term of three years; to ascertain the necessary sums of money to be raised for the service of the United States, and to appropriate and apply the same for defraying the public expenses—to borrow money, or emit bills on the credit of the United States, transmitting every half year to the respective States an account of the sums of money so borrowed or emitted,—to build and equip a navy—to agree upon the number of land forces, and to make requisitions from each State for its quota, in proportion to the number of white inhabitants in such State; which requisition shall be binding, and thereupon the Legislature of each State shall appoint the regimental officers, raise the men and cloath, arm and equip them in a soldier like manner, at the expense of the United States; and the officers and men so clothed, armed and equipped shall march to the place appointed, and within the time agreed on by the United States in Congress assembled: but if the United States in Congress assembled shall, on consideration of circumstances judge proper that any State should not raise men, or should raise a smaller number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed and

equipped in the same manner as the quota of such State, unless the legislature of such State shall judge that such extra number cannot be safely spared out of the same, in which case they shall raise officer, cloath, arm and equip as many of such extra number as they judge can be safely spared. And the officers and men so clothed, armed and equipped, shall march to the place appointed, and within the time agreed on by the United States in Congress assembled.

The United States in Congress assembled shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expenses necessary for the defence and welfare of the United States, or any of them, nor emit bills, nor borrow money on the credit of the United States, nor appropriate money, nor agree upon the number of vessels to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander in chief of the army or navy, unless nine States assent to the same: nor shall a question on any other point, except for adjourning from day to day be determined, unless by the votes of a majority of the United States in Congress assembled.

The Congress of the United States shall have power to adjourn to any time within the year, and to any place within the United States, so that no period of adjournment be for a longer duration than the space of six months, and shall publish the journal of their proceedings monthly, except such parts thereof relating to treaties, alliances or military operations, as in their judgment require secrecy; and the yeas and nays of the delegates of each State on any question shall be entered on the Journal, when it is desired by any delegate; and the delegates of a State, or any of them, at his or their request shall be furnished with a transcript of the said journal, except such parts as are above excepted, to lay before the Legislatures of the several States.

ARTICLE X. The committee of the States, or any nine of them, shall be authorized to execute, in the recess of Congress, such of the powers of Congress as the United States in Congress assembled, by the consent of nine States, shall from time to time think expedient to vest them with; provided that no power be delegated to the said committee, for the exercise of which, by the articles of confederation, the voice of nine States in the Congress of the United States assembled is requisite.

ARTICLE XI. Canada acceding to this confederation, and joining in the measures of the United States, shall be admitted into, and entitled to all the advantages of this Union: but no other colony shall be admitted into the same, unless such admission be agreed to by nine States.

ARTICLE XII. All bills of credit emitted, monies borrowed and debts contracted by, or under the authority of Congress, before the assembling of the United States, in pursuance of the present confederation, shall be deemed and considered as a charge against the United States, for payment and satisfaction whereof the said United States, and the public faith are hereby solemnly pledged.

ARTICLE XIII. Every State shall abide by the determinations of the United States in Congress assembled, on all questions which by this confederation are submitted to them. And the articles of this confederation shall be inviolably observed by every State, and the Union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them; unless such alteration be agreed to in a Congress of the United States, and be afterwards confirmed by the Legislatures of every State.

And whereas it has pleased the Great Governor of the world to incline the hearts of the Legislatures we respectively represent in Congress, to approve of, and to authorize us to ratify the said articles of confederation and perpetual union. Know ye that we the undersigned delegates, by virtue of the power and authority to us given for that purpose, do by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said articles of confederation and perpetual union, and all and singular the matters and things therein contained: and we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the United States in Congress assembled, on all questions, which by the said confederation are submitted to them. And that the articles thereof shall be inviolably observed by the States we respectively represent, and that the Union shall be perpetual.

In witness thereof we have hereunto set our hands in Congress. Done at Philadelphia in the State of Pennsylvania the ninth day of July in the year of our Lord one thousand seven hundred and seventy-eight, and in the third year of the independence of America.

THE CONSTITUTION OF THE UNITED STATES

WE THE PEOPLE OF THE UNITED STATES, in order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE. I.

Section. 1. All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section. 2. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons. The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in

such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New-York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

When vacancies happen in the Representation from any state, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section. 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the legislature thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third maybe chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the Absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of

honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section. 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Section. 5. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, not to any other Place than that in which the two Houses shall be sitting.

Section. 6. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been encreased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section. 7. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate shall, before it become a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section. 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and Post Roads;

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on land and Water;

To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

To provide and maintain a Navy;

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

To provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress.

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of Particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section. 9. The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

ARTICLE. II.

Section. 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice President.

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice President, declaring what Officer shall then act as

President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be encreased or diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enters on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section. 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section. 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section. 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE. III.

Section. 1. The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office.

Section. 2. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—the Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

In all cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section. 3. Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

ARTICLE. IV.

Section. 1. Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section. 2. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section. 3. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular States.

Section. 4. The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE. V.

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the

Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE. VI.

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE. VII.

The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth. In witness thereof We have hereunto subscribed our Names,

AMENDMENTS TO THE
CONSTITUTION

ARTICLES IN ADDITION TO, and Amendment of the Constitution of the United States of America, proposed by Congress, and ratified by the Legislatures of the several States, pursuant to the fifth Article of the original Constitution.

AMENDMENT I.

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

AMENDMENT II.

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

AMENDMENT III.

No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

AMENDMENT IV.

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

AMENDMENT V.

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

AMENDMENT VI.

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation;

to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

AMENDMENT VII.

In Suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

AMENDMENT VIII.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

AMENDMENT IX.

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

AMENDMENT X.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people. [The first ten amendments went into effect December 15, 1791.]

AMENDMENT XI.

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State. [January 8, 1798.]

AMENDMENT XII.

The Electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President.—The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States. [September 25, 1804.]

AMENDMENT XIII.

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation. [December 18, 1865.]

AMENDMENT XIV.

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or

obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article. [July 28, 1868.]

AMENDMENT XV.

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude—

Section 2. The Congress shall have power to enforce this article by appropriate legislation.—[March 30, 1870.]

AMENDMENT XVI.

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration. [February 25, 1913.]

AMENDMENT XVII.

The Senate of the United States shall be composed of two senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature.

When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: *Provided*, That the legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

This amendment shall not be so construed as to affect the election or term of any senator chosen before it becomes valid as part of the Constitution. [May 31, 1913.]

AMENDMENT XVIII.

After one year from the ratification of this article, the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission thereof to the States by Congress. [January 29, 1919.]

AMENDMENT XIX.

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

The Congress shall have power by appropriate legislation to enforce the provisions of this article. [August 26, 1920.]

AMENDMENT XX.

Section 1. The terms of the President and Vice-President shall end at noon on the twentieth day of January, and the terms of Senators and Representatives at noon on the third day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the third day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President-elect shall have died, the Vice-President-elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President-elect shall have failed to qualify, then the Vice-President-elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein

neither a President-elect nor a Vice-President-elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice-President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice-President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission. [February 6, 1933.]

AMENDMENT XXI.

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any State, Territory or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by convention in the several States, as provided in the Constitution, within seven years from the date of the submission thereof to the States by the Congress. [December 5, 1933.]

AMENDMENT XXII.

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President,

for more than two years of a term to which some other person was elected President shall be elected to the office of the President more than once. But this Article shall not apply to any person holding the office of President when this Article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the date of its submission to the States by the Congress. [February 27, 1951.]

AMENDMENT XXIII.

Section 1. The District constituting the seat of government of the United States shall appoint in such manner as the Congress may direct:

A number of electors of President and Vice-President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those appointed by the States, but they shall be considered, for the purposes of the election of President and Vice-President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have the power to enforce this article by appropriate legislation. [March 29, 1961.]

AMENDMENT XXIV.

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have power to enforce this article by appropriate legislation. [January 23, 1964.]

AMENDMENT XXV.

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2. Whenever there is a vacancy in the office of Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both Houses of Congress.

Section 3. Whenever the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President as Acting President.

Section 4. Whenever the Vice President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as Acting President.

Thereafter, when the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit within four days to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both Houses that the President is unable to discharge the powers and duties of his office, the Vice President shall continue to discharge the same as Acting President; otherwise, the President shall resume the powers and duties of his office. [February 10, 1967.]

AMENDMENT XXVI.

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any State on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation [June 30, 1971.]

AMENDMENT XXVII.

No law, varying the compensation for the services of the Senators and Representatives shall take effect, until an election of Representatives shall have intervened. [May 8, 1992.]

Candidates receiving less than 1 percent of the popular vote have been omitted. Thus the percentage of popular vote given for any election year may not total 100 percent.

Before the passage of the Twelfth Amendment in 1804, the electoral college voted for two presidential candidates; the runner-up became vice-president.

Source: U.S. Immigration and Naturalization Service, 2006.

¹Data for years prior to 1906 relate to country whence alien came; data from 1906–79 and 1984–89 are for country of last permanent residence; and data for 1980–99 refer to country of birth. Because of changes in boundaries, changes in lists of countries, and lack of data for specified countries for various periods, data for certain countries, especially for the total period 1820–2004, are not comparable throughout. Data for specified countries are included with countries to which they belonged prior to World War I.

²Data for Austria and Hungary not reported until 1861.

³Data for Austria and Hungary not reported separately for all years during the period.

⁴No data available for Czechoslovakia until 1920.

⁵Prior to 1926, data for Northern Ireland included in Ireland.

⁶Data for Norway and Sweden not reported separately until 1871.

⁷No data available for Romania until 1880.

⁸Since 1925, data for United Kingdom refer to England, Scotland, Wales, and Northern Ireland.

⁹In 1920, a separate enumeration was made for the Kingdom of Serbs, Croats, and Slovenes. Since 1922, the Serb, Croat, and Slovene Kingdom recorded as Yugoslavia.

¹⁰Beginning in 1957, China includes Taiwan.

¹¹Data not reported separately until 1952.

¹²Data not reported separately until 1925.

¹³Data not reported separately until 1949.

¹⁴No data available for Japan until 1861.

¹⁵Data not reported separately until 1948.

¹⁶Prior to 1934, Philippines recorded as insular travel.

¹⁷Prior to 1920, Canada and Newfoundland recorded as British North America. From 1820 to 1898, figures include all British North America possessions.

¹⁸Land arrivals not completely enumerated until 1908.

¹⁹No data available for Mexico from 1886 to 1893.

²⁰Data not reported separately until 1932.

²¹Data for Jamaica not collected until 1953. In prior years, consolidated under British West Indies, which is included in “Other Caribbean.”

²²Included in countries “Not specified” until 1925.

²³From 1899 to 1919, data for Poland included in Austria-Hungary, Germany, and the Soviet Union.

²⁴From 1938 to 1945, data for Austria included in Germany.

²⁵Includes 32,897 persons returning in 1906 to their homes in the United States.

²⁶Data for fiscal year 1998 have been revised due to changes in the count for asylees and cancellation of removal. The previously reported total was 660,477.

²⁷Prior to 1993, data include independent republics; beginning in 1993, data are for unknown republic only.

²⁸Prior to 1992, data include independent republic; beginning in 1992, data are for Yugoslavia only.

²⁹Prior to 1992, data include previously independent republics only; beginning in 1992, data are for all former republics except Russia.

— represents zero.

NOTE: From 1820 to 1867, figures represent alien passengers arrived at seaports; from 1868 to 1891 and 1895 to 1897, immigrant aliens arrived; from 1892 to 1894 and 1898 to 1989, immigrant aliens admitted for permanent residence. From 1892 to 1903, aliens entering by cabin class were not counted as immigrants. Land arrivals were not completely enumerated until 1908. For this table, fiscal year 1843 covers 9 months ending September 1843; fiscal years 1832 and 1850 cover 15 months ending December 31 of the respective years; and fiscal year 1868 covers 6 months ending June 30, 1868.
